

## Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

## Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

## Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

# THE BRITISH & COLONIAL PRINTER

FOUNDED  
1878.

AND STATIONER

PUBLISHED  
WEEKLY.

[REGISTERED AT THE GENERAL POST OFFICE AS A NEWSPAPER  
FOR TRANSMISSION IN THE UNITED KINGDOM.]

**FORTY-THIRD YEAR.**

VOLUME LXXXVIII.  
NUMBER 1.

LONDON: JANUARY 6, 1921.

EVERY THURSDAY.  
PRICE TWOPENCE.

## "Fryotype" PRINTING METALS

It is **false economy** to save 5 to 10 per cent. in the initial cost of a PRINTING METAL when the quality is so poor that 25 per cent. or more is lost when the metal is put into use.

Impure or "drossy" metals lead to "chokes" in the nozzle or mouthpiece, or bad "sinks" in the Stereoplate which spoil or delay important work.

The "Fryotype" SERVICE OF PRINTING METALS offers an absolute guarantee of immunity from such troubles and will help printers to produce  
**Printing of Quality.**

*The "Fryotype" Standard of Quality will never be lowered.*

## **"Dry" Lithography.**

**By WILLIAM GAMBLE, F.R.P.S., F.O.S.**

In my article entitled "The New Lithography," published in the issue of December 9th last, I referred briefly to a process of "dry" lithography, and it will no doubt be interesting to describe more fully the features of this process. It is written about as though it were a new process, and one writer has stated that the idea was originated and developed in Chicago, but our American friends seem to be unacquainted with the fact that the process of lithography when first discovered and worked out by Senefelder was a "dry" process. In his description of his invention, published in 1821, he refers to his early difficulties in printing due to the liability of the stone to take up ink between the lines. To overcome this he etched the stone or metal plate more and more into relief, and made his inking pad harder. He writes: "When a pen drawing is so made that the various lines are close together, and there is no white space on it that is greater than at most half-an-inch in diameter, it will permit printing in a purely mechanical way without being prepared [i.e., with gum water]. It need merely be etched into all the relief possible without undereating the lines." This proves that Senefelder himself was the real inventor of "dry" as well as "wet" lithography.

The great superiority and ease of wet lithography put the dry process out of court for many years, but there were inventors who had visions of a successful dry method, and fore-

saw that if the difficulty of the plate taking ink in the whites could be overcome, there would be a decided advantage. In the "Process Year Book" for 1896, Joseph Scholefield describes a process called "Mercurographie or Photogravure with Quicksilver," and he says: "The basis of this process is founded on the fact of the amalgamation of mercury on a metal plate having the peculiar effect of repelling printer's ink when rolled or rubbed over it." He proceeds to describe the various ways in which this idea can be applied, and gives formulae for the mercuric preparations. In one case a hygroscopic photo-litho transfer paper is prepared, and after being exposed and inked up, is dusted with a powder consisting of iodide quicksilver, cyanide quicksilver and chromate quicksilver. When the print is transferred to a copper or zinc plate, the powder forms an amalgam on the metal, and repels ink from the parts thus affected when the plate is rolled up with lithographic ink.

Another formula is for making a lithographic crayon with the mercuric preparation, and a chemical ink for writing or drawing with the pen or brush is also described. For relief etching it is shown that certain acids will attack the zinc without affecting the parts covered by the mercury amalgam. Such relief plates can thus be prepared without rolling-up with ink.

The article referred to is probably a description of an old process—very likely French,

etch-

JANUARY 6, 1921.

judging by the title—though the author does not give the origin nor claim any originality for himself. He suggests that it may prove an interesting field for experiment in the hands of those who care to follow out "both new and obsolete methods." The present writer knew Mr. Scholefield as a very practical and well-informed lithographer, who had had a good deal of experience in Continental lithographic shops. His ideas were certainly running in the direction of "dry" lithography.

The next inventor in this field was Mr. G. R. Hildyard, a London colour printer, who in 1898 introduced the "wharf-litho process," which was a combination of lithographic and letterpress printing methods. The design drawn on the stone was re-transferred to as many zinc plates as there were to be colours in the finished print, and these plates were subjected to a certain chemical treatment which enabled them to be printed litho fashion, from the surface, on an ordinary wharfedale machine. In 1899 a company was formed to operate the process, under the auspices of Mr. Harvey Dalziel, but although much good work was done, the concern was wound up in 1904.

The present writer remembers a demonstration of the process being given in some premises in Baldwin's-gardens, Gray's-inn-road, E.C., and saw a double-crown sheet being printed. It was put through for the last of five colours at a speed of about 1,000 impressions per hour. The subject was a vignetted stipple-drawn portrait of Lord Tennyson, transferred 8-up. A copy of this sheet is before us as we write, and the result is certainly unexceptionable. There was nothing in the appearance of the zinc printing plate to give any clue to the process, and though we have many times tried to obtain from the inventor some information about the process, we have only been able to elicit the fact that he depended on the raising of innumerable fine grain points in the whites, these points being too fine to take ink, but sufficient to bear off the rollers and to prevent "dipping." We have the idea that these grain points were, or could be, produced by treatment of the plate with a mercury compound.

The revival of "dry" lithography in America occurred just before the late war, and we remember receiving particulars of a method which was being used by the Forbes Lithographic Co., of Boston, one of the largest lithographic houses in the United States. The success of the method was said to depend on the work being close, such as the backgrounds

of cheques, and on the use of a Levy Acid Blast Etching machine. The firm had had constructed a specially large etching machine of this type to deal with the large litho zinc plates used on their litho machines.

Since then the process has made rapid progress, and we hear of its being worked extensively in America. One of the claims made for this method is that it is possible to print in water sensitive inks on safety papers for bank cheques. We should not be surprised to hear that such a process has been used for many years past by London cheque printers. We know that background tints have long been printed on letterpress machines, and it is quite likely that the reason for it was the difficulty of printing water-sensitive inks by litho.

It has been found that the "dry" process is worked most successfully on offset machines, using indiarubber rollers in place of the usual leather ones.

Whether the new method which is said to have been devised by an English lithographer, and likely to be put on the market shortly, will prove something very different from what we have described, remains to be seen.

MR. ROBERT H. RUDDOCK, printers' auctioneer, etc., of 71, Fleet-street, E.C.4, has forwarded us a copy of his useful publication "Engagements, 1921." The months are clearly shown on the margin. Each opening covers a week, the days set out in columns, with the time 9 a.m. to 6 p.m. given in the margin. Engagements can thus be entered up without the slightest fear of confusion. The book is well bound, and the paper used of excellent quality. We note that the certified valuations taken by Mr. Ruddock for the six months ended June, 1920, amounted to £4,694,602.

MESSRS. ROBT. CRAIG AND SONS, LTD., have celebrated their centenary this year, and the event is now marked by the publication of a crown 4to, 144 pp. souvenir, printed on coated paper and bound in stiff canvas, titled, "A Century of Papermaking." The book is copiously illustrated with views of mills, deparmments and personalities. Unlike most productions of the kind, there is no prime effort to display proprietors and principals, attention being given principally to the staffs and workmen. A perusal of the pages serves the purpose of bringing the reader into intimate touch with the inside of the mills. There are a surprising number of paper men about whose first acquaintance with paper and papermaking was made with Craig's, and not a few Manchester men have pleasant recollections of Caldercrux. To these in particular a glance through the souvenir will stir up a memory of younger days when paper was cheaper and better than it is to-day.

THERE were six fatal accidents in the paper, printing, etc., group of trades during November.

## The Printing Trade in 1921.

By R. A. AUSTEN-LEIGH  
 (President, London Master Printers' Association).

It would take a brave man to be an optimist to-day about the immediate future of the printing trade—except on the principle that if there is bound to be a bad time, the sooner it comes the better. For there can be no manner of doubt that the two comparatively good years which the trade has enjoyed since the Armistice are now definitely over, and that we are in for the inevitable slump that follows every great war. Palliatives in the way of meeting the increased cost of living by higher wages may be effective in staving off the crisis for a time, but sooner or later economic laws are certain to have their innings. The last year has seen two considerable increases in the wages paid to the printing trade, with the result that, influenced, too, by the enormous price of paper, the demand for our printed product has largely fallen off, and there is to-day a growing amount of unemployment in the trade. In addition, foreign competition is again raising its head, and, quite apart from the loss of much foreign trade, even that part of our domestic trade, in which time is not the main element, is threatened.

### Financial Stringency.

Again, the financial position of the master printer is none too easy to-day. Even if the balance-sheet for the last two years shows that respectable profits have been made, the immensely enhanced expenses have made it impossible for the printer to "carry on" without much extra capital, and the result has been that many a master printer, far from being able to draw out his profits, has been compelled to leave them in his business to supply the needed capital, and even then has found things tight enough when the weekly wage-day comes round. Nor has the master printer, who executes nearly every job to a different specification, the means enjoyed by other manufacturers of selling his stock at a cut price to provide himself with the cash which he so greatly needs.

### Cost of Materials and Labour.

Before, therefore, the printing trade is likely to look up, it is necessary for the cost of production to come down. Even when the employers as a whole have introduced the very best systems and machinery, and their employees have given the best possible output, prices may still be too high to tempt back that portion of the trade which is not an

absolute necessity. If so, we must wait for the various items that go together to form our cost to fall before we can expect any great improvement. The recent fall in the price of paper may have been partly due to special circumstances, but sooner or later, as the market supplies improve, a fall is bound to come in the price of that and other materials.

Lastly, we come to the vital question, will wages come down? The answer seems to be that if the cost of living falls sufficiently—and if it does not we shall be bankrupt sooner or later—wages will go down in sympathy in the same manner as they have gone up. If I am right in this, our trade will have difficult times to face, but it is a good augury that we have a well-established Joint Industrial Council now in being, and that, thanks to the moderation and good sense displayed by both capital and labour, our trade has emerged from the dangers of the last few years without any very serious trouble.

## New Year Honours.

Among the five new peers included in the list of New Year honours is the Right Hon. Sir Horace Brooks Marshall, K.C.V.O. (Lord Mayor of London, 1918-19), principal of the firm of Horace Marshall and Son, publishers. For public services, he is now made Baron.

The new Knights include the following:—

Mr. Thomas Jewell Bennett, C.I.E., M.P., for many years editor of the *Times of India*, of which he is principal proprietor; was selected as Coalition Unionist for the Sevenoaks Division in 1918.

Mr. William Davies, editor of *The Western Mail*, Cardiff.

Mr. Samuel Squire Sprigge, M.D., M.R.C.S., editor of the *Lancet*.

Mr. Dawson Williams, M.D., F.R.C.P., editor of *The British Medical Journal*.

**THE THAMES PAPER CO., LTD.**—The blotting pad which Mr. E. B. Fiske, the managing director sends out at Christmas time with the season's greetings of the Thames Paper Co., is a familiar feature of the office furniture in the paper trade. This welcome reminder is again on numerous desks. A more appropriate or useful gift one could not desire. Not only is it a blotting pad, but it combines a diary and jotter. The two latter features, on either side of the blotter, are tastefully covered by leatherette boards, printed on the insides of which are calendars for the next two years, postal information, and a valuable table of board counts and substances. The whole is encased in leatherette mounted on boards for which the Thames Co. is so well known. An interesting example of Purfleet manufacture also is the adaptable and durable case in which the blotting pad is sent out.

## The Printer's Present Difficulties.

### Mr. E. G. Arnold's Views.

With costs still at a high figure, demand at a minimum, and unemployment rampant, no printer is likely to need informing that there are many present-day obstacles in the way of good business in printing. It is interesting, however, to note the views of leaders of the industry as to the state of trade; and from their analyses of the situation hints may perhaps be gathered of the directions in which future developments may be expected. Writing in the *Yorkshire Post* on the position in which the New Year finds the printing industry, Mr. E. George Arnold, of Leeds, who was from 1916 to 1918 president of the Federation of Master Printers, points out the chief difficulties under which the trade has at present to "carry on."

The price of the product, he says, has increased to a height beyond its economic value, the result being a marked falling off in demand. He cites the repeated substantial increases of wages that have been granted, together with the reduction of hours from 51 to 48—the effects of which, he thinks, are only now being felt—also the granting of the week's holiday with pay. It should, however, be understood, he admits, that the increased price of the finished product does not lie, by any means, entirely at the door of labour, in that it is partly, and in some cases entirely, the result of the increased cost of material, paper, etc. But, when considering the increased cost of material, it must be remembered that those materials are, speaking generally, the result of the labour of others in different trades, in which the workers have received similar advances of wages to those granted to the workers in the printing group of trades.

As regards the export trade, he writes, the high cost of labour and of materials have rendered it extremely difficult to find markets at the present high prices, and, in the case of cheaper stationery, for use in India, Siam, Burmah, etc. (of which considerable quantities were sent from Leeds pre-war), the sale has collapsed entirely, for the price is higher than the natives will pay for the finished article.

Printing works in the former enemy countries are beginning to get busy again, and foreign print is coming in, while the British printer is still labouring under the pre-war grievance that labels, for instance, may be printed in large sheets, at the bottom of which the imprint "Printed abroad" (or in whatever country it may be) is added.

The adverse American exchange interferes to a considerable extent with those master printers who have endeavoured, during the past year, to bring their plant up-to-date by purchasing the most modern types of machinery from that country. It is obvious that until the U.S.A. exchange becomes more

stabilised than it is at present, employers purchasing American machinery for special purposes and for high speed output are under a very severe handicap.

The Joint Industrial Council for the Printing Group of Trades has done useful work during the year, writes Mr. Arnold, particularly in the preparation of a report regarding the possibilities of the industry running its own unemployment insurance scheme, but, owing to the extraordinary number of meetings of the Federation Council and the various committees, the Joint Industrial Council has been largely crowded out. Opinions are strongly divided amongst the employers as to whether the Council has any efficiency value or not, but when matters become more stabilised and better attention can be paid to constructive work within the industry, there should be a great future before it.

### ST. BRIDE

## Foundation Printing School.

### Students' New Year's Eve Concert.

The students of this well-known technical institute are leaving no stone unturned to achieve success in the herculean task they have undertaken—to raise a sufficient sum of money to found a Printers' Pension. Through the enthusiasm of one or two bright spirits in the school, an excellent orchestral and vocal concert was given at the institute, on December 31st, when Mr. Alfred Pitman, the director of the orchestra of the "Times Musical and Dramatic Society" brought his thirty performers and provided an excellent evening's entertainment, interspersed with musical items by students and others.

During the evening the principal, Mr. J. R. Riddell explained the object of the concert, it being an effort to add to the Printers' Pension Fund which the students had set themselves gallantly, to commemorate those students who fell in the great war. He stated that probably the outcome of this concert would be that over fifteen guineas would be credited to the fund, which now amounted to close on one hundred pounds, but that a great deal had yet to be done before the six hundred pounds aimed at was raised. Therefore, they appealed to all friends to contribute to the young printer-craftsmen's effort. He also stated that contributors of not less than 10s. would receive a copy of the book which is being contributed to and printed by the students. This volume, "St. Bride Students' Cake," it is expected will be ready by about the end of April. Therefore it is necessary for all who would like to have a copy to make application at an early date.

The Rev. Arthur Taylor proposed a hearty vote of thanks to the performers for their excellent programme, which had contributed so well to the St. Bride Students' Pension Fund.

## Review of the Paper Trade.

### Some Interesting Points for Consumers.

At the end of every completed twelve months it is the ingrained habit of the business man to make up his books and cast up accounts for the year, and, if he is wise, he does not limit his activities in this direction to the estimation of his store of pounds, shillings and pence, but "views the landscape o'er" and examines the events of the bygone period and their influence on the present and the future. Never has there been a more interesting moment, in the memory of living man, for the exercise of retrospect and prospect, and the papermakers of this country will be well advised to consider the history of the past year and the probabilities of the coming year with the most earnest care.

During 1920 we have had, in the paper trade of this country, a period of persistent and increasing demand for our products, of readiness to pay the growing prices which were forced upon us by the higher costs of materials and labour, and a resulting boom of prosperity which made us turn a deaf ear to the prophets of financial and commercial difficulties ahead. All was for the best in the best of all possible worlds; the whole round globe was hungry for paper, in quantities far beyond those which its paper machines could produce, and there would be no limit to the indefinite prosperity of the paper trade. All was, and would be, well; and then, suddenly, without a moment's warning, everything stopped short. Not merely did the buyer cease to order, but, where he had the option of cancellation (and, very often, when he had no such right), he cancelled his existing orders, and mills whose order books had displayed a plethoric obesity found that the lean times were already upon them. The paper trade, whose short memory held nothing but recollections of easy prosperity, staggered under this stunning blow, and looked round, in dazed fashion, to find the cause of its disasters.

This was not readily discoverable, and divers reasons were put forward by those who claimed to know, each commercial physician diagnosing the disease which his own pet nostrum was guaranteed to cure. This is neither the time nor the place to discuss the rival theories, more especially as a strong committee of inquiry, in which the trade unions are joining hands with the manufacturers, has been set up to investigate and report. We can but record the position, dramatic in its intensity, and pass on to deal with the current of events during the year and the attendant circumstances which accompanied, and may (or may not) have caused, the collapse of trade.

### The Import of Paper.

One of the vital questions of the British paper trade is always the amount of foreign

paper which comes in to compete with the home product, and in this respect the past year has been one of the keenest interest. There is no subject on which it is so easy to lose the sense of proportion, and yet, at the same time, there is no market influence which is so speedily disastrous as a misconception of the volume and magnitude of foreign competition. It is necessary to remember, in the first place, that before 1914 the mills in this country were only able to produce about 60 per cent. of the weight of paper required for home consumption, leaving two-fifths of the total quantity to be imported. Of this two-fifths, quite a large amount consisted of weights and qualities which it did not pay the home mills to produce, and another appreciable quantity consisted of speciality papers in which the foreigner had some natural advantage. The residue of the imported tonnage, being the only portion which came directly into competition with British products, was sold under keenly competitive conditions, and, as a general rule, the British mill could face the competition and hold its own. Five years of restricted import, partly due to shortage of shipping facilities and partly to Government regulation, have accustomed the British paper trade to an artificially sheltered existence in which foreign competition, though it existed, could be regarded as negligible.

The year 1920 saw the restrictions cease to operate, but the result was not quite what was expected. On the one hand, the quantity imported was considerably less than normal, and yet, on the other hand, its effect on the market was considerably greater than the quantity justified. On these two points it is advisable to refer to actual figures. The total import of paper in 1913 was 644,000 tons: the total for October and November, 1920, was 83,000 tons, or at the annual rate of just under 500,000 tons. It is further to be remarked that the quantities coming from the countries of Central Europe reached their maximum during the summer months, and since July have shown a continuous decrease, whereas the Scandinavian competition, especially in wrapping papers, is on the upward grade. None the less, these comparatively small quantities, coming from countries where the rate of exchange has collapsed, have exercised a rapid and disastrous effect upon the market; not because of effective competition, but on account of their influence on the mind of the buyer.

### Collapsed Exchanges.

This brings us to the consideration of another of the abnormal features of the situation, the depreciation of the Continental exchange rate; and this feature alone makes it impossible to apply the ordinary principles of political economy or financial theory to the present position. When a shilling has to one seller the same value that a penny has to another seller, no ordinary form of competition is taking place; and yet this is exactly the position in the case of certain of the Continental exchanges. The German, while the mark is valued at 240 to the sovereign, can, if

he chooses, sell to this country a shillings-worth of paper for a penny; and no amount of skill or efficiency on the part of the British papermaker can enable him to divide his making-cost by twelve. Consequently, in so far as this form of competition becomes effective, it becomes a direct question for the Government to consider how it can be regulated; for if not regulated, it will inevitably cause the closing of British mills and consequent unemployment.

Nor is its effect limited merely to the extent of the available supply. Buyers, and especially trade buyers, are easily alarmed; and the greater the stock held by a buyer the greater is the effect upon his mind of even a single offer at a substantially lower price. Immediately such a symptom appears he must, in self-defence, cease further buying until he has assured himself that the fall in prices has reached its limit. Consequently, the offer of a small quantity of paper at a low price (rendered possible by the depreciated exchange) had its effect not merely on the actual buyer but on every prospective buyer who heard of the quotation.

Further, it is to be observed that the artificial state of the exchange, while it gives a temporary advantage to the seller in the country affected, is, in the long run, quite as much to his disadvantage as to that of his competitor. If the whole production of Germany were to be sold in this country on the basis of the mark at 240, it would simply mean that Germany had parted with her assets at a figure far below their actual value; so that Germany would be so much poorer and this country so much richer, although in the process of national wealth-acquirement, British manufacturers would have had to close down their works. There are welcome signs that this side of the exchange question has not passed unnoticed in Central Europe, and that steps to remedy the abnormal state of things are even now being taken.

The remedy is, again, not easy to discover, but, reluctant as every business man is after his war-time experiences, to suggest Government interference with industry, this is essentially a matter for the Treasury and the Board of Trade. It is, therefore, gratifying to note that it is officially announced that it is the intention of the Government to include in a Bill to be introduced at the beginning of next session provisions dealing with the situation caused by the importation of goods at abnormally low prices owing to the state of certain of the exchanges.

THE Electrotypers and Stereotypers' Auxiliary held a very successful concert at Anderson's Hotel on Tuesday, in aid of the funds of the Printers' Pension Corporation.

A REUTER Washington telegram says that a representative of a press syndicate recently approached President Wilson with an offer of \$150,000 to write an article on any subject he might select. The President has refused on the ground that no article was worth such an amount.

## Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

There was an unusually large gathering at the monthly meeting of the Association on Tuesday evening, at St. Bride Institute, Bride-lane, E.C.4. Mr. A. J. Daines (president) was in the chair, Mr. A. W. Hunt (vice-president) ably supporting. During the evening Mr. B. J. Sansom, technical instructor in bookbinding at St. Bride, delivered an interesting paper on "How to teach Young Binders; from a Technical Standpoint."

The secretary having read the minutes of the previous meeting, which were duly confirmed, the meeting proceeded to the election of the following new members:—Messrs. R. Chiverrell, warehouse (Howard and Jones); F. R. Martin (honorary) (Avery and Martin). To the new members the president extended a warm welcome on behalf of the Association.

On the question of imposing a fine for the non-return of the pay-cards, it was agreed that a fine should be made, but that the question should be placed on the agenda for consideration at the annual general meeting.

### Invitations to the Annual Dinner.

Invitations to the annual dinner, fixed for March 12th, at the Holborn Restaurant, next came up for consideration. It was unanimously agreed that the Association should send double-ticket invitations to Mr. Clifford, to the Printers' Managers and Overseers Association, and to the Electrotypers' and Stereotypers' Managers and Overseers Association.

A report of Mr. Sansom's address, and the subsequent discussion, will appear in our Bookbinding issue on January 20th.

THE Newspaper Conference on Tuesday protested against the new telephone charges, and the London Chamber of Commerce also proposes to oppose them.

THE Printers' Managers and Overseers (Parent) Association opened the new year auspiciously on Tuesday, when a short business meeting was followed by an enjoyable smoking concert—to be reported next week.

"WHAT A COMPOSITOR SHOULD KNOW."—Mr. W. H. Slater, who has done much valuable work as a teacher at the Borough Printing Classes, will publish at an early date a series of small handy text books bearing the above caption. The Borough Polytechnic Printing Classes during the last twenty-seven years have been responsible for the excellent training of a large number of students, and as a school of printing this institution has achieved a high reputation. These handbooks, based on the instruction given, will be very welcome, not only to those who have passed through the school, but to printers generally.

AN Advertisement is always working.

# Trade Notes.

MR. WILLIAM A. FRASER, of Dublin, proprietor of the *Irish Farming World*, left £5,037.

THE rates for certain advertisements in the *London Gazette* are increased as from January 1st.

MR. W. F. TAYLOR, founder and governing director of the *Cambridge Daily News*, died last week at Cambridge aged 65.

THE death occurred last week of Mr. James R. Manners, a well-known Glasgow journalist, who previously had editorial control of the *North British Daily Mail* and the *Weekly Mail*.

THE current price-list of Messrs. Maggs Bros., 34 and 35, Conduit street, W., contains particulars of many handsomely-bound library sets of standard authors, memoirs, biographies, and other interesting works.

MR. VICTOR E. MARSDEN, M.A., of London, correspondent of the *Morning Post* at Petrograd, 1911 to 1918, and before that of the *Standard*, left £2,187, with net personalty of £1,991.

A LARGE section of the glue and gelatine works of Cannon and Co., Lincoln, has been destroyed by fire. Stocks of glue and gelatine, valued at £30,000 were destroyed, and many hands are thrown out of employment.

A SERVICEABLE office calendar—bearing a photograph of the Old Clock Tower, Monickendam, taken by the sender, is sent us by Mr. Robert K. Burt, papermakers' agent and merchant, of 19-21, Farringdon street, E.C.4.

THE new and enlarged *System* fully maintains its place as a tip-top "Magazine of Business," each number being brimfull of ideas for overcoming difficulties, improving business organisation, increasing output and extending sales.

IT is rumoured that certain owners of London daily papers are proposing arrangements by which, from the early spring onwards, their journals would be carried by air and delivered for sale at the Paris kiosks at 8 o'clock every morning.

EDWARD FREDERICKS, 48, a bookbinder, of no fixed abode, was charged with breaking and entering 11A, Forest-lane, Stratford, on Christmas eve, and stealing an attaché case and other articles, valued at £5 10s., the property of Thomas Barry. He was remanded.

MANY comments have been made in the Press as to the three days' cessation of newspapers during the Christmas week-end. Baseless sensational rumours were in circulation, and the absence of printed news was keenly felt, giving the general public just a taste of what Manchester and Liverpool experienced during the recent compositors' strike.

THE *Masonic Record*, a new illustrated monthly journal devoted to the interests of

the craft, has just made its appearance, the publishers being Messrs. Thomas, Warden and Co., 324-5, High Holborn.

THE Swiss printers' strike has been settled, and the men have resumed work.

THE Press Club's Christmas party for the children of members, held on Saturday, proved a thoroughly enjoyable function.

MR. J. D. BOUCHIER, for many years *The Times* correspondent in the Balkans, died in Sofia at eight o'clock on Thursday of last week.

THE executors of the late Miss Matilda Levy have given £500 to endow a bed in perpetuity at the Lloyd Memorial (Caxton) Seaside Home, Deal, Kent.

THE *Financier*, "the oldest financial daily," has issued a useful office calendar, each sheet of which carries one month's dates in large figures, together with the whole of the rest of the year's dates in small type.

THE death occurred on Saturday, with tragic suddenness, of Mr. Christopher David Leng, one of the proprietors of the *Sheffield Daily Telegraph* and allied journals, a well-known newspaper man who took a keen and inventive interest in printing.

MESSRS. LIFFE AND SONS, LTD., have issued a handsome booklet commemorating the 25th anniversary of the *Autocar*. This souvenir contains many interesting historical notes, greetings from prominent people in the motor-ing world, and some excellent illustrations.

A TOTAL of 11,004 books were published in the United Kingdom during the year 1920, according to the *Publishers' Circular*. This is an increase of 2,382 compared with the total for 1919, and brings British publishing (so far as the number of items is concerned) almost back to the pre-war level.

LONDON's latest morning daily newspaper is the *News Summary* (published by "News Summary, Ltd.," Red Lion House, Red Lion-court, Fleet-street), a single sheet (expanded when necessary) containing a carefully-prepared synopsis of the world's happenings at home and abroad during the previous 24 hours.

"SURPRISE" INKS TRADE MARK.—We have received from the Jaenicke-Ault Co., of Newark, N.J., U.S.A., a copy of a recent decision of the Court of Appeals, District of Columbia, whereby this firm's right to the use of the name "Surprise" as applied to printing inks is established, and Messrs. the Ault and Wiborg Co.'s registration of the same name as a trade mark for printing inks is cancelled.

COSTS OF BOOK PRODUCTION.—After a twelve-years' life, the *Englishwoman* ceases publication with its January issue. An editorial note on this decision says: "We are beaten by the high and ever-increasing cost of printing, of paper and of everything else concerned with book production; we have exhausted our funds and the generosity of our friends—and the only thing left for us is to make our bow and settle up our accounts."

## FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS.**

at 58, Shoe Lane, London, E.C. 4.

Tel.: Stonhill, Fleet, London. Phone: 8407 City.

SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE  
EXTRA).

or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C.4.

THURSDAY, JANUARY 6, 1921.

# Current Topics.

## The New Year Outlook.

THOUGH it may be as true of printers as of any other section of the community that "Hope springs eternal in the human breast," yet the printing industry cannot but feel some dissatisfaction and uncertainty as it enters upon this year of grace 1921. Leaders of the trade are expressing the opinion that the price of print has now risen beyond the point which, according to the laws of economics, cannot be exceeded without serious injury to the status of the craft. And this is in keeping with the experience of printers to-day, for while the employers in the trade are finding orders and profits decreased, the employees are perturbed at the growth of unemployment, which has now reached ominous proportions. The Government's proposal to parcel out the available work, and by reducing the hours and earnings of those in full employment to absorb some of the unemployed, is not apparently being hailed with

very general approval. It would seem that the printing and allied trades, in which the nature of the work so often makes it inadvisable, where not impossible, to transfer work from one operative to another, are not likely to accept this proposal with any special avidity. The whole subject is, however, one for careful consideration, and we understand that the Joint Industrial Council of the Printing and Allied Trades at a meeting arranged for next Wednesday is to give the matter its attention, when also the important subject of unemployment insurance is to be further discussed. It is in difficult times like the present that the Joint Industrial Council should be utilised to its utmost capabilities. Certainly the best possible outcome of the year 1921 for all in the printing and allied trades will be secured only by the fullest possible realisation of the common interests and common responsibilities of employers and employed, and by the closest possible co-operation between the two.

\* \* \*

## A Paper Trade Weakness.

It is certainly one of the weaknesses of the British paper trade that it has to rely upon sources overseas for its principal raw material. The fact has long been recognised, though never with such point as in recent years. There is, apparently, no means of altering the fundamental conditions since it is not a practical proposition to grow pulpwood in this country to the extent required to feed the paper mills. British manufacturers, therefore, are thrown upon their own resources to obtain as reasonable terms as they can. It has been suggested more than once of late that our papermakers should endeavour to obtain possession of their own pulp mills abroad, or, at least, secure some option upon the pulp produced. We have already pointed out that this is a reversal of the policy hitherto pursued. Nevertheless, it is a logical one, though there are greater difficulties now in the way than there used to be. Not only are the owners of the pulp mills realising the value of their assets, but the governments of the countries where they exist are equally alive to the importance of the industry.

\* \* \*

## Norwegian Criticism.

THE announcement that the directors of the Hartlepoons Paper Mills Co., Ltd., intended to solve the problem of pulp supplies for themselves by co-operating with Norwegian manufacturers and buying pulp mills in Norway has drawn criticism from the official organ of the Norwegian Chamber of

Commerce in London, which states that plans of British world monopolies cannot appeal very strongly to the Norwegian mind. "Norwegians are glad to have the help of foreign capital to develop their industries," it is added, "but they do not want to be slaves of it; they want to keep their freedom as proprietors and leaders, and when they pay interest and instalments, foreign capital ought to be satisfied. . . . Englishmen are very welcome in Norway—more welcome than any other foreigners. But they should not talk too much to Norwegians about England getting a world control of the canning industry, and then of the pulp and paper industry. The Norwegians have put in so much hard work, both by brain and hand, to build up these industries to the pride and satisfaction of their country and themselves, that they resent the idea that all this should fall into the hands of some few foreigners, who want to conquer the world and make the native proprietors and managers only servants and dependents of a monopolistic combine."

## Personal.

THE new Principal Agent of the Unionist Party Organisation, Sir Malcolm Fraser, is the first newspaper director to be appointed to this post. He was formerly assistant editor of the *Standard*, editor of the *Evening Standard* and *St. James's Gazette*, day editor of the *Daily Express*, editor-in-chief of the *Birmingham Gazette*, *Dispatch* and allied newspapers, and was director of various newspaper companies.

MR. JOHN MARTIN, well-known as a Parliamentary journalist, and for over 40 years a member of the staff of the *Daily Telegraph*, celebrated his golden wedding on Sunday, having been married at St. George's Church, Stonehouse, Plymouth, to Miss Emma Jones, on January 2, 1871.

MR. T. H. CUNANE, the well-known representative of Messrs. A. M. Peebles and Son, Ltd., is giving a lantern lecture on paper-making, entitled "From Forest to Printing Works," before the members of the Printers' Managers and Overseers Association (Manchester Centre) on January 8th, and again before the members of the Newcastle-on-Tyne District branch of the Paper Bag Makers' Association, on January 12th.

MR. ERNEST A. PEACHEY, who passed away on Thursday last in his 60th year, was a well-known London journalist, having been engaged for nearly 20 years in the sub-editorial

department of the *Daily News*, and for the last 11 years with the *Daily Telegraph*. The funeral took place on Monday, and was attended by a number of his colleagues on the *Daily Telegraph* and of old journalistic friends on the London Press and the provinces.

A MEMORIAL service for Mr. Peachey was arranged to be held yesterday (Wednesday) in St. Bride's Church, Fleet-street, the organisers being the Press Club, the Gallery Lodge, No. 1928 (of which Mr. Peachey was secretary), and the Parliamentary Press Gallery.

AMONG the many prominent people attending the funeral on Thursday last of Mr. Thomas Catling, the late editor of *Lloyd's* were Mr. B. Marwood (representing Viscount Burnham), Mr. Frank Lloyd and Mr. Harry Lloyd (representing *Lloyd's*), Sir Alfred Robbins (president of the Board of General Purposes, representing the United Grand Lodge of Freemasons of England), Mr. George Springfield (president of the Institute of Journalists), Mr. Stewart Caine (representing the Newspaper Press Fund) and several representatives of the British International Association of Journalists, of which Mr. Catling was a past president. As was his wish, Mr. Catling was buried close to the grave of Douglas Jerrold.

MR. THOMPSON, general manager of Messrs. Hugh Stevenson and Sons, Ltd., boxmakers, etc., of London and Manchester, has completed 20 years' service with the London branch of the company.

AFTER nearly 25 years in journalism, during which time he rose from copy-boy to editor, Mr. Charles A. Barnett has resigned his position as head of the *Evening Express*, Cardiff, in order to enter an important commercial concern in the Welsh Metropolis. The occasion of his departure from the office on Friday last was marked by two presentations. From the compositors and mechanical staffs Mr. Barnett received a gold ring, while a massive silver epergne and silver hot-water jug was presented by Mr. Barnett's editorial colleagues, members of the commercial and circulation departments and the directors.

MR. ALEX. W. STEWART, of the editorial staff of the *Glasgow Herald*, who recently retired from active journalism after 40 years' service in that profession, has been presented with a number of appropriate gifts on behalf of a wide circle of friends associated with the Corporation, the Press and the commercial interests of the city of Glasgow.

AN interesting ceremony took place at the *Western Mail* office, Cardiff, on Friday, when his colleagues assembled to honour Mr. J. M. Woods, linotype operator, on his departure for Pontypridd. A presentation was made to Mr. Woods, on behalf of the employees, of an attache case.

## DIVIDENDS AND REPORTS.

**BENN BROTHERS**.—Interim dividend of five per cent.

**HUGH STEVENSON AND SONS, LTD.**—Dividend of 4½ per cent. actual (108d. per share) for the period ending December 31st on the 9 per cent. cumulative participating preference shares, payable to shareholders registered on December 24th.

**A. ARMSTRONG AND Co.**—The accounts of **A. Armstrong and Co.**, the Dublin paper merchants, show a net profit for the year to September 30th, after providing for all taxation, bad debts, etc., of £6,100, or exactly £1,000 more than for 1918-19. After adding £3,300, against £3,500, brought forward, there is an available balance of £9,400, an increase of £800. The directors have placed £700, against nil a year ago, to depreciation of plant and machinery, and, after writing £2,000, against a similar sum, off goodwill, they propose to pay a dividend and bonus, together making 7½ per cent. for the year, which compares with 5 per cent. for the previous year, and leaves a balance of £2,600 to carry forward, a reduction of £700.

## NEW COMPANIES.

**ACCOUNTANCY AND SECRETARIAL TRAINING INSTITUTE, LTD.** (Cardiff)—Capital, £1,000, in

£1 shares; to acquire the undertaking of **F. J. Alban**, relating to the preparation of students and candidates for the professions of accountant, secretary, and municipal treasurer, and the publication of text books in connection therewith. Smith, H. B. Paper-box constructions. 155,527.

## Bury Papermaking Co., Ltd.

The directors of this company, in their report issued to the shareholders state that the accounts for the year ended November 27th, after providing for excess profits duty and corporation tax, show a gross profit on the trading account of £40,266 15s. 4d. After charging that account with depreciation, etc., amounting to £11,891 19s. 2d., there is left a credit balance of £28,374 16s. 2d. To this amount must be added the balance from last year (less interim dividend of 15 per cent.) amounting to £4,298 3s. 4d., which then leaves a balance of £32,672 19s. 6d. The directors recommend the payment of a dividend of 10 per cent. per annum on the preference shares, less income tax; 15 per cent. per annum, plus a bonus of 10 per cent. for the year, on the ordinary shares, free of income tax, amounting in all to £13,097 4s., carrying the balance of £19,575 15s. 6d. to next year's account.

The chairman (Mr. James Preston) should have retired in June last (as per articles of association), but he is continuing to serve the company until the shareholders' meeting, and the confirmation of his re-election is asked.

The shareholders are also asked to confirm the re-appointment of Messrs. C. M. Merchant and Sons as auditors.

## Government Contracts.

### H. T. Stationery Office.

Contracts were placed with the following firms during November :—

PRINTING, RULING, BINDING, ETC.

**MESSRS. J. RUTHERFORD AND CO., LTD.,** Victoria Mills, Victoria-road, Holloway, N.7, are the manufacturers of the superior water-proof papers known as the Daffodil brand. Their papers and packings are held in great favour. The partners in the firm are Mr. J. Rutherford, who was with Messrs. James Spicer and Son, Ltd., for many years, as factory manager, and Mr. H. H. Myers, who for some time was the London representative of Messrs. Davies and Royle.

READING Borough police have presented Mr. H. F. Pettengell, a local journalist, with a silver cigarette case for assisting a constable during a disturbance.

## The State of Employment.

Employment during November in the printing, paper and bookbinding trades was fair on the whole, but showed a slight decline as compared with the previous month.

With letterpress printers there was some further slackening in the state of employment, and in London, although a fair amount of overtime was worked by compositors generally, some offices were reported to be on short time. In the provinces employment was not quite so good as in October, being quiet or slack at most centres. A little short time was reported.

In the lithographic printing trade there was also a slight decline on the state of employment as compared with last month, short time being occasionally reported from both London and the provinces.

Employment in the bookbinding trade was described as being good in London except in the case of machine rulers, but a number of workers were on short time. In the provinces employment was not so good as in October, and some short time was reported.

According to returns received by the *Labour Gazette*, out of 80,872 members of trade unions in the printing industry, the percentage of unemployed at the end of November was 2.9, as against 2.8 in October, and 1.0 in the previous November, the increase being 0.1 per cent. compared with the previous month and 1.9 per cent. compared with a year before. In the bookbinding section, out of a trade union membership of 14,584, the percentage of unemployed is given as 1.2 as against 1.1 in October and 1.3 in the previous November, an increase of 0.1 per cent. on the previous month, but a decrease of 0.1 per cent. on November 1919.

Returns made by employers show the number of workpeople in the printing offices concerned to be 8,750, a decrease of 0.9 per cent. as compared with October, but an increase of 1.7 per cent. as compared with November, 1919. The total wages paid amounted to £33,371, an increase of 6.8 per cent. over the previous month, and an increase of 22.3 per cent. over November, 1919. In the bookbinding trade employers returns showed 4,875 workpeople, an increase of 1.2 per cent. on October, and an increase of 14.7 per cent. on November, 1919. The total of £11,688 paid to workpeople represented an increase of 7.7 per cent. on October, and an increase of 33.6 on November, 1919.

THE business of James P. Sim and Co., manufacturing stationers and paper merchants, carried on at 48, King-street, Glasgow, by the late James Pollok Sim, and subsequent to his death, by his executrix, has been sold as at April 21st, 1920, to Mr. James Fyfe, who for many years was associated with the late James Pollok Sim. Mr. James Fyfe will continue to carry on the business under the same firm name of James P. Sim and Co. The business was originally founded in 1903.

## This Year in the Paper Trade.

Trying to read the signs of the times in regard to the paper trade was the task which Mr. Fred C. Boyce, president of the American Pulp and Paper Mill Superintendent's Association, took upon himself at a recent meeting of that organisation. Regarding the outlook for business in the paper industry during the coming year, he said "While I do not want to pose as a prophet or as the son of a prophet, there are certain underlying conditions in the paper industry which are very different from the underlying conditions prevailing in some other industries, and from these underlying conditions we perhaps may be able to draw a few conclusions that may not prove to be far from correct.

"The next year will be one of the years of reconstruction, and during that time we perhaps may see many changes in commodity prices in the different lines of industry, and possibly there may be some changes along these same lines in the paper industry, but on account of the strong underlying conditions in our industry I think we may look forward with confidence to the year 1921.

"There are no stocks of paper in the hands of the paper manufacturers and the stocks of paper in the warehouses of the jobbers are probably smaller than ever before, and on account of the extreme scarcity of paper during the past year the ultimate consumer has not been able to acquire any considerable amount of stock. I think, therefore, we are safe in saying that the stocks of paper on hand to-day, taken as a whole, are lower than any time during the past several years. If this is the case, it means that as much paper will have to be purchased from the mills next year as actually consumed, and the jobber and consumer cannot further reduce their stocks.

"On account of but few mills having been built during the past five years, not sufficient to keep up with the normal decreased demand for paper, the ability of the mills to-day to produce is not sufficient to take care of the normal requirements.

"There has been a little temporary lull in the buying movement of paper in sympathy with the slackening off of buying in other lines, but this will only mean stronger buying later on to replenish depleted stocks. My conclusion is that we may look forward to the coming year in the paper business with security and confidence."

## PATENTS FOR SALE OR LICENCE.

THE Proprietor of Letters Patent No. 3131/15 relating to "PRINTING" desires to dispose of his Patent or to grant licences to interested parties on reasonable terms with a view to the adequate working of the Patent in this country.

## New Inventions.

### Toy Books.

A toy book patented by Mr. H. J. Valentine comprises a page, loose sheet, or cover of stout material on which is printed a figure, object, or landscape complete in itself, such as the figure A, the outline B of which is cut through except at a few separate places C so that the figure, etc., can be readily detached, and pages of stiff paper depicting various accessories to the figure, etc., such as garments D, harness, or trees, which are to be cut out, folded if necessary, and fastened to the figure, etc., or to one another by tabs fitting in slits, so that the accessories may be slipped on and off

the figure, etc. A large envelope may be provided on the inside of the back cover to hold the cut out pieces. The same gentleman has also patented a children's toy book adapted to form a collapsible stage structure, which comprises a front cover *a* provided with an opening, a back cover *b* which can be held in a curved position, a stage or platform *d*, and leaves which may be detachable or fixed and are adapted to form scenic backgrounds or to be cut up to form figures, etc., for use on the stage. The back cover is coloured on the inside to represent a circus and spectators, and is held in the curved position by its free edge being slipped under a strip *c* of cardboard on the front cover, or by tongues fitted through

the front cover. The front cover is coloured and the part *d* is bent back to form the stage, a tongue *e* thereon engaging a slit *f* on the back cover, and, if required, similar slits in

the leaves forming the scenic backgrounds; or these may be applied to the portion of the back cover above the slit *f*.

### Loose-Leaf Indexes.

Mr. A. C. Hern has patented an invention that relates to a loose-leaf index, ledger, folder, etc., in which the first letter of the indexed matter is indicated by main tabs, such as the tab G, Fig. 1, in the case of a ledger, subsidiary tabs are arranged under the main tabs and marked with the vowels A, E, I, O, U as shown, the index, ledger, etc., containing, following each vowel-tapped leaf, leaves arranged in alphabetical order of the second letter of the indexed matter. These leaves are provided at their top edges with projections, preferably not extending above the

edges of the tabbed leaves, arranged in groups according to the letters of the alphabet and their relationship to the vowels with the aid of a templet. The projections to the left indicate the second letter of the word and further projections to the right may indicate the third letter on the same system. Thus a sheet with the word "Gabe" is marked with

letters A, B at the top and filed behind the leaf with the subsidiary tab A, which leaf is itself below the leaf with the main tab G. Preferably the top right-hand corner of each leaf has a numerical reference in accordance with a key to facilitate rapid filing. In a card index, Fig. 3, the main tabs and subsidiary vowel tabs are at the left of the top edges of the guide cards, and the cards on which the names are written have numbered projections separated according to the position of the consonants in the key for the numerical reference. In a modification, the vowel projections are slightly displaced with respect to one another. In the card index shown, only the first and second letters are indicated, but further projections may be provided to indicate the third letter and more space may be allotted for the second letters than for the third letters in accordance with a templet. A numerical reference may also be provided. Various forms of tabs may be used, and a tab for the fourth letter or detachable tabs indicating a further sub-division may be provided. Such detachable tabs indicating **W** and a numerical reference are shown in Fig. 14, which illustrates a folder according to the invention with second and third letter projections and a numerical reference in the top right hand corner. The positions of the

projections for the second letters are also indicated on the vowel guide cards, as shown for the letters **L, M**. The normal height of the vowel guide cards may be slightly higher than the tabs to protect these. To provide a firm tab on a folder the top edge of the back *d*, Fig. 15, has an overlapping part *b*, and this is glued at *c* to the back, the tabs being cut out of the double part. The edge of the other end of the front is turned in and glued down at *e*. Alternatively, extra pieces may be glued along the top edges or these may be stapled or sewn. Suitable fastenings may be provided. "Miscellaneous" folders may be provided to file irregular correspondence, and these are provided with a lower tab in the main tab position and a middle tab marked "miscellaneous," the ordinary second, or second and third, letter tabs and numerical references being provided, and, if required, appropriately marked interleaves. Transfer cases used with the folders are marked correspondingly to the folders. Tabs may be dispensed with and letters marked on distinctively coloured cards or folders in the proper positions, a square of the appropriate colour being marked on the vowel guide card.

## The Printing Trade's Unemployed.

### Some Considerations and Proposals in Re- spect of a Problem of Grave Urgency.

Unfortunately the conditions at present obtaining in the printing industry are such that the printer who is brimming over with optimism as to the future of his trade is hard to find, if not non-existent. One is much more likely to meet the man who tells of soaring costs, shrinking orders, and vanishing profits. The gravity of the position is brought home forcibly by the fact that in one case at least the voters' list is being taken from the printer to be produced by the typewriter and photozincography. When to reduced demand at home we have to add a great reduction of orders for export trade and the grave difficulties which the exchange anomalies place in the way of developing our export business, it is not surprising that unemployment in the printing and allied trades—though not so serious as in some other industries—is a matter that is giving cause for grave concern. The unemployment figures of the L.S.C., for instance, which are a pretty safe indication of the state of the trade, show a steady increase, the month of December bringing a rise from 564 in the first week to 691 in the last, the present figure being probably well over 700. It is satisfactory that this week's meeting of the Joint Industrial Council is giving attention to the whole subject of unemployment and unemployment insurance. Much interest will attach to any concrete proposals that may be forthcoming.

#### The L.S.C. Proposals.

The London Society of Compositors has, by special delegate meeting, been discussing in earnest, indeed in somewhat stormy fashion, the subject of remedies for unemployment. As a consequence the members of the Society are being balloted in respect of several proposals that have been made. At the time of

writing, the result of the ballot is not known. The questions submitted, to be answered "Yes" or "No," are these: 1.—Are you in favour of a Levy of 1s. 6d. per week for the creation of a Special Unemployment Benefit Fund? 2.—Are you in favour of an Overtime Tax of 3d. per hour? 3.—Are you in favour of approaching the Master Printers' Association for the Suspension of Apprenticeship for a period, and for the revision of the present proportion of apprentices to journeymen? 4.—Are you in favour of approaching the Master Printers' Association with a view to further reducing Overtime below the new limit of 32 hours per calendar month?

In respect of the first two proposals, which are strongly recommended by the L.S.C. Committee, it is expected that the vote will be overwhelmingly in favour.

In sending out the ballot papers, the Committee remark, in regard to the question of the reduction of apprentices, that they "are in full agreement with the proposal to approach the Master Printers' Association on the apprenticeship question." "In view of the present condition of the trade," they add, "we are justified in expecting whatever relief can be afforded by a reduction in the proportion of apprentices to journeymen, or by a temporary suspension of the recognition of new apprentices."

In the matter of a proposed further reduction of overtime, there was a division of opinion between the delegates and the Committee. In view of the fact that an agreement has lately been signed—coming into operation this month—for a reduction of the overtime limit from 40 to 32 hours per calendar month, the Committee were of the opinion that it was inadvisable to re-open the question with the Master Printers' Association. However,

the delegate meeting did not share that view, the proposition for approaching the employers for a further reduction of the overtime limit being carried by a large majority. The members are accordingly asked to decide the issue for themselves.

### A Printing Trades' Alliance Suggestion.

Some people may this week have met with a sensational rumour to the effect that the Printing Trades' Alliance were proposing that printing trade employees should now agree to a 25 per cent. cut in wages. As it is but a few weeks since Alliance members were, after an arbitration, awarded a 7s. increase of wages, a proposal of reduction coming so soon afterwards would look rather like a vote of censure on the arbitrator. Enquiry at the P.T.A. headquarters, however, elicits the information that that is not a fair statement of the facts. We understand that the proposal in question is meant to refer to the whole of industry, not to the printing trade separately. The suggestion as worded in a resolution to be proposed by Mr. G. Poulton (representing the employers' side of the Alliance) at a general meeting of the society this week reads as follows: "That this general meeting of the Printing Trades Alliance believes that the time has now arrived when, in the interests of the industrial community, the workers should agree to a 25 per cent. decrease in wages." Although this wording does not make the matter very clear, we understand that the idea behind the resolution is that if the workers, not only in the printing industry, but in all industries, agreed to a simultaneous 25 per cent. reduction in wages, the result would be a fall in the general cost of living which would compensate the wage-earners to some extent by making the remaining wages worth more, and in our own industry would, by reducing cost of print, encourage trade, both home and export, and so would reduce unemployment and make for the increased prosperity of the industry, to the ultimate benefit of the workers. Apparently it is not proposed that wages should be reduced while the cost of living remains what it is, but it is suggested that if employers and employed in every industry could get together with a view to doing their utmost to reduce their own particular industry's contribution to the general high cost of living, something could be done to reduce unemployment and improve trade all round.

Certainly the co-operation of employer and employed in an effort to reduce costs is a thing most earnestly to be desired. But the resolution cited above would hardly seem to be within the realm of practical politics unless the question of guarantees and compensations were first dealt with thoroughly and satisfactorily.

### Government's Short-Time Scheme.

The Government's scheme of the extension of short-time working with a view to absorbing the unemployed does not seem to be meeting with much approval—at any rate from the labour side. What the printing industry

thinks of it will be better known when this week's discussion of the subject at the meeting of the J.I.C. is reported. Mr. T. E. Naylor (general secretary, London Society of Compositors), was the president at a meeting of Government industrial councils and Government joint trade councils, convened by the Treasury and held on Monday at the Ministry of Labour. The employers on the different councils—the Government in each case—were represented by officials at the various establishments, while the workers were represented by their various trade union officials. The Government proposal for short time with reduction of wages was rejected by the trade union representatives who took the view that many of the men now in work were barely getting enough to live upon, and it was impossible to accept a scheme which would automatically reduce their wages.

### Big Extent of the Problem.

Mr. A. E. Holmes (Printing and Kindred Trades Federation), approached this week on the subject, seemed to have little hope of much relief being obtained by any of the quick and simple suggested cures for unemployment. He regards the trouble as an international one, and anticipates that recovery will have to be general and gradual, and closely connected with the progressive rectification of the present chaos in international exchange. Countries whose rate of exchange put them at a disadvantage to us, will exert every effort to do business with us, and our markets must feel the effect of these imports, while on the other hand it will take time for us to build up successful trade in those directions where the rates of exchange are unfavourable to us. Trade in general, and consequently the state of employment, must thus be to some extent dependent on international recovery from the disastrous effects of the world war. This, however, does not mean that nothing can be done to mitigate our own unemployment problem. Mr. Holmes remarked that he regarded with special hopefulness the progress being made with the arrangements whereby the printing industry would support its own unemployed. Although the special scheme under the Unemployment Insurance Act might not be in working order by July, he looked to see it carried through satisfactorily, and hoped that when employers and employed co-ordinated their efforts in preventing members being thrown out of work and coming "on the funds," distress from unemployment would be greatly mitigated for the printing and allied trades.

## Sale of Printing Plant.

An important and extensive sale of letterpress and lithographic machines and materials, oil engines and electrical plant took place last Thursday at H.M. Stationery Office Stores, Great Suffolk-street, S.E. Almost the whole of this machinery and plant had been in use by the British Expeditionary Force and had been returned to this country from France and thoroughly overhauled and put in order. There was a large attendance of buyers and the various items sold freely. The prices ruling were such as to allow of printers getting excellent bargains, especially in the litho machine section of the sale.

In the letterpress section a Model 5 crown "Victoria" fine art platen machine, by Rockstroh and Schneider, fitted for power, brought £160. Half-a-dozen No. 4 crown "Phoenix" platens, by Schetter and Geisecke, were sold at prices varying from £185 to £235 each, and two crown-folio "Falcon" platens, by Waite and Saville, Ltd., went for £90 and £85 respectively. A number of Cropper platens in sizes from foolscap folio to demy folio were knocked down at prices varying from £27 10s. to £90; and a lot of hand lever platen presses were bought up very cheap, some of these, a little imperfect, went for 25s. and 30s. In the Wharfedale section the following prices were realised: a double royal, by Harrild and Sons, with geared inkers, £140; a double demy "Defiance," by J. Elliott, Son and Co., £100; a double crown, by Dawson and Son, £180; a demy, by Furnival (incomplete), £60; a crown by the Bremner Machine Co., Ltd. (incomplete), £80; and a double crown stop cylinder, by Hamm, £90.

In the litho section a number of demy litho proof presses, beautifully made, with gun metal frames and tympan, went for £9 and £10 each, and a similar series of presses in foolscap size brought from £4 to £5 each. A quad demy litho proof press, by J. Ratcliffe and Sons, with plate bed, went for £40; and a quad crown litho proof press, by Mann and Co., brought £50. There was an immense number of proof presses all of which were sold at fair prices. Among the litho printing machines a quad demy flat bed, by Furnival, was sold for £55; two similar machines for £50; and one for £80. A quad crown, by Furnival, went for £120; a quad crown "Reliable," by Ratcliffe and Sons, for £80; a quad crown, by Mann and Co., fetched a similar price, and a double demy by the same makers £110. Another "Reliable" went for £70; a quad crown ditto for £100; a double demy, by Newsum, for £80; and two demys, by Furnival, for £100 and £115, respectively. An eight crown "Aluminium" rotary litho machine, by Foster, was sold for £425, and a single colour rotary photogravure machine, 28 in. wide, for £155.

A large number of electric motors of different powers were sold and were all bought up; several oil engines were also offered and

were sold at prices varying from £13 for a 4-h.p. "Jap" to £110 for a 14-h.p. "Tangye." About twenty guillotines were offered; one of these a 42-in. "Star," by Dawson and Sons, went for £200; a 33-in. self clamp, by Crossland, for £180; a 42-in., by the Bremner Machine Co., for £275; a 44-in., by Furnival, for £140; and a 26 in. by the same makers, for £50. Nearly fifty wire-stitching machines were included in the sale and were freely bid for. Other items were a double demy "Cundall" four-fold folding machine, £75; a "Gough" die press, 5 by 3-in. die, £22 10s.; a "Davis" typesetting machine, with a series of moulds, £220; a pantograph engraving machine, with work table, £10. In all nearly 700 lots were sold. The auctioneer was Mr. Robert H. Ruddock, of 71, Fleet-street, E.C.

## The Prince as a Printer.

A private visit was paid by the Prince of Wales, attended by Captain the Hon. Piers Legh and another member of his staff, on Friday afternoon to *The Times* office in Printing House-square. News of his intended visit had got abroad, and a considerable crowd waited in Queen Victoria-street and Waterlane to give him a welcoming cheer as he passed in. Mr. Walter, chairman of the directors, and a number of other directors were present to receive His Royal Highness.

The Prince was conducted over the whole of the building, and displayed special interest in the mechanical section. It was too early in the day to witness the printing of the ordinary edition of *The Times*, but after going through the composing rooms and other departments, His Royal Highness was invited to start the machine on which the trade supplement was to be printed. This, it is understood, was his first experience as a practical printer. He also witnessed the commencement of the printing of the library edition of *The Times*.

In the various departments many presentations were made to the Prince, and he renewed his acquaintance with some whom he had met during the recent campaign and on his overseas tour.

SOME 400 paperworkers have been registered for unemployment benefit at Penicuik, it is stated.

ACCORDING to a return furnished by the *Labour Gazette*, there were 29 trade unions in the paper, printing and allied trades in 1919, with a total membership at the end of the year of 192,434 (131,674 males and 60,760 females). At the end of 1918 the membership numbered 143,123 (103,564 males and 39,559 females). The percentage increase in the 1919 total over 1918 was 34.4—of males 27.1 and of females 53.6. In 1915 the total membership was 98,000 (88,000 males and 10,000 females).

# Printers' Managers and Overseers ASSOCIATION.

## PARENT ASSOCIATION.

### New Year Smoking Concert.

Meeting for the first time in 1921—at the "Old Bell," Holborn, on Tuesday of last week—the P. M. and O. A. entered upon the new year in very sociable fashion, the transaction of the month's business being followed by a jolly smoking concert in which was manifested a spirit of camaraderie which augurs well for the Association's future prosperity.

In the absence of the president, Mr. A. E. Jarvis, who is visiting Germany, the vice-president, Mr. S. M. Bateman, occupied the chair.

The minutes of the December meeting having been read and confirmed, the general secretary, Mr. E. W. Whittle brought forward some matters germane to this item of the agenda. Referring to the negotiations with the Typographical Association on the question of notice, he read a letter received from the T.A. stating that the Council of the T.A. had agreed that the members concerned should receive a month's notice—subject to P. M. and O. A. giving an assurance that in the event of a dispute their members would not undertake any productive work or assist in building up a non-union office. He said he thought this arrangement would prove of mutual advantage to the two Associations.

Mr. Whittle also told of the paying in of the money collected for the P. M. and O. A. pension fund, and he read a letter from the Printers' Pension Corporation acknowledging receipt of a donation of £200 for the year, stating that the balance would be placed to the credit of Pension No. 3, and congratulating the Association upon the progress made.

Nominations for membership being the next business, the following names were put forward:—Mr. J. Cameron Gracie (*The Times*, Printing House-square, overseer—intaglio machine section); Mr. W. A. Grasby (*The Times*, overseer—jobbing machine section); Mr. W. H. Halls (Messrs. Speaight and Sons, Ltd., assistant manager).

These gentlemen were unanimously elected, and, being present, were all personally welcomed by the chairman, who handed to each his certificate of membership.

### Conference and United Gathering, 1921.

The chairman next read the following recommendation by the council: "That the 1921 Conference and United Gathering be held in London on Saturday, May 7th, 1921."

Mr. Whittle explained that it had been the wish of provincial members that if the Printing Exhibition took place in London in 1921, the Conference and United Gathering should also be held in London. It having now been

arranged for the Printing Exhibition to be held in London, the Council had chosen May 7th as the best date. It came about the middle of the exhibition, and the intention was to carry out a programme similar to that arranged in connection with the last exhibition. He moved that the Council's recommendation be approved.

Mr. E. H. Berryman seconded the motion.

After one or two queries had been answered, making it clear that the wishes of Liverpool had in no way been over-ridden—the invite to that city having been, at the express wish of provincial members, made conditional upon the arrangements with regard to the printing exhibition—the Council's recommendation was unanimously endorsed.

The chairman apologised for the absence of the president, mentioning that Mr. Jarvis was in Germany. He said Mr. Durston's absence that evening was due to family reasons. He also introduced to the meeting Mr. Garrett, a Manchester member present as a visitor, to whom a very hearty welcome was accorded. Mr. Garrett briefly responded, complimenting the Parent Association upon the systematic way in which he saw them conducting their business.

The meeting being thrown open for general business, Mr. Dawson referred to the illness of an old and esteemed member of the Association, Mr. J. J. Smith, and proposed the passing of a vote of sympathy, the secretary to write him a letter conveying the good wishes of the Association.

Mr. Whittle mentioned that he himself had been in frequent correspondence with Mr. Smith and that other members also had been in touch with him.

Mr. Blackwell seconded Mr. Dawson's motion, and it was unanimously agreed that a letter be written, as suggested, on behalf of the Association.

The general secretary drew attention to Rule 23, which deals with the subject of legal assistance to members, and which mentions the figure of £10 as the maximum sum ordinarily payable on behalf of the Association. Mr. Whittle suggested that, owing to the change in monetary values, this rule should be one of the first rules to be revised, and he referred to a case in which one of their members had required legal assistance and in which the costs would exceed the figure specified. He proposed that the council be given authority to exceed that figure.

Mr. Pugh said he knew the details of the case, and assured the members that there was every reason to give the council this authority.

The matter being put to the vote, the meeting was unanimous in accepting the proposal.

### The Smoking Concert.

The concert which followed the business meeting was of a varied and free-and-easy character, members joining heartily in many choruses, and showing by their applause that they thoroughly enjoyed the "turns" provided. Miss Alice Palmer was encored in the singing of several sentimental songs which she rendered with feeling. Miss Lily Davis, besides singing several more serious songs,

showed her versatility by joining with Mr. Harry Hawksbee in an uproarious coster sketch "Arriett's Rival," which was very effectively done. Mr. Hawksbee in a clever character sketch, "The Poetical Tramp," and in humorous songs, evoked loud applause. The humorous side of the programme was further sustained by Mr. Vic Ashworth, who was best appreciated in his very able inebriate sketches as "one of the boys." Miss F. Martyn accompanied at the piano, and also contributed a pianoforte solo.

At the close of the concert Mr. French proposed a hearty vote of thanks to the artists.

Mr. Burton seconded, complimenting the Entertainment Committee on having provided a concert which it was evident everyone had thoroughly enjoyed.

Mr. Hutchins having responded on behalf of the Entertainment Committee, "God Save the King," was sung, followed by "Auld Lang Syne," members joining hands and singing with great cordiality, thus closing the first meeting of 1921 in a spirit of good fellowship which strikes an excellent keynote for the year ahead.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### UNITED STATES.

A New York firm of metal merchants desire to get into touch with United Kingdom manufacturers of copper printing rollers and of metals generally, with a view to acting as their agents, on a commission basis, in the United States of America. It is understood that the firm have facilities for covering the New England and Middle Atlantic States. (Reference No. 25)

### CHINA.

An old-established British firm at Shanghai, with wide connections in China, are most anxious to obtain all material which would be of interest in an educational way, whether for liberal arts, vocational or scientific training, as they have on their lists every kind of school in China from the most elementary ones using only one to two books in English, to aero and submarine schools and mining and technical colleges. The firm have branch offices throughout China. (Reference No. 898).

### MEXICO.

The British Vice-Consul at Guadalajara, Mexico, reports that a firm in that town desire catalogues and prices from British firms dealing in stationery, fountain pens, account books, publications in Spanish, and paper of all classes. (Reference No. 853.)

### SOUTH AFRICA.

A Johannesburg business man desires to obtain agencies, for the Union and Rhodesia, for United Kingdom manufacturers of wrapping paper, etc. (Reference No. 861.)

## Technical Trade Lectures at Derby.

The third of the series of technical lectures given to printers at the Derby Technical College, took place on Friday, January 7th, when an address was given on the "Possibilities of Lithography," by Mr. J. H. Burton, lithographic instructor, St. Bride, London. Mr. Burton traced the development of the craft from its birth until the present day. He touched upon the degeneration of the art, the training of the apprentice, how he was trained, how he is trained, and how he will have to be trained, if the lithographers of this country are to hold their own with other competitors. The lecturer dealt fully with the possibilities of lithography and the application of photography to the need of the lithographer, also with the advantages of offset printing.

There was an excellent array of lithographs on show dating from early periods to some fine examples produced in this country by the latest methods.

After a number of questions had been answered, Mr. J. W. Evans, litho manager of Messrs. Bemrose and Sons, Ltd., proposed a vote of thanks to the lecturer for his interesting and instructive lecture. Mr. Chas. H. Evans, general manager of Messrs. Bemrose and Sons, Ltd., seconded the vote of thanks and expressed the hope that they would have Mr. Burton with them again at some other date. Mr. W. Corker admirably filled the position of chairman.

## German Paper Regulations.

The following items may at present be imported into Germany without licence:—Waste paper (paper, written on or printed); paper clippings (waste from the manufacture of paper); paper, pasteboard and pasteboard wares, only fit for re-pulping. Books in all languages, including prayer books, printed or written, with or without pictures of any kind printed, attached, or inserted therein; books with raised characters for the blind—all these bound or not; newspapers and periodicals.

No export licence is required on the exportation from Germany of the following:—Paper caps and strips for igniting; book-binders' cloth, smooth or pressed; tracing cloth; wall hangings, lincrusta, and the like, of linoleum or similar materials; printed articles for business purposes intended for distribution among the *clientele* of a German business for purposes of information or advertisement; postage stamps, used and unused; daily newspapers; periodicals exported through the medium of the publishers' despatch offices; paintings on tissues of vegetable textile materials, on wood, common metals, or alloys thereof, paper or stone; drawings, even if bound or mounted on paper, board, tissues or the like.

## From Forest to Printing Works.

**P. N. and O. A. Lecture at Manchester.**

On Saturday last, at the Old Swan Restaurant, Manchester, Mr. Thos. Rignall, the president, had the support of a good company of members.

After the passing of the minutes, it was reported that Mr. A. Hellewell had slipped and broken his leg. The secretary was requested to write a letter of sympathy.

Mr. Fred Seeley having resigned from the Technical Committee, the vice-president, Mr. F. E. Robinson, was elected to the vacancy.

The arrangements for the annual dinner are promising to be on the lines of pre-war days, one feature being that all musical items will be supplied by the members.

The secretary reminded the members of the aims of the London president (Mr. Jarvis) in regard to the Printers' Pension Corporation, and hoped that there would be a good response.

The present meeting-house accommodation not being convenient on all occasions, the two following recommendations were discussed: (a) "In order that we may secure better accommodation for our meetings, each member of the Centre pay a levy of two shillings per quarter, commencing with the first quarter." (b) That the annual general meeting and the annual dinner be held at some other place, and, if necessary, a levy be called on all members to meet the increased cost."

Messrs. Jas. E. Mayo and Edward McVay introduced the recommendations, and, after discussion, it was resolved, "That recommendation (a) be altered from 'two shillings' to 'one shilling,' and that it be balloted upon by all members."

### Mr. Cunane's Lecture.

Business being over, Mr. T. H. Cunane delivered a lecture entitled "From Forest to Printing Works." The lecturer first illustrated and described the distinguishing characteristics of the various fibres from which pulp is produced, and the different methods of production. Flax fibres were used chiefly for ledger papers. Esparto fibres were shown to be the printer's best friend from the pressman's standpoint, and traces of them could easily be found in papers owing to the peculiar "teeth" fibres that were not come across in any other papermaking material. Esparto came from four countries, the best being obtained from Spain. Owing to transport difficulties in the French areas, this particular class was very slow in getting to England. It was hoped that improved organisation would very soon allow greater imports to reach these shores. Chemical wood was first used in 1875, and the three processes of reducing wood for paper-making purposes were known as soda, sulphite and sulphate. Trees of white pine, fir, aspen, spruce and poplar were most in demand, the fibres of the last-named being nearest to those of esparto. The pulp for

newspapers was chiefly obtained from the pine trees. For the manufacture of blotting papers the utility of wood had no comparison with that of cotton. It was explained that jute fibres had a strong affinity for dyes, and the colour mixer had to be careful when dealing with these fibres, otherwise he was liable to obtain a mottled paper instead of the kind he required. The Japanese mulberry fibres were the strongest of all the papermaking family of fibres. Owing to its great cost, they were not in the commercial market.

### The Forests Depleted.

Having explained the various fibres, the members were conveyed pictorially to the virgin forests of several countries, one in particular being that of Newfoundland. Logging camps were first built, and then the foresters selected the trees which had the fewest branches and were most upright in their growth. They were cut down, marked for the various pulp mills, and were then hauled by several devices to the water's edge. When they had to cross great lakes they were rafted together by chains, whilst in swift rivers they were rolled into the waters.

Having arrived at the mill, the next process was the cutting into lengths of about two feet, the stripping of the bark, the chipping, grinding, beating, screening, drying and rolling necessary in the production of mechanical and sulphite pulp, and the packing for export. The making of chemical pulp, the treatment of esparto, straw, rags, etc.; the treating, washing, bleaching and many other processes were shown in succession and clearly described.

### Papermaking.

The pulp was then followed to the paper-making machine, where straining, drying, calendering, coating, reeling, cutting and other operations up to the finished article were completed. All these necessary processes, after being carried on in a methodical manner produced food for large newspaper machines, which simply ate up the paper at one end and deposited it at the other end in *Times*, *Mails*, *Dispatches* and *Couriers* at the amazing rate of 60,000 copies per machine per hour, so that the ruler on his throne, the laird, the squire, the university scholar, the financier, the business man and artisan could each have the daily opportunity of knowing how the inhabitants of the globe are moving and having their being.

It must be admitted that the lecturer has a thorough knowledge of his subject from a practical standpoint.

Messrs. Thos. Rignall, Chas. N. Knowles, A. Gavin, E. Murphy, A. Young and Jas. Worthington asked many questions and received satisfactory answers.

Replying to a vote of thanks, Mr. Cunane agreed to come again at a later date and lecture on colour mixing, sizing and coating of papers.

WEE MAC.

THE annual conference of the North-western Group of the T.A. is to be held at Blackpool this spring.

## Trade Notes.

THE first "annual" dinner and concert of the London Press Branch of the Electrical Trades Union was held at Anderton's Hotel on Monday.

THE premises of Messrs. J. and G. Allan, printers and stationers, Westgate-road, Newcastle, were the scene of a serious fire on Friday morning.

AS FROM the issue of January 15th, the price of the *Autocar* will be reduced to 4d., the quality and quantity of the reading matter being retained.

THE first week in January saw another new newspaper launched in Paris—*Le Peuple*, official organ of the C.G.T. (Confédération Générale du Travail).

IT is reported that 10,000 persons followed the hearse at the imposing funeral at Sofia, Bulgaria, of Mr. James David Bouchier, for 33 years Balkan correspondent of *The Times*.

THE death took place on the 4th inst. of Mr. John Macaulay, one of the proprietors of the *Greenock Telegraph*, which claims to be the first evening paper published in the United Kingdom.

THE death took place at Newport, Isle of Wight, on Friday, of Mr. Thomas Lee, the oldest journalist in the Isle of Wight, who was editor of the *Isle of Wight County Press* for more than twenty-five years.

THE circulation managers of the London Sunday newspapers met at dinner on Monday the 10th inst. at Simpson's, in the Strand, under the chairmanship of Mr. J. H. Parham, manager of the *Daily Chronicle* and *Lloyd's News*.

By his will, Sam Radges, publisher, of Topeka, Kansas, directed that a certain newspaper was to be left daily on his grave for the next twenty years. He paid the whole subscription in advance, and gave his vault in the cemetery as the address.

THE executive council of the T.A. are putting Rule 44 into force regarding overseers and disputes. The ruling is that an overseer shall give and receive a month's notice and a manager three months' instead of the usual fortnight given and received by the journeyman.

AT the invitation of the proprietors of the *Newcastle Chronicle*, the editorial and commercial staffs of the associated newspapers of the firm, together with the editorial staffs of other of the local newspapers, were entertained to a dance and whist drive on Saturday night at the Banqueting Hall, Jesmond Dene.

CHARGED at Clerkenwell on Saturday with being concerned together in making forged banknotes, and having in their possession material for making them, Frederick Ford, 43, a King's Cross hotel proprietor; Morde Samuel Levy, a Camden-road merchant; and Hyman Kurasch, a Gray's-inn-road commission agent, were remanded.

THE late Mr. Edwin Sawyer, of Salford, fancy box manufacturer, left £11,422.

THE late Mr. William Dedrick, of Blackheath-park, S.E., and The Paper Mills, Snodland, Kent, paper manufacturer, left £46,768.

MR. BARRON, of Newcastle, has been elected as machinemens' representative on the T.A. executive council in place of Mr. T. Roberts (Liverpool), now an organiser.

MESSRS. HEWITT BROS., printers' engineers, of Field-street, King's Cross-road, London, W.C.1, send us a useful office calendar, printed in two colours, with tear-off leaves each bearing a month's dates.

THE annual general meeting of the Electrotypers and Stereotypers Managers and Overseers Association will be held on the 18th inst. at St. Bride Institute, when the executive are hoping to see a large representation of the members present.

AMONG the recent advertising novelties sent to us we have received an artistic calendar, together with a handy and useful note book and penknife from Messrs. John Bradley, papermakers' agent and merchant, 37, Queen Victoria-street, London, E.C.4.

A FURTHER remand was ordered on Friday at the London Mansion House in the case of Simon Isaacs (27), a printer, of Fieldgate-mansions, Romford, charged with maliciously setting fire to a quantity of paper in the premises of Shurek and Co., Arthur-street, E.C.

THE Executive Committee of the Scottish Typographical Association are proposing to institute a system of continuous unemployment pay at the rate of £2 per week. To that end they suggest for a period of six months an additional levy of 1s. 4d. a week upon all members who are employed.

THE new edition of the "Literary Year Book for 1921" has just been issued by its new proprietor and editor, Mr. Mark Meredith, from the "Year Book" Offices, 67, Dale-street, Liverpool. It contains the usual directory of authors and artists, classified lists of periodicals, publishers, etc., and a number of other features.

THE London Master Printers' Association has arranged a members' luncheon to take place on Tuesday, January 18th, at the Connaught Rooms, when Mr. Pick, of the Underground Electric Railways and the Design and Industries Association, will deliver an address on "The Connection of Printing with the Objects of the Design and Industries Association."

WE have received from Messrs. Hill, Siffken and Co., Ltd., Grafton Works, North-road, Holloway, N.7, with their compliments, a very useful and strongly-made blotter. Measuring 11½ by 17½ in., the blotter is enhanced in serviceableness by the inclusion on each sheet of blotting in clear red letters of the months of year. The firm's activities, too, are plainly depicted so as to be of easy reference.

FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,  
at 58, Shoe Lane, London, E.C. 4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

**SUBSCRIPTION:** Per Annum, 8s. 8d. (POSTAGE EXTRA).

**Charges for Trade Advertisements:**  
(Full page 8 by 5 1/4 ins.)

Whole Page ...	£4 10 0			s. d.
Half Page ...	2 10 0	One-eighth Page	17	6
Third Page ...	1 17 6	One-third Column	22	6
Quarter Page ...	1 10 0	One inch in Column	9	0

An Extra Charge for Cover and Special Positions.  
Discounts according to Number of Insertions.  
Representatives throughout the United Kingdom and also in Australia, India, South Africa, United States Canada, etc.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—**STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C. 4**  
Copies may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., news-agents, 11, St. Bride-street, E.C. 4.

THURSDAY, JANUARY 13, 1921.

## Current Topics.

### L.S.C. Unemployment Ballot Result.

As we go to press we receive the result of the L.S.C. ballot on the unemployment proposals set out on page 29. For the 1s. 6d. proposal there were 7,340 in favour, 3,082 against, majority 4,258. The overtime tax of 3d. per hour received 8,076 votes, 2,288 being cast against, majority 5,788. For the suggested temporary suspension of apprenticeship there voted 9,518, and against 841, majority 8,677. The voting in favour of reducing overtime was 8,100, against 2,246, majority 5,854. There are thus substantial majorities for all the proposals.

\* \* \*

### The South-Western Wages Dispute.

THE difficulty at Plymouth, with regard to the non-payment of the recent 5s. advance in wages, has now, we understand, been satisfactorily overcome. There occurred, as intimated in these pages, some misunderstanding

between certain employers of the district and their workpeople, and the new rates specified in the agreement of November were not paid. The dispute became serious, an offer by the employers of a 3s. 6d. increase being rejected by the men, and notices being tendered to enforce the demand for the 5s. At this point it was suggested that the dispute be referred to a conciliation committee of the Joint Industrial Council. This was agreed to; panels were accordingly selected by each side, and the conciliation committee, which met on Thursday last, was able to reach a decision that the full rate specified in the national agreement should be paid. The decision was accepted by the employers concerned, and the notices were immediately withdrawn. This settlement gives hope that a like course may be possible in the other parts of the south-western area similarly affected.

\* \* \*

### Destiny Assured.

We are sufficiently far removed from the war to enable us to take stock of the professions of better industrial relations which were made at the time. And although there might have been doubts as to whether these were in all cases honestly made, it is being demonstrated now, we believe, that they are being fulfilled in a remarkable degree. Adversity shows us our friends; and in these days of depression the workpeople in the printing trade, as doubtless in others, are finding that their employers are standing by their protestations of friendliness. It is a splendid tribute to the honesty of purpose on the part of the captains of British industry. Nor are the employees wanting in this respect. In the paper mills, at all events, they have exhibited a reasonableness which is commendable; and if both sides continue to pull together the destiny of papermaking in this country is assured.

\* \* \*

### Printers and Depreciated Paper.

PRINTERS' stocks of paper are running down to a very low ebb, a fact equally as pleasing to the printer as to the mill or merchant. The anxiety of the printer whose stock was mainly constituted by paper purchased at a much higher figure than its ultimate value can be well imagined. In most cases, it is probable that direct loss on usage occurred only in cases of orders secured by keen quotations. On all unestimated orders, which may be taken to constitute the bulk of any business every printer has attempted, and very rarely failed, to cover his costs completely. In the case of one large printer, the plan adopted is to use up the stock at its actual original cost

in every possible instance, but in the event of keen competition and low-priced orders to buy fresh stock at to-day's price for those particular jobs. The question to consider is how long it would take to work off old stocks by this method, and whether in the end the more economical plan would be to cut losses and get a quick deliverance from the remains of the high price period. Everything, of course, depends upon the amount of old stock and the class of trade.

#### **A German Paper Offer.**

A LARGE batch of samples of paper (chiefly envelopes and stationery) came to hand from a Berlin house. From the paper point of view, the chief item of interest was a cream-wave writing paper, good white quality, which worked out at 7d. per lb. at Berlin. Extra charges for packing, freightage and State fee would bring the price to about 7½d. per lb. The conditions of payment were "cash with order," a stipulation calculated to negative any inducement there might be in the price. From English sources Swedish M.G. kraft is offered at £57 per ton, M.G. sulphite at £60 to £70 per ton, extra fine greaseproof at 8½d. per lb., white bank (English make) at 9½d. per lb., tinted E.S. papers at 9d. lb., and white fine printings at 7½d. lb.

## Scottish Newspaper Wages.

AT a meeting of the executive committee of the Scottish Weekly Newspaper Proprietors' Association, held in Edinburgh on Saturday, it was unanimously decided that, in view of the depressed condition of the printing industry, the association recommend immediate consideration be given to the advisability of intimating a reduction in wages to the extent of 15 per cent.

AT a very pleasant "house-warming" on Tuesday evening Mr. G. A. Isaacs, Mayor of Southwark, and secretary N.S.O.P.A., performed the opening ceremony at the inauguration of Messrs. Burrup, Mathieson and Sprague's employees' institute at 43, Nelson-square, Blackfriars. Mr. T. E. Naylor and other trade union leaders took part in the speech-making, and Mr. Mathieson, who was present, received many congratulations upon this new step in welfare work. A report will appear in next week's issue.

MR. FRED BERRY, C.C., managing director Messrs. Thomson Bros., Ltd., 49, Knight-riders-street, E.C.4, received a warm welcome in trade circles this week on resuming his business activities after several weeks indisposition.

## Personal.

COL. SIR WM. DUPREE, J.P., D.L., whose name figured in the New Year Honours List as the recipient of a baronetcy, is distinguished for his work on behalf of industrial harmony. It is now known that in December, 1918, in furtherance of this good end, he made a donation of £20,000 to The Industrial League.

MR. J. CROWLE-SMITH, J.P., of Messrs. Hazell, Watson and Viney, is the subject of a biographical article in the February number of the *Magazine of the Wesleyan Methodist Church* under the heading, "A Leading London Methodist." The article is illustrated with a full-page photograph of Mr. J. Crowle-Smith and Mrs. Crowle-Smith and a smaller photograph showing Mr. J. Crowle-Smith, together with his two sons, Mr. W. H. Crowle-Smith and Rev. J. Crowle-Smith.

MR. CECIL CLAY (Richard Clay and Sons) presided at a successful propaganda meeting held on Tuesday evening at the "White Swan" Hotel, Crystal Palace, under the auspices of the Association of Master Printers of South-East London.

MR. J. W. CARLEY spoke on the necessity for organisation; Mr. A. Williamson opened a discussion on costing, and Mr. A. Langley impressed upon the meeting a few home truths. An extended report will appear in our next issue.

THE lecture on Charles Dickens, notified for the 14th inst. at St. Bride's, to be given by Mr. T. W. McAra, J.P., has had to be postponed until Friday, January 21st.

MR. J. E. WOOLACOTT, the well-known London journalist, has been appointed to the editorship of the *Pioneer*, the great Allahabad journal.

MR. HAMILTON EDWARDS and Mr. Martin Fitzgerald, the two directors of the *Freeman's Journal*, and Mr. Hooper, the editor of that newspaper, were released on Thursday night. The release, which is on medical grounds, is unconditional.

THE Early English Text Society has appointed Humphrey Milford, Oxford University Press, to be the sole publisher for the society as from the beginning of this year.

THE printing, bookbinding and stationery business of Mr. W. E. Clegg, of 30, Market-place, Oldham, has been disposed of to Mr. John Albinson, who is continuing the business under the name of "John Albinson, Successor to W. E. Clegg."

**Société de Pâtes de Pailles du Tarn-et-Garonne.**—Paper pulp, by soda processes, employing carbonate, sulphate or other soda salts, etc. Capital, 1,700,000 francs; 2, Rue Récamier, Paris.

## Opening for Fibre Boxes.

Mr. F. P. Scharsmidt, Canadian Trade Commissioner to India and Ceylon, says there is a pressing need in India for paper and fibre boxes, and at the present time Japan enjoys almost a monopoly. Prices of boxes have increased from 300 to 400 per cent. Owing to these conditions above described in connection with tea and rubber boxes, Mr. Scharsmidt can see no reason why the introduction of wood fibre boxes into India would not prove successful. Manufacturers contemplating the introduction of fibre products into India for the tea packers must bear in mind that the same must be odourless, but this does not apply to rubber containers.

## Electrotypers and Stereotypers

### AUXILIARY.

#### Successful Bohemian Concert on Behalf of the Printers' Pension Corporation.

A successful concert was held at Anderton's Hotel, Fleet-street, E.C.4, on the 4th inst., in connection with the Printers' Pension Corporation, the chair being occupied by Mr. T. H. Middleton, assistant general secretary of the National Society of Electrotypers and Stereotypers. A most enjoyable evening's entertainment was provided under the guidance of the musical director, Mr. W. E. Condry. During the evening the company were favoured by the special appearance of Miss Marie Dainton, Miss Rita Le Bosse and Mr. George Bolton (by kind permission of Messrs. Maskelyne's, Ltd.), who gave their services for the benefit of the charity. During the evening Mr. John Fry (Fry's Metal Foundry) presented a medal to each member of the winning team in connection with the recent football match between the Fryotype Company and the rest of the trade; the proceeds of which benefited the Fryotype Pension and the Electrotypers and Stereotypers' Auxiliary. Mr. Fry expressed his pleasure in presenting the medals for this form of sport, as it tended to create a better spirit amongst men and considerably helped trade charities. He mentioned that the handsome silver cup presented by the Electro and Stereo Managers' and Overseers' Association was on view, and although his team was unsuccessful for the first year he hoped to be the guardian of the cup during 1921-22.

Mr. W. C. Warren, general secretary of the National Society, proposed the toast of "The Chairman." It gave him more than the usual pleasure to see his close colleague occupying the chair for the first time in connection with the Auxiliary. He outlined the volume of work connected with the Auxiliary and its liabilities, and appealed as recommending subscriber on behalf of Mr. Charles Evans, a very old member of our trade, for their support at the March elections. It was his pleasing duty to announce that the result of the chairman's efforts was a total of £152 17s. 6d. to the funds. The announcement was well received by those present, who recorded their appreciation with musical honours.

The chairman in responding to the toast thanked those present for the appreciation they had shown. He warmly thanked all friends, both present and absent, who had supported his appeal. He expressed a keen desire that in the near future he would witness a full day's all-round sport amongst members, to give as far as possible all sides of sport a chance to show their merits; this he felt would tend to foster a true spirit of comradeship. In conclusion, he wished long life, happiness and success to all recipients in con-

nection with the Printers' Pension Fund during 1921.

On behalf of those present he warmly thanked Miss Marie Dainton for the services she had so kindly given, and also the other artistes and the musical director for the splendid entertainment they had provided during the evening. The chairman's remarks were received with acclamation.

Mr. A. Chadwell, president of the Electrotypers' and Stereotypers' Auxiliary, heartily thanked Mr. Fry for not only providing the medals, but in being there in person to present them, and for the true sportsmanship he had displayed throughout the contest. He wished him better luck during the coming season. The entertainment closed with the singing of "Auld Lang Syne."

## 50 Tons of Paper.

#### Ex-Government Official Charged with Forgery.

At the Mansion House recently, before the Lord Mayor, Eric Arthur Waldron, 25, described as a journalist, was charged on remand with forging and uttering an order for the delivery of 50 tons of paper, purporting to be an order from the Ministry of Labour.

Sir Richard Muir, for the Director of Public Prosecutions, said the defendant, who is a married man, had been employed in the Publicity department of the Ministry of Labour. It was alleged that in the spring of 1920, some months after he had left the service of the Ministry, the defendant forged an order from the Ministry for 50 tons of paper at a price of £3,266, and then forged an agreement between himself and the French Paper Stock Co. for the supply of the paper for £2,916, which would leave him a profit of £350. Cheques amounting to £30 were afterwards drawn in favour of the defendant by a solicitor, and had been paid. Correspondence between this solicitor and the Ministry of Labour led to the defendant's arrest. He was discovered in Bethlehem Hospital.

The police stated that the defendant was admitted to Bethlehem Hospital last October, suffering, according to a medical man, from anxiety and neurosis. Though it was considered advisable for him to enter the hospital he had never been certified.

The defendant was remanded in custody.

*Braintree and Bocking Advertiser*, which has been published weekly at Braintree, Essex, for more than 60 years, has ceased publication.

At a Dewsbury laundry, a mill hand's smock and blue overalls were brought to be washed in the usual way. After being boiled with other articles, it was discovered that the smock and overalls were reduced to shreds. On examination it was discovered that both weft and warp of the garments were composed of paper.

## British Paper Abroad.

### A Sample Exhibition Which May Help Manufacturers.

The Foreign Samples Exhibition has now taken up permanent headquarters at 7-11, Old Bailey, and already the Department of Overseas Trade have on view a collection of 100,000 samples collected from all over the world which show the British manufacturer what his competitors are doing and what the markets abroad require. As time advances and the competition for the markets of the world becomes more acute, it is the intention of the Department to add to the collection so as to help keep the British manufacturer abreast of his foreign competitor.

The samples have all been catalogued and labelled with such particulars as countries of origin, description, wholesale and retail selling price, and many other valuable details. The display of these samples also offers an advantage to manufacturers in that they are able to detect foreign infringements of their trade marks and registered designs. By means of the information supplied they have taken steps to protect their rights in a particular country and have put a stop to illegal competition.

Although the number of articles on exhibition that more particularly relate to paper and stationery goods are not very numerous, there are several specimens that are worthy of note. Most of the varieties shown in the section referred to are of pre-war manufacture. Periodical inspection of the samples on exhibition by representatives of our British paper and stationery houses should prove a welcome addition to the ordinary channels through which they gain intelligence of the conditions prevailing abroad.

The chief samples on exhibition among the collection relating to paper and stationery are:—A comprehensive range of end-papers of German origin which were particularly favoured in the South American markets; German "news" and writing paper, selling in the Swiss market; post cards and oleographs of German origin that had a footing in the Spanish market; a miscellaneous collection of Italian paper of recent date; specimens of Japanese wood pulp boards and millboards, samples of Japanese papers, letter, wrapping and manilla from British Colonies; samples of Dutch "news" paper, greaseproofs, blue, straw and white packing papers, and American stationery goods for the Canadian markets.

UNDER the Bankruptcy Act receiving orders have been granted in respect of A. E. Turton, 7, Grosvenor-terrace, Otley, Yorks, printer's roller caster (January 6th), and of Abraham Collinge, Albert Collinge, and Edith Collinge, 300-302, Stockport-road, Manchester, bookbinders (January 7th).

### Government Printing Costs.

SIR,—The description of the publication, "A Muster Roll of the Royal Naval Air Service, etc.," in your article on this subject on page 673 of the December 30th issue bears some analogy to that of the Royal Air Force List (printed by us from its inception until December, 1920), and might be taken by the uninformed to refer to that publication.

We shall be glad if you will publish this, our disclaimer, of any connection with the work mentioned before the Committee of Public Accounts, and referred to in their report published as "White Paper" number 231.

Yours faithfully,

J. J. KELIHER AND CO., LTD.  
D. OXFORD, Secretary.

11, Marshalsea road,  
London, S.E.1, January 7th.

## New British Patents.

### Applications.

Evans, A. B. Sheet-feeding mechanism for printing presses 36,413.  
Moore, H. B. Postal envelopes, etc. 36,315.  
Perkins, A. Envelopes. 36,446.  
Sheridan, F. Duplex inking combination for lithographic, etc., processes. 36,422.

### Specifications Published.

1919.

Ranbach, B. Apparatus for making cardboard boxes. 155,684.

## Books on the Great War.

The collection of books, including the valuable pamphlets on the war, made by Mr. F. W. T. Lange, of St. Bride Institute, in conjunction with Mr. George Young, of the Polyglot Club, has been purchased by a public library in California through their agents, Messrs. Stevens and Brown.

Mr. Lange, who was also compiler with Mr. W. T. Berry of the work entitled "Books on the Great War," states that he is unable to continue the publication of the bibliography owing to insufficient financial support, which has resulted in a loss on the undertaking.

MR. Y. YAMAKAWA has succeeded Mr. Midor-Komatsu as editor of the Japanese section of the *Trans-Pacific*, that excellent monthly magazine of Eastern trade.

## Paper Bag and Box Wages.

Wage alterations in the paper bag making and paper box making trades took place in November, and are set forth in the *Labour Gazette*.

### Bag-Making.

In regard to bag making, the changes taking effect in Great Britain from November 15th are as follows:—

#### MALES.

**Machine Tacklers.**—New scale of minimum rates fixed, under Trade Boards Acts, resulting in increases of  $1\frac{1}{2}$ d. to  $2\frac{1}{2}$ d. per hour. Minimum rates after change: 18 years,  $11\frac{1}{2}$ d., increasing to  $1s. 4\frac{1}{2}$ d. at 21 years and to  $1s. 8\frac{1}{2}$ d. at 23 years and over; for those entering the trade at 21 years and over, the rates to be lower than scale for second and third year, increasing to full minimum rate of  $1s. 8\frac{1}{2}$ d. after three years' service.

**Paper Bag Cutters.**—Net scale of minimum rates fixed, under Trade Boards Acts, resulting in increases of  $1\frac{1}{2}$ d. to  $2\frac{1}{2}$ d. per hour. Minimum rates after change: 18 years,  $10d.$ , increasing to  $1s. 4\frac{1}{2}$ d. at 21 years and to  $1s. 6\frac{1}{2}$ d. at 23 years and over; for those entering the trade at 21 years and over, the rates to be lower than scale for second and third year, increasing to full minimum rate of  $1s. 6\frac{1}{2}$ d. after three years' service.

**Hydraulic Pressers, Slitters, Stock-keepers, Packers and Despatchers** (21 years of age and over).—Increase, under Trade Boards Acts, of  $2\frac{1}{2}$ d. per hour in the minimum rates. Minimum rates after change: First year of service,  $1s. 4\frac{1}{2}$ d.; second year,  $1s. 4\frac{1}{2}$ d.; third year,  $1s. 5d.$ ; fourth year,  $1s. 5\frac{1}{2}$ d.

**Other Workers (except learners).**—Increase, under Trade Boards Acts, of  $2\frac{1}{2}$ d. per hour in the minimum rate ( $1s. 1\frac{3}{4}$ d. to  $1s. 4\frac{1}{4}$ d.).

**Learners.**—New scale of minimum rates fixed, under Trade Boards Acts, resulting in increases of  $\frac{3}{4}$ d. to  $2\frac{1}{2}$ d. per hour. Minimum rates after change: Under 15 years,  $4\frac{1}{2}$ d.; 15 to 16 years,  $4\frac{3}{4}$ d., and increasing with each year of age to  $9\frac{1}{2}$ d. at 18 to 19 years, and to  $1s. 2\frac{1}{2}$ d. at 20 to 21 years.

#### FEMALES.

**Workers (including home worker) other than learners.**—Increase, under Trade Boards Acts, of  $1\frac{1}{2}$ d. per hour in minimum time rate ( $8d.$  to  $9\frac{1}{2}$ d.) and piecework basis time rate ( $8\frac{1}{2}$ d. to  $9\frac{3}{4}$ d.).

**Learners.**—New scale of minimum rates fixed, under Trade Boards Acts, resulting in increases of  $\frac{1}{2}$ d. to  $1d.$  per hour. Minimum rates after change: Ranging from  $3d.$  to  $4\frac{3}{4}$ d. per hour (according to age) at date of commencing in the trade to  $8d.$  per hour after  $3\frac{1}{2}$ ,  $2\frac{1}{2}$ ,  $1\frac{1}{2}$  or  $\frac{3}{4}$  years' service.

### Paper Box-Making.

The changes in the paper box-making trade (Great Britain) came into effect as under:—

November 15th.—Males 18 years of age and over, viz., machine minders, die makers, form setters, cutters (including shears and guillo-

tine), and head stock-keepers. Scale of minimum rates fixed, under Trade Boards Acts, starting at  $9\frac{1}{2}$ d. per hour at 18 and under 19 years of age and increasing with each year of age to  $1s. 2\frac{1}{2}$ d. at 21 to 22 years of age and to  $1s. 7\frac{1}{2}$ d. at 23 years and over; for those entering the trade for the first time at the age of 21 or over, the full minimum rate of  $1s. 7\frac{1}{2}$ d. per hour to be attained after three years' service.

November 19th.—Females: Workers (including home-workers) other than learners. Increase, under Trade Boards Acts, of  $1\frac{1}{2}$ d. per hour in minimum time-rate ( $8d.$  to  $9\frac{1}{2}$ d.) and piece-work basis time-rate ( $8\frac{1}{2}$ d. to  $9\frac{3}{4}$ d.). Learners: New scale of minimum rates, fixed under Trade Boards Acts, resulting in increases of  $\frac{3}{4}$ d. to  $1\frac{1}{2}$ d. per hour.

November 15th or 19th.—All workers, overtime rates fixed, under Trade Boards Acts, for all hours worked in excess of 48 per week; nine hours on any day (except Saturday) and five hours on Saturday.

It is to be noted that by an agreement made between the British Paper Box Manufacturers' Federation and the National Union of Printing and Paper Workers, the minimum rates fixed for males 18 years of age and over were put into operation from March 22nd, 1920, so far as workpeople employed by members of the Employers' Federation were concerned.

## Stamp Paper.

An interesting paper was read recently by Mr. P. L. Pemberton before the International Philatelic Union on the manufacture of paper for stamps. The author of the paper says that the study of the manufacture of paper used for stamps has been a somewhat neglected branch of philately. While the ordinary stamp collector is quite content to be able to differentiate between wove and laid paper, thick and thin, etc., the specialist, though as a rule, going more deeply into the subject, does not go far enough. Mr. Pemberton says that a practical philatelist can see a watermark which is absolutely invisible to a non-collector. The perfect philatelist, though it is not necessary that he should know thoroughly how paper is manufactured, should, however, be acquainted with some knowledge of the subject. The author deals in an interesting manner with the early history of the art, bringing his subject down to the time just previous to the introduction of printing into this country, then on to the period surrounding the early pioneers, John Whatman and the Fourdrinier brothers. The paper is enhanced by two extracts on the various processes employed in the manufacture of hand and machine made papers, by Mr. T. W. Simpson, the Government Printer of Western Australia.

THE optimists predict better times with the advent of a new year.

### SALES BY AUCTION.

#### EDWIN W. EVANS.

Ruskin Press, 156, Sandpits, Parade, Birmingham.

**M**R. EDWIN W. EVANS is favoured with instructions to SELL BY AUCTION, on the Premises, 156, Sandpits, Parade, Birmingham, on THURSDAY, 20th JANUARY, 1921, at Two o'clock, the Valuable LETTERPRESS PLANT AND MACHINERY, comprising:—Demy Wharfedale, by Furnival & Co., No. 1750, balanced flyers, geared inkers, etc.; Crown Folio Reddish Jobber, by Furnival & Co., No. 917, treadle and power; 32-in. Self-Clamp Diagonal Guillotine, by Furnival and Co., No. 5057, fitted power; No. 4a Reel Wire Stitching Machine, by Aug. Brehmer, No. 3631, fitted power; 2-h.p. Gas Engine, by Furnival & Co., No. 228, complete with fittings; 12-in. Roller Galley Proof Press, 26 by 24 in.; Iron Imposing Surface; Bolted Dust-proof Type Cabinets; Frames and Case Racks; Polished Oak Graduated Lead and Reglet Racks; Brass Rule Cabinet; 140 Cases Book and Jobbing Type, all on point, by Stephenson, Blake & Co., Caslon & Co., and Miller & Richard; Galleys, Chases, Fixtures, Fittings, etc.

On view day prior and morning of Sale, and Catalogues of the Auctioneer, 150, Fleet Street, London, E.C.4.

Tel.: Central 6678.

### Employment and Earnings in the PAPER TRADE.

In the paper trade employment was generally slack during November, although rather better than during the previous month. Short time was worked in most districts. In the month 13,322 workpeople were reported by employers as engaged in paper manufacture, a decrease of 1.7 per cent. compared with a month before and an increase of 8.1 per cent. as against twelve months ago.

Wages earned in the same month amounted to £41,582, a decrease of 2.9 in the month but an increase of 25.9 per cent. compared with a year ago. The comparison of earnings, of course, is affected by increases in rates of wages.

In the printing, bookbinding and paper trades combined, trade unions reported a membership during November of 105,041, of whom 2,931, or 2.8, were unemployed. Unemployment showed a decrease of 0.6 per cent. compared with the previous month, but an increase of 1.8 per cent. as against the position last year.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STATIONER," 58, SHOE LANE, LONDON, E.C.4.

### SPECIAL PREPAID ADVERTISEMENTS

**SITUATIONS WANTED.**—Special Rate for Operatives only: One Shilling and Sixpence for Twenty-One Words and One Penny per Word after. Minimum charge, One Shilling and Sixpence. Cash to be sent with order.

**LEGAL and FINANCIAL ANNOUNCEMENTS, TENDERS PATENTS, SALES BY AUCTION, etc.**—Two Shillings per line.

Telegram: STONHILL, FLEET, LONDON.

Telephone: No. 8407 CITY.

### Situations Wanted.

**I**MPROVER or TURNOVER (17) requires sit. in Foundry; used to Moulding and Flat Casting, can also make ready on Platens or Wharves if required; good refs.—J. T., Box 13810.

### Miscellaneous.

## New Inventions.

### Type-Composing Machines.

Mr. O. Wolters has invented a method by which in type-composing and casting machines, balls or like devices are set up by key mechanism in a partitioned frame so as to represent the matter to be composed, the balls then causing the operation of punches to perforate a record strip or serving to operate the

casting machine directly. (1) The key-levers 1, Fig. 4, have each two projections, 2, 3 adapted to rock pivoted arms 5, each of which carries a ball-releasing member 6, Fig. 6, located at the end of a ball channel 6<sup>a</sup>. When a key is depressed, two balls are released from different channels and fall through tubes 10 into compartments of a partitioned frame 11. The frame is advanced step by step until a line has been composed, when the matter can be corrected. The frame 11 is then in position

over an auxiliary frame 12, and a sliding plate separating them is withdrawn to allow the balls to fall into the frame 12 by which they are transferred to a frame 14. The frame 14 is advanced step by step to deliver the balls to a partitioned cylinder 15 rotating within a casing 40, Fig. 5, the balls thereupon acting through levers 17 on punches 18. The balls return to the machine through a channel 20 which may be closed by a slide 40<sup>a</sup> to enable the perforated strip to be duplicated. (2) The space occupied by the composed matter is recorded by projections 21, Fig. 7, of varying size attached to the keys and acting through a bar 22 and ratchet mechanism 23, 24 on a counting device. In a modification the keys have projections of varying length adapted to depress a rocking bar. (3) The casting machine is operated by balls passing through the perforations of the record-strip. The strip 38, Fig. 10, passes under a reciprocating slotted plate 43 located beneath two ball-reservoirs 45, 46, the released balls falling down tubes 49 to a partitioned cylinder 50 or a pair of cylinders arranged at an angle. The balls operate members arranged longitudinally and transversely of the keyboard, so that each signal causes the operation of the key located at the intersection of two members. Bars 52, Fig. 13, extending along each row of keys 53 may have pivoted frames 57 which by the action of the balls of one series are lowered on to the heads of the keys. The balls of the other series cause the depression of bars 60 having fingers 61 adapted to actuate the keys. The record-strip may be divided into two parts travelling under separate ball-holders, or the casting machine may be operated directly by the balls without the use of a record-strip. The balls may be replaced by bodies of other shapes, such as rectangular or saddle-shape bodies adapted to be supported by a comb-shaped member, or pins sliding in a notched plate.

### Composite Material for Printing Plates.

Composite sheet material for making articles such as printing plates and printing plate matrices by moulding under heat and pressure, consists, under a patent by Mr. J. Stokes, of a fibrous body impregnated short of saturation with a phenolic condensation product, and a non-fibrous facing incapable of adhering to the article on which the sheet is moulded. Fig. 2 is a section of a sheet particularly suitable for making printing plate matrices by moulding on a type form or

printing plate. This sheet has a metallic facing, which may be of granular form or a thin sheet of lead or copper, but is preferably a foil sheet *a* of an alloy of equal parts of tin and lead. The sheet *a* may be backed by a lead foil sheet *b* and a second alloy foil sheet *c*, the whole being rolled together. The backing comprises one or more layers *e* of fibrous material, preferably blotting paper or matrix paper which is impregnated, such as by painting, short of saturation, with the phenolic condensation product. The layers *e* are stuck together and to the undersurface of the metal facing by means of a varnish composed of phenolic condensation product and barium sulphate. The composite sheet is then placed in a press to unite all the laminations, but is not heated sufficiently to harden

and set the phenolic condensation product to the infusible state. Fig. 4 is a section of a sheet particularly for use in making printing plates. In this form, fibrous layers *h*, prepared similarly to the layers *e* of the sheet shown in Fig. 2, are coated on both sides with layers *h*<sup>3</sup> of phenolic condensation product and the sheet is placed in a heated press for a short time to partially harden the layers *h*<sup>3</sup> to form a smooth non-flowing skin on the sheet. The bottom of the sheet may be provided with ribs *h*<sup>4</sup>. In the sheet shown in Fig. 5, the impregnated fibrous layers *i* are united by strips *i*<sup>1</sup> of the varnish described above, the surface layers *i*<sup>2</sup> consisting of phenolic condensation product. In another form of sheet, the body consists of wood or other fibre. In another form, Fig. 7, the facing layers *o* of the phenolic condensation product are united together by forcing portions *o*<sup>4</sup> of the facing layers through perforation in the body.

## The Greycaine Book Manufactory.

**A London Bindery that does not Fear Comparison  
with the Best Establishments in the United States.**

Anyone in search of the most go-ahead bookbinding houses in the London area could not carry his inquiries very far without being directed to the well-known bindery of the Greycaine Book Manufacturing Co., Ltd., Laycock-street, Islington. And if—as happened the other day to a representative of the *British and Colonial Printer and Stationer*—he should have the good fortune to be made welcome and conducted through the different departments of the works, he could not fail to be impressed with the advanced state of development of the modern bookbinder's resources as exemplified by this firm's up-to-date equipment.

The business was founded 17 years ago by Mr. Frank Grey, who, in first working his way through the "shops" so as to master the practical side of the work, and afterwards launching into business on his own account, demonstrated energy and ability which have made him a foremost figure in the bookbinding industry of these islands. One indication of Mr. Grey's status in the trade is found in the fact that he is, and has been for several years, the very live chairman of the Master Bookbinders' Association. Starting his business in 1904, he shortly afterwards became associated with Mr. G. R. Hall Caine, from whom comes the latter part of the "Greycaine" name. The works were originally in Cross-street, Islington, a removal being made to Laycock-street in 1908.

### **Some Greycaine War Service.**

While on the subject of personnel, mention should be made also of Mr. Horace Grey (son of Mr. F. Grey), who is a popular figure in the works. Mr. Horace is one of those who will

carry all their lives evidence of their having "done their bit" in the Great War—he lost a leg at Cambrai in 1918. Although suffering under a grave disability, he is an enthusiast in his work, and a distinct asset to the business.

Mr. H. K. Judd, too, their able representative, has cause to remember the sacrifices made in connection with this firm on behalf of the Allies, as one of his sons, Frederick Geo. Judd (Second Lieutenant, Royal Dublin Fusiliers, 2nd Battalion), was killed in action on May 24th, 1915.

Of course, Mr. Hall Caine's war-time services as Deputy Controller of Paper are too well known to need more than a mention here.

### **A Visit to the United States.**

Mr. Horace Grey has recently returned from an extensive tour in the United States, the object of his visit being to study present-day American bookbinding methods, and to make a note of any points in which our cousins across "the Pond" might be in advance of the practice of the most go-ahead binderies here. Mr. Grey was able to visit many of the largest and most up-to-date bookbinding establishments in America, as, for instance, the J. F. Tapley Co., Colliers, Doubleday, Page Co., Curtis Pub. Co., Sears Robuck, T. R. Donnelly Co., Rand McNally's, Brock and Rankins, *Pictorial Review*, Ginn's, Flemmings, Riverside Press, and Plimpton's—all of whom, he says, received him graciously, and gave him every facility for inspecting their works.

### **Where America is Ahead.**

Coming from such an extensive and well-equipped bindery as the Greycaine establish-

ment, Mr. Horace Grey, while seeing in the States many binderies which were both large and up-to-date, was not greatly impressed by these features. The buildings in which book-binding is carried on in America are, he thinks, much more imposing on the whole than those of our British binderies; but the principal point on which he had to concede that the American binders are ahead of us was in the matter of scientific costing. The docket difficulty in this country compels the book-binder to have recourse to the reckoning of his costs by a process of averaging-down on many jobs—a process which, apart from piece work, is but little better than a gamble—whereas the American bindery operative has no objection to ringing-in on the clock when he starts an operation, and ringing-off when he finishes it, and thus the firm has the means of ascertaining exactly the cost of every job. All those who have to do with costing and charging-out know how much importance attaches to the possession of specific costs of individual jobs. The need for more accurate costing methods in the bookbinding industry of this country is a matter which is becoming more and more urgent, and will, it is to be hoped, find ere long some solution which will be acceptable alike to the employers' costing departments and to the trade unions.

#### **The Greycaine Equipment.**

A stroll through the various departments of the Greycaine Book Manufacturing Co. gives the visitor the impression not only of great resources for the binding of big editions in minimum time, but also of the perfection to which the evolution of bookbinders' machinery has attained. The experience is likely to prove a satisfactory tonic to anyone suffering from the delusion that the Old Country is hopelessly out of the running in modern methods of book production. Watching the progress through the works of such books as the Waverley "History of the Great War," the handsome volumes of "The Amateur Mechanic," or "The Masterpiece Library of Short Stories," one cannot but reflect upon the great contrast in many of the processes between the ways of the hand worker and the methods of present-day machinery.

The most notable machine, of course, is the "Juengst" combined gatherer, stitcher and wireless binder. Messrs. Greycaine have had the gatherer in service for some time, and the stitching and binder extension has just been added by Messrs. Smyth-Horne. We are able in this issue (pages 64 and 65) to publish a large illustration of this very interesting machine. What a contrast from the work of hand collating is the work of the "Juengst"! It can deal with 24 signatures simultaneously. A travelling belt traverses the length of the machine and receives the sections one after the other in their right sequence, until the required number have been collated. The pile of sections is then, if desired, passed on to the extension of the machine which effects the stitching. In case any of the sections should be missed in being fed from the 24 boxes, or in case two sections should anywhere be delivered instead of one, a lever automatically

comes out of action and breaks the electric circuit. Thus this remarkably intelligent machine "downs tools" spontaneously if it should make a slip, and waits for the attendant to rectify its mistake before it proceeds with its work.

To the other machinery used by the Greycaine Co. we can refer but briefly. To see a whole string of book cases being made at the same time on the "Sheridan" case-making machine is an arresting sight. Cloth is fed from a roller at one end of the machine, passes over glueing rollers, has the requisite boards accurately placed upon it, the cloth is cut, folded over, and pressed upon the boards, and the completed cases are delivered at the other end of the machine. Equally striking are the ingenious Smyth case-making machines, an example of which we illustrated in a recent issue. Among the many other interesting machines to be seen may be mentioned both "Chambers" and "Dexter" folding machines up to quadruple size, also an extensive battery of Smyth sewing machines. Here, too, one can see at work on the same floor the "Dayton" three-knife book-trimming machine (in which the knives come down vertically to trim three edges of a book), and the new Smyth continuous trimmer, in which volume after volume is fed into the machine, pushed through the three knives in a horizontal direction, and delivered perfectly trimmed.

Undoubtedly the British bookbinder has shown, and is showing, to the world the way of progress in the craft. When objection is made that so much of the machinery he uses is imported, we have to remind ourselves that the majority of even the imported machines had their origin in British brains; therefore to this country belongs the credit of inaugurating the progress which they represent. Bearing this in mind, and remembering the existence of such a firm as the Greycaine Co. with its admirably up-to-date equipment and immense capacity for output—a capacity, by the way, which is claimed to be equal to an output, on occasion, of 25,000 books a day—one can justly feel confident that the British bookbinding industry is capable of holding its own with that of any other country in the world.

---

IN Bath Public Reference Library is a volume, recently presented to it, bound in human skin. Only five libraries in the world possess such rarities. It looks like pig-skin. The book is, fitly enough, Machiavelli's "The Prince."

DAMAGE estimated to amount to £40,000 was caused by a disastrous outbreak of fire in Lincoln, in which a large section of the glue and size works of Messrs. Cannon and Co. was destroyed. Large stocks of glue and gelatine, valued at £30,000, were destroyed.

M. Z. A. MEIEROVICS, Foreign Minister of Latvia, has arrived in London from Paris and Rome for the purpose of obtaining the *de jure* recognition of Latvia, and also the establishment of better trade relations between Latvia and the Allied countries.

## A New Move in Welfare Work.

**Messrs. Burrup, Mathieson and Sprague's Employees' Institute.**

A very interesting function, graced by the presence of several of the leaders of printing trade unionism, took place on the 11th instant, when a formal opening was made of Messrs. Burrup, Mathieson and Sprague's employees' institute at 43, Nelson-square, Blackfriars. The firm has taken over a substantial four-storey house in the square (which is but a few minutes' walk from the works in Southwark street), and has renovated and furnished it throughout for the benefit of the employees, to serve as a canteen and a place for social intercourse. Tuesday's gathering proved a very happy house-warming, giving an auspicious send-off to this rather novel welfare venture.

The official opener was His Worship the Mayor of Southwark, Mr. G. A. Isaacs, secretary, N.S.O.P.A., and, true to the spirit of the scheme, which is genuinely a workers' affair, the chairmanship of the meeting was in the hands of the father of the firm's federated house chapel, Mr. F. S. Thew.

Mr. Thew opened the proceedings by welcoming Mr. Isaacs, expressing appreciation of his having found time amid his multitudinous engagements to attend the opening ceremony.

### Mr Isaacs Declares the Institute Open.

His Worship the Mayor, who was greeted with loud applause, performed his part of the programme in a jolly little speech which showed that mayoral or other honours had in no way deprived him of his big capacity for good-fellowship with trade unionist colleagues. As mayor of the borough, as secretary of one of the trade unions concerned, and as a member of the health committee of the Joint Industrial Council of the Printing and Allied Trades—"I'm not only a 'twicer,'" he said, "I'm a 'thrice'"—(laughter)—he welcomed this effort to provide better food and better accommodation for workers in the district. It was a new line of welfare activity to provide such facilities outside the working premises, and it was fitting that a lead in this direction should come from the printing industry, which had been pre-eminent in promoting cordial relations between employers and employed. After expressing the wish that benefit might accrue to all concerned in the undertaking, he declared the institute open.

### Other Trade Union Secretaries Speak.

Mr. T. E. Naylor, secretary, L.S.C., who mentioned in the course of his speech that the firm of Burrup, Mathieson and Sprague was one of the oldest in the district if not in the country, it having been established in 1628, welcomed the presence among them of Mr. G. J. Mathieson, head of the firm, and also commented upon the recognition of trade

unionism implied in the fact that the meeting was in the hands of the father of the federated house chapel. He said that Mr. C. W. Bowerman, who had been invited to be present, was unfortunately prevented and had conveyed his apologies for absence.

Mr. H. W. Howes, secretary, Printing Machine Managers' Society, made interesting reference to what he had seen of welfare work in America, and emphasised the value of such schemes as this of Messrs. Burrup, Mathieson and Sprague's in promoting good relations between employers and employed.

Mr. Woodgate Stevens, secretary of the Amalgamated Society of Lithographic Printers, and of the London Printing and Kindred Trades Federation, and Mr. W. C. Niblett, secretary of the Platen Printing Machine Menders' Society, also spoke, wishing the new venture success in the name of the trade unions they represent.

### The Employees' Appreciation.

Mr. Thew, on behalf of the employees of the firm of Burrup, Mathieson and Sprague, then expressed their keen appreciation of Mr. G. J. Mathieson's efforts for the social welfare of his employees. He remarked that the services of a Whitley Council were not necessary where the head of the firm so well understood his employees' needs. According to *The Times*, he said, theirs was the best appointed printing office in London, if not in England. The employees appreciated that. He tendered to Mr. Mathieson sincere thanks on behalf of the federated house chapel.

Mr. Thew's remarks were received with loud applause from the employees' representatives (numbering about 100) present, and the applause was renewed when Mr. Mathieson rose to respond.

Mr. Mathieson, who recalled that he was apprenticed just 42 years ago, addressed the gathering as "fellow-workers," and said that as the freehold of the house had been bought, he hoped they would have their institute for many, many years. He thanked them very much for the way in which they had spoken of him. (Applause).

Mr. E. W. Whittle, works manager, called on to say a few words, expressed satisfaction with the excellent spirit which had characterised the meeting, and laid stress on the benefits following the application of unselfishness in industry.

The meeting closed with three very hearty cheers for Mr. Mathieson, and for Mr. Isaacs and the other trade union secretaries present.

The several floors of the clean and brightly-appointed institute then became the scene of some merry little tea-parties, which were to be followed by a workers' "sing song," giving a right sociable start to a project which it is hoped will redound to the benefit of all concerned.

MESSRS. PEMBERTON AND CO., paper merchants, 77, Cannon street, London, E.C.4, inform us that they have been appointed sole London agents for the Radcliffe Paper Bag Co., Radcliffe.

## Master Printers' Propaganda.

### Useful Meeting in South-East London.

Mr. Cecil Clay, the president of the Association of Master Printers of South-East London, presided at a successful propaganda meeting held on Tuesday of last week at the White Swan Hotel, Crystal Palace, under the auspices of the Association. The object of the meeting was largely propaganda, and the excellent attendance due, no doubt, in large measure to the presence of the organiser (Mr. J. Johnson) in the district for the two previous days, indicates that efforts to enlarge the scope of the Association are meeting with good results.

### Need for Organisation.

Following the election of new members, at the invitation of the chairman Mr. J. W. Carley addressed the meeting and emphasised the need for organisation in industry generally, and particularly among employers. He asked what safeguard there would be if trade unionists were fully organised and other sections of the community were not. He urged that the chief aim of combination among masters was to increase output and cheapen production. Mr. Carley went on to emphasise the importance of adopting a costing system, which he described as a sheet anchor to their business. They were now beginning to look at what stood behind cost, namely, the arts of production, which were dependent upon the character of the men who were engaged in the management of undertakings. It depended upon the ability of those people individually and collectively to discover the best methods of performing work. In that direction only would they be able to obtain a larger turnover and cheapen the product to the public, which meant at the same time extending the market. He went on to argue that master printers had to defend their market jealously and by way of scientific and industrial research. Reference was then made to a scientific society, which, on account of the cost of printing, had been issuing its scientific works through the Stationery Office. Although it might be true that such a means of publication might make scientific works more accessible to the public, it did not follow that it was the most economical course to adopt, although the publications had been issued at a lower price than would be possible if the scientific society had published them itself at an economic price. That was a tendency master printers had to watch. Only by unity, which was the object of that meeting, could such inroads as he had referred to be successfully resisted.

### The Costing Expert.

Mr. A. Williamson, secretary of the Federation Cost and Charges Committee, contributed a very practical address on "Costing on Scientific Lines," which he described as

the most absorbing topic of the day. He believed no industry could be successfully conducted until some definite and practical method of dealing with the cost of that industry had been standardised and universally adopted. Speaking of the propaganda campaigns which the Federation was conducting in various parts of the country, Mr. Williamson pointed out that these were not only valuable to those taking part in them, but they enabled them to promote a higher stage of efficiency in the costing and estimating staffs. There were two or three questions which were never successfully answered at the classes which were being held, and those directing the campaign were concentrating attention upon the points of weakness and ultimately they would train a better type of costing clerk, and of cost accountant for the larger establishments.

The speaker went on to explain the adaptability of the system to small firms and pointed out that even if a gentleman were 1,000 miles away from his business, if he could be reached by post, he could be furnished with a full record of all the details of his business. Pointing out the difference between haphazard methods and the scientific costing system, Mr. Williamson said under the system they got not merely the work charged out to customers, but a record of the total amount of operations performed, with the value of those operations by the chargeable hour; and it did not matter whether they charged out the proportion of time involved on a job to their customers this week or next week or next month, they had credited their departments with the value of production as it had been performed in any particular week. The advantage of that was that instead of getting variations in charging out they had a more consistent amount for value as against the amount of cost.

### Simplicity of the System.

Mr. Williamson went on to explain the simplicity of the system, for which only three forms were necessary in practically any business. These were the daily docket, the cost sheet, and the weekly record of chargeable and nonchargeable time. When they looked at the character of a printing business, added Mr. Williamson, it was more vital that proper records should be kept than in any other business that he knew of. It was not only the records which were brought to their notice on the cost sheet, but they were able to recover a satisfactory return for their labour. The speaker went on to advocate that employers should carry the system on to the operating side, and in this connection gave some interesting figures as to the difference in correcting matter whether by machine or hand. It was when they came to estimating that their troubles began and they needed some direction to guide them as to how long it took to correct certain classes of matter. Therefore he was endeavouring to create an interest in the operational side of costing.

In conclusion, he said that he was certain that unless the printing industry devoted attention to the vital factors to which he had

referred, some of their work would disappear. He claimed that it was scarcely possible to reduce the costs of production much below their present position, but it was possible, by organisation and the collection of vital data, through the costing system, to reduce the price of their work to customers. Mr. Williamson added that the long promised price list was now practically ready.

### The Ultimate Gain.

Answering questions raised by Mr. Grubb (Croydon) and another member, Mr. Williamson said the question whether the installation of the costing system was likely to lead to a loss of business depended upon the prices which were being secured at the time of its introduction. For instance, one man said the first year the system was in operation his firm lost 25 per cent. of their business, but they finished up the year with an extra profit of £200, as unprofitable work had been eliminated. The amount of work entailed in introducing the system depended upon the nature of the business. The recording of time and the hourly rates could be kept by a junior clerk with a sufficient intelligence to transfer figures from one form to another. Having found the cost of a job, it simplified the work of charging and it took up less of the time of the most important individual about the firm.

A query being raised as to whether distribution ought to be done by a staff separate from the ordinary staff, Mr. Williamson said this was easy in the case of a large establishment, but in smaller offices he preferred the setting apart of a day or some portion of a day in the week.

Mr. A. Langley, past president of the N.W. Association, also gave an address which we hope to print in another issue.

The chairman, in closing the meeting, spoke of the importance of these meetings as revealed by the proceedings that evening, and mentioned the matter of the National Union of Clerks, which had been considered on the previous day by the Federation Labour Committee. The decision the Labour Committee had come to was that if any demands were made upon printers they should not agree to any terms without referring the matter to headquarters. He suggested that the expense of introducing the costing system into a small office was negligible and naturally it was larger in a bigger establishment.

On the motion of Mr. J. E. Wright, a cordial vote of thanks was passed to the chairman and the speakers.

Visitors from a distance were brought to the meeting by means of a char-a-banc, which was a great convenience in view of the rail transport difficulties.

MESSRS. SMITH, STONE AND KNIGHT, LTD., have sent round a useful business desk memo calendar for 1921. With the date and three months before one, there is the back of the succeeding day's sheet for jotting purposes, and sheets, as they are turned over, remain intact for future reference.

## New British Patents.

### Applications.

- Berkshire Printing Co., Ltd., and Brooke, N. Paper, etc., bag making mechanism. 784.
- Chemische Fabriken Worms Akt-Ges. Manufacture of printing and stamping colours. 154.
- Computing - Tabulating - Recording Co. Colour prints, etc. 610.
- Dickins, L. E. Loose-leaf catalogue system. 491.
- Heenss, H. Pneumatic paper-feeding apparatus in high speed presses, folding apparatus, etc. 770.
- Linotype and Machinery, Ltd., and Parker, T. R. G. Means for tripping cylinders of rotary printing presses. 653.
- Linotype and Machinery, Ltd. Means for controlling operation of pawl and ratchet mechanism. 654.
- Linotype and Machinery, Ltd. Means for attaching ropes, etc., to winding drums. 655.
- Muffuniades, J. P. Collapsible cardboard box. 213.
- Miller, H. C. Loose-leaf binders. 362.
- Oakley, T. D. Envelope. 595.
- Paragon Kassenblock Co. Ges. Apparatus for making and printing cash pads. 449.
- Paterson, E., and Pye, T. Bed movements of printing machines. 270.

THE United Typothetae of America has inaugurated a scheme for pushing the sale of their Standard Price List to non-members.

# Teaching the Young Binder.

Mr. B. J. Sansom, Bookbinding Instructor at St. Bride Institute, addresses the Members of the Printing, Book-binding and Kindred Trades' Overseers Association.

At the monthly meeting of the above Association held on the 4th inst. at St. Bride Institute, Mr. B. J. Sansom delivered an interesting paper on the subject, "How to Teach the Young Binder: from a Technical Standpoint." The president of the Association, Mr. A. J. Daines, introduced the lecturer.

Mr. Sansom, who was very cordially received, said that so much had been said about what should be done for the printer that it was time someone voiced the requirements of the bookbinder. He hoped with the arrival of the new Education Act, the latter would receive a little more attention than he had in the past. The real aim of the "Fisher Act" is to give the boys and girls a good scholastic and technical education that will prove beneficial to them in commercial life.

## Value of Theory.

It is well understood, continued the lecturer, that the very best is not obtained from the apprentices, or learners, engaged in the printing and kindred trades; the reasons being, among others, that a lad may not be ambitious, or he does not want to learn, or that he does not like the trade, while in other instances, he does not fit the opportunity. In many cases a boy is placed under the care of a journeyman, or craftsman, who may be an excellent workman in practice, who can demonstrate and show a lad how a certain piece of work should be done, but yet is quite unable to convey his thoughts, or explain the reason why it is done in any particular way, owing to lack of theoretical knowledge. The journeyman is himself often unable to get below the surface of a subject, and at times does not have sufficient interest in the boy, and thus the boy becomes a mere machine.

The purely shop-trained man is much inclined to rest on rule-of-thumb methods, and, moreover, the severely practical training of the shop has no tendency to lead to a comprehension of, much less a sympathy with, the broad principles that are usually included under the name of theory.

The framers of the Education Act probably had in mind the importance of day-time tuition, for one of the most difficult things a teacher has to contend with is to teach a boy when he is tired. The boy may have good intentions, but after a strenuous day's work his mental faculties and power of reasoning present the most difficult of propositions for the teacher to deal with.

## Teacher and Pupils.

The teacher should interest himself in his pupils, and should know them at the starting point.

Binding students very often do not think it necessary to have a knowledge of paper, but the instructor understands what a tremendous advantage it is to the binder, so he endeavours to form a connection with the subject they wish to be acquainted with. Mr. Sansom instanced the case with stationery binding, where the instructor gets the student to agree that before he can become an efficient binder he must understand the correct weight of boards that a book requires. He proceeds to explain how board weights for quirage are regulated by the weight, size and substance of the paper used, and illustrated to them that if a binder does not arrive at the weights of the boards for the book by a scale, which must be based on the weight and size of the paper, then he must decide by bulk or appearance, clearly indicating the connecting advantage between board weight for quirage, and sizes, bulk and qualities of paper. Thus the pupil gradually finds himself interested in a subject that he originally did not wish to be acquainted with.

## Over-Seriousness.

Over-seriousness in a pupil, Mr. Sansom thought, is akin to dullness, and is generally seen by facial expression.

Dealing with the technique of some branches of the trade, the lecturer said this required careful explanation by the drawing of comparisons, thus taking a wider view of the subject. As an example, so much can be said about the preparation of leather for finishing that the first idea instilled into the mind of the apprentice or learner is that it is a mystical science. As an example, some leathers, such as calf, russias, sheep and roans are porous, and it is advantageous to fill up the pores or spiral passages in the leather to enable the glair or albumen to lie on the surface. The finisher is compelled to treat the leather in such a way as to overcome these obstacles, but an easier or more simple explanation must be given before getting the youths to see clearly.

## Mastering the Difficulties of Marbling.

Mr. Sansom next explained how necessary it was for the student to have a knowledge of the mucilages used in marbling. Gum, tragacanth and carrageen moss were the chief mucilages used in marbling, and 90 per cent. of the troubles that occur were caused by the student not having a complete mastery over the size. Gum tragacanth, also called gum dragon, was the product of various species of astragalus found in Asia Minor and Persia. The lecturer next dealt with carrageen or Irish moss, showing how interested the student

may become in its study if it is put to him in the right manner. The lecturer thought it was essential to take the student right down to the root of a problem. He instanced the chemical changes that take place with marbling due to atmosphere. All these must be explained to the student.

### The Value of Observation.

One of the best means of a student expressing himself, said Mr. Sansom, is by taking notes. The use of the blackboard was also advocated. Observation played a very important part in teaching, both by the pupils and the teacher. Mr. Sansom, in concluding his remarks, made several references to the importance of observation in the work of the ruler. He thought that of all the branches of the binding trade where observation, carefulness and inference are the essentials, the chief was that of ruling.

### Discussion.

Mr. A. J. Daines, in opening the discussion, paid a warm tribute to the value of Mr. Sansom's lecture, and agreed with many of the things the lecturer had stated. One of the most important matters, he considered, in the training of the boy was to try and understand his psychology. He was persuaded, too, that it was necessary to find out if the boys entering their trade had the aptitude or the inclination to take up the work of a bookbinder. He thought the apprentice should be encouraged in his work by a little extra remuneration when it was deserved. One of the difficulties that operate against good apprentices is often the bad influence of other boys. In the working out of the costing system they, as overseers, often found it difficult to fit the apprentice in; they had to make him pay somehow. As much as the overseer would wish to, he had not always the time to explain to a boy the intricacies of his craft. Mr. Daines said he did not deprecate sport, but he thought the modern boy had many hindrances to his advancement in the picture palace, football and other phases of sport. He looked to the schools to shape a boy's character.

Mr. Chris Atkins said he thought the trade was being injured by the sub-division of labour, and it was bad for the apprentice. He believed that they should inculcate into the journeyman that it was to his benefit that the boy should be shown his trade.

Mr. G. A. Rutherford urged that ground work was a very important part in a boy's knowledge of his trade. He warmly advocated the adoption of a scheme for evening classes or day schools, by which apprentices would learn the ground work of their trade. He also favoured the maintenance of discipline right through into the technical classes.

Mr. J. Walker briefly expressed warm approval of technical training for the apprentice, but thought it was absolutely necessary that he should have practical experience as well.

Mr. Sansom was accorded a hearty vote of thanks for his lecture.

## P. M. & O. A. Lecture at Bristol.

### Mr. Joseph Goodman on Lithography.

An important gathering of employing printers and printers' managers responded to the invitation of the Bristol centre of the Printers' Managers and Overseers' Association to attend the lecture on "Latest Lithographic Machinery and Modern Processes," delivered by Mr. Joseph Goodman, of London, on December 16th, at the Royal Hotel, College Green, Bristol.

The president, Mr. J. M. Dodds, in introducing Mr. Goodman, eulogised his services in the cause of technical education, not only as a teacher, but also as the author of various well-known technical handbooks, and contributor to trade journals, and practical expert in lithography and photo-mechanical processes.

Commencing his lecture with a photograph of Senefelder taken from an authentic chalk portrait drawn from life, Mr. Goodman gave most interesting details of the birth and development of the art-craft of lithography from its inception in 1798 down to the present day. He brought home to his audience the innumerable difficulties against which the earlier lithographers had to contend, and mentioned, incidentally, that Senefelder had tried 1,000 recipes for transfer paper before he found one that was quite satisfactory.

The connection of photogravure with lithography was amply demonstrated, and earliest examples shown, also the reel-fed lithograph machines and the two and three-colour rotaries. The various assailing processes of colour printing were all explained and their merits and demerits clearly defined. All the several photographic duplicating transferring processes were expounded, and the value of camera aids to the craft dilated upon.

With a unique collection of slides the lecturer showed the most marked developments of the craft, from the pole press to the present rapid multi-colour off-set machine.

In addition to the lantern illustrations, Mr. Goodman had decorated the walls of the lecture room with a display of the widest range of lithographic work by all methods and processes (including two fine military chromo-lithos kindly lent by Messrs. Johnstone and Cumbers, of Farringdon-street, London), constituting the finest and most important collection ever displayed at one time in the city of Bristol; all of which were greatly admired and enthusiastically commented upon. There were many expressions of appreciation of the lecture, and a very hearty vote of thanks to Mr. Goodman concluded the meeting.

It is calculated that during the eleven months to November last 200,000 workpeople in the printing, paper, etc., group of trades received a net increase in wages of £118,000 a week.

## State Printing and Stationery.

### Some Severe Criticisms.

Government printing and the ordering of stationery by official departments come in for criticism in the reports of the Select Committee on Publications and Debates Reports.

In their third report the Committee deal with the question of Government printing offices, which are being maintained for a period of three years' trial. The Harrow establishment, which is Government property, was bought from Messrs. Allen in 1918, and was originally purchased for the purpose of printing the food coupons for the national scheme of food rationing. The Stationery Office are now using it for printing certain work which used formerly to be done by contract. Of the London establishments Hare-street printing office is partly Government property and partly leasehold; Dugdale-street printing office is rented by the Government. These two establishments and a third in Farringdon-road are being removed to Great Suffolk-street to a Stationery Office building.

"In his evidence in April," says the Committee, "the Controller informed us that the number of employees was 1,571. On December 8th he informed us that this establishment had grown to 1,710. Thus, at a period when other Government establishments are reducing their staffs, the Stationery Office is apparently increasing theirs. The Controller, in his evidence, has stated that the Stationery Office policy is, if possible, to do about half the Government printing, in order that the Government may, by this means establish competitive printing, and keep a check on excessive prices."

Replying to other questions, Mr. Codling said it was not the intention of the Stationery Office to recommend that all printing should be done in the Government works; roughly, possibly half, but not more—the idea being that by that means the State would get the advantage of competitive prices from the printing trade against the Government establishments.

"As far as the Committee are aware, no Departmental Committee has inquired into the cost of, and the necessity of maintaining, the present establishment, and we are of opinion that the whole question of the policy of maintaining a large Government printing establishment, such as is now in being, should form the subject of inter-departmental inquiry, as was the case in 1907, and further, that the extent of work that is to be given to the Government printing offices, and the size of the establishment that is to be maintained, should be definitely decided."

One report deals with the expenditure on stationery, etc., of the principal Ministries. The Committee state that they have ascertained from evidence that the expenditure on stationery by many of the Departments has considerably exceeded the estimates in de-

grees varying from 100 per cent. to 200 per cent. to, in the case of the Ministry of Food, some 600 per cent. It would seem that in the majority of cases, although there is an official charged with a general control of stationery indents, there does not appear to have been any Departmental Committee sitting periodically to revise and check the use of, and the expenditure, on stationery, and in certain cases it transpired that the official concerned knew nothing about the value of the stationery indented for.

Mr. W. R. Codling, Controller, Stationery Department, handed in a return for the whole of the Government waste paper for the period 1913-14 to the first eight months of 1919-20 inclusive, which showed that London waste amounted to £198,782 and provincial waste to £102,584. Reference was made by this witness to 3,000,000 leaflets which were sent to waste by the Ministry of Food.

The Admiralty sent back to the Stationery Office £8,000 worth of signal pads as waste, as they had got out a new pattern.

In the current year's estimates the gross amount taken for stationery is £5,769,104, as against £1,237,708 in 1913, but of this total £1,100,000 represents the cost of printing in connection with registers of voters.

## Paper Technology.

The report of the works of the Department of Technology of the City and Guilds of London Institute shows that 13 candidates entered for the examinations in paper manufacture. Of these, nine passed in the final examination and four failed, six obtaining first and three second class passes. The acting examiners were Mr. G. Lake and Mr. A. Baker.

It will be remembered that prizes were awarded by the Papermakers' Association in the form of four prizes of £1 10s. each to candidates who passed the final examination in the first class, one prize of £1 to a candidate who passed the final examination in the second class. In a recent issue we gave the names of the successful candidates, but in the report before us that of Mr. Harry B. Coates appears as taking a first prize, final, S.M., at the Leeds Technical School.

**INSTITUTE OF INDUSTRIAL ART.**—Printing, poster-production and arts of book-making are the present subjects of the exhibition at the British Institute of Industrial Art, 217, Knightsbridge, S.W. Much evidence is produced of the artistic quality of the work being turned out by such presses as the Chiswick Press, the Florence Press, the Dolphin Press, and H.M. Stationery Office. A specially interesting exhibit is one showing calligraphy by Edward Johnston, the father of modern calligraphy and his successors.

An Advertisement is always working

# Trade Notes.

MR. JAMES ALABASTER, printer and stationer, of Hove, has left £12,382.

MESSRS. ILIFFE AND SON'S journal, *Motor Traction*, this month changes its name to *Motor Transport*.

THE *London Progressive*, a monthly 2d. organ of the London Progressive Union, has issued its first number, dated January.

THE first number has just appeared of *Sales Management*, a monthly journal for those engaged in selling and advertising.

IN memory of the journalists who fell in the war, a memorial tablet was unveiled at the Press Club on Monday evening by Lord Burnham.

THE *Imperial Food Journal*, a monthly review, to be devoted to the expansion of the Empire's food resources, is about to make its first appearance.

IN the October to December number of the *Monotype Recorder* is an illustrated notice of the printing firm of Messrs. Loxley Bros., Ltd., of London and Sheffield.

MESSRS. JOHN HEYWOOD AND CO., LTD., have started a publication with the title of the *Engineering World*, with which is incorporated the *Industrial Engineer*.

"REYNOLDS'S" machine staff held their annual supper at the Bedford Head Hotel, Maiden-lane, Strand, on Tuesday, of last week, supported by the warehouse and foundry departments.

THE *Weekly Press* (New Zealand) Christmas number, just to hand, contains some fine illustrations and seasonable articles. A coloured plate, reproduced from an original painting, is issued as a supplement.

SIR LEICESTER HARMSWORTH, who owns the *Western Morning News*, is reported to have bought the *Western Mercury*, the Free Liberal organ of Plymouth. It is stated that he proposes to stop publication of the *Mercury*, and to amalgamate the two papers. The price paid for the *Mercury* is given as £25 per £10 share.

MR. PATRICK MAHON, printer, of Dublin, has been sentenced by court martial to five years' penal servitude. The charges against him were those of having books relating to the "illegal" organisation, Cumman na mBan, and to Dail Eireann, metal discs of printing documents relating to Irish Volunteers, and 18 proof sheets relating to drill.

PENSION ELECTION, 1921.—Votes and interest are being solicited on behalf of Mr. John Hayward, aged 73, compositor. The candidate has been connected with the Chiswick Press for nearly 50 years, and the recommending subscriber is Mr. Chas. T. Jacobi, Chiswick Press. The case is strongly recommended by the composing chapel of the Chiswick Press and others.

THE *Bury Times* send us a two-colour single-sheet calendar for 1921.

MR. JAMES BURN, of Acton, editor of the "A B C Railway Guide," aged 87, left £2,630.

THE death occurred last week of Mr. Thos. Arlidge, aged 92, the oldest printer of Northampton.

It is reported that all the Italian newspapers have formed a syndicate for the purchase of news-print.

IN the December issue of the *Librarian*, Mr. Ross's "Select Bibliography of the Art of Printing" is continued.

*Pearson's Magazine* for January keeps up its reputation with brightly written stories and entertaining articles.

THE annual dinner of the London Master Printers' Association is to be held on February 16th, at the Connaught Rooms.

THE Worshipful Company of Stationers is holding a reception at Stationers' Hall on Wednesday afternoon, the 26th inst.

MR. W. D. JENKINS, for more than 60 years proprietor and editor of the *Berks and Oxon Advertiser*, died at Wallingford in his 82nd year on Friday.

MESSRS. GEORGE PHILIP AND SON, LTD., formally opened on the 10th inst, a new canteen for the benefit of the workers at the firm's Willesden works.

THE Liverpool branch of the National Union of Bookbinders has agreed, under certain conditions, to the introduction of Federation time dockets.

AT a sale in America recently, \$1,000 was paid for an early copy of *La Libre Belgique*, the newspaper issued secretly during the German occupation of Belgium.

THE Printing Crafts' Guild, in connection with the Manchester School of Technology, had an interesting evening on Friday, January 14th, when Mr. A. H. Munday, A.I.C.E., F.C.S., lectured on "Metals."

THE Winterbottom Book Cloth Co., Ltd., notify us that as from January 20th their London Offices will be located in larger premises at 60, Wilson-street, Finsbury, E.C.2. Telephone Nos. : Wall 5518 and 5519.

MESSRS. SLATER AND PALMER, printing ink manufacturers, whose offices are at 4, Wine Office court, Fleet-street, send us a hanging calendar in which the monthly sheets, each printed in two colours, serve as specimens showing various tints in which the firm's inks can be supplied.

THE Industrial League and Council has arranged a series of lectures on important industrial subjects at Caxton Hall every Wednesday until the end of March. On February 23rd Dr. E. Halford Ross is to speak on "Health in Industry," and on March 9th Sir H. E. Morgan, K.B.E., is to take the chair when Mr. C. Latham speaks on "The Ex-service Man and His Reinstatement in Industry."

## Combined Gatherer, Stitcher and Wireless Binder.

We present herewith a general view of the "Juengst" combined gatherer, stitcher and wireless binder, the up-to-date machine described in our article "The Grey-Caine

Book Manufactory" on pages 55 and 56 of this issue. This machine takes a page up to 9-in. by 12-in. in size, and the average output is in the neighbourhood of 60 to 80 complete

books per minute. The width of the machine is about 8-ft. 8 in., while the length varies in accordance with the number of boxes fitted, the 24-box machine measuring about 68-ft. from end to end, and the 18-box model having a length of about 57-ft. The great length of this machine necessi-

tates our illustrating it in two sections. In order to visualise the machine as a whole, the reader should imagine the lower picture as being placed with its left edge abutting upon the right edge of the upper picture, so as to make a continuous illustration. It is divided in order to be large enough to bring out the detail.

### FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,  
at 58, Shoe Lane, London, E.C. 4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE EXTRA).

#### Charges for Trade Advertisements:

(Full page 8 by 5½ ins.)

Whole Page ...	£4 10 0		s. d.
Half Page ...	2 10 0	One-eighth Page	17 6
Third Page ...	1 17 6	One-third Column	22 6
Quarter Page ...	1 10 0	One inch in Column	9 0

An Extra Charge for Cover and Special Positions.  
Discounts according to Number of Insertions.

Representatives throughout the United Kingdom and also in Australia, India, South Africa, United States Canada, etc.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—**STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C. 4.**

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Kverett and Son, Ltd., news-agents, 11, St. Bride-street, E.C. 4.

THURSDAY, JANUARY 20, 1921.

## Current Topics.

### Government Printing.

THE position of the Stationery Office printing enterprise has long been felt in the trade to be somewhat anomalous, and at the present moment the interest of master printers is focussed upon the subject of Government printing and the extent to which it ought to be restricted in order that due regard may be had to the rights of the printing industry as a whole. Leicester is now in the spot-light in this connection, as the contract for the printing of the Leicester voters' lists has been withdrawn from the local printing firms, and the work is being undertaken by the Stationery Office. The work was put up to tender, and secured by the Leicester Master Printers' Association, which distributed it amongst its members. Subsequently the Association found it necessary to make an additional charge, and the Stationery Office, after again putting the work up to tender, decided to undertake the printing of the lists itself.

### Master Printers' Attitude.

THE following resolution was passed by the Council of the Federation of Master Printers: "This Council expresses its desire to do everything in its power to mitigate the suffering caused by unemployment, and is taking action in the localities concerned, but it finds it difficult to press its members to adopt the suggestions of the Ministry of Labour until it is assured that they are being observed in the Government printing works under the control of the Stationery Office. The Council learns with regret that during November and December a number of contracts were withdrawn from the trade and placed at the Government office, although unemployment was then on the increase." An official of the Stationery Office, communicating with the Press on the matter, has laid stress on the fact that H.M.S.O. is a "union house" and that the same number of men would be employed whether the work was done in the Government printing works or by the trade. This does not, however, meet the Master Printers' point as to the strange behaviour of the Government, in that at a time when the Ministry of Labour was asking firms to keep on as many men as possible, here was the Stationery Office, another Government department, deliberately taking work from the trade. The S.O. plea, that the work could thereby be done with greater economy, is one that raises the question of official costs—a matter that would bear a good deal of investigation. We think the trade as a whole will welcome the recommendation embodied in the third report of the Select Committee on Publications and Debates Reports, to the effect that there is room for an inter-departmental inquiry into the need for, the cost of, and the desirable extent of the Government's printing enterprises.

\* \* \*

### French Paper Offers.

ALL the talk of paper dumping on this side is directed against German-made stuff. We have this week come in contact with exceptional offers from Austria and France. It is strange that while Germany is supposed to be strangling both French and English manufacture, papers of French make are offered here at prices against which our makers could not compete. As may be expected, the class of paper offered by French makers is of high grade. Rag banks of exceptional strength and quality have been offered at a figure which works out at about 1s. 3d. per lb. in English money. It is all a question of rate of exchange, and the offers, therefore, are of temporary value only. As the exchange im-

proves, the cost will approximate more to normal, which puts the high-grade foreign paper out of reach of competition. Unless natural rectification of the exchanges becomes a more speedy process, artificial adjustment must surely be resorted to by all countries through sheer necessity of escaping absolute chaos.

### Chaotic Paper Prices.

IN OUR previous comments on the re-establishment of a level of market values, we have observed that the larger wholesale merchants were tardy in accommodating their prices to fit the new conditions. Naturally they have lost a fair amount of business, and until they finally decide to cut their losses and accept the inevitable reduction of the margin of profit they will lose a lot more business. The mills are on a bottom basis, and large orders can be placed direct if the buyer chooses to do his business on this principle. Meantime there are agents and merchants in every town in the country offering to accept orders on a keenly-cut margin over mill prices. There are sure signs that the wholesale houses are realising the position; but there are also evidences of a tendency to bargain rather than fix up prices on a definite policy. Incalculable harm will be done if high prices are named as a feeler and then followed by abnormal concessions in order to get the business. One house offers E.S. writing at 1s. 2d. per lb., but in face of a turn-down is prepared to supply at 9½d. per lb. No wonder the restoration of confidence is a slow process.

## Personal.

LORD BURNHAM and Lord Riddell were at the head of the deputation of newspaper representatives which waited upon the Postmaster-General on Wednesday of last week, to protest against the new 'phone rates.

SOME frank and intimate recollections of the great artist-printer, William Morris, covering his Kelmscott Press activities, will be found in a volume announced by Longmans, "William Morris and the Early Days of the Socialist Movement," by the late Mr. Bruce Glasier.

ALDERMAN SIR ROWLAND BLADES, M.P., has been admitted to the Court of Assistants of the Stationers' Company.

MR. ALFRED F. BLADES, Master of the Worshipful Company of Horners, presided

at the Company's banquet last week to the Lord Mayor and Sheriffs. Sir Rowland Blades, M.P., and Sir T. Vansittart Bowater were among those present. Each guest was the recipient of a replica of an old-time horn book.

MR. FRANK PICK, of the Underground Electric Railways, who is chairman of the Design and Industries Association, delivered an interesting address at the L.M.P.A. luncheon at the Connaught Rooms on Tuesday, taking as his subject the connection of printing with the objects of the association he represents.

MR. R. A. AUSTEN-LEIGH, Mr. G. W. Jones, Mr. Vincent Brooks, Mr. W. Howard Hazell and Sir Cecil Harrison, took part in an animated discussion that followed Mr. Pick's address.

MR. E. W. HUMPHRIES and Mr. A. E. Goodwin, president and secretary respectively of the Federation of Master Printers, attended the quarterly meeting of the Somerset Association at Taunton on Tuesday, and in the evening of the same day the annual dinner of the Bristol Association.

MR. A. CHADWELL (*Daily Chronicle*) was unanimously re-elected president of the Electrotypers and Stereotypers Managers and Overseers' Association, held at St. Bride Institute on Tuesday. A report of the proceedings will appear in our next issue.

AT the same meeting expressions of deep regret were tendered to Mr. W. H. Longley (treasurer) on the loss he has sustained in the death of his wife on Monday.

MR. J. T. FENNELL, deputy chief reporter of the *Birmingham Post* has just retired after 42 years' service. In a journalistic capacity he has been identified with the municipal life for 40 years, and recently he was the recipient, from the General Purposes Committee of the Birmingham City Council and former ex-lord mayors, of an illuminated address, a piece of silver plate being handed to Mrs. Fennell.

MR. ELLIOTT DODDS, assistant editor of the *Huddersfield Examiner*, has been invited to become the prospective Parliamentary candidate for the City. He has signified his acceptance.

THE Printing Trade Section of the Birmingham Chamber of Commerce has appointed Mr. Reginald Hudson as its chairman.

WE regret to learn that Mr. H. Williams (H. Williams and Co.), Red Lion Works, E.C., is suffering from acute throat trouble as the result of a chill during the week-end.

## DIVIDENDS AND REPORTS.

**R. W. CRABTREE AND SONS.**—Directors of this Leeds firm of manufacturers of rotary printing machines announce that having regard to financial situation they have decided to postpone payment of half-yearly dividend on 8 per cent. cumulative participating preference shares due end December last, in order to conserve resources. Company is not carrying a very large amount of work in progress for orders on hand, greatly in excess of normal amounts, due to great difficulty in balancing supplies of materials during past twelve months, and owing to delay in completion of new works at Willesden. It is expected that very large amount of work in progress will be liquidated by March 31st, and, subject to any unforeseen circumstances arising, board propose to pay postponed dividend on that date. Company was registered in February last.

**ST. NEOTS PAPER MILLS.**—Interim dividend paid of 5 per cent., tax free.

**GUARD BRIDGE PAPER Co.**—Interim of 8s. per share, free of tax, against 12s. 6d. per share last year.

**SPANISH RIVER PULP AND PAPER MILLS.**—Dividend of 13 per cent., less tax, on common stock, payable January 15th.

## NEW COMPANIES.

**ORIENTAL ARTS AND CRAFTS, LTD.**—Capital £7,500. Private company. Subscribers: S. H. Pellatt and D. E. Cooper. Registered office: 37, Russell-square, Bloomsbury, W.C.

**E. J. AND H. E. ROSE, LTD.**—Capital £20,000; Marine store dealers, sack, bag and paper merchants, etc. Private company. Permanent directors: E. J. Rose and H. E. Rose.

**ZIMMER, LTD.**—Capital £1,000; merchants, exporters, importers and manufacturers of and dealers in toys, stationery, fancy goods, etc. Private company. First directors: M. W. Zimmer and F. P. Barnes. Registered office: 31 33, Broad street House, New Broad-street, E.C.2.

**NUCARD Co., LTD.**—Capital £2,000; to take over the business of printers and wholesale and retail dealers in visiting and other cards, manufacturers of cases and containers therefor, etc., carried on by A. King and J. T. Mitchell at 1, Pilgrim-street, E.C., as the "Nucard Co." Private company. First directors: A. King and G. M. Hedges. Registered office: 1, Pilgrim-street, E.C.

**WERTHEIM AND KOENEN, LTD.**—Capital £20,000; general commission agents, manufacturers of and wholesale and retail dealers in textile fabrics, paper, etc. Private company. Permanent governing directors: M. P. J. Wertheim and F. H. Koenen. Registered office: 80, Princess-street, Manchester.

**J. W. VERNON AND Co., LTD.**—Capital £1,000, in £1 shares; stationers, printers lithographers, stereotypers, envelope manufacturers, account book manufacturers, paper and paper bag-makers, etc. Private company. First directors: J. W. Vernon, Mrs. Anne Vernon and S. J. Vernon. Registered office: 12, Chequer-street, St. Albans.

**G. NEWSUM AND Co., LTD.**—Capital, £4,000, to take over the business of engineers carried on by G. Newsum and T. Horsfall at Leeds, and to carry on the same and the business of manufacturers of all types of machinery and appliances suitable for printers. Private company. First directors: G. Newsum, T. Horsfall and P. Ward. Registered office: Central Hall Works, South Market, Hunslet-lane, Leeds.

**CLAYTON GLUE WORKS, LTD.**—Capital, £40,000, in £1 shares, to take over the business of glue, grease, bone, manure, general

chemical manufacturers and bone dealers, carried on at Clayton Glue Works, Bebbington-street, Clayton, Manchester, and to adopt an agreement between John Batten (Clayton), Ltd., and R. T. Tiplady. Private company. First directors: A. Bimson and E. C. Witter. Registered office: Clayton Glue Works, Bebbington-street, Clayton, Manchester.

**ALLIED PRESS, LTD.**—Capital, £35,000, in £1 shares, to adopt an agreement with Percival Jones (London), Ltd., and to carry on the business of printers, stationers, lithographers, etc. Private company. First directors: T. J. Smith and P. F. Jones. Registered office: 19, Clerkenwell-close, E.C.

**WILLIAM L. HODGSON, LTD.**—Capital, £500, in £1 shares; dealers in drugs, chemicals, stationery, etc. Private company. First directors: W. L. Hodgson and H. Goodwin. Registered office: 33, Westgate End, Wakefield.

**BERNARD MANUFACTURING CO., LTD.**—Capital, £2,000, in £1 shares, to take over business lately carried on as The Bernard Manufacturing Co. at 3, The Broadway, Friern Barnet, New Southgate, and to carry on the business of picture-frame makers, woodworkers, box-makers, wood carvers, cardboard manufacturers, stationers, etc. Private company. First directors: P. J. Richardson and J. Mackay.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**WANDSWORTH BOROUGH NEWS CO., LTD.**—Mortgage dated December 20th, 1920, to secure £1,500 charged on 144a, High-street, Wandsworth, S.W. Holder: Samuel Samuel, M.P., Berkeley House, Hay hill, Berkeley-square, W.

**METZLER AND Co. (1920), LTD.** (music publishers, etc., London).—Particulars of £12,000 debentures authorised December 21st, 1920; whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**WHITEFRIARS PRESS, LTD.**—Further charge as additional security on certain land and premises, etc., in Medway Wharf-road, Tunbridge, dated January 1st, 1921, to secure £9,500 and further advances, not exceeding, in all, £20,000. Holders: London Life Association, Ltd.

**EXCHANGE PRESS, LTD.**—Particulars of £5,000 debentures, authorised by resolutions of October 11th and 18th, 1920; present issue £500, charged on the company's undertaking and property, present and future, including uncalled capital for the time being.

**NOVELLO AND Co., LTD.**—Further charge on certain properties in Wardour-street and Little Chapel-street, Soho, W., dated December 29th, 1920, to secure £12,431 12s. 4d., making with

certain other moneys £25,000. Holders: Trustees of Liverpool Victoria Friendly Society.

**T. H. SAUNDERS AND Co., LTD.** (paper and bank-note manufacturers, etc., London).—Particulars of £5,000 debentures authorised November 26th, 1920; whole amount issued; charged on company's undertaking and property, present and future, except uncalled capital, subject to outstanding debentures issued prior to 1918.

**BIRMINGHAM LITHOGRAPHIC CO., LTD.**—Issue on December 16th, 1920, of £500 debentures, part of a series already registered.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### AUSTRALIA.

A firm, with offices in Sydney, and large connections with all the important wholesale houses, departmental stores, stationers, book-sellers, etc., throughout the Commonwealth, desire to undertake the representation of United Kingdom manufacturers of stationery goods, educational goods, etc., on a commission basis. (Reference No. 2.)

A Sydney indent agent and importer desires agencies for United Kingdom manufacturers and suppliers of office requisites and sundries, files, notepaper, scholastic requirements, etc., on a commission basis. The inquirer is understood to have good connections with wholesale houses throughout the Commonwealth. (Reference No. 4.)

### BRAZIL.

H.M. Consul-General in Rio de Janeiro has forwarded a list of firms in that city who are desirous of securing agencies for British paper. British firms desirous of appointing agents will be furnished with the names of the firms referred to on application to the Department of Overseas Trade. (Reference No. 28.)

**EDWARD LLOYD, LTD.**—A delightful treat was given recently to about 50 children from the Poor Law Institution, Milton, Kent, by the Transport Department of Lloyd's Paper Mills, Sittingbourne, Kent. A motor lorry called for the children at the institution, whence they were conveyed to the Empire Picture Hall, East-street. After the performance they were given an excellent tea, at which Mr. J. Buggs (manager of the Transport Department), Mrs. Buggs and Mr. W. R. Raynham showed their interest. Further entertainment was given to the children by the stripping of a Christmas tree and the distribution of toys. Altogether the event proved a happy one both for the promoters and for the children.

Notes and News for

# The Bookbinder.

## Time Recording and Trade Welfare.

We understand that a representative gathering of both sides of the trade will consider the question of the binders' daily time docket at Liverpool at a very early date. The bad time ahead of us will force home to all concerned the sheer necessity of keeping the industry on the sound track of hard knowledge and clear fact. It is as vitally important to the masters as to the men that profit in business should be an actual reality, although failure may only mean difficulty to one proprietor as against many men. It is impossible to conceive that the men are not willing to play their part in keeping the industry in the front rank of progress and sound business conduct. The men are asked to fill a time docket; the masters are asked to install a proper system of cost-finding; the task of the master is infinitely harder than that of the man. But benefit is derived on both sides. Minimum wage is controlled by union and federation. Maximum wage is controlled by the standing of the establishment. As long as a house doesn't know its standing it cannot afford to be generous for fear the generosity deepens a loss. But, given the common sense system of costing work out on the same basis that work is paid for, i.e., the basis of time, the standing of the business is known progressively week by week and the house can make its commitments at any period in the full knowledge of the facts. The men of the binding trade could not do better for themselves than force every master to work to his costs, even to the extent of boycotting the employer who guessed where his fellows calculated.

## An Industry and Its Unemployed.

Unemployment in the printing and binding trades has reached serious dimensions. In fact, unemployment is serious whatever its dimensions. If it is only one man, and he willing but unable to work, the burden of unemployment is a nightmare bringing in its train all the misery of want. We look to the speedy arrival of the day when every industry shall make itself responsible for the welfare of every individual within its sphere. Welfare work as we know it to-day is so narrow and limited that the moment a man or woman is discharged, whether rightly or wrongly, the welfare department ceases its interest. Naturally individual establishment welfare is limited to the clock sheet and salary book. The broader foundation of welfare is the

industry as a whole, and the trustees are the national representatives of the industry. But at once we are constrained to inquire what has become of the bond of union so publicly pronounced as the predominating feature of relationship between men and masters in 1918?

## The Binding Materials Market.

**BOOKCLOTHS.**—Immediately following our complaint at the delay in lowering the price of bookcloths the announcement was made that the reduction had come about to the extent of 2d. per yard. Actually the new price had been arranged and privately advised before we wrote but the knowledge had not come our way. It may be taken for granted that the demand has slackened, as in fact any buyer can see for himself by the speeding up of delivery. Representatives are now actually keen for orders and promise quick supplies of stock lines. Users will be well advised to sing slow and keep to requirements only. The price of raw material has slumped and gives ground for hopes of further reduction in the price of bookcloth. At the moment the cheapest English cloth we know is one at 1s. 6½d. per yard plain and 1s. 7d. per yard embossed, but even this figure is more than four times the pre-war cost.

**LEATHERS.**—The leather market is very flat, although in a small way the demand has been better since the new year came in. There has been no further reduction in price except in cases where makers are emulating the stores by offering clearance bargains. To-day's average prices are: Glazed skivers, 6½d. to 8½d. per square foot, according to selection; straight grained skiver, 8d. to 10d.; grained sheep, 10d. per square foot. Basils run from 11½d. to 1s. 3d. per foot for thin to stout glazed colours. Grained and diced basils range between 1s. 3d. and 1s. 6d. per foot. Other prices are the same as quoted last month.

**BOARDS.**—Strawboards are a burden on the holders. The dock stores are congested and every warehouse has more than its share. Prices have fallen so low that much loss is inevitable to many merchants. Despite the reduction there is no demand, for the simple reason that users held good stocks when the slump came. Boxmakers have had a more trying period than bookbinders, for a great part of their trade has gone entirely. The market price to-day for Dutch strawboards is £18 10s. per ton for unlined 8 to 16 oz., and £3 10s. per ton for heavier weights. Actually, however, £15 10s. is being asked in some

quarters, and there are few agents who would refuse an offer of £16 to £17 10s. per ton, with the usual extras of course. Meantime English imitation strawboards are finding their chief use on cartons and tubes. Foreign millboards are offered at £30 to £33 per ton, but clearance lots are on offer at £25 to £30. Hand-made black boards are selling at 52s. 6d. per cwt., and for the best class trade this is the board most in demand. English grey millboards are £44 per ton, a very reasonable price under the circumstances.

**MISCELLANEOUS MATERIALS.** — There has been a slight reduction in binder's paste, but the wet variety is still dear, especially when carriage for a distance is incurred. Glue has gone down to £100 per ton for square unstamped Scotch. Users must be warned against entering into binding contracts for the coming months. Foreign glue will come in at prices which will force down the figure of our own product and there is room for reduction. At the moment, thread and tapes have not shown the expected fall, but it is imminent and will be forced by the low demand. Calicoes are following the cotton market and binders' qualities are now listed at 6½d., 7½d. and 9d. per yard, the last named a very fine quality. Union buckram is still 4s. 2d. per yard and linen buckram remains at its former figure, though imported qualities of high-grade are securable at 5s. per yard.

**A NEW LOOSE-LEAF LEDGER.** — Messrs. Spicer Brothers, Ltd., have put on the market a new loose-leaf ledger produced on the Thong principle. It is claimed that the ledger possesses special advantages in flat opening, rigidity and simplicity in operation. We have seen the ledger in use and can support the claim of the makers. Certainly it marks a distinct advance on anything offered by the wholesale stationer. The ledger is offered to users only through the medium of the trade.

## Government Printing Waste.

### Messrs. Philip and Son Not Implicated.

In an article in our issue of December 30th, under the heading "Government Printing Costs," citation was made of the Fourth Report from the Committee of Public Accounts in which occurred a reference to a firm of map printers, not named, who were mentioned in respect of certain printing done for the Air Ministry.

Messrs. George Philip and Son, Ltd., of 32, Fleet-street, write to us combating a rumour to the effect that they were the firm referred to. They enclose copies of correspondence they have had with the Committee of Public Accounts, making it clear that the firm of lithographic printers referred to in the report was not their firm, and that in no evidence given before the committee during the last session was the name of their firm mentioned.

## City and Guilds Institute.

### Technology Results — 1919-20.

The report has just been published of the work of the Department of Technology of the City and Guilds of London Institute for the session 1919-20. The session has seen an increase in the number of candidates for technological examinations, advanced typography being one of the subjects in which this increase is very marked, 514 candidates presenting themselves in 1920 as compared with 134 in 1919.

In Typography, Grade I., 22 candidates sat for examination, 10 of whom passed; in Typography, Grade II. and Final, of the 514 entries 414 were successful; and in the examination for the Full Technological Certificate there were 14 passes out of 18 entries. In Lithography, Grade I., five sat for examination, and two passed; while in Grade II. and Final 73 sat and 50 passed. In the Book-binding examination, there were 41 entries, with 26 passes.

### The Prize List.

The St. Bride Foundation Printing School stands out as the chief prize-winning institution in the printing and allied trades. The following are St. Bride prize-winners: L. H. Almond, Typography (Press and Machine Work), 2nd Prize, Grade II., B.M.; L. Birchby, Typography (Compositors' Work), 1st Prize, Final, S.M.; J. D. Dorward, Typography (Compositors' Work), 2nd Prize, Grade II., B.M.; A. L. Johns, Lithography, 1st Prize, Grade II., B.M.; D. Knowles, Typography (Press and Machine Work), 1st Prize, Final, S.M.; W. Millington, Typography (Press and Machine Work), 1st Prize, Grade II., B.M.; R. Renwick, Lithography, 2nd Prize, Grade II., B.M.

The Dudley School of Arts and Crafts is also in the list, with W. H. Smith, Typography (Compositors' Work), 1st Prize, Grade II., B.M.

The special prizes offered by the Stationers' Company and the Printers' Managers and Overseers Association were gained as indicated below.

### TYPOGRAPHY.

The Stationers' Company's Prizes: Grade II.—Section I.—Compositors' Work.—1st Prize of £2 2s. and Silver Medal, Walter Slatt rie Clark, St. Bride Foundation Printing School; 2nd Prize of £1 1s. and Silver Medal, Walter Bernard Arnold, St. Bride Foundation Printing School, London. Grade II.—Section II.—Press and Machine Work.—1st Prize of £2 2s. and Silver Medal, Wilfrid Millington, St. Bride Foundation Printing School; 2nd Prize of £1 1s. and Silver Medal, Leonard Holgate Almond, St. Bride Foundation Printing School.

The Prizes offered by the Printers' Managers and Overseers Association: Final examination.—Section I.—Compositors' Work.

—1st Prize of £1 5s. to Leonard Birchby, and 2nd Prize of 10s. to Arthur Meeks, both of the St. Bride Foundation Printing School, London. Final Examination.—Section II.—Press and Machine Work.—1st Prize of £1 5s. to Duke Knowles, and 2nd Prize of 10s. to John Pickering Russell, both of the St. Bride Foundation Printing School. Grade II.—Section I.—Compositors' Work.—1st Prize of £1 to William Henry Sheath, Technical School, Dudley; 2nd Prize of 7s. 6d. to Jack Dunstan Dorward, of the St. Bride Foundation Printing School, London. Grade II.—Section II.—Press and Machine Work.—1st Prize of £1 to Wilfrid Millington, and 2nd Prize of 7s. 6d. to Leonard Holgate Almond, both of the St. Bride Foundation Printing School, London.

### LITHOGRAPHY.

The Stationers' Company's Prizes: Grade II.—1st Prize of £2 2s. and Silver Medal, Arthur Liddington Johns, St. Bride Foundation Printing School, London; 2nd Prize of £1 1s. and Silver Medal to Albert Fifer, St. Bride Foundation Printing School, London.

The Prizes offered by the Printers' Managers and Overseers Association: Final Examination.—A Prize of £1 each to Herbert Arthur Crutchfield and George William Gridley, both of the St. Bride Foundation Printing School, London. Grade II.—1st Prize of £1 to Arthur Liddington Johns, and 2nd Prize of 7s. 6d. to Raymond Renwick, both of the St. Bride Foundation Printing School, London.

### BOOKBINDING.

One of the Prizes offered by the Stationers' Company: Final.—Forwarding.—Prize of £3 3s. and Silver Medal, Henry James Phillips, L.C.C. Day Technical School of Book Production.

Announcement is made that, owing to the discontinuance in England and Wales of examinations below the Final Examination, the prizes and medals hitherto awarded by the Stationers' Company to London candidates on the results of the lower grade examinations in Typography, Lithography and Bookbinding will no longer be offered for competition.

## TENDERS WANTED.

### BOROUGH OF BERMONDSEY.

THE Council of the above Borough invite Tenders for General Printing and Stationery for twelve months, from 1st April, 1921. Forms of tender and other particulars can be obtained on application to the undersigned.

Tenders addressed to the Town Clerk, Town Hall, Spa Road, S.E., endorsed "Tender for" (as the case may be), must reach the undersigned not later than 12 noon, Monday, the 7th February, 1921.

FREDK. RYALL,  
Town Clerk.

Town Hall,  
Spa Road,  
Bermondsey, S.E.16.  
12th January, 1921.

MAINTENANCE ENGINEER wanted, for Country Printing Work; good education, thorough engineering and electrical training, experienced in printing machines, and motor equipments, knowledge of motor transport.—Write, stating full details and experience, to Hazell, Watson and Viney, Ltd., Aylesbury. 13812

### Miscellaneous.

BUCHANAN'S EQUIVALENT WEIGHT CALCULATOR. A Time-saving Pocket Companion for Papermakers and Paper Users. Standard size (12-in. long), in box-wood; £2 2s.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

GOOD BOOK PRINTINGS for sale, from stock; also 74 by 98 M.G. Kraft.—Loveitt, Paper Merchant, 5, Grosvenor-road, Bradford, Yorkshire. 13728

MANUFACTURING FIRM with Representatives covering Yorkshire ground desire further Commissions and would be glad to hear from good Paper House, Manufacturing Stationer or other; suitable lines for Printers and Stationers; warehouse and office accommodation available.—Box 13811.

# Paper and Collapsed Exchanges.

## An Important Corrective Scheme.

Mr. A. P. Burt, as the representative of the United Kingdom Paper Bag Manufacturers' Association, has put forward an important proposal for meeting the difficulty arising from unfair competition by reason of collapsed exchanges.

At a recent meeting of representatives of the paper, printing and allied trades, Mr. Burt invited them to consider the effect of importing paper and paper goods into this country from those countries whose currencies are depreciated, and to decide what remedial steps should be urged upon the Government. Mr. Burt expressed the opinion that paper consumers, such as printers, stationers, envelope, bag and box makers, should lend their assistance in this matter to the producers, adding that he would have been glad to see representatives present from the trades unions directly concerned, feeling that the question was of equal, if not even more, importance to them.

The position of the exchanges of the chief paper exporting countries at the time was as follows:—

Germany, marks 20, marks 265, showing depreciation about 1,225 per cent.

Czecho-Slovakia, kroner 24, kroner 280, showing depreciation about 1,050 per cent.

Finland, marks 25, marks 170, showing depreciation about 600 per cent.

Norway, kroner 18, kroner 25, showing depreciation about 40 per cent.

Austria, kroner 24, kroner 1,100, showing depreciation about 4,500 per cent.

Belgium, francs 25, francs 55, showing depreciation about 120 per cent.

In the following it will be observed that Germany is taken as the illustration, but so far as the exchanges are concerned, similar remarks apply in varying degree.

It was stated that the average daily imports of paper from Germany direct, for the present year, was about 100 tons, plus doubtless some via Holland. Extracts were given from various financial and trade sources indicating that the Germans expect a very large increase in their export paper trade, and that one reason for the abundance of paper available for export is that the German newspapers have reduced their size and circulation. The German trade journal, *Der Papier Fabrikant*, recently stated "the demand from abroad is considerable. Following the depreciation of the mark advantageous business has accrued to papermakers." British papermakers endeavoured to meet the recent situation by substantially increasing their production, but now no one wants it. Doubtless, the present unsatisfactory state of the trade was to some extent a reflection of the existing general trade depression, but it is feared that the British paper producing trade would not emerge from its present condition while the situation is so largely dominated by depreciated exchange.

## A Common Danger.

It was suggested that what is the paper producer's difficulty to-day will be the paper consumer's difficulty to-morrow. In other words, the effect of exchanges would act unfavourably on the stationery, envelope, printing, bag, etc., trade, and reference was made to a very large order for coloured printed labels having been sent to the "Continent," as well as orders for envelopes. *It was not proposed to ask for any restriction as such on the import of paper.* On the contrary, the consumers desire the makers to experience brisk competition, but the consumers want to be fair, and feel strongly that it is not in their interests for the British producers to lose their business. The effect of the Exchanges is *not* competition, but something overwhelming which in many cases the British makers could not withstand. Although, in theory, importation would *ipso facto* right the Exchanges in time, it was pointed out that this was necessarily an erratic and slow process, probably involving years, during which time many producers might be put out of business.

Imported paper pays no British taxes or rates, and whilst it is readily admitted that Germany must export something, it is most unfair and illogical that our workers should be out of a job because we won the War. If it were wise to let Germany send us whatever quantity of paper she liked at the lowest prices she cared to accept, would not this mean that it would be a good thing if Germany could, and would, send us all the paper we require, and for this country to write off its value against the indemnity? If this were done our paper mills could close, our paper producing organisations could be dispersed, our mills could become untenanted, and fall into a bad state of repair, unemployment would be much increased, but surely our people would resent being maintained in idleness by importation of low price papers resulting from collapsed Exchanges.

## Case of Wood Pulp.

What was wanted was increased production and reduced cost, but we are getting the opposite. As Germany must export something, why not let us take from her such goods as we must import, and especially those which, speaking generally, are imported from neutrals or the U.S.A., of which an excellent example connected with our own trade is wood pulp. Let Germany send as much wood pulp as she possibly can, and we will be glad to take it at the lowest price at which she is prepared to sell it, but the Germans are not anxious to sell their wood pulp, as shown by the fact that they ask almost as much per ton for wood pulp as for corresponding paper made from it. Germany prefers to send paper rather than wood pulp, and presently she will prefer to send us stationery, printing, envelopes, etc., rather than paper.

Some illustrations of the very low prices which the Germans are quoting were mentioned as follows:—

M.G. pure sulphite at 5d. per lb., c.i.f. British port.

Strong M.G. deep colours at £45 per ton, c.i.f. British port.

Kraft at £47 per ton, 5 per cent., f.o.b. Hamburg.

Very strong wrapping (2nd grade kraft) at £29 10s. per ton, 5 per cent., f.o.b. Hamburg.

News-print which costs to produce in Germany M.2,500 per ton, and sold in that country for M.3,500 per ton, is sold to this country at M.8,000 per ton—say at current Exchange 3½d. per lb., d./d. London, and it was pointed out that all such prices were *absurdly high* from the German point of view.

Particulars of wages paid in German paper mills were not available at the moment, but it was thought that they are in the neighbourhood of from M.250 to M.350 per week, of which the equivalent at current Exchange is from, say, 20s. to 30s. per week. It was believed that these rates applied to 2-shift men, but, as everyone knows, wages in this country are three or four times these rates, and in the case of paper mills, they apply to 3-shift men, which latter is a very important point.

In a recent speech, Mr. McKenna stated that "A mark used to be worth 1s., but was now represented by about 1d., and that if price levels in the two countries were in the same ratio as Exchange, prices in Germany would be twelve times (now 13-14 times) as high as in this country, but that prices in Germany have not risen to anything like this extent."

It was submitted that it was for us to see that Germany's financial disability—resulting from the War—one of the punishments for her wrong doing—does not prove a tremendous advantage for her and a weapon so deadly against our papermaking industry as to render it unremunerative to the point of extinction. Also that—and this point is specially emphasised—we are only on the fringe of the trouble, but it is common knowledge that already many manufactures in British mills were either stopped or running only part time. One of the leading trade journals quite recently doubted whether six mills have healthy order books.

### Comparative Purchasing Power.

The German Commissary for Import and Export agreed that their iron and steel industry shall fix as a minimum for export prices two-and-a-half times pre war, plus Exchange, but why should we allow them to make a benefit of their depreciated Exchange? The problem is, how is the position to be dealt with?

In Germany M.20 used to have a commodity purchasing power equal to £1 in England. It is easy to ascertain how many marks are now required to purchase in Germany the same amount of goods as £1 now buys here. It is really the question of the comparative cost of living in the two countries in their respective currencies. Mr. McKenna says it is nothing like 12 times, i.e., nothing like M.240. The question is, what is it? If the Government do not know, they can easily ascertain. Such knowledge as the speaker possessed, points to a comparison of M.70 with £1, i.e., M.70 buys in Germany to-day about what the £1 buys here, and whatever is the correct comparison

should be about the standard rate of Exchange governing imports. Owing to the sentiment, caprice, etc., of bankers, brokers and speculators, the rate which governs imports varies from, say, about M.200 to M.300. It is not a real rate of Exchange in the sense that Exchanges were real before the War when balances were settled in gold, but it is an artificial Exchange as shown by the violent fluctuations within short periods. The product of the printing press has inflated the currencies, and so depreciated them. Nothing really happens in Germany, or here, or anywhere else to justify the Exchange varying within ten days from 300 to 212 as happened less than a month ago.

How is a standard Exchange to work?

Is it practicable?

It was hesitatingly submitted "yes," and to the great advantage of this country by means of an *Exchange Corrective* to be paid into our National Exchequer instead of to the German exporters as at present.

How is this *Exchange Corrective* to operate?

Firstly, the Government must determine the figure of the standard Exchange.

In the second place, they should issue regulations that all imports should be purchased on sterling basis payable in marks at standard Exchange.

Assume the standard Exchange is M.70 per £. Now let us suppose an English buyer orders one ton of German paper for £40 payable in Marks at standard Exchange of M.70 per £ (whether f.o.b. or c.i.f. does not matter for the purpose of the illustration). In due course the paper comes along and is cleared through our Customs when the Rate of Exchange is, say, M.250.

What happens?

The English buyer remits to the German supplier (or his agent, as the case may be) M.2800, being the value of one ton of paper at £40 per ton at Standard Exchange of M.70 per £. These M.2800 will cost him £11 4s. at the Rate of Exchange then current. Now he must pay the balance, being the *Exchange Corrective*, to the Government through, say, the Customs. In the case illustrated it would be £28 16s., i.e., £11 4s. to the German supplier, and £28 16s. to relieve our taxation. Total cost to buyer, £40. The buyer would know from the beginning exactly what he would have to pay in our currency for the goods, and would not be concerned with the vagaries of the Exchanges. The method would tend to the Germans asking a higher price as they would try to get more Marks for their goods.

This is not an import tax, as such, but an *Exchange Corrective*, which would gradually and automatically disappear as the Exchange righted, and would be gone entirely when the Exchange reached standard, which, it will be observed, is altogether higher than so-called par.

The Customs are already familiar with Exchanges, as the declared value of all imports must allow for Exchange difference based upon rate current on date of Port clearance.

The system would necessitate provision of consular certificates of origin to render it

abuse-proof, otherwise, German paper would reach us disguised via other countries, who would then share with the Germans the substantial sums which we wish to see transferred to the British Exchequer. As things are, Germany is beginning to reduce her inflated paper currency at the expense of British manufacturers and workers. The various countries concerned should be dealt with in different degree as their respective exchanges and other considerations make desirable.

## Trinidad Paper Duties.

The Legislative Council of Trinidad have passed a Bill fixing a new customs tariff. British preferential rates are provided for goods, the growth, produce or manufacture of the British Empire.

Included in the Customs Schedule are the following items relating to paper goods, etc.:—

	British Preferential Tariff.	General Tariff.
Bags and sacks (empty) not including paper bags ...	10% ad val.	15% ad val.
Machinery (printing) ..	Free	5% ad val.
<b>PAPER:</b>		
(a) Cards, playing (per pack not exceeding 53 cards) ...	6d. per pack	9d. per pack
(b) Paper of all kinds and manufactures of paper	10% ad val.	15% ad val.
Stationery, other than paper	10% ad val.	15% ad val.

The second Schedule, specifying exemptions from duty, includes books, printed, bound or unbound, not being account books; music, newspapers, pamphlets, periodicals, unframed photographs, almanacs, school globes, atlases, charts, maps, plans, trade catalogues and advertising circulars of no commercial value, bank notes, used postage stamps and used post cards; but not including printed labels, printed forms and Christmas cards.

## Paper Wares Prohibition in Norway

Among the luxury goods which are prohibited to be exported in Norway as from December 6th are the following:—Paper wares, viz., parlour games, playing cards, picture post cards, and congratulation cards, oleographs and photographic reproductions.

MESSRS. A. M. PEEBLES AND SON, LTD., have issued a handy calendar diary for 1921 with the compliments of the season. The tear-off sheets of good quality writing paper afford ample room for engagements.

## Paper and Cardboard.

### Imports into the United Kingdom during December.

Total imports of paper and cardboard into the United Kingdom for December, and for the same month of 1919 and 1913 were as follows:—

TOTAL IMPORTS.			
Dec., 1920	674,903 cwt.	£1,690,115	
" 1919	1,168,003 "	2,040,161	
" 1913	1,087,918 "	650,001	

Details of the imports for last month are as under:—

### PRINTING AND WRITING PAPER IN LARGE SHEETS.

Sweden ...	38,651 cwt.	£92,293
Norway ...	15,490 "	45,299
Germany ...	12,323 "	31,059
Belgium ...	796 "	3,294
U.S.A. ...	2,866 "	14,088
Newfoundland ...	145,580 "	398,910
Other Countries ...	41,273 "	114,644

Totals ... 256,999 " 699,587

### PACKING AND WRAPPING, INCLUDING TISSUE PAPER.

Finland ...	10,518 cwt.	£31,082
Sweden ...	57,501 "	192,707
Norway ...	14,820 "	52,097
Germany ...	18,082 "	59,720
Belgium ...	5,760 "	21,632
Other Countries ...	16,709 "	68,786

Totals—Dec., 1920 123,390 " 426,024  
 " 1919 328,139 " 777,715  
 " 1913 370,253 " 259,080

### COATED PAPERS.

Germany ...	1,004 cwt.	£5,215
Belgium ...	1,842 "	14,450
France ...	527 "	5,152
U.S.A. ...	1,050 "	5,308
Other Countries ...	1,688 "	13,830

Totals ... 6,111 " 43,955

### OTHER IMPORTS.

Stationery ...	3,088 cwt.	£25,150
Mill, Leather, Card and Pasteboard	83,227 "	185,420
Strawboards ...	183,029 "	178,908
Other Sorts ...	19,059 "	131,071

## Exports of Papermaking Materials.

Dec., 1920	...	5,325 tons	£98,264
" 1919	...	7,421 "	122,144
" 1913	...	17,881 "	91,386
Jan.-Dec., 1920	...	136,581 "	2,516,654
" 1919	...	47,460 "	906,074
" 1913	...	201,754 "	958,435

## New Inventions.

### A Cover for Loose Leaves.

A folder or cover for loose leaves, etc., patent by Mr. G. Dunkerley, has extensions *d*, Fig. 1, hinged or flexibly attached at or near to the edges of the sides *a*, and an endless string *e* knotted at *h* to prevent slipping is threaded through holes *f*, *g* in the sides and extensions, to hold the extensions at an angle to the sides and support the latter in an inclined position, and so provide a trough when the folder is opened on a table or the like. The cords *e* are crossed over the top of the folder, and looped under the slots *i* to hold the cover and extensions closed, the back *b* serving as a base for storing. In the modification

shown in Fig. 4, strips *l* of calico, etc., are attached to the sides and extensions to hold the latter at an angle, and side-pieces *n* on the back *b* serve to prevent the paper from protruding at the ends of the folder. Fig. 9 shows pieces of elastic *o* threaded through eyelets *f* on the sides, and adapted to be looped over the top edge, or around buttons *q* to retain the sides *a* and extensions *d* in the closed position. Handles *p* may be provided for carrying.

### Feeding Sheets.

In a machine for feeding sheets to printing, folding, or other machines, the invention of The Dexter Folder Co., devices are provided for crimping the sheets as they approach the stops or gauges, so as to stiffen them, the crimping devices also acting to retard the movement of the sheets. A feeler finger which acts to stop the machine on failure of the feed is also provided. Fig. 2 shows a plan of one side of the feed table on to which the sheets are fed by tapes 1. The sheet is drawn

against a side gauge 57, Fig. 2, 10, and 14, by a reciprocating gripper comprising a jaw 35, pivoted on a pin 33 on a rack bar 27, and a fixed jaw formed by a flange 28 on the bar 27. The bar 27 is reciprocated in a guide channel formed in a bracket 26 which is secured to a cross bar 23 and is formed with bearings 15, 16 supporting a rock shaft 11 on which is keyed a skew quadrant 31 for operating the bar 27. The bracket 26, to which the side gauge 57 is secured, is adjustable laterally by nuts 18, 19 mounted on a screwed extension 17 of the bearing 16 and engaging opposite sides of a bracket 20 fixed to the cross bar 23. The opening and closing movements of the gripper jaw 35 are controlled by a dog 40 pivoted on an arm 36 of the jaw and adapted to abut against a shoulder 41 on the arm 36 to open the jaw when the dog 40 strikes an adjustable stop 47 at the end of its outward stroke. The jaw is held open during the inward stroke by

means of a roller 39 on the dog riding under a cam bar 42 and at the commencement of the return stroke the dog is tripped by its engagement with the bar 42 to allow the jaw to be closed by a spring 59 on the pin 33. The tripping of the dog 40 may be effected at the end of its inward stroke by providing a fixed lug to be engaged by the lower end of the dog. The sheet crimping device consists of a member 52 pivoted on a pin 51 on the bracket 26 and provided with a flange 54 which, when it is in the position shown in dotted lines in Fig. 14, depresses a part of the sheet below the plane of the remainder so that as the sheet is drawn towards the gauge 57, it is crimped or warped to stiffen it, and its movement toward the gauge is retarded. When the gripper is opened, the member 52 is lifted by the engagement of a roller carried by a pin 48 on the gripper, with a flange 53 on the

member 52. The member 52 may be held out of operation by a screw 55 engaging a lug 56 on the bracket 26. The front edge of the sheet passes between the finger 97, Fig. 2, secured to a fixed cross shaft 6, and a pair of fingers 96 projecting from a member 95 secured to a rock shaft 91. As the sheet approaches the front stop, the shaft 91 is rocked to raise the fingers 96 to crimp and retard the sheet. The means for stopping the machine on failure to feed is shown in Fig. 5. A feeler finger 82 is pivoted to an arm 80 fixed to a shaft 97 which is normally rocked by an arm 85 carrying a roller 86 engaging a cam 5 on the shaft 6. An arm 78 on the shaft 79 carries a pin 77 supporting a bar 71 which is connected through linkage 73, 76 to stopping gear. As the shaft 79 is rocked a projection 70 on the bar 71 is alternately moved into and out of the path of a lug 69 adjustably secured to the cam 5; but if the sheet supply fails, the feeler 82 falls into a hole 83 in a plate 84 preventing the roller 86 from following the cam depression 87, so that the bar 71 is moved longitudinally by the lug 69 to stop the machine. The cam 5 is oscillated by a reciprocating rod 3, and operates the rock shaft 11 by means of a tooth 8 engaging a notch in a member 10 secured to the shaft 11, the shaft 11 being held stationary between each oscillation by the engagement of the curved surfaces 13 with the edge of the cam. The rock shaft 91 is operated by an arm 90 engaging the cam surface 88 on the cam 5 and its movement is limited by an arm secured to the shaft 91 carrying a stop screw engaging the shaft 6. The arms 85 and 90 are connected by a spring which tends to hold them in contact with the cam 5. The grippers and crimping devices are duplicated on the other side of the feed board to that shown in Fig. 2.

### Driving Printing Machines.

Driving mechanism for a printing press, by which the speed of the press can be readily controlled and the press instantly stopped, comprises a belt pulley 43 loose on the main shaft 11 of the machine and a drum 27 fixed to the shaft 11 and carrying clutch shoes 42 adapted, on the depression of a treadle 64, to engage the pulley 43 to start the drive. When the clutch is disconnected, a brake shoe 57 is simultaneously applied to the drum 27 to stop the machine. The clutch shoes 42 are carried by levers 42' pivoted at 45 to the drum 27 and having weighted ends 46 to which are connected springs 47 to hold the shoes normally out of contact with the pulley 43. The levers 42' are also connected to arms 36 pivoted at 37 to the drum 27 and adapted to be operated by rods 32, the ends of which engage recesses 25 in a collar 23 slidable on the shaft 11. The rods 32 actuate the arms 36 through springs 33 and loose washers 34. The sliding movement of the collar 23 is effected by turning a collar 20 having cam surfaces 21 engaging corresponding surfaces on a fixed member 16 and the collar 20 is turned by a cable 65 connected to a disk 60 on the treadle-actuated shaft 58. The disk 60 is held in adjusted position by friction against a standard 59.

The brake shoe 57 is carried by a lever 49 pivoted at 52 to the press frame 10 and carrying a roller 54 held in engagement with a cam projection 55 on the collar 20 by means of a spring 56. On depressing the treadle 64, the collar 20 is turned and the cam 55 allows the spring 56 to release the brake 57. Simultaneously the arms 36 are turned to move the

clutch shoes 42 into engagement with the pulley 44. As the speed of the shaft 11 increases, the weighted ends 46 of the levers 42' tend to swing outwardly against the pressure of the springs 33, so as to disengage the shoes 42, and by this means the speed of the shaft 11 may be controlled. The invention is by the Horton Manufacturing Company.

### Crinkled Paper.

According to a patent application by the Arkell Safety Bag Co. crinkled paper, crinkled fabric, and other sheet material are obtained by moistening a web 44 by rolls 40, 41, squeezing out excess moisture by rolls 42, 43, pressing the paper on to a perforated cylinder 1 by means of a suction box 26 while it is removed

by an adjustable spring-pressed doctor 33. The suction, which may be variable to vary the crinkling, is produced by a motor-driven pump. Fluid pressure may be applied as in Fig. 3, by means of a chamber 52 having rolls 54, 55 at the edges, a plain roll 48 being used. Pressure and moistening may be effected together by using steam.

## British Paper and Cardboard.

### Exports During December.

The total exports of British paper and cardboard during December of last and the preceding year and also for 1913 were as under:—

#### TOTAL EXPORTS.

Dec., 1920	...	241,227 cwts.	£1,491,462
" 1919	...	142,074 "	480,168
" 1913	...	258,431 "	287,596

The exports for December last, with countries of supply in some cases, fall under the following headings:—

#### PRINTING, NOT COATED.

	Cwts.	£
France	2,941	14,741
United States	2,175	14,778
Other Foreign Countries	23,453	131,578
British South Africa	12,148	63,241
British India	34,103	151,551
Straits Settlements	1,080	6,434
Ceylon	3,927	18,423
Australia	39,423	176,939
New Zealand	13,993	65,745
Canada	1,078	6,186
Other British Possessions	4,411	22,343

Totals—Dec., 1920	...	138,732	671,959
" 1919	...	49,912	171,385
" 1913	...	126,259	132,276

#### WRITING PAPER IN LARGE SHEETS.

	Cwts.	£
France	595	3,671
United States	145	1,886

Australia	1,179	8,585
New Zealand	298	2,468
Canada	111	1,760
Other British Possessions	1,003	10,386

Totals—Dec., 1920	...	8,071	79,850
" 1919	...	4,430	37,482
" 1913	...	6,507	15,268

## British Paper & Cardboard Exports.

British exports of paper, etc., last year were over 32 per cent. below the quantity shipped in 1913, but as compared with 1919 an increase is registered of 151 per cent. The total figures stand as under:—

1920	...	2,352,431 cwts.	£12,817,859
1919	...	937,030 "	4,230,910
1913	...	3,498,914 "	3,679,195

Last year's value, as compared with 1913, shows an increase of 248 per cent., and as compared with 1919 an increase of nearly 203 per cent.

The recovery in the export of printings and writings during last year may be regarded as satisfactory. Printing papers (not coated) sent abroad represented 1,108,805 cwts. of the value of £4,894,213. This is a big advance on 1919 when 365,564 cwts. valued at £1,435,767 were shipped. The quantity exported in 1913 was 1,877,721 cwts., of the value of £1,823,163.

The exports of writing paper in large sheets last year were 2,9883 cwts. of the value of £1,541,343, and exceed in quantity the 218,476 cwts. (£472,286) of 1913. In 1919 writing paper was exported to the extent of 137,611 cwts. of the value of £920,465.

It is rather interesting to observe that the course taken by the above two groups of papers during last year was identically the same. Thus, in regard to printing paper the export figure in January was 57,183 cwts., which fell away in February, rose again in March, and after a little check in April it went on steadily rising, until it reached the figure of 161,299 cwts. in November, which is the only figure which exceeds that of last December (138,732 cwts.). In printing paper the last four months show a total export of 540,775 cwts. against 568,030 cwts. for the first eight months of the year.

## Last Year's Paper Imports.

**Quantity Exceeds that for 1913 and Value Fourfold.**

It is noteworthy that British imports of paper last year exceeded those in the pre-war year of 1913, as the following total figures show:—

1920	12,945,269 cwts.	£30,252,181
1919	7,620,184 "	13,021,023
1913	12,881,747 "	7,691,542

As compared with 1919 the imports last year show an increase of over 69 per cent.

Values show a very different ratio, the amount for last year being more than four times that of the pre-war year of 1913. The increase last year as compared with 1919 amounts to over 132 per cent.

The imports during 1920 comprised the following:—

	Cwts.	£
Printings and Writings, in large sheets ...	3,396,365	9,119,910
Packing and Wrappings including Tissues ...	3,904,488	11,568,609
Coated Papers ...	128,273	817,750
Stationery ...	32,973	249,065
Mill, Leather, Card and Pasteboard ...	1,658,064	3,162,000
Strawboard ...	3,447,507	3,238,003
Other Sorts ...	377,599	2,096,844

## Canadian News-Print.

**Struggle Over the Price.**

The action of the Spanish River and Abitibi Co.'s in reducing their price for news-print for the first half of 1921 from 7 cents per pound to 6½ cents, has been the principal topic of interest in the industry in Canada during the past week. It is stated here that the concession followed a conference in New York between the companies' representatives and their customers at which strong objection was taken to the 7 cent price, which was not only ½ cent a pound higher than that fixed by the

International Paper Co. and the Canadian Export Paper Co., but was \$40 per ton more than the Spanish River and Abitibi Co.'s charged last year. The fact that these companies last year had been receiving a lower price than the general contract price was the reason why a 7 cent rate had been decided upon, to equalise the companies' receipts with those of other producers. However, the companies had no wish to be regarded as taking advantage of their strong position, and the price was, therefore, finally decided upon at the same rate as that of the other companies.

## Riordon's Big Business.

The net profits of the Riordon Pulp and Paper Co., Ltd., for the first quarter of its fiscal year, from July 1st to September 30th, 1920, exceeded \$1,600,000. This statement is regarded by the directors and investors as very reassuring, as at the time the company was formed, the estimate for the year was placed at \$5,000,000, while at the above rate the business is running at \$6,400,000 the year.

## Printers and the Cult of Beauty.

**Mr. Frank Pick, of the Design and Industries  
Association, Speaks at the L.M.P.A. Luncheon.**

That energetic and high-principled society, the Design and Industries Association, had the opportunity last week, in the person of its chairman, Mr. Frank Pick (general commercial manager of the Underground Electric Railways), of putting before an influential gathering of London master printers its views as to the possibility and desirability of more attention being paid to the achievement of beauty in the products of present-day industry. The occasion was the January luncheon of the London Master Printers' Association, which was held at the Connaught Rooms on Tuesday, when Mr. R. A. Austen-Leigh presided over an excellent muster of members and friends of the Association.

The president, in introducing Mr. Pick, mentioned that the Design and Industries Association was founded in 1915 for the purpose of encouraging honest workmanship and good taste in every sort of manufacture. Of this Association he (Mr. Austen Leigh) was himself a humble member—not, he said, as one holding any particular views of art, but rather as a sort of Philistine groping for light. (Laughter.) The Design and Industries Association had done good service in arranging excellent exhibitions of printing, and to Mr. Pick himself printers were grateful for his activities in connection with the high-class poster printing done in respect of the Underground Railways.

### **Need for Master Printing.**

Mr. Pick, who was given a cordial reception, began by making regretful reference to the days when master printers had to produce masterpieces; he suggested it would be well if master printers of to-day had something in the way of a library of masterpieces for them-

selves, so that they might have before them reminders of the value of good printing.

Looking back to the time of the invention of printing, Mr. Pick cited striking facts and figures to show the immense advances made in the material or the quantitative side of the production of print, but said he thought we had made no appreciable advance in the artistic or spiritual side. What could be done to remedy this? He read the statement of the aims of the Design and Industries Association, and explained that the Association's object was not to introduce art into commerce, but rather to bring art out of the corners in which it now lingers. They did not want a few fine hand printed books produced in protected nooks; what they wanted was a new craftsmanship based not upon the hand press but upon the machine.

Mr. Pick went on to speak of his experience in the production of posters for the Underground. They soon found, he said, what an extraordinary number of different founts of black-letter type printers possessed; they found also how very ugly many of them were. Another difficulty was the printer's proneness to use the false emphasis of different founts of type, as against the true emphasis of proper composition. And yet it was so simple to get good composition if workmen had good standards set before them! In regard to lithography, he had learned by experience that this process was not at its best when copying elaborate pictures made without respect to lithographic reproduction. Pictures suitable for lithographic treatment had to be specially chosen. Indeed, he wished to see an extension of the practice of the artist himself putting the picture down to stone.

After comparing the recent advances made

in lithography in this country with those made in Germany—to the disadvantage of ourselves—Mr. Pick pleaded for a better quality of British workmanship as shown on our hoardings, and said it would be a good thing if a large body of business people, as well as artists, could be got together to strive to bring the element of quality into machine production.

#### Printing and Railways.

Mr. R. A. Austen-Leigh, after referring appreciatively to Mr. Pick's address, made interesting comparison between the development of printing and of railway transport. Both were founded upon highly-developed crafts, to which in their earliest days they adhered too closely. Some incunabula were hardly distinguishable from the best manuscripts; the earliest railway carriages were little more than stage coaches placed upon trucks. Separate development came later. Printing had not developed quite as fast as Mr. Pick would have liked. Perhaps the railways had not developed quite as fast as printers might wish. (Laughter.)

Mr. G. W. Jones, in the course of an interesting speech, emphasised how much the printing craft owed to those who had not been printers. He instanced the first Caslon, who was an engraver, and remarked that one of the greatest impetuses the craft had had in our own lifetime came from a man who loved our craft but was not a printer—William Morris. Mr. Jones mentioned a personal meeting with Morris, and, while criticising some of his work, said Morris had at any rate demonstrated some of the potentialities of the printing craft.

#### The Printer's Difficulties.

Referring to Mr. Pick's criticism of the use of type, Mr. Jones pointed out that the printer is the servant of every one of his customers, and thus is no autocrat. Though some of them had been preaching the gospel of "one fount of type in one job" for 40 years, many customers did not want it. Moreover, not every member of the Society of Compositors was seeking the beauty of simplicity: they *did* want to show that latest fount of type which had come into the office. (Laughter.)

Mr. Vincent Brooks, who laid stress on the need for every effort to better the present condition of British trade, said that as a member of the Senefelder Club he was keenly interested in bringing the artist into closer touch with commercial life. He felt that what Mr. Pick had said was abundantly true. He advised printers, especially lithographers, to get the right man for artistic work, despite the cost, and to give him every facility to do his best.

Mr. Howard Hazell, in an able speech, mentioned his own membership of the Design and Industries Association and expressed his interest in the views put forward by Mr. Pick. In sincerity of workmanship and beauty of work could be found some compensation for the loss of the individual worker in modern industry. Printers' chief difficulty was with their customers, who sometimes rejected what was thought to be beautiful and actually

wanted all those mixtures of types and that brass rule. The object of the Design and Industries Association was to see to it that those who wanted beautiful work should have it, and thus they would influence the public as a whole. They wanted to get down to the man in the street and help him to realise the value of beautiful things. In this respect he thought a debt of gratitude was owing to Mr. Frank Pick who had placed beautiful work where it could appeal to the greatest number—in the picture-gallery of the streets. In conclusion, Mr. Hazell told how Underground Railway posters had, during the war, carried beauty of colour and form into the hospitals in France, bringing to soldiers there something of the country they had left.

Sir Cecil Harrison proposed a vote of thanks to Mr. Pick for his "most interesting" address. Referring to the elusive nature of beauty, Sir Cecil stressed *sincerity* as the greatest desideratum, and suggested that if they could put into their work the element of sincerity, they would be able to maintain individuality, and from that would arise the beauty they were seeking.

The vote of thanks was carried informally with acclamation, and the proceedings came to an end with a brief response from Mr. Pick, who said he would go away with more sympathy for printers than he had previously had.

The president announced at the close that there would not be a luncheon next month, but that on February 16th the annual dinner of the London Master Printers' Association would be held in the Connaught Rooms, when it was hoped there would be a good attendance.

---

ILLUMINATED MSS. AT S. KENSINGTON.—To the exhibition of manuscripts from the library of Durham Cathedral, now shown for a short period in the Victoria and Albert Museum by the generosity of the Dean and Chapter, some very interesting additions of MSS. from other sources have recently been made. Earliest in date among these is St. Cuthbert's MS. of the Gospel of St. John, which is recorded to have been found in his shrine when his body was translated to the new cathedral at Durham in 1104-05. This MS. is specially interesting on account of its cover, which is probably of the seventh century, and is believed to be the only decorated leather binding in existence of anything like so early a date.

NEWSPAPER PRESS FUND.—During last year the sum disbursed by the Newspaper Press Fund in grants and pensions—£8,007 15s. 8d.—was the largest in any year in the history of the fund (says the annual report). During the year, 207 new members were elected, forty-three died and seven were removed from the roll, which now comprises 3,003 members, of whom 1,301 reside in London, 1,655 in the country, and forty-seven abroad. Five pensioners died during the year and five new pensions were granted. Forty-five pensions are now being paid, amounting to £2,034.

## The "Lithotex" Process.

Striking Demonstration by Mr. Harrington

Mr. E. C. Harrington, a lithographic instructor at St. Bride Foundation Institute, gave on Thursday of last week an interesting and impressive demonstration of the practical working of the "Lithotex" process. The demonstration took place at the offices of Pictorial Machinery, Ltd., 7, Farringdon-road, E.C.1, where also there were on view some admirable examples of colour printing in which the "Lithotex" process had been used—a notable feature being some exquisite calendar and fine art work executed by Messrs. Eyre and Spottiswoode, Blades, East and Blades, Lever Bros., Robinson, of Bristol, and others. There were about a dozen trade visitors present, among them being some prominent London lithographers and letterpress printers, including representatives of H.M. Stationery Office and the Air Ministry.

In a preliminary oral exposition of the process, Mr. Harrington briefly reviewed the method of printing by means of multiple stereo plates, and he drew attention to the time-taking nature of the work of getting into correct alignment and "making ready" a large number of small stereos. He also pointed out the extreme difficulty of getting accurate register in multi-colour work done by this method, and remarked further that the stereos did not actually, as so often claimed, produce prints equal to those from the original block. Referring next to litho work, he emphasised the time and cost of getting drawings down on to the stone or plate; moreover, the damping of transfers and the pressure, he said, necessarily resulted in a spreading or "spueing" of the ink, with consequent detriment to the printed picture; while reduction or enlargement of a drawing meant long and costly work by the litho artist. Further, the printing surface was only more or less on the surface of the grain of the litho plate, whereas from a photographic negative printed down on a bichromated-albumen coated litho plate, the subject printed was transferred right down to the base of the grain in an indestructible composition, and consequently would permit of a run on machine of many times that of a plate produced by the hand-transferred method. Moreover, the "Lithotex" method, in as many hours as the number of days ordinarily taken, produced more accurate results, and offered remarkable facilities for reduction or enlargement, while it was found that, at the end of a long run, the fine work turned out was as good as at the beginning.

Very striking was the immediate translation of these verbal claims into practical demonstration. The visitors were taken into a dark room containing a "Lithotex Step and Repeat" machine. The action of the machine having been briefly explained, a projection was made from a half-tone portrait positive,

and in this way there was produced on another photographic plate a negative replica several times repeated, it being made clear that as many replicas as desired could be obtained, and with any required reduction or enlargement. A series of replicas having been obtained on the negative plate, this was rapidly developed, and was then taken to the "Lithotex Printing-Down Frame," the details of which were explained. A sheet of grained zinc was sensitised in view of the visitors, was inserted in the frame, and the printing-down process carried out. The zinc plate was then removed, rolled up with transfer ink and washed, and was found to bear excellent printed-down reproductions of the photographic original, the only remaining requirements being the usual gumming, light etching, etc., to produce a finished plate ready for a long run.

The visitors were evidently much impressed with the advantages of the new method, and there were many expressions of appreciation of the information given and of the lucid, quick and very successful manner in which Mr. Harrington carried out the demonstration.

## STATIONERS

AND THE

## Employment of Ex-Officers.

Major-General Sir Frederick Maurice, K.C.M.G., gave an interesting address to the Liverymen of the Worshipful Company of Stationers, at their Hall on Wednesday, 19th January. He explained in a lucid manner what had been done: and what is being done towards finding ex-officers employment. Sir Frederick mentioned that there were probably 13,000 ex-officers of the National Army who had still to find berths. He made a strong appeal to employers present to help in every possible way to fulfil the obligation which the country undertook to look after these men when they returned from fighting the nation's battles.

The chairman, Mr. R. A. Austen-Leigh, complimented Sir Frederick upon his able and interesting address. He felt that after what had been said, those present would help ex-officers not only by finding them situations but also by furthering the claims of the ex-officers amongst their friends.

The hon. secretary of the Livery Committee, Mr. J. R. Riddell, in proposing a vote of thanks, made a characteristic appeal on behalf of disabled men, asking that a certain proportion of openings in the printing trade should be kept for the men who have undergone a technical training to fit them to become useful and self-supporting citizens. He paid tribute to the trade unions by stating that in his opinion if it had not been for the support and interest given by the various printing trade unions, the scheme for the training of disabled soldiers as printers would in all probability have fallen through.

# Electrotypers and Stereotypers

## MANAGERS & OVERSEERS' ASSOCIATION

### Annual General Meeting.

During the past year the Association has adopted a policy of enthusiasm in all it has undertaken, and can look back at the results of its endeavours with satisfaction. The monthly meetings have been well attended, and besides allowing opportunities for social intercourse, members have derived considerable benefit educationally from the various lectures and discussions that have taken place from time to time. From a financial point of view the Association stands in a prosperous condition, while at the same time it has taken a keen interest in the various charitable claims that have come before it, and it has given liberally towards encouraging and uplifting the dignity of the craft.

There was a large attendance at the annual general meeting, held on the 18th inst., at the headquarters, St. Bride Institute, Bride-lane, E.C.4, when Mr. A. Chadwell occupied the chair.

The minutes of the last meeting having been approved, the next item on the agenda was the balance-sheet.

Mr. J. Parker proposed and Mr. A. Latimer seconded, that the balance-sheet, as submitted, be adopted.

The proposition was unanimously carried.

Mr. W. Brooks, on behalf of himself and his co-auditor, expressed appreciation of the manner in which the books had been kept.

It was agreed that the printing of the new rules as drawn up by the Committee appointed for the purpose and subsequently authorised by the members, should be proceeded with.

The Secretary reported having received the block of the design executed by Mr. Filkins.

### Election of Officers and Council.

The retirement, according to rule, from the presidency of Mr. Chadwell, in spite of his willingness to do so, and his assurance that as an ordinary member his best interests would still be with the Association, would not be considered by the members.

On the motion of Mr. Parker, seconded by Mr. J. Black, Mr. Chadwell was heartily re-elected president.

Mr. Chadwell briefly returned thanks.

On the proposition of the President, seconded by Mr. A. Wood, Mr. W. Bullett was unanimously re-elected secretary.

Mr. W. H. Longley, the retiring treasurer, who was absent on account of the death of his wife, was re-elected, and it was agreed that a letter of condolence be sent to him on his bereavement.

Messrs. G. W. Sharvell, sen., and F. Le Gry were re-elected trustees.

On the proposition of Mr. Latimer, seconded by Mr. G. W. Sharvell, it was decided that the names submitted be elected *en bloc*. They

were: Messrs. J. Parker, G. W. C. Sharvell, jun., A. Wood, H. Filkins, H. Clark, J. Craske, and J. Black.

### Correspondence.

A letter was read from Mr. H. Williams tendering thanks to the members and the president for the generous contribution towards the Christmas appeal undertaken by him on behalf of Dr. Barnardo's Home.

A letter from Mr. F. E. Shillam (Electro Auxiliary), thanking the Association for presenting to the trade the handsome challenge cup, was also read.

Another letter stated that the auxiliary had at a recent meeting agreed that they invite the Association to secure the chairman at the next concert.

In regard to the last letter, it was agreed that the Association undertake to secure the chairman at the next auxiliary concert.

The balance of four guineas on the challenge cup collection was, on the motion of Mr. Bullett, decided to be placed as the first contribution of the Association towards the plate on the occasion.

### Hon. Members.

The question of inviting gentlemen well-known in the printing and allied trades to become honorary members was discussed, and the general opinion was that it would be to the good of the Association. On the motion being put to the vote, it was carried that the rule should be amended so as to allow, at the discretion of the executive, hon. members on payment of one guinea per annum.

Mr. W. C. Warren (general secretary Electrotypers' Society), on the invitation of the President, dealt briefly with the present phase of unemployment and overtime, and appealed for the friendly co-operation of the overseers in the matter.

Mr. Warren also mentioned the holding of a sports event on behalf of trade charities that was in contemplation by the Electrotypers' Society, and said that any assistance that could be given by the members would be heartily welcomed.

A vote of thanks to the chairman brought the meeting to a close.

SENTENCE of nine months' hard labour was passed by the Recorder at the Old Bailey last week upon Eric Arthur Waldron, 25, who pleaded guilty to forging and uttering documents relating to the supply of paper whilst engaged in the Publicity Department of the Ministry of Labour, and by which he obtained £30.

CATALOGUES FOR CZECHO SLOVAKIA.—The Commercial Secretary to H.M. Legation at Prague states that an import licence is not required if printed catalogues are despatched to individual firms in Czecho-Slovakia as "printed matter" or by parcels post. An import licence is, however, required for printed catalogues consigned in bulk to a firm or individual, but even in this case no difficulties will be encountered if application is made to the Ministry of Foreign Trade at Prague.

# Map-Printers' Welfare Work. Mr. T. W. McAra on Dickens.

## Messrs. George Philip and Son's Canteen.

Messrs. George Philip and Son, Ltd., the London Geographical Institute, have just completed the erection of a canteen at their Willesden Works, which was formally opened on January 10th. To mark the occasion the directors invited the entire staff of close on 250 to tea in the new building, where a very pleasant time was spent. A piano was presented for use on similar social occasions and reference was made to the good feeling existing between the directors and staff. The following resolution was proposed by one of the staff, and carried with musical honours:—

"That we, the employees of Messrs. G. Philip and Son, Ltd., desire to tender the directors of the firm our most hearty congratulations for their splendid example to other employers of labour, in the reinstatement of all their workers who were actively engaged in the late Great War, and for their personal sympathy and respect of those who were called to make the great sacrifice.

"We would also wish to tender our sincere thanks for the kindly, courteous and generous consideration they have given to all labour problems submitted to them, especially during the past six years, the result of which has produced many concessions, financial and social, for the great betterment of the workers.

"We would further hope that the same amicable relations may long continue to the future benefit and prosperity of all concerned."

Some musical items brought a memorable evening to a close.

The canteen building, which has been adapted from army huts, consists of two wings at right angles, curtained off for men and women respectively, but which can be utilised as one large room when required. The kitchen is placed in the inner angle between the two rooms, with separate serving hatches, thus avoiding all fumes of cooking entering the main building. The exterior is pleasing, and has been improved by the addition of a verandah facing the main road.

The welfare movement from which the canteen has partly resulted has been in successful operation in the works for a considerable time, and at present consists of welfare, social, sports and canteen committees, who hold their own meetings. Representatives from these meetings meet the management once a month, forming the Works Council, to discuss welfare matters.

MESSRS. CHARLES J. FORWARD AND SON, LTD., publishers and general bookbinders, of 25-27, Sayer-street, New Kent-road, S.E.17, send us a copy of their neat and serviceable "Forward" pocket diary and engagement book for 1921.

A departure from the usual character of the well-established lectures given at St. Bride Foundation Institute was made on Friday, the 21st, when the chairman of the Printing School Committee, Mr. T. W. McAra, J.P. (secretary of the Newspaper Proprietors' Association, Ltd.), gave a lecture on Charles Dickens with readings from his works and songs by Madame Clifford Stayner and Miss Connie Edwards, Mrs. McAra acting as accompanist. The Rev. A. Taylor, Vicar of St. Bride's Church, took the chair at short notice owing to Mr. George Eaton Hart being called away on important business. In calling upon the lecturer the chairman said he felt that there was no need to introduce Mr. McAra, he was so well known, and his work on behalf of the School would remain a lasting monument to him.

The lecture, which was of a highly interesting and entertaining character, held the large audience interested for two hours. Mr. McAra's elocutionary powers were shown to advantage in the readings, and the singing of the ladies in a large measure added to the success of the lecture.

The Vicar, in moving a vote of thanks to Mr. McAra and his colleagues for their entertainment, referred appreciatively to the influence that the life and works of Charles Dickens had wrought upon character.

The principal, Mr. J. R. Riddell, in proposing that a vote of thanks be given to the Vicar, said that there were two men on whom he could always rely in an emergency; one was the lecturer, and the other the Vicar who that night, at very short notice, had consented to give up his few moments of leisure to occupy the chair. The votes of thanks were carried with acclamation.

**LANCS. UNEMPLOYMENT.**—Unemployment is very heavy in Lancashire and Cheshire. An official return about a fortnight ago gave 382,944 as the number of men and women of the two counties who had claimed either part or whole time benefit under the Act. In the Old Trafford district a firm of lithographic printers has placed 250 workpeople on a basis of three days' work a week.

**EDITORS FINED.**—Four London editors were fined for contempt of court in the King's Bench Division last Thursday. The editor of the *Daily Mail* was fined £200 for the publication of a court-martial sentence before it had been promulgated. The other cases concerned the publication of an inaccurate account of a police raid at Ford's Hotel, Gray's Inn-road, in which it was falsely stated that materials for the forging of bank notes had been found. The editor of the *Daily Chronicle* was fined £200, and the editors of the *Evening Standard* and *Pall Mall Gazette* £100 each.

An Advertisement is always working.

## This is the Patent "LITHOTEX" Step-and-Repeat Machine in operation.

**T**HIS Machine is part of a complete plant for the making of multi-negatives for Printing-down on to metal, displacing transferring in litho practice.

Complete plant is now sold at £3,300, but at present can be leased for the very low pre-war rate of

**£300 per annum.**

*A few figures may  
interest you :—*

Seven per cent. (present bank rate) on £3,300 is £231, this leaving for wear and tear, depreciation, maintenance of patents and profit £69. This is why the leasing of a "Lithotex" Plant is the cheapest thing in the printing trade to-day.

The plant, while costing only one worker's salary, saves several; not only is this so, but it is a time-saver, an ensurer of better work, and a great convenience; every user endorses this.

*Kindly write for booklet fully describing "Lithotex" Plant and its purpose.*

## Pictorial Machinery Limited,

SPECIALISTS IN MACHINERY AND PLANT  
FOR THE GRAPHIC ARTS,

**7, FARRINGDON ROAD, LONDON, E.C.1.**

Wires : "Pictograph, London."

Phones : Central 3215—Central 3216.

# Trade Notes.

At Sotheby's last week Messrs. Maggs paid £1,710 for a third folio Shakespeare.

LORD RIDDELL will preside at the annual dinner of the Newspaper Press Fund, which will be held at the Hotel Victoria on Thursday, May 5th.

PRINTERS on all the Lisbon newspapers declared a strike on the 17th to press their claims to higher salaries, which the proprietors have declined.

THIS year the triennial delegate meeting of the Typographical Association will be held, the place of meeting being Hastings, and the date the week commencing June 6th.

FOR disfiguring the natural beauty of the landscape at Langley, Bucks, by erecting advertisement hoardings, Messrs. H. J. Heinz and Co., of Southwark, were last week fined 5s. and costs at Slough.

SOME satisfactory assurances with regard to the development of the Empire wireless chain were forthcoming when on Wednesday of last week an influential deputation of newspaper interests waited upon the Postmaster-General.

At the quarterly meeting of the Southampton Master Printers' Association last week, Mr. A. E. Goodwin made an advance announcement as to the issue of minimum price lists to all members of the Federation with a view to stabilising prices.

**ELECTION, PRINTERS' PENSION CORPORATION.**—Votes and interest are being solicited on behalf of Mr. Martin J. Thompson, A.O.F. Court Caxton, 47 years, member of Islington Vestry, May, 1901 to 1904, and member of Highgate Masonic Lodge. Recommending subscriber, Mr. F. P. Lewingdon.

**FEDERATION ANNUAL MEETINGS.**—Owing to difficulties in securing suitable accommodation, the Federation of Master Printers has decided to hold its annual meetings at Scarborough instead of at Harrogate, and arrangements are being made for the reception of a record number of members attending.

SOME details of methods used in the alleged forging of bank notes were mentioned in the hearing at Clerkenwell Police Court on Saturday, of the case in which three men, Ford, Levy and Kurasch were charged on remand with being in possession of material for making forged bank notes. The accused were again remanded.

At a meeting attended by Lord Burnham and presided over by Mr. C. H. St. John Hornby, the employees of Messrs. W. H. Smith and Son on Wednesday of last week unanimously resolved to form a committee, representative of the various departments, to further the interests of the Newsvendors' Benevolent and Provident Institution.

THE National Association of Theatrical Employees has just issued the first number of the *N.A.T.E. Journal*.

MR. CHAS. G. BARNARD, of Watford, Herts, printer, aged 51, left £2,588. Mr. Walter Paine, of Worthing, journalist, left £4,748.

THE Stationers' Social Society has arranged to hold its annual winter dinner in the Grand Hall of the Hotel Cecil on February 19th, at 6 p.m.

THE University of Paris is anxious to have a printing business of its own, similar to those of the Clarendon and Pitt Presses at Oxford and Cambridge.

THE "Print-Collector's Quarterly" (Boston, U.S.A.), which suspended publication in 1917, is to be revived in London with Messrs. J. M. Dent and Sons, Ltd., as publishers.

THE United Typothetæ of America is requesting members to send each week two copies of the best job produced, for use in the printing exhibit at the next convention.

THE *Manchester Guardian Commercial* reports a rumour in commercial quarters that a Government inquiry is to be held on the question of the economic value of the "middle" trader.

THE Committee of Public Accounts have issued reports which show that among other Governmental waste was a sum of £20,000 unnecessarily spent in connection with General Election advertisements regarding soldiers' and sailors' votes.

THE death is announced from Toronto of Sir William James Gage, the well-known Canadian publisher. He was president of the publishing and stationery house of W. J. Gage and Co., and of the Educational Book Co. and the Kinleith Paper Mills.

THE French Paperstock Co., Ltd., Penrhyn Wharf Pulp Mills, 24-30, Bermondsey Wall, London, S.E. 16, in sending the season's greetings to their friends, have adopted the novel and useful idea of forwarding at the same time a map of the British Isles mounted on an excellent sample of their strawboard.

**MANCHESTER T.A.**—An endeavour is being made in the Manchester branch of the T.A. to obtain information of any office where excessive overtime is being worked, and representation is also being made to the employers to restrict the working hours to 48 as much as possible during the slack period. A weekly 6d. levy is to be imposed on the branch members to augment the out-of-work pay of the members.

AMONG some early English books from the Britwell Court library sold last week to Messrs. Quaritch, was an unrecorded edition of "The Boke of Solomon called Ecclesiastes," which stands as one of the earliest imprints on English ground of any portion of the Scriptures. This work, printed by Thomas Godfray in London about 1532, is even older than the 1536 folio edition of Tindale's "Testament."

## FORTY-THIRD YEAR.

Printed and Published EVERY THURSDAY  
by STONHILL & GILLIS,  
at 58, Shoe Lane, London, E.C. 4.

agents, 11, St. Bride-street, E.C. 4.

THURSDAY, JANUARY 27, 1921.

# Current Topics.

## The Railway and Telephone Rates.

THERE is much reason for printers to take a keen interest in the proposed new classification of railway rates, as the carrying out of the railway companies' proposals would mean a very serious increase in the rail transport of all printed matter, the present high costs of which are already seriously affecting the printing industry. The Federation of Master Printers has already been active in the matter, having sent a deputation to the Railway Rates Advisory Committee protesting against the short time allowed for entering objections. Owing to protests made, the time allowed has been extended to the end of February. A special committee of the Federation is collecting information, and intends to put forward a formal notice of objection to the attempt to place printed matter in a higher classification. Another direction in which the Federation has been commendably active is in respect of the proposed increases in the

telephone rates. At the last meeting of the Federation Council a strong protest was entered against the increases suggested, and instructions were given to the Federation's representatives on the Federation of British Industries to do all in their power to secure more equitable arrangements than those proposed.

## The Binder's Costs.

THE question of cost-finding in bookbinding establishments, on which we laid special stress in our last issue, is very much to the fore at present. The subject was dealt with effectively by Mr. A. E. Goodwin on Tuesday of last week when he addressed the Master Bookbinders' Association at their monthly lunch. Those who have been fighting the battle for more efficient costing in the bindery have every reason now to be confident of victory. The Liverpool decision to adopt the model time-sheet recommended by the executive of the binders' union is a sign of the times. It is a tribute to the patient and effective leadership of the men's executive—assisted by the costing enthusiasts of the Federation of Master Printers—and it is likely to have far-reaching results.

## Printers and Costing.

MR. HOWARD HAZELL, in carrying on a vigorous, and, of course, an expert propaganda in costing, is breaking new ground next Wednesday at Nottingham, where he will address a meeting of printing employees on the Federation Cost System, with particular reference to how costing affects employees. In these days of high costs, and especially in view of the falling off in demand, the question is a vital one to the workpeople, just as it is to the employers. Mr. Hazell is, therefore, seeking to arouse a wider interest in the problem. It stands to reason that the more the employee knows about costing and what it means in the selling of print the better will he rise to his responsibilities, and more fully realise his importance in the works.

## Demand for Copying Paper.

THERE is still a dearth of high-class copying papers. Much of the stuff that is coming in from Italy and Finland is far below the quality required on the market. Even Japanese papers are singularly difficult to secure, except from one source. The regular grades of both English and foreign make are slow to return and users are forced to turn their attention to inferior stuff.

## Personal.

RUMOUR has it in the Press that Lord Burnham has refused an offer of the Governor-Generalship of Canada, his reason being the wish to maintain his managerial relations with the *Daily Telegraph*.

SIR CAMPBELL STUART presided at the second annual dinner of the day publishing staff and associates of *The Times*, held on Saturday evening at the Abercorn Rooms.

SIR HARRY BRITTAI, M.P., accompanied by Lady Brittain, left England last Thursday for Czecho-Slovakia, Austria and Germany, to study existing conditions in Central Europe.

SIR HORACE BROOKS MARSHALL has taken the title of Baron Marshall of Chipstead.

At the annual dinner of the Bristol Master Printers' Association—attended by Mr. E. W. Humphries and Mr. A. E. Goodwin, president and secretary of the Federation of Master Printers—the Lord Mayor of Bristol was a guest and complimented the printing industry upon the efficiency of its organisation.

MR. A. E. GOODWIN and Mr. A. E. Holmes, the joint secretaries of the Joint Industrial Council, paid a visit to Walsall on Friday to attend what proved a very interesting and helpful meeting of workpeople and employers arranged by the local District Committee.

OXFORD University Press has elected as a perpetual delegate the Right Rev. T. B. Strong, Bishop of Ripon and late Dean of Christ Church, Oxford.

MR. STANLEY UNWIN, having acquired a controlling interest in the Swarthmore Press, Ltd., has joined the board as managing director.

MR. EDWARD M. ILIFFE, of Messrs. Iliffe and Sons, Ltd., presided at a public meeting on Monday, called by the Coventry Chamber of Commerce to protest against the recent action of the Postmaster-General with respect to the telephone rates.

BRISTOL branch and South Wales and South-Western groups of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers have unanimously decided to nominate W. J. Britton, group secretary and organiser, for the position of general secretary of the printing section of the union.

MR. AUGUSTINE BIRRELL was the principal guest of the International Association of Antiquarian Booksellers at their ninth annual dinner last Thursday, in the Criterion Restaurant.

## ST. BRIDE Costing Examination Results.

The results of the costing examination held at Stationer's Hall, on the 15th December, 1925, when 75 candidates sat for the examination, have now been issued by the examiners, Mr. W. Howard Hazell, J.P., and Mr. H. Curwen, who say in their report: "We wish to draw attention to the paper obtaining the first place and which has been awarded the highest possible number of marks. The questions in this paper have been answered accurately and fully, and the explanations given show that this student has a thorough grasp of the principles of the costing system." Mr. H. V. Davis, who has been placed first and gets the Costing Committee's first prize, is employed by Messrs. Hazell, Watson and Viney, Ltd., Long-acre. Mr. E. Binstead, who takes second place and second prize, is employed by the Lamson Paragon Supply Co., Ltd.

A spring-term class in the same subject under Miss G. E. Etherington, is now over-enrolled. It is anticipated that a summer-time class will be held during May and June.

The results are as follows: Davis, H. V., 150; Binstead, E., 148; Williams, S. J., 147; Athill, C. H. M., 146; Holman, W. R., 146; Miss Robinson, G. M., 144; Quy, F. C., 143; Gray, H., 143; Fowler, E. W. L., 141; Miss Thomas, I. V. R., 140; Milne, J. W., 140; Kirkham, H., 140; Jackson, J., 139; Monk, H. T., 137; Lankester, R. W., 136; Batey, C. E., 136; Richardson, A. F., 135; Martine, F. C. J., 135; Fuller, B. G., 134; Whetton, W. C., 134; Taylor, E., 131; Miss Hill, E. L., 131; Williams, J. G., 131; Miss Shoulders, F. M., 130; Heron, E. M., 127; Smith, T., 127; Ansell, J. F. C., 125; Daw, A. A., 125; Miss Plateau, H. E., 124; Harper, T., 123; Wiles, H., 121; Quill, M. J., 120; Fayers, J. R., 118; Nye, G. V., 117; Blackley, F. W., 116; Baker, E. G., 115; Richardson, W. H., 113; Hobbs, J., 112; Glover, H. J., 111; Jackson, A. G., 109; Wilkings, R. F. C., 109; Wallace, A. H., 106; Paine, H. T., 106; Smith, T. W. P., 103.

THE late Mrs. Clement Edwards, who had been engaged in compiling a system of newspaper cuttings covering the whole of the Labour movement and education since the great dock strike of 1889, had amassed a compilation extending to something like 2,400 volumes, with index references amounting to between 3,000,000 and 4,000,000.

PRINTERS have been able to assist the London public museums in increasing their 1919 revenues, considerable sales having been effected of guide-books, catalogues, pictorial post cards, and photo reproductions. The British Museum heads the list with £3,418 from these sources; the National Gallery drew £851, the Natural History Museum £685, the Tower of London £507, the Victoria and Albert Museum £518.

Subscribers: W. Potter, C. Potter and A. J. Potter. First directors: C. Potter, W. F. Potter and A. J. Potter.

**SHELDON SCHOOL, LTD.**—Capital £3,000, in £1 shares; to acquire sole right to the business philosophy inaugurated by Prof. A. F. Sheldon, and the British copyright of all his publications and courses of study, the exclusive right to purchase for British use copies of Mr. Sheldon's courses of study and all his magazines, books, publications and advertising literature, the right to purchase on

special terms copies of the *Business Philosopher* magazine issued by Mr. Sheldon in the U.S.A., etc. Private company. Subscribers: H. T. Millman and R. M. Branson. Registered office: 4, Lincoln's-inn-fields, W.C.2.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

**PETERBOROUGH ADVERTISER CO., LTD.**—Particulars of £7,500 debentures authorised October 18th, 1920; present issue £4,500, charged on the company's undertaking and property, present and future, including uncalled capital.

**BRYANT CARTON CO., LTD.** (Merton).—Mortgage dated January 4th, 1921, to secure £4,000; charged on certain land and buildings in Mitcham. Holder: Sir Edward Mann, Bart., Thelveton Hall, Scole, Norfolk.

**L. UPCOTT GILL AND SON, LTD.** (printers, etc., London).—Issue on December 17th, 1920, of £16,670 debentures, part of a series already registered.

**JAMES WAKEHAM AND CO., LTD.** (printers, etc., London).—Second debenture dated January 7th, 1921, to secure £50; charged on company's undertaking and property, present and future, including uncalled capital. Holder: W. J. Hill, 22, Chelverton-road, Putney, S.W.

**LONDON DIE CASTING FOUNDRY, LTD.**—Particulars of £2,000 debentures authorised January 10th, 1921; whole amount issued, charged on company's undertaking and property, present and future, including uncalled capital.

**SAMUEL HILL AND SONS (LIVERPOOL), LTD.** (printers).—Mortgage dated December 23rd, 1920, to secure £5,000, charged on 10, College-lane, Liverpool. Holder: Miss M. H. Rimmer, Levey Lea, Moffat-road, Dumfries, N.B.

**CENTRAL DEVELOPMENT CORPORATION, LTD.**—Particulars of £35,000 debentures authorised by resolutions of July 22nd and August 6th, 1920; present issue £1,000, charged on company's property, present and future, including uncalled capital.

"WANDSWORTH BOROUGH NEWS," LTD.—Land registry charge on 144 and 144A, High-street, Wandsworth, dated December 30th, 1920, to secure £1,500. Holder: S. Samuel, M.P., Berkeley House, Hay-hill, Berkeley-square, W. (This charge is identical with a mortgage for the same amount and on same property, dated December 20th, 1920).

PEN CARBON CO., LTD. (Leicester).—Satisfaction in full on January 8th, 1921, of mortgage dated February 6th, 1914, securing £2,800, notified. Mortgage dated January 10th, 1921, to secure £4,000, charged on certain land and premises in Leicester, also registered. Holders: Leicester Permanent Building Society, 14, Friar-lane, Leicester.

JAMES BURN AND CO., LTD. (bookbinders, printers, etc.).—Mortgage dated December 29th, 1920, to secure £30,000 and further advances, charged on 40-43, Kirby-street, Hatton-garden, E.C. Holders: Barclay's Bank, Ltd.

LYLE TRADING AND MANUFACTURING CO., LTD. (stationers, etc., London).—Satisfaction to the extent of £100 on January 12th, 1921, of debentures dated March 28th, 1907, securing £5,000.

### BANKRUPTCIES, etc.

Re FREDK. WM. CORBY (stationer, 81, Carter-lane, E.C.).—This debtor attended before Mr. Registrar Hope at the London Bankruptcy Court on January 19th for the public examination upon accounts showing liabilities £1,901 4s. 11d. and no available assets. The debtor stated that from 1878 he carried on business as an account bookbinder at 4A, Walbrook, E.C., removing in 1896 to Green Dragon-court, E.C., where he added to the business that of a manufacturing stationer. In December, 1912, witness sold his business to F. W. Corby and Co., Ltd., which was formed with a capital of £3,000 to take it over; as vendor, he received £2,999 in shares and £3,000 in debentures, £2,500 of which he transferred to his wife as security for debt, and the balance of which he sold; in October, 1915, on the application of his wife as debenture holder a receiver was appointed who continued the business till March, 1919. The assets were then sold. In March, 1919, witness again started in business for himself as a manufacturing stationer at 81, Carter-lane, E.C., but practically no business was done until October, 1919; in the following April he purchased a similar business for £750, and during the same month he agreed to sell the assets of both businesses for £5,000, payable as to £500 in cash and £4,500 in shares in a company which the purchaser was to form. On June 9th, 1920, another company was registered with a capital of £2,500, of which he was appointed managing director, but in August he was by resolution removed from his office, and he had not received his shares in accordance with the agreement of April, 1920. Wit-

ness attributed his insolvency to loss in trading since March, 1919, and to the failure of the purchaser of his business to carry out the before-mentioned agreement. The examination was concluded.

Re GUIDO AJELLI (fine art publisher and printer, 13, Gray's-inn-road, W.C.).—This bankrupt, who failed in August, 1920, with liabilities £329 and assets "nil," applied on January 19th at the London Bankruptcy Court for an order of discharge. The official receiver reported that the applicant formerly carried on business in Milan in the printing and publishing trade. In 1915 he joined the Italian Army, but was invalided out in June, 1917, as the result of wounds and shell shock. During the following month he came to this country with a capital of £100, and started as agent and traveller for firms in the printing trade; in January, 1918, the business was transferred to a limited company of which he acted as managing director until August last. The bankrupt attributed his failure to liability for a debt of the Italian business contracted in his absence. The only offence reported was insufficiency of assets to equal 10s. in the £ on the amount of the liabilities, and on that ground the discharge was suspended for three weeks.

## Gazette.

### A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

### ENGLAND AND WALES.

#### THE BANKRUPTCY ACT, 1914.

#### RECEIVING ORDER.

The Printers' Exchange (sued as a firm), 40 Fleet-street. January 17th.

#### PUBLIC EXAMINATIONS.

Donald Mackenzie and Frank Peter Reavey (trading in co-partnership with George William Macey, and described in the receiving order as The Printers' Exchange), 40, Fleet-street, E.C. March 8th, at Bankruptcy-buildings, Carey-street, W.C.

James William Beales, 7, King-street, Wakefield, stationer. January 19th.

MR. THOMAS G. HIGHT, Sheffield, has been recommended for appointment as stationery assistant in the Town Clerk's Department, Edinburgh, the object being to effect a saving in the use of stationery, printing, etc., by the Corporation departments.

THE new executive committee of the Stationers' Social Society has soon got to work, and sub-committees have been appointed to arrange for golf and bowls competitions.

## Electrotypers and Stereotypers.

### Conference re Apprenticeship.

The conference recently held at 24, Holborn, between the Labour Committee of the Federation of Master Printers and the National Society of Electrotypers and Stereotypers has not yet arrived at a final decision, and a further meeting is to be held.

There was a representative body of employers present, including Mr. R. A. Austen-Leigh, Mr. G. Eaton Hart, and Mr. A. E. Goodwin. Mr. E. W. Humphries, President of the Federation of Master Printers, occupied the chair. The Society were represented by Messrs. H. W. Clark, G. Maidment, J. Lockton, and the general secretary, Mr. W. C. Warren, who presented the case for the Society, and the following is a summary of the points raised at the conference.

Mr. Warren said: "It is not a question so much of mere hours, wages and working conditions, but a matter that we think is exceedingly important so far as the whole future of our trade is concerned. I do not think it would be stating anything but the bare truth to say that possibly not one firm in twenty, perhaps even fifty, have had apprentices trained in the way they ought to have been trained."

Mr. Warren mentioned that an indenture for apprentices—identical with the one now under discussion—had already been agreed with the Newspaper Proprietors' Association and the Electrotypers' and Stereotypers' Trade Employers' Association, and he spoke on the introduction of a fourth party—the Joint Apprenticeship Committee—consisting of a certain number of nominees of the men's Society and a certain number of the particular employer's organisation with whom this model indenture may be agreed.

In the past boys had been pitchforked into the trade, some suitable and others unsuitable, and this Committee would exercise some supervision over the boys both from the point of view of suitability prior to apprenticeship and later their training during apprenticeship. One of the most important powers given to the Joint Apprenticeship Committee will be that the boys will be compelled (it will not be optional) to attend technical training schools. Power will also be given to the Committee to cancel a boy's indentures if it is found that he does not legitimately endeavour to make himself an efficient craftsman.

Mr. Warren stated they also favoured an arrangement for interchange of apprentices between firm and firm during the term of apprenticeship (without alteration of the ratio in either firm) to enable the apprentice to obtain a wider knowledge of various methods of production.

On the question of wages for the whole of the country, Mr. Warren said there was only one reasonable way of settling the wage rates, and that was on the lines of the National Agreement, their proposal being 20 per cent. for the first year, 25 per cent. for the second,

30 per cent. for the third, 40 per cent. the fourth, 50 per cent. the fifth, 60 per cent. the sixth, and 75 per cent. for the last year, although higher rates had been agreed with the Trade Employers' Federation based on the age of the commencement of the apprenticeship. The percentage in all cases to be based on the standard rate paid to journeymen.

The question of the proportion of apprentices to journeymen was brought forward, and in answer to a question by Mr. Goodwin, Mr. Warren stated the conditions with regard to London and the country in jobbing offices were: one apprentice for three journeymen, two for six, three for nine, four for twelve, five for seventeen, and six for twenty-two, with a maximum of six. The Agreement with the L.U.A. was two apprentices for eight journeymen, and one apprentice for every additional four journeymen up to a maximum of six apprentices.

Mr. Warren also referred to the necessity of the Joint Apprenticeship Committee securing some control over the technical training classes and especially the kind of instruction given in them.

The Chairman said they were all interested in the points that had been raised, but pressed for the removal of the embargo that the Society had put on apprentices with certain periodical firms, and after some discussion a mutual arrangement on this matter was reached.

The Chairman, during the course of the proceedings, thanked Mr. Warren for the clear exposition of his views in regard to the technical training of the apprentices, and said a good many employers also recognised that the status of the boy should be improved, and that he should not be used simply as a money-maker.

## Dublin Printing Works Dismantled.

The printing works of Mr. Patrick Mahon, a well-known Dublin City Councillor, who was recently sentenced by court-martial to five years' penal servitude in respect of certain documents found in his premises, were raided on Tuesday by police and soldiers. Two constables first called upon Mrs. Mahon at her private residence, and in the presence of her and her daughter the machinery at the works was dismantled, the operation being carried out by a mechanic under the directions of a Dublin Metropolitan Police officer. Parts of the machinery were afterwards taken away in a motor lorry. The works, which since Mr. Mahon's arrest have been conducted by his daughter, are now at a standstill.

At his court-martial Mr. Mahon said that during the war printers got ready their work, printed it, and sent it on to the Censor, who passed it or otherwise, and in that case the printer was safe. Now the difficulty was that they did not know what to print or what they were not to print. He should say he had never seen the documents alleged to have been found.

### Strawboard Stagnation.

THE strawboard trade is in a bad way, and after a very flourishing period the Dutch mills are facing something like an anxious time. Very few back orders are left over for the English market; and judging by the enormous tonnage held in store in this country, some time must elapse before further orders are placed. If stocks were normal and the demand steady, the market price would be £20 per ton for unlined, 8 to 16-oz. board. As it is, the market price is £18 10s.

### Strawboard Supplies.

The countries supplying the British market with strawboards during December were as under:—

Port of Importation.	Country whence Consigned.	Quantity. Cwts.	Value. £
London	Germany	293	466
"	Netherlands	61,966	58,635
"	Belgium	600	420
Liverpool	Netherlands	8,803	3,780
"	United States	607	1,754
Bristol	Netherlands	28,942	29,735
Goole	"	10,222	9,592
Hull	"	80,377	27,654
Manchester	"	21,191	21,655
"	Belgium	966	310
Newcastle	Netherlands	512	416
Plymouth	"	102	127
Southampton	"	498	560
Stockton	"	1,859	2,296
Aberdeen	"	300	240
Dundee	"	611	610
Grangemouth	"	1,724	1,571
Leith	"	18,696	13,908
Belfast	"	4,947	4,723
Dublin	"	373	556
Total		183,029	178,908

### Leatherboards.

The imports of leatherboards into the United Kingdom during December were as under:—

Port of Importation.	Country whence Consigned.	Quantity. Cwts.	Value. £
London	Sweden	260	355
"	Germany	840	900
"	Netherlands	812	1,167
Manchester	Sweden	628	1,131

## New Inventions.

### Making Paper Bags.

An invention by Mr. J. Perry, patented in England, relates to a machine for making square-bottomed, or flat bags comprising feed-rollers 43, 44 for continuously feeding a paper tube, rollers 108, 109 for holding the end of the tube, intermediate rotary nippers 87, 88 for intermittently feeding the tube, and a cutting device 98, arranged between the nippers and the feed rollers; the nippers may be driven at a lower speed than the feed rollers in order to

cause slack to form when the cutting device is operative. The machine is described as applied to making a bag having V-sides 92, 93, Fig. 2, the tube 40 being cut by the cutting device in such a manner that the sides project beyond the front 143, and the back 144 projects beyond the sides, the rollers 108, 109 forming the bottom of the bag by applying paste to the front at the part C and folding the back and sides upon that part. The cutting device consists of a revolving toothed blade 98 which co-operates successively with the toothed edges 89, 94, 97 of a tube-former plate 45, and plates 90, 95, the toothed edges being in stepped order with the edge 89 at the front. The plate 95 engages the top of the tube, and the V-sides pass into the space between the plates 90, 95. The blade 98 is secured to an arm 100, Fig. 5, which is adjustably secured to a disk 99 on an oblique shaft 104 geared to the main shaft 81. The roller 108 is provided

with a rigid blade 118, Fig. 6, for applying adhesive, and a rigid folding-blade 116 which co-operates with a gripping blade 117 in the roller 109. The gripping-blade 117 is secured to a rock shaft 119 which is rocked periodically by a stationary cam. The blade 118 receives adhesive from a roller 123 running in a tray 124. Types 138 for printing upon the bag are secured to the roller 109. The types are inked by a roller 141. The bags are delivered by means of rollers 128, 129. To permit of adjusting the size of the bag, the rollers 108, 109 and the associated rollers 123, 128, 129, 141, are mounted on a frame 21 which can be adjusted by means of a rack and pinion. When the frame is adjusted, a pinion 80, secured to the main shaft 81 and geared to the rollers 43, 44, and the rollers 108, 109 is replaced by a larger or smaller pinion.

### Type Moulds.

An invention by the Williams Engineering Co. and H. W. Dole is intended to facilitate the separation of the tang from the body of the type. A thin metal plate or other member 9 adapted to form a nick or groove in the

type body is secured between one mould-block 10 and the adjacent break part 7. The member 9 has a length exceeding the set-width of the widest type to be cast. According to the Provisional Specification, a wire may be used.

**PAPER TESTING INSTRUMENTS.** — There seems to be a lack of paper testing instruments on the market. Among recent inquiries is one for a micrometer suitable for measuring thicknesses of board to 1.000th part of an inch up to an inch. We shall be glad to hear from manufacturers.

# Rotary Photogravure.

How it may affect Letterpress and Lithographic Printers.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

Present-day printers, watching the undoubtedly remarkable progress which is being made in rotary photogravure in the hands of firms who have laid themselves out for it, are naturally inquiring what will be its effect on the future of their industry. Is the process to remain in the hands of firms specialising in it, or is there any possibility of the process being taken up by the ordinary printer as an adjunct to his business? Inquiry into the cost of installing the process reveals the fact that a considerable capital expenditure is required to instal not only the printing machine or machines but also the means of producing the engraved copper cylinders. If simply the printing machine is installed and some outside firm relied on to produce the cylinders it is feared that the cost of the latter and the delay in furnishing them would be a serious handicap, whilst there might be risks of damage in transit and disputes as to the quality of the work on the cylinder since it is not possible at present for the engraver to furnish a proof. There is again the cost of regrinding and polishing the cylinder for a fresh job which is a not inconsiderable item, whilst the cost of building up the cylinder with copper when it has got down to too small a diameter to suit the machine is a still greater expense. These considerations militate against the employment of the process

for small jobs and short runs, and as matters stand it is practically only the big newspaper and periodical publishing houses who can afford to run the process.

## Attempts to Cheapen the Process.

Such is the position of the process at present, but it may not continue. Experiments have been in progress for doing away with the necessity of using the heavy iron cylinders coated with copper by electro-deposition, by using thin copper tubes which can be bought commercially and only need to be ground and polished for use. These are mounted on an expanding mandrel which gives them the necessary solidity. Even this expedient is expensive because the tubes must have a substantial thickness, and with most of the printing machines at present in use the copper must be built up again in order to maintain a standard pitch diameter which will gear with the printing cylinder. Another method that has been largely adopted is to use comparatively thin iron tubes which are coated with copper by electro-deposition. There is no advantage in this on the score of cost, but it dispenses with the expanding mandrel, which is an expensive item in the construction of the machine.

The problem has been attacked in another direction by endeavouring to make machines

which work independently of differences in diameter of the printing cylinder. At least two patents have been taken out with the object of overcoming the difficulty, but the possibilities of these inventions have yet to be proved. At present it has not been determined how far it is possible to grind down before the cylinder becomes too small. In a case within our own experience a cylinder used on a sheet-feed machine was reground and polished ten times without becoming too small to be used. Assuming the maximum depth of the engraving to be  $\frac{3}{1000}$  inch, this means a reduction of 6-1000 on the diameter, which means a considerable difference. Possibly the construction of the machine was such as to help in overcoming any slurring due to the reduced diameter. Naturally the greater number of times a cylinder can be used without re-coppering the greater will be the economy of working.

#### **A Hopeful Line of Research.**

The greatest hope for the success of the process and its widest application lies in finding some means by which thin copper plates can be stretched round a cylinder in the same way as zinc plates are attached to lithographic offset machines. There have been numerous patents taken out for inventions with this object in view, but so far as we know not one patentee has demonstrated the practicability of his invention. There is no inherent difficulty in stretching the plate round the cylinder; the problem is how to bridge the gap between the two ends of the plates, for the "doctor" blade which wipes the surplus ink from the plate must remain in contact with the surface all the time if a clean wipe is to be assured. One inventor proposes to fill up the gap with a closely fitting segmental piece which will carry the "doctor" over, but there must still be two places where this piece joins into which the ink will run, and the "doctor" will perhaps be tripped and damaged against the edges of the join. Another inventor proposes to get over this difficulty by running in solder—not an easy operation to do neatly. A further patent claims to overcome the difficulty by running in wax; but though this might prevent the ink running, it does not prevent the "doctor" catching, and even if this could be avoided it is possible that the "doctor" might pick up the wax and make streaks over the picture. It is understood that the "doctor" cannot be lifted at one edge and set down past the other, as streaking would be caused by ink accumulating under the "doctor." So it remains a pretty problem which some inventor has yet to solve. We believe it can be done—indeed we have seen

it demonstrated by a crude experiment recently that it can be done, and if further trials confirm it there is a much wider field opened for the process.

#### **A New Era Dawning.**

If plates can be used it is obvious that it will be possible for a printer—letterpress or lithographic—to simply instal a printing machine and get his plates made by some process engraving firm laying itself out to do such work, and it would be quite easy for any process block producer to make such plates with very little addition to present plant. We confidently predict that it will not be long before this is done, and then the process will take a big leap forward and become a very serious competitor to letterpress and lithographic printing, especially as it is now so easy to reproduce the text as well as the pictures.

For the every-day printer the sheet-feed machine is the one best suited to his needs. The reel-feed rotary machine is only convenient for long runs in standard sizes, such as for newspapers and magazines. To buy paper in the reel for every sort of job that may come along is an impossible proposition. The sheet-feed machine deals with paper of any size or quality, and the ordinary printer's stock can be used. The speed can be varied to suit the drying of the ink, and if greater speed is required than the usual capability of hand feeding, it can be attained by the addition of an automatic feeder and an electric heating device for rapid drying.

It is sometimes urged as a drawback that a complete cylinder must be ground off before another job can be put on. This difficulty has been ingeniously overcome, and it is now possible to re-etch the cylinder until it is completely covered with separate jobs, each printed separately and no previous job setting off on the paper or on the blanket. Thus every requirement of the every-day printer has been met except the possibility of using plates, and when that has been solved no printer should hesitate to add a photogravure machine to his plant.

---

**SHAKESPEARE HEAD PRESS.** — The death, last year, of Mr. A. H. Bullen, who achieved distinction with the work of his Shakespeare Head Press, Stratford-on-Avon, is not to be allowed to terminate the usefulness of that notable printing house. Mr. Basil Blackwell, the Oxford publisher, has acquired the business, which will be turned into a small private limited liability company with the aim of developing the past tradition of fine printing, publishing books of literary and artistic merit, and of selling new and second-hand books of an appropriate character.

## Re George William Macey,

"The Printers' Exchange,"  
 40, Fleet-street, London, E.C.

This debtor filed his petition at the London Bankruptcy Court on January 10th, and the first meeting of his creditors was held on January 24th, before Mr. Garton, official receiver.

According to the debtor's statements to the examiner he was engaged from May, 1918, to February, 1920, in editing various books in connection with the war, published by the Blighty Publishing Co., Ltd., at 40, Fleet-street, E.C. In January, 1920, with Mr. Donald Mackenzie and Mr. F. P. Reavey, he formed the Printers' Exchange, Ltd., with a nominal capital of £1,000, for the express purpose of publishing a monthly journal entitled the *Printers' Exchange*, the idea being to advertise for the exchange, sale and purchase of all classes of machinery and materials for the printing and allied trades. They subsequently developed big paper contracts (cash against documents). The first in February, 1920, was negotiated through the National Bank, Ltd., and resulted in a credit balance of between £5,000 and £6,000. Another transaction was for the purchase of ochre-glazed paper, approximately amounting to £26,000; on account of that contract about £10,000 was paid in respect of various charges, and the warrants for this paper, which is at Hull, are still held by the Bank. With the capital represented by the profit on the first transaction, and the capital raised on the security of the second transactions they were enabled to book forward contracts with Nordskoy and Co.'s Paper Mills, Christiania, through Messrs. Willis, Syndall and Syrett, the latter's London agents; these contracts approximated close upon £350,000, and a portion of it was represented by paper at between £65 and £71 per ton, which was then the market price, and which paper was practically unobtainable at that time, it being news-print on reels. During the last six weeks the market dropped to about £30 per ton; the National Bank established a confirmed irrevocable letter of credit with Nordskoy's Bank at Christiania for £50,000, and as the shipments were made Nordskoy's drew against this credit. About the beginning of November last the slump in the paper trade set in and as a result his (debtor's) firm were indebted to their bankers in the sum of about £142,000, against which the latter held security worth £70,000. An action by the *Irish Times*, at whose suit execution had been levied at his private residence at Twickenham, was in respect of an over-payment of about £2,850 for paper supplied. The Bank agreed to sell them paper at £10 per ton under market price in order to recoup them for the amount of their over-payment, but the negotiations fell through and the *Irish Times* obtained judgment against the *Printers' Exchange* and the individual members of the firm. The *Printers' Exchange* as a publication was successful, but

it has not been published during the last two months.

The debtor returns his drawings from the business at about £2,800, he has personal liabilities of only £50, but may be held responsible in his separate capacity for the debts of the firm, which amount to anything between £100,000 and £150,000 and he values his personal assets at about £200. The debtor attributes his failure to depreciation in the market value of paper.

Mr. I. Goldman attended the meeting on behalf of the debtor, and in the absence of any proofs of debt the chairman closed the meeting, the estate remaining for the present in his hands; but it was intimated that an application would be made to consolidate the proceedings with the receiving order made on January 17th against the *Printers' Exchange* (sued as a firm).

## Prohibitive Newspaper Costs.

"Western Daily Mercury" Killed.

The Plymouth morning newspaper, the *Western Daily Mercury*, which was first published in June, 1860, is compelled by the advancing costs of production to cease its individual existence. It is merged this week in the *Western Morning News*, which now becomes the *Western Morning News and Mercury*, published at 1½d.

Emphasis upon present-day costs is somewhat diluted by the *Mercury* proprietor's sweeping statement that "throughout its long history of nearly 61 years it has never returned one single copper to its proprietors by way of dividend, so far as we can ascertain." As some indication of to-day's special difficulties, however, it is stated that "taking 100 as the index figure for the year 1914, expenses by 1920 have increased as follows: Wages, 300; salaries, 270; cost of paper, 500. Receipts on the other hand (still taking 100 as the index figure for 1914) have increased as follows: Sales to 192; advertisement revenue to 330."

It is announced that Mr. R. A. J. Walling has resigned the editorship of the *Western Daily Mercury*, and his position as director of the Western Newspaper Co.

In correspondence between Mr. Arthur Henderson and M. Krassin, just published, M. Krassin states that the reconstruction of the Printers' Union in Moscow and the arrest of certain of its members and others had no connection with the visit of the British delegation, but were connected with events running back for several years, and that in regard to the removal of two members of the Moscow Soviet one was recalled by his constituents by their own free act and the other was sent to the front as a mobilised doctor.

## WEST AND NORTH-WEST London Master Printers.

### Annual Dinner.

The members of the West and North-West Master Printers' Association held a very successful social gathering at Pagani's Restaurant, Great Portland-street, on Tuesday of last week, the occasion being the annual dinner, which was presided over by the president, Mr. W. J. Pollock. The gathering included ladies, and was very representative of this active association. Among the guests invited were Mr. R. A. Austen-Leigh (president of the London Master Printers' Association) and Mrs. Austen-Leigh, Major H. Fordyce Birch, Mr. H. C. Hill (North Association), Mr. A. Spring (S.W. Association), Mr. and Mrs. J. J. Keliher, Mr. A. E. Goodwin and Mr. W. Whyte. An excellent menu was followed by an equally delightful musical programme. The speeches were reduced to a minimum, but in spite of this it was not possible to conclude the programme excellently arranged by the president and Mr. Alf Langley.

### Pioneer Work of W. and N.-W.

Mr. R. A. Austen-Leigh in submitting the toast of "The Master Printers' Association of West and North-West London" made complimentary references to the work of the association. Although young in years, he said, it had proved to be of extreme importance to the printing trade. When it started in 1913-14, the trade was in a parlous condition. They did not know what their costs really were; oft-times they used to allow customers to fix their own prices, and they always wanted everything for nothing with a discount off that. The North-West was started with two main ideas: to learn their costs, and to respect the imprint. They had been very successful in their programme, which had been followed throughout the whole of the districts round London. Their very valuable example had brought an entire evolution of the London Master Printers' Association. The North-West was the second largest association in membership, the E.C. district naturally taking the first place, owing to the large numbers of printers in the City. They had been fortunate in having had a successful list of presidents in Mr. Burt, Mr. Scarsbrook, Mr. Langley, Mr. Perry and Mr. Pollock, who had contributed largely to the enterprise and energy exhibited by this pioneer Association. Referring to the printing trade generally, he said the past year had been an extremely anxious one with labour difficulties. He could not tell them whether wages were coming down this year. He personally believed they would, but he hoped their trade would not have to bear the brunt of the fight, but that they would follow in the steps of the larger industries, shipping, mining and building trades, as they had followed in the upward trend. He wished to express his thanks

as president of the No. 1 Alliance, for the valuable assistance he had received from the West and North-West representatives.

The president, Mr. W. J. Pollock, in responding to the toast, very briefly expressed members' appreciation of the kind references made to the West and North-West. Owing to the labour difficulties of the past year, which had entailed so many attendances at committees, they had had to suspend their ordinary activities, but they hoped soon to resume their propaganda campaign. Although they had a very good membership he regretted to say there was still a large number outside the fold. He attached a great deal of importance to the social side of the association, which had had beneficial effect in bringing members into closer and better understanding with one another. Although the future was by no means bright, he felt there was no reason to be afraid; it was only necessary to face the future with courage, confidence and cheerfulness.

Mr. Hill submitted the toast of the West and North-West slogan, "Proper Profits for Printers." Having referred to the old conditions which prevailed when some printers made estimates and others guessed at them, he asked was it any wonder that with unlimited competition the prices were lowered and lowered until the trade was reduced to a hopeless condition? The Federation Costing System, where installed, had enabled printers to discover their full costs, and so to strengthen their demand for an adequate return.

### The Future of Prices.

Mr. A. E. Goodwin, in acknowledging the toast, expressed the pleasure he always had in attending any function with the bright and active North-West. They could not get more out of an Association than they were prepared to put into it. It reminded him of the comments of a family who had attended a church Christmas service. The father complained of the sermon, the mother thought the decorations were not up to much, but the little boy thought it was a very good show for a 1d. (Laughter.) That was the case with some of their members; they expected too much of their officials for a very small subscription. The slogan of the West and North-West had "caught on" throughout the British Isles. There was no doubt they had an exceedingly difficult task in front of them in the future in maintaining prices. There was danger in the suggestion that prices would drop with the fall of wages, as large buyers would hold over orders in the expectation of this; personally, he could not see much immediate prospect of a reduction. Supposing wages were reduced by 5s. per week, this would mean a reduction of about 5 per cent. in costs. Although a material amount, that reduction in price was not going greatly to increase the volume of work. Referring to the progress that was being made in the installation of the Costing System, he could not help remembering one of the suggestions of the late Capt. Pulman at one of their annual dinners; he recommended the ladies, if they wished for a larger allowance, to in-

sist that their husbands installed the Federation System. That had had a wonderful effect, and was well worth recommending to the ladies again that evening.

Major H. Fordyce Birch, referring to the alliterative title of the toast "Proper Profits for Printers," urged the necessity of applying this to proper printers, as he had discovered there were numbers in the trade who were not printers at all. When proper printers had installed the Federation Costing System, there would be little scope for the outsiders, and there would be "proper profits for proper printers as prophesied by the proper prophet" (Mr. Goodwin).

The toast of "The Ladies" was submitted by Mr. Evelyn Jones, and was responded to by Mr. J. J. Keliher.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### CANADA.

A communication from H.M. Trade Commissioner at Toronto states that a local dealer in advertising novelties desires to obtain quotations from United Kingdom manufacturers who are in a position to supply advertising novelties in the form of printed folders containing advertising matter and a small package of, say, a dozen or 24 needles. A sample showing the type of article required is available for inspection by United Kingdom firms interested at the Department of Overseas Trade on application to Mr. Webster-Jones (Victoria 9,040; Extension 225), until February 5th, after which date it will be available for loan to provincial firms who may not be able to inspect it in London. The inquirer states that he would furnish the copy for the advertising matter. The name and address of the advertiser referred to will be furnished by the Department to any United Kingdom manufacturers interested.

A manufacturers' agent in Montreal desires to obtain representation of United Kingdom manufacturers of paper (all lines), paper mill materials, supplies, etc., particularly straw-board and straw paper for corrugating, on a commission or sales basis, for Eastern Canada. (Reference No. 91.)

### CANADA—NEWFOUNDLAND.

An importer and commission merchant in Montreal desires to obtain the representation of United Kingdom manufacturers of stationery of every description, for the whole of Canada and Newfoundland. (Reference No. 92.)

C. H. INNISS, paper merchants, etc., of Mexico City, have sent us an interesting calendar for 1921, printed in Spanish characters.

## The State of Employment.

In the paper, printing and bookbinding trades generally the state of employment during December showed a marked decline as compared with the previous month, and was considerably worse than a year ago. With a few exceptions, short time was generally worked in the various sections of these trades.

With letterpress printers employment was not so good as in November, and some short time was reported from various provincial centres, including Newcastle, Leeds, Sheffield, Leicester, Plymouth and Edinburgh. In London, although a fair amount of overtime was worked by compositors, employment showed in most cases a decline as compared with the previous month. With electrotypers and stereotypers in London, however, employment was reported to be good. In the lithographic printing trade employment was slack in both London and the provinces, being generally worse than during last month, and some short time was reported.

Employment was quiet in the bookbinding trade, and showed a sharp decline from last month. Some short time was worked in London and in the majority of the provincial centres.

According to the returns received by the *Labour Gazette*, out of 80,963 members of trade unions in the printing industry, the percentage of unemployed at the end of December was 3·7, as against 2·9 in November, and 1·2 in December of the previous year, the increase being 0·8 per cent. on the previous month and 2·5 on a year before. In the book-binding section, out of a trade union membership of 15,047, the percentage of unemployed is given as 2·3 at the end of December, as against 1·2 in November and 1·1 in December, 1919, an increase of 1·1 on the previous month and of 1·2 on a year before.

Returns made by employers for the week ended December 18th show the number of workpeople in the printing offices concerned to be 10,126, a decrease of 0·8 per cent. as compared with November and of 0·6 per cent. as compared with a year before. The total wages paid amounted to £38,883, a decrease of 2·5 per cent. on the previous month, but an increase of 14·3 on a year before. In the book-binding trade employers' returns showed 5,881 workpeople, a decrease of 0·9 per cent. on the previous month, but an increase of 9·3 per cent. on a year before. The total of £13,865 paid to workpeople represented a decrease of 4·6 on the previous month, but an increase of 15·3 on a year before.

In a memorandum on the telephone controversy issued by the Newspaper Proprietors' Association, the following suggestions are put forward for the Postmaster-General's consideration: An all-round increase in the flat rate, message rate, and measured service subscription of 50 per cent.; an increase in the trunk fees up to 180 miles of 40 per cent. and above that distance of 25 per cent.

## The Stationers' Company.

### A Successful Conversation.

The forward policy that is being manifested by the Worshipful Company of Stationers was again evidenced on Wednesday of last week when, under the genial presidency of the Master, Mr. Edward Unwin, a well-arranged reception and conversation were held at Stationers' Hall.

There was a large representation, of course, of the printing and allied trades, among those present, besides Mr. Unwin and Mrs. Unwin, being: Sir Cecil and Lady Harrison, Sir Ernest and Lady Hodder Williams, Alderman Sir G. Rowland Blades and Lady Blades, Alderman Sir John and Lady Baddeley, Sir Wm. and Lady Waterlow, Mr. Edgar Waterlow, Mr. C. R. Rivington (Warden) and Mrs. Rivington, Mr. Reginald T. Rivington (Clerk) and Mrs. Rivington, Mr. and Mrs. R. A. Austen-Leigh, Mr. and Mrs. J. J. Keliher, Mr. and Mrs. E. C. Keliher, Mr. and Mrs. C. T. Jacobi, Mr. and Mrs. O. C. Griffith, Lt. Col. and Mrs. G. C. Knight Clowes, Mr. and Mrs. J. R. Riddell, Mr. and Mrs. Henry Hill, Mr. and Mrs. H. C. Bolton, Mr. and Mrs. A. Langley, Mr. and Mrs. E. C. Langley, Major C. W. Lundgren, Mr. and Mrs. Frank Murrell, Mr. and Mrs. W. Penman, Rev. and Mrs. W. C. Piercy, Mr. and Mrs. L. G. Sloan, Mr. and Mrs. Lance Spicer, Mr. and Mrs. Ronald Spicer, Lt.-Col. and Mrs. Roy F. Truscott, Mr. and Mrs. E. P. Vacher, Mr. and Mrs. Herbert Virtue, and Mr. W. Will.

An enjoyable vocal and instrumental concert was rendered under the direction of Mr. Turle Lee, the artists being Miss Florence Hyde (songs), Miss Dorothy Greene (songs), Miss Ida Bass (violin), and Mr. Reginald Johnson (songs).

Much interest was shown in the beautiful old Hall and in such of the company's ancient documents and other treasures as were on exhibition. The activities of the Livery of the Company, under their indefatigable hon. secretary, Mr. J. R. Riddell, are welcome signs of the times. It is surely to the good of all concerned that wider use should be made of the ancient heritages of the Worshipful Company of Stationers.

We have received a copy of a monthly diary from Mr. J. Stokvis, 73, Cathles-road, Balham-hill, S.W.12, who represents a firm of Dutch printers and bookbinders.

MESSRS. WHITEMAN AND BASS, LTD., in removing from 235 and 236, High Holborn, to more commodious accommodation at 15, Clerkenwell-close, are actuated by the requirements of expanding business, and are taking advantage of the change by adding considerably to their already modern lithographic plant and machinery, thus reinforcing their capacity for the prompt and efficient execution of trade orders.

### When Will Trade Unions Face the Truth?

SIR,—A short time ago, I was present at a meeting of about a dozen of the leading controllers of the printing industry in London, and in the course of a general conversation on the unemployment question, I ventured to say I was convinced that in our trade at least the real cause of unemployment, and the one that was in the power of the trade unions to remedy was that with the increase of wages there had been a slackening of effort on the part of the individual, the result being that the production per man and woman was probably on the average throughout London as much as 25 per cent. less than pre-war, especially in the machine and warehouse departments. The reply by one of the largest employers in London, and one who is probably better acquainted with the actual inside working of printing factories than any other man in London was that it was far greater than 25 per cent., especially among the less skilled portion of the trade.

Later on, someone stated that the L.S.C. had 700 members on its book. The printer referred to above said he understood it was 1,000, but he hoped it would soon be 3,000, as he was convinced that was the only thing that would bring the trade unions to their senses. This was from a man who has always shown his practical sympathy with the objects of the trade unions, and who has probably been more ready to meet them than any other large London employer. He is certainly not a man who desires to reduce wages, but he has a very great desire to see every man and woman doing their utmost to justify by production the wages that are now being paid, as he sees very clearly, as every thoughtful man must see, that unless the members of the trade unions individually and as a whole do their very best to encourage individual effort and to promote the development of business, no effort of their leaders can prevent reduction of wages and far greater unemployment than at present.

"The great need of the printing trade, as probably of every other trade, is that the leaders should face the truth and get to business on it for they can do far more to remedy the trouble than any other body of men. It is useless to blame them for mistakes of the past or for them to blame the employers. The remedy is for the keenest men on both sides to get together and frankly face the truth.

Yours faithfully,  
C. H. LEA.

Williams, Lea and Co., Ltd.,  
Worship-street, E.C.2.

AN Advertisement is always working.

# Trade Notes.

THE death took place on Monday of Mr. Thomas Norris, editor of the *Southport Visiter*.

By the death of Mr. Louis Casartelli, last Thursday, there passed away an able and versatile journalist, well known in London Press circles.

THE new "Liddell and Scott," now being printed by the Clarendon Press, will, it is said, cost £20,000 to produce, and cannot be sold for less than four guineas a copy.

WILLS.—The late Mr. Frederick Henry Townsend, of Hampstead, fifteen years art editor of *Punch*, left gross estate of £6,260. Mr. Henry Start, of Wolverhampton, bookseller and stationer, left £7,711.

IN the just concluded big lawsuit, Manchester Ship Canal v. Brunner-Mond and Co., and Attorney-General v. Manchester Ship Canal, the printed evidence reached 1,200 pages, and counsel's speeches 319 pp.

A WELL-ATTENDED meeting of the Printers' Managers and Overseers Association was held on Tuesday, when provisional sanction was given to many suggested alterations of rules. A report will appear in our next issue.

FURTHER evidence was heard on Saturday against Frederick Ford, Morde Samuel Levy, and Hyman Kurasch, in the bank note case. The case was adjourned until to day (Thursday), when the defence will cross-examine the witnesses for the prosecution.

MR. W. A. DUNCAN presided at the annual meeting of the Northern District of the Press Fund in Newcastle on Saturday night, and a satisfactory report was adopted. This showed a slight increase in local membership, that a record sum of over £8,000 had been disbursed by the Fund during the year, and grants amounting to £166 had been made in the Newcastle district.

AT the annual general meeting of the Printing, Bookbinding and Kindred Trades' Overseers Association, held at St. Bride Institute on Tuesday, Mr. A. W. Hunt (Wm. Clowes and Sons) was elected president, and Mr. H. Milton (London Colour Printing Works) vice president. The retiring president, Mr. A. J. Daines, received well-deserved commendation for his services during his term of office. A report of the proceedings will appear next week.

THE death occurred last week of Mr. Arthur Walter, who had been editor of the Parliamentary Debates in the House of Lords since 1898. Mr. Walter began his association with metropolitan newspaper work on the editorial staff of the *South London Press*. He acted as one of the representatives of British journalism at the International Congress of the World's Press at Antwerp in 1894, and Berlin in 1903, and in 1918-19 he was president of the British International Association of Journalists. Mr. Walter was also a keen Free-

mason, being a life governor of the three Royal Masonic benevolent institutions and a Past Master of the Duchy of Cornwall Lodge.

MR. JOHN BRUCE, proprietor of the *Aberdeen Free Press*, left £56,524.

MR. PERCY WILMOT WILKINSON, of Hove, formerly of Farringdon-road, E.C., bank-note engraver, left £13,843.

BERMONDSEY Council received ten tenders for printing 5,000 catalogues, the quotations ranging from £174 to £290.

ANNOUNCEMENT is made of dissolution of partnership between A. H. Paine and J. E. Fenton, stationers, 100, Fore-street, Saltash, Cornwall.

AT a meeting of a committee of the Empire Press Union, steps were taken towards the foundation of a system of travel scholarships for young journalists.

ONE case of lead-poisoning in the printing industry was reported during December, and in the same month there were two fatal accidents in the paper-printing group of trades.

THE first page of the *Aberdeen Evening Gazette*, which has hitherto been devoted to advertisements, is now given over to the news of the day, as in the case of the leading newspapers.

IN connection with the Lincoln Printing Craft Guild, an interesting and instructive lecture, entitled "Notes on German Printing," was given by Mr. J. A. Howard, of the *Echo* jobbing department on Wednesday of last week.

WHEN a young printer's apprentice was summoned at the Guildhall last week to show cause why his indentures should not be cancelled, it was stated that instead of attending to his duties, he wrote blood-curdling stories of the "Deadwood Dick" type.

JOURNALISTS' STRIKE BALLOT.—A meeting of nearly 400 members of the Central London and Parliamentary branches of the National Union of Journalists at the Memorial Hall on Saturday night decided, with two dissentients, to reject the wages and conditions offer made by the London Newspaper Proprietors' Association. The resolution described the offer as unsatisfactory, inadequate, and inequitable. It was also agreed, with six dissentients, to take a ballot on the question of withdrawing services if further negotiations do not end satisfactorily.

COURT-MARTIALLED at Belfast, on Friday the West of Ireland Printing and Publishing Co., Ltd., proprietors of the newspaper *An Connachtach*, and Robert George Bradshaw, the editor, were charged with spreading false reports, spreading reports likely to cause disaffection, and spreading reports likely to undermine public confidence in certain banks. The charges arose out of the publication of a circular. The Judge-Advocate said he was not satisfied that the third charge came within the meaning of the section. The court found the accused not guilty on this charge. On the other two charges Bradshaw and the company were fined £250 each.

## Current Topics.

### Joint Industrial Council Convention.

THE Joint Industrial Council of the Printing and Allied Trades has already, as we have pointed out from time to time, performed valuable services to the industry, and its first annual convention, at which many subjects of vital importance will come up for discussion, should attract widespread attention. The convention is to be held at Brighton on April 12th, and will be open to the trade in general. As Mr. C. W. Bowerman completes in April his term of able chairmanship of the Council, a new chairman will have to be elected, and doubtless the name of the present vice-chairman, Mr. E. W. Humphries, will be put forward. Certainly Mr. Humphries' vice-chairmanship has been marked by an impartiality and capacity which prove him to be eminently fitted to serve as the Council's next chairman.

### Government Printing and "Economy."

THE Stationery Office's claim that it can produce printing more economically than can private enterprise is one that calls for some detailed explication. Since our recent reference to the subject—in respect particularly to the Leicester Voters' List—the matter has been taken up very effectively by Mr. E. Harold Nickson, A.C.A., secretary of the Leicester Master Printers' Association, who in the course of a communication to the Press, says: "In imagining that he can do the printing of the Leicester Voters' List more economically than local printers, the Controller of Stationery is faced with the following facts: The work entailed is comprised of approximately 80 per cent. for labour charges. Leicester minimum rates are 9s. per week less than London rates, and it is known that in some departments of the Government printing works considerably more than the minimum rate has to be paid to entice workers to go from London as far as Harrow. The Stationery Office recently purchased several new linotype machines when prices were at the highest level, and, assuming the works are run on business-like lines, as stated by the Controller, this high purchase price will materially increase costs as compared with those of old-established business houses, whose plant was bought under normal conditions. The Controller states that he is in the happy position of being under reduced overhead charges. Is not the position rather that he has access to some 'vote' to which he can charge certain expenses—and so appear to run his works economically—but which in the long run find their way as a charge against the National Exchequer? Surely it is time for the general public to say with no uncertain voice that 'officialdom' must cease, and allow the business of the country to be run by business men."

\*\*\*

### The Printer-Scapegoat.

OUR worthy contemporary the *Spectator* has had a sympathetic word to say for the gentleman so well known in the Press as the producer of "printer's errors." The particular "error" which provides the occasion for its remarks is an unusual one, as it has no relation to the services of the "comp." It appears that the *Irish Theological Quarterly* is accustomed to submit proofs of its articles to the Roman Catholic Archbishop of Dublin, and, after approval, publish the articles under the archiepiscopal imprimatur. The *Quarterly* having published a highly debatable article dealing with the ethics of tyrant-killing, the

editors were challenged in the matter, and had to admit that the article had been passed for publication without the usual authorisation. They protested ignorance of the omission to submit proofs to the Archbishop, representing that the sending of proofs was not done *via* the editorial department. The following is the *Spectator's* comment (January 22nd): "The poor printer receives the blame. No one else is required to share it with him. The grievances of printers who all the world over are continually being made to bear the odium which belongs to other people would make an engaging volume if such a book could be written. Printers are the scape-goats of the literary world."

\* \* \*

### Statistics.

UNEMPLOYMENT and trade depression are bad for everybody—employers and employed alike. The condition of the paper trade in this country is reflected by the statistics as to unemployment which are furnished by the *Labour Gazette*. Particulars issued in connection with the Unemployment Insurance Act, 1920, show that the number of persons whose unemployment books or out-of-work donation policies remained lodged on December 31st, was 12,125, of whom 6,881 were males and 5,244 were females. As compared with November 26th, there was an increase in the total of 8,849, an addition of 4,832 males, and 4,467 females. At the end of December there were also 6,248 workpeople in the papermaking industry who were on systematic short time. Of these, 3,197 were males, and 3,051 females. The total figures represent something like a quarter of the workpeople in the paper mills. The official report as to employment in the paper trade for the month of December bears out the gloomy impression. This was not so good on the whole as during the preceding month. Employment, in fact, was "slack or bad" in most districts, a number of mills being partially closed down or working short time. According to information received from employers furnishing returns, the number of workpeople engaged in the week ended December 18th was 14,648. This figure represents a decrease of 3·7 per cent., as compared with a month before, but an increase of 3·3 per cent. as against the position a year before. The total wages paid in respect of these employees was £46,070, a decrease of 3·7 per cent. in the month, but an increase of 18·5 per cent. as compared with a year ago. Of course, it has to be remembered that the comparison of earnings is affected by increases in the wages made during the year.

## Personal.

TO CELEBRATE his having been raised to the peerage, Lord Invernairn was last Thursday entertained at luncheon in Prince's Hotel by the members of the Industrial Welfare Society, of which he is chairman. Sir William A. Waterlow was among the guests.

LORD LEVERHULME, speaking at the annual dinner of the Institute of Cost and Works Accountants, over which he presided on Friday at the Holborn Restaurant, said the country had never passed through a more critical time when costing was so necessary. Mr. W. Howard Hazell was among the guests on the occasion.

MR. CLEMENT K. SHORTER has just completed 21 years' successful editorship of the popular illustrated weekly, the *Sphere*.

SWANSEA Master Printers' Association have elected the following officers for the year: President, Mr. John Jones; vice-president, Mr. Albert Davies; secretary and treasurer, Mr. Henry Hood.

MR. T. E. NAYLOR, J.P., general secretary of the London Society of Compositors, is to be the lecturer at the St. Bride Foundation Printing School to-morrow (Friday) evening, his subject being "A Compositor in Canada." The lecture will be illustrated with lantern slides.

AT University College, Gower-street, on February 14th (5.30 p.m.), there is to be a public lecture (with lantern) on "The Art and Craft of Printing," by Mr. Charles T. Jacobi, of the Chiswick Press.

EXETER and District branch of the National Union of Journalists have made a presentation to Mr. M. E. Timewell on the occasion of his marriage.

BIRTHDAY honours have been done to Mr. W. J. Towner, of Brighton, now 86 years of age, who has been for 70 years associated with the local newspaper Press.

A GOLD chain and pendant were presented last week to Mr. B. Bruff, linotypist in the offices of the *Norwich Mercury*, in recognition of his completion of 50 years' service to the *Mercury*. The presentation was made on behalf of the proprietors and staff by Mr. W. J. Culling, works manager, who eulogised the long and efficient service rendered by Mr. Bruff.

MR. JONATHAN CAPE, lately manager of Messrs. Duckworth and Co., has started a publishing business of his own at 11, Gower-street, London.

## DIVIDENDS AND REPORTS.

**WELDON'S**.—10 per cent. per annum (1s. per share), less tax, on ordinary shares for half-year (interim), payable February 10th. Last year, dividend same.

**LANSTON MONOTYPE**.—Final of 5 per cent., making 8 per cent. for past year; same as previous year.

**"LIVERPOOL DAILY POST."**—Final on ordinary at rate of 6 per cent., making 8 per cent. for year, against 15 per cent. (including bonus of 2½ per cent.) previous year; forward, £50.251.

**SITTINGBOURNE PAPER MILLS**.—Interim dividend of 9d. per share, free of tax, payable January 29th, in respect of 1920.

**CROPPER AND Co.**—Interim dividend of 5 per cent. per annum (6d. per share) less tax, on ordinary for half-year. Last year, dividend same.

**NORTH OF IRELAND PAPER MILL**.—For the year 1920, after providing for excess profit tax, corporation tax, and depreciation, there is a profit of £31,869, and £32,587 was brought in, making £64,458. An interim dividend of 2s. per share was paid in July, and the directors propose a final dividend of 1s. 6d. per share, free of tax, carrying forward £22,456.

## NEW COMPANIES.

**ASTON INSTITUTE OF PHYSICAL CULTURE LTD.**—Capital £2,000, in £1 shares; physical experts, printers, publishers, journalists, newspaper and magazine proprietors, etc. Private company. Subscribers: W. Light and G. H. Wales. Registered office: 19 and 21, Ludgate-hill, E.C.4.

**FATHER CHRISTMAS, LTD.**—Capital £1,000 in £1 shares; manufacturers of Christmas crackers and novelties, bonbons, toys and cardboard boxes, printers, paper dealers, artificial flower makers, etc. Private company. Subscribers: J. L. Goldberg and H. Palmer.

**SUNDAY SPORTSMAN, LTD.**—Capital £40,000, in £1 shares; newspaper proprietors, printers and publishers, advertising agents and contractors, lithographers, electrotypers, bill-posters, etc. Subscribers: J. H. Foster, T. V. Riordan, D. C. Sparks, S. M. Goddard, E. H. Thain, J. W. N. Stratton and A. L. Welland. First directors: D. P. Sheridan and J. W. N. Stratton. Registered office: 367, Strand, W.C.2.

**BRADBURY BROTHERS, LTD.**—Capital £12,500 in £1 shares (5,000 7½ per cent., cumulative preference); to take over the business of Carson and Bradbury, Ltd., carried on at Buglawton, Cheshire, to carry on the business of manufacturers of and dealers in jacquard cards, card, mill and straw boards, newspapers, tub-sized and engine-sized writings, enamel, tinted and other papers, manufacturers of and dealers in materials and machinery used in connection with the paper, printing, bookbinding and paper bag making trades, etc. Private company. Directors: B. J. Bradbury and R. S. Bradbury. Registered office: Buglawton, near Congleton, Cheshire.

**RELIANCE CHEMICAL CO., LTD.**—Capital £1,000, in £1 shares; to take over the business of a chemical manufacturer and paper merchant, carried on by F. L. Stacy at Carshalton, Surrey, and 107, Gravel-lane, Southwark, S.E. Private company. Directors: F. L. Stacy, F. F. Stacy and W. E. Stacy. Registered office: 107, Gravel-lane, Southwark, S.E.1.

**DISPATCH PRESS, LTD.**—Capital £16,000, in 15,000 preference shares of £1 each and 20,000 ordinary shares of 1s. each; to adopt an agreement with C. E. Routley, to develop and turn to account the business referred to therein, and to carry on the business of printers, publishers, advertising agents, lithographers,

etc. Private company. Subscribers: T. Page and G. Hoare. First directors: T. Page and others to be appointed by subscribers. Registered office: Granville Works, Cricklewood-lane, N.W.2.

**HARWELL, LTD.** (London).—Capital £3,000, in £1 shares; general merchants, importers, exporters and manufacturers of and dealers in various commodities, including stationery and chemicals. Private company. Subscribers: H. E. Weller and T. Weller. Subscribers appoint first directors.

### **COMPANY MORTGAGES AND CHARGES.**

*Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).*

**R. W. CRABTREE AND SONS, LTD.** (manufacturers of rotary printing machines, etc.).—Memorandum of deposit dated January 12th, 1921, to secure all moneys due or to become due from company to Lloyd's Bank, Ltd., not exceeding £90,000, charged on various properties in Leeds, Willesden, N.W., and South-wark Bridge-road, S.E.

**RONEO, LTD.**—Satisfaction in full on June 17th, 1911, of debentures dated December 21st, 1903, securing £40,000. (Notified January 20th, 1921).

**ANDREW DICKSON, LTD.** (printers, stationers, etc., Newcastle-on-Tyne).—Satisfaction in full on various dates of debentures dated January 13th and September 27th, 1911, and November 28th, 1912, securing £400.

**DE GRUCHY AND CO., LTD.** (stationers, printers, London).—Issue on January 11th, 1921, of £1,000 debentures, part of a series already registered.

**PIONEER PRESS, LTD.**—Charge on company's undertaking and property, present and future, including uncalled capital, dated January 13th, 1921, to secure £1,000. Holders: C. Burchell, 69, Earle street, and A. McQueen, 75, Maccoma-road, Plumstead, S.E.18.

### **BANKRUPTCIES, etc.**

**Re DAVID EDWARD JONES** (printer, etc., 11, Hand-court, Holborn, W.C.).—This debtor attended before Mr. Registrar Francke at the London Bankruptcy Court on January 28th, for public examination upon accounts showing liabilities £894 4s. 1d. to rank against assets valued at £761 15s. 8d. Replying to Mr. F. T. Garton, official receiver, the debtor stated that he was formerly a solicitor's clerk, but early in 1915, he joined a Mr. G. S. Barnes in a verbal partnership, and with about £30 capital they commenced business as above. They had no plant or machinery, but obtained orders and gave them out to the trade to be executed. Mr. Barnes was an old man, and two years ago ceased to take any active part in the business, the result being that in August last, the partnership was dissolved upon

terms that witness continued the business under the same style of "G. S. Barnes," and allowed his late partner £2 or £3 a week for about three months. The dissolution was not published or notified to the creditors. In consequence of pressure by creditors witness called a private meeting in November last and offered to execute a deed of assignment, but Messrs. Spicer Bros. would not agree to it, and insisted upon the estate being wound up in bankruptcy. Witness attributed his failure to the profits having been insufficient to meet the drawings of himself and his late partner in consequence of bad debts, falling off in business and Mr. Barnes's illness. The examination was concluded.

## **Three Years for Newspaper PROPRIETOR.**

### **The "Wells Journal" Case.**

At the Somerset Assizes, Thomas Ralph Hearne, 47, newspaper proprietor (the first meeting of whose creditors was reported in our issue of December 16), was indicted for bigamously marrying Miss Ida Calder, a Langport headmistress, on October 31st, 1918; and in that he, being a person who had been adjudged bankrupt on November 23rd, 1920, in incurring a certain debt, unlawfully did, on March 23rd, 1920, obtain credit to the amount of £4,950 from A. J. Clare, of Wells, under false pretences, and a similar offence for a like amount from James Bowman Woodhams, of Wells. A further charge was preferred against the prisoner of obtaining certain printing presses and plant by false pretences from Mr. Woodhams.

Prisoner pleaded guilty to all charges.

Mr. R. A. Dummatt, who prosecuted in the bigamy charge, said that within a year of his bigamous marriage prisoner got possession of every penny of the lady's money—£1,200. Prisoner had a bad record and had already served two terms of 18 months and two of penal servitude, one of five years.

Mr. W. T. Snell, who prosecuted in the false pretences case, said the prisoner on going to Wells stated that he had at least £10,000 in cotton mills in Leeds, £10,000 in Russian bonds, and an estate in Ireland. Mr. Snell added that as a result of prisoner's persuasive powers Mr. Clare took him to Mr. Woodhams, printer, stationer and proprietor of the *Wells Journal*. As a result of the introduction, Mr. Woodhams entered into a bargain for the transfer of the copyright of the *Wells Journal* and the printing business he carried on to prisoner.

Mr. F. A. Wilshire for the defence told of Hearne's military and other national service.

Mrs. Hearne made a moving appeal in court on behalf of her husband.

A sentence of three years' penal servitude was passed.

'PENROSE'S ANNUAL, 1921.' Edited by William Gamble, F.R.P.S., F.O.S. London and Bradford: Percy Lund, Humphries and Co., Ltd. 10s. 6d. net.

This, the twenty-third volume of the Process Year Book and Review of the Graphic Arts, excellently records the progress made in these arts up till the present year, and Mr. Gamble, whose knowledge of the various reproductive processes is extensive and varied, has given to the trade an interesting and practical book that will repay study by those printers who cater for illustrative work, whether in monochrome or colour, by any of the photo-mechanical methods that are now being so widely used. The editor has secured a fine list of contributors to the volume, and we have articles from the pens of such well-known workers as T. C. Easner, A. E. Dent, W. T. Wilkinson, R. B. Fishenden, Frederick T. Corkett, Chas. T. Jacobi, Frank M. Sutcliffe, E. R. Grills and others. The articles deal with the use of the airbrush in photography, standardisation of trichromatic inks, the Hacker plate gauge and rectifier, high-light processes in photo lithography, Lithotex advantages, wet and dry colour filters, and other subjects of interest to the illustrative worker; and the editor's forewords give an excellent resumé of the progress made in the various processes. Printers will be interested in the description by Mr. Dutton of his method of printing without the use of types, which is suitable for the production of either solid matter or display work, and would, if commercially successful, go a long way towards abolishing the compositor and the composing room. Examples of work done by Mr. Dutton's process are given, and are wonderfully good for a process that is as yet in its infancy, and may prove to contain features that will bring it into every-day practice. Another contributor, Mr. A. E. Bawtree, has been at work on a process with similar intention to Mr. Dutton, viz., the elimination of printers' type, but he proceeds on a different system. In both of these methods the printing plates produced may be used on offset, litho or rotary photogravure machines, and we see it quite probable that the bulk of book and newspaper work may, in the future, be done in quite different ways from those of the present day. Printers will, no doubt, be anxious to hear more about the practical application of these new processes than is given in the pages of the "Annual." The specimens of illustrative methods that are given in the volume are very fine, and include Rembrandt gravure, rotary gravure, velo-gravure, photo-offset, Bemrose and Sons' new colour process, three, four and five colour half-tone, duotone and line. The colour prints are excellent examples of their various classes, especially the frontispiece, a photo-

gravure in colours by the Rembrandt Intaglio Printing Co., Ltd., and a specimen of Messrs. Bemrose and Sons' "Derby" print process. "A Study of an Old Man," by the photo-print method, is also fine, and the portrait of Cornelius van der Geest, from blocks by John Swain and Son, is noticeable for its rich quality. The half-tone and line subjects show the value of this class of work for commercial illustrations. The production of "Penrose's Annual" stands to the credit of Messrs. Percy Lund, Humphries and Co., Ltd., who have produced a fine volume, and one that should be appreciated by all interested in illustrative art. It is interesting to note that the inks used were specially manufactured by Messrs. Shackell, Edwards and Co., Red Lion-passage, E.C.; the paper used for the text is "Blandford Deckle Edge," made by Messrs. G. F. Smith and Son (London), Ltd., 7, New Union-street, E.C.; the machinery used for text, illustrations, etc., was mostly that supplied by Messrs. Furnival and Co., Ltd., Reddish; and the type used throughout the text was cast from Monotype metal supplied by Fry's Metal Foundry, Holland-street, Blackfriars, S.E.

"ENGRAVING." By T. W. Lascelles. London: Sir Isaac Pitman and Sons, Ltd., Parker-street, W.C.2.

This is a practical manual which combines with instruction a historical resumé of the engraver's art, and in plain language, elucidated by illustrations and diagrams, gives the learner an insight into the obvious methods of illustration by engraving whether on wood or metal. It deals with line engraving, the preparation of wood for engraving and the engraving thereon, etching, mezzotint engraving, dry point etching, monotypes, copperplate engraving, the engraver's studio and the method of steel facing. The author has the gift of clearly explaining the various methods, and the book will be useful to all who desire to master the difficulties of the different engraving methods treated of.

LABOUR AND INDUSTRY. Manchester: The University Press. Pp. viii. 294. 12s. 6d. net.

The University Press, Manchester, have rendered a public service by publishing the lectures which were delivered in the Department of Industrial Administration in the College of Technology in Manchester during the session 1919-20 dealing with the subject of Labour and Industry. The subject is dealt with by leading authorities in its various aspects. Mr. Percy Alden's lecture on unemployment, for instance, is a model of lucidity and balance, and contains many suggestions which are of even greater value now than when they were put forward. Mr. Cole's address on the control of industry shows his usual penetration and grip of current labour history, while Mr. Tawney brings all his sturdy logic and his experience on the Coal Commission to bear on the same theme. Sir D. Drummond Fraser's lecture on the best methods of public borrowing is ad-

mirably clear and supported by some excellent graphs and charts, while other specialists are Professor Baillie on industrial unrest, Mr. Whitley on the Councils named after his Committee, Miss Voysey on welfare work, Mr. Goldstone on continuation schools, Sir Malcolm Delevingne on labour regulation under the Peace Treaty, and Mr. Percy Pybus on payment by results, with special regard to the engineering trade. Mr. Clynes has a very valuable contribution on the question of organised labour. The whole volume represents a very practical treatise on a subject which is of prime importance in these days, and the University Press has rendered a distinct service in publishing it in permanent form.

## **Packing Paper for Export.**

The question of correct packing of paper is an important factor in export trade. A correspondent of *The Times* (Trade Supplement) has been writing on the subject, and in reference to paper he says: Whereas news and printing papers may be press-packed in bales, it is advisable that writing, book, and tissue papers also, especially when consigned to Central and South American States, should be packed in hydraulically pressed bales; cases should be used for coated papers only, or when specially ordered by customers. For baling, the paper should be wrapped in oil-paper and hessian, and hydraulically press-packed.

Bale packing will carry a weight of about a quarter of a ton gross; it should not be heavier than this, as all over South America a great deal of the work of stowage in Customs house sheds, and delivery to consignees, is performed by manual labour. The advantage of baling over casing is that the packages are not merely cheaper and stronger, but also occupy less freight space.

A most useful diary for 1921 has been issued by the well known firm of Messrs. Davies and Royle. It is compact, well bound, and admirably arranged for cash items and memoranda.

MESSRS. JOHN DICKINSON AND CO., LTD., are issuing attractive sets of samples of coated paper and boards. In various effective tints the coated boards take black and coloured inks to advantage. Their chromo papers are equally well produced in variety and style.

## **Germany and Music Printing.**

With regard to a suggestion of British music for Continental buyers being printed in Germany, Messrs. Bosworth and Co., Ltd., of Heddon-street, W.I., have written to the Press asserting the British origin of the printed matter they publish. In pre-war days their Leipzig publishing office naturally produced its publications on the spot, but when the war broke out, say Messrs. Bosworth, they re-engraved in England all the works which were in such demand as to warrant re-engraving. They state that they have just placed with a London printing firm an order for 15,000 copies of Beethoven Sonatas, which will use up about 24 tons of British-made paper, and find employment for many weeks for printers, bookbinders, etc. As another small item, they placed recently in Nottingham for a new cover design of the popular piece "Rendezvous," and are printing there 50,000 covers for this little work. So far from sending printing orders abroad, Messrs. Bosworth can claim to be exporting to Belgium, France, Italy, etc., works printed in England, which, before the war, these countries imported solely from Germany.

## **Wages in Ireland.**

The *Labour Gazette* reports the following changes in wages during December in the Irish printing and allied trades:—

Ireland (except Belfast and Dublin), as from September 11th: Compositors and machinemen (book, jobbing and newspaper), linotype and monotype operators: Increase of 10s. per week; minimum rates after change for jobbing compositors, Grade I. towns, 90s.; Grade II., 81s. 6d.; Grade III., 7s.; Grade IV., 73s. 6d.; Grade V., 71s.; Grade VI., 68s. 6d.

Belfast, as from pay day in week beginning November 15th: Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper), bookbinders and machine rulers, lithographic printers: Increase of 5s. per week; minimum rates after change, compositors—jobbing, 93s. 6d.; evening news, 96s.; morning news, 105s. 6d.; bookbinders, 93s. 6d.; lithographic printers, 97s. 6d. As from pay day in week beginning November 29th: Cutters and labourers: Increase of 5s. per week; minimum rates after change, cutters—5 years' experience and over 80s. 6d.; 2 years' and under 5 years' experience, 72s. 6d.; under 2 years' experience, 62s. 6d.; labourers, 59s. Women in the lithographic, letterpress and binding trades: Increase of 2s. per week.

By a decree issued by the Belgian Minister of Economic Affairs, dated December 15th, 1920, news-print paper is exempted from the requirements of an export licence.

## Paper Bag Manufacturers.

### Developments in the North.

The business meeting of the Newcastle and District sub-section of the United Kingdom Paper Bag Manufacturers' Association was held last week, when it was decided to make an effort to become a section, instead of a sub-section, of the Northern Division, which embraces Manchester within its purview. The membership has steadily grown since the inception of the association during the war period. It was largely at the request of the Government, who introduced Trade Boards of various businesses that the Paper Bag Association was called into being.

The first lecture held under the auspices of the section, in the Connaught Hall, Newcastle, was particularly successful. Mr. T. H. Cunane, the well-known representative of Messrs. A. M. Peebles and Son, Ltd., possessed of a wide practical experience of paper-making, was the lecturer, and, with the aid of a series of lantern slides, he gave a vivid account of the process of paper manufacture and its uses from the forest to the printing works. Mr. A. C. Wilkie, of Messrs. R. Robinson and Co., Ltd., presided over a large and attentive audience.

MR. EDWARD EVERARD, letterpress and lithographic printer, of 37 and 38, Broad-street, Bristol, and 19 and 21, Farringdon-street, London, sends us a wall calendar distinguished by an admirable example of four-colour block printing, in which a fine figure-and-landscape picture is reproduced with excellent effect.

THE *Manchester Guardian Commercial* presented with last week's issue a supplement which took the form of a review of trade industry, transport and finance for the year 1920. The publication is a revival for the first time since the war of this review of trade, and the mammoth issue, dealing with a host of industrial movements, will be of great value to business men generally.

GERMAN UNEMPLOYMENT.—November returns showed increasing unemployment among German workers as a whole, though the figures of the unions in the printing and allied trades are comparatively satisfactory. Among "book and job printers," 6.5 per cent. were unemployed in November, out of a reported trade union membership of 68,890, the corresponding figure for October being 5.4, comparing with 4.0 for November, 1919. Of 39,131 "printers and lithographers," 1.6 per cent. were unemployed in November, compared with 2.2 in October, and 1.0 in November, 1919. Of 80,668 bookbinders, 3.9 per cent. is the November figure, comparing with 5.0 in October, and 1.5 in November, 1919.

## TENDERS WANTED.

EDMONTON PUBLIC LIBRARIES.

**THE** Committee of the Edmonton Public Libraries invite tenders from recognised Trade Union Firms for the printing and production of a new Fiction Catalogue.

Specifications and other particulars are to be obtained from Mr. P. W. Farnborough, Librarian, Central Library, Lower Edmonton, N.9.

The Committee do not bind themselves to accept the lowest or any tender.

G. W. FRANCIS,  
Clerk to the Libraries Committee.

# The Properties of Printing Papers.

## Printing Crafts Guild Lecture in Manchester.

Over one hundred members attended the lecture and demonstration given in the Paper-making Department of the Municipal College of Technology, Manchester, on Saturday afternoon, January 22nd.

Mr. J. Huebner, M.Sc.Tech., F.I.C., during his lecture on "The Testing of Printing Papers," first discussed the properties of the chief paper-making materials, the fibres, the addition of loading materials, and their effects on finished papers. Whilst in some cases the loading substances reduced the cost of production, in other instances they were added in order to make the paper opaque, to improve its surface, to render it more absorbent, and to produce more even shades. In the colouring of papers, both mineral and organic, coal-tar dye-stuffs were used, the former acting at the same time as loading materials. The properties of a paper were also influenced by the sizing. Whilst engine sizing, i.e., sizing of the paper in the pulp by the addition of rosin size and alum, produced certain results, tub sizing, i.e., the sizing of the paper itself by means of gelatine, gave a distinctly different surface. In addition to these materials, starch and soap were frequently employed. Quite a special finish was produced by surface coating, in which the surface of the paper was covered with mineral substances.

### Papermaking Methods.

Papermaking by hand, on the Fourdrinier, the American or M.C., the cylinder or board, and the mould machines was next described, and it was pointed out that each of these methods produced papers possessing distinct characteristics. Thus paper made on the cylinder machine much more resembled hand-made paper than that made on the Fourdrinier machine. The former type of machine was much used in America, but little employed in this country. Very high-class papers could be made on cylinder machines, and it was often the practice to unite two or more layers of paper to form one sheet. Coloured boards were largely manufactured by this method. The cylinder machine could also be used for making imitation hand-made papers. In this case the wire gauge on the cylinder was divided in order to produce single sheets in place of the web paper. In some cases it was absolutely impossible to say whether a paper had been made by hand or machine, although the price might give some indication. No lignified fibres, such as mechanical wood pulp or jute, should be used in high-class papers, whilst a pure mechanical wood pulp, i.e., wood cellulose, must be classed amongst the purest fibres, and there was no reason to assume that its lasting properties should be inferior to those possessed by rag fibres. The latter, however, imparted special properties to the paper. The linen

fibre was the best papermaking fibre on account of its stiffness, whilst other fibres were harder and, therefore, imparted this property to the finished sheet. Paper testing should be studied by printers, and other users of paper, and whilst a certain knowledge of the manufacture of paper was essential, this, as well as the practice of paper testing, could be acquired by attendance at one of the regular courses in the College.

Mr. Huebner then briefly described the different methods employed in paper testing, including microscopical and microchemical tests, how to ascertain the machine and the crossway of a paper, the tearing strength and the tearing length of papers, the resistance to folding or rubbing, the ink resisting qualities of papers, etc.

### Some Questions Answered.

A discussion followed, questions being asked by Messrs. R. B. Fishenden, J. Taylor, Ed. McVay, Jas. Worthington, H. Holme, F. J. Hughes, and some half-dozen other members.

In reply, the lecturer stated that little attention was given to cylinder machine-made papers in this country, and many printers did not know much about such papers, whereas the Americans seemed to have studied the subject much more closely. As to maturity, the longer a paper was stocked, the better it would print, other things being equal. He did not see why electricity in paper could not be overcome seeing that in rubber they had been successful in mastering the electricity. A paper that had been absolutely dry would not absorb moisture very rapidly when exposed to the atmosphere. Hand-made papers should be dried in lofts at a low temperature. The reason why some papers break quickly when folded was probably because they were made on cylinder machines. The printer and papermaker should exchange views more frequently, and then they would be able to obviate many of the troubles of the printer, such as cockling, plucking, or the presence of nauseous fumes from certain papers, particularly by the coated ones. Knowing from what sources the various gelatines were produced, and the many substitutes that had been used during recent years owing to lack of proper supplies, printers would require to have patience until more normal times.

After a hearty vote of thanks to the lecturer, the members adjourned to the machine-room to see the paper, from pulp to finished article, being made.

WEE MAC.

FROM the Institute of Industrial Administration we have received a copy of the first issue of *The Journal of Industrial Administration*, which contains a number of important articles on the subject indicated by the title. Attention is particularly called to the instructional courses which have been arranged by the Institute on the subjects of Production Estimating and Production Costing.

## A New Paper Tester.

A practical paper man tests the strength of his sample of paper by tearing it, first in the machine direction, and then across. He judges by the feel of the tear what the relative merit of the paper is, and is possibly aided in his estimation by the appearance of the torn edges. He knows that the tension test of a strip, or the bursting strength of a disc, as measured by well known apparatus, does not give him quite the same information as his rough tearing test.

Although it cannot be contended that the tearing resistance of paper is its only important property, it is nevertheless true that for a variety of purposes for which paper is used,

so that  $OG = r$  inches, and it is held initially at an angle  $Q_1$ , to the left of the vertical through  $O$ , the potential energy of the pendulum is the work that it can do in falling to its vertical position, i.e., its weight multiplied by the distance through which its centre of gravity would fall. So that we have initial potential energy  $= P (r - \cos Q_1)$ .

If the pendulum is now released, neglecting friction and air resistance, it will pass through its bottom position and rise to an equal height on the right hand side of the vertical. But if during its downward path some of its energy is made use of to tear a sheet of paper, it will only rise to a smaller height on the far side, making an angle of, say,  $Q_2$  with the vertical.

In this case we may write as our energy equation:—

Potential energy at position  $OA = \text{work}$

FIG. 1.

such as in wrappings, bags and sacks, its tearing resistance is the real criterion of its suitability.

The accuracy of all measurements depends upon the elimination of the "personal equation," and so many attempts have been made to devise an instrument which will give mechanically the tearing resistance of paper. The tester described in this article is the successful result of such an effort.

In principle the new tester is extremely simple. Suppose we tear a sheet of paper over a length of  $d$  inches, and the average resistance offered to the tear is  $R$  lbs., and the total work done is  $W$  inch lbs., we have  $W = R d$ . So that if we can measure  $W$  and  $d$ , we at once know  $R$ .

Further, suppose we have a pendulum  $OA$  of weight  $P$  pounds and centre of gravity  $G$ ,

done on paper + potential energy at position  $OB$ ; or putting in our symbols—

$$P r (1 - \cos Q_1) = R d + P r (1 - \cos Q_2),$$

$$\text{whence } R = \frac{P r}{d} (\cos Q_2 - \cos Q_1)$$

$P r d$  and  $Q_1$  can all be made constants for all tests, and then the measurement of the tearing resistance of the paper resolves itself into a simple determination of the angle  $Q_2$ . Or, better still, the instrument can be so calibrated as to read  $R$  direct.

After various forms of construction of a tester based on this principle had been tried, the form shown in the accompanying photograph was adopted. The pendulum takes the form of a segment of a circle pivoted at its apex.

The segment carries a paper clamp  $C_2$ . The

standard on which the pendulum is suspended also carries a paper clamp C. The test paper is cut as shown in Fig. 2, and then folded, portions AA forward and portion B backward along the dotted lines. Portion B is secured in the clamp on the pendulum and portions A to the clamp on the frame. Then, on releasing the pendulum, the paper is torn along the wavy lines C D.

The pendulum is held in its initial position by a flat spring S mounted on the base of the instrument engaging against the right hand corner of the segment E.

The swing of the pendulum is indicated by a light pointer P, which is mounted frictionally on the axis A. The pointer is set in the vertical position, and is held while the pendulum swings to the right by a stop on the spring, but directly the pendulum swings to the left the pointer moves with it. In this

FIG. 2.

way, when the pendulum comes to rest, and this is facilitated by releasing the spring so that it acts as a brake, the pointer indicates by suitable graduations on the pendulum either angle through which the pendulum has swung to the right, or a figure proportional to the tearing strength of the paper.

With the actual model illustrated, the graduations are such that when the length of the tear ( $d$ ) is 88 mm. and six sheets are torn at one time, each small division represents one gram. tearing force in the singlesheet, i.e.,  $R = 1$  gram.

A levelling screw LS provides a means for initial adjustment, so that when the pendulum is swung and no paper is torn the pointer indicates zero.

Those interested in the apparatus can see the only specimen at present in existence at Messrs. R. J. Marx, late J. Marx and Co., of Chiswell House, Finsbury-pavement, London, E.C.2.

INVESTMENTS in the pulp and paper industry in Canada total \$264,598,300. The figures cover operations in ninety-nine plants.

## Interesting the Schoolboy in Printing

### A Lecture at Coventry.

Mr. A. E. Feltham, president of the Coventry Master Printers' Association, gave an interesting lecture to about 300 boys at the local Technical Institute on Friday, the 21st Jan., upon "The Printing Trade." The address was given in continuation of the efforts of the Education Committee to interest boys leaving school in choosing a trade rather than getting into some blind alley occupation.

Mr. C. C. Johnson presided, and announced that Mr. Feltham would give two prizes for the best essays upon his address, one for a boy who had left school and one for a boy still at school.

Mr. Feltham, aided by illustrations on the screen, described the introduction of printing and its development from wood block letters, to movable types and machine setting, and also the various kinds of machinery in use. He showed the lay-out of pages and of the case, and speaking of the importance of a good general education strongly recommended those who were going to take up printing to study grammar, punctuation and phrasing and gave examples emphasising this point. He stated that printing was now one of the best paid trades and that it afforded plenty of scope for intelligent employees. The time to improve themselves was whilst they were young, as they could adapt themselves to the requirements and would reap the benefit in later years. Speaking of the importance of learning correct spelling and punctuation, he said there was not a street in Coventry without some of the signs displayed being imperfect in these respects.

At the conclusion he was warmly applauded, and the chairman said no further vote of thanks was necessary after this demonstration of appreciation.

MESSRS. FELBER, JUCKER AND CO., LTD. 29, Peter-street, Manchester, have found it necessary to increase the office accommodation for their paper department in London, and have taken the first floor of Nos. 77-79, Cannon-street, E.C., as new offices, and will take possession of same as soon as the necessary alterations and decorations are completed.

PAPER TRADE CUSTOMS.—The codified trade customs of the paper trade are being revised, and are now in the press. When adopted by the four associations interested—namely, the Papermakers' Association, the National Association of Wholesale Stationers and Paper Merchants, the Employers' Federation of Envelope Makers and Manufacturing Stationers, and the United Kingdom Paper Bag Manufacturers Association—they will be published.

### Variable Size Cylinders.

A rotary printing machine which is capable of printing in one or more colours from cylinders of variable size comprises one or more printing cylinders 9 mounted in a frame formed of side members 1, 2, a connecting member 3, and a side bracket 5 for supporting a transverse driving shaft 4 which can be geared to a series of printing couples arranged side by side. Each printing roller is fitted with an inking apparatus, which is driven from the shaft of the printing roller, and is capable of adjustment to suit rollers of different sizes. An impression roller 44 mounted in arms 45 controlled by a screw 46 coacts with the printing roller. As shown, the printing roller 9 is inked by a pair of rollers 29 which are mounted in adjustable bronze bearings 35 which are fitted in slots in the side frames 1, 2 and are secured in position by screws 32. The arrangement permits rollers of different sizes

to be secured in position readily. The rollers 29 receive their ink from a roller 22 which is fitted with a longitudinally reciprocating distributing roller 37, and the roller 22 is supplied by an oscillating transfer or messenger roller 21 which is moved to and from this roller and a duct roller 13 driven by an eccentric 10, and a connecting rod 11 from the shaft 8 of the printing roller. The rod 11 is adjustably secured to a slotted crank 12 fitted with a pawl which actuates a ratchet to rotate the roller 13 intermittingly. The roller 21 is carried by a flexible frame 23 connected to an oscillating shaft 25 operated by a cam 26 and lever 28 from the shaft 8, and the roller 37 is reciprocated longitudinally by means of a cam 38 and adjustable lever 39, 41, 42 connected to a fork 43 on the shaft of the roller 37. The roller 22 gears with the rollers 29 which are geared to a wheel on the shaft 8, and the rollers 29 may be arranged below instead of above the roller 9. Mr. C. R. Pasquier is the inventor.

### Calendars and Indicators.

Under an invention by Mr. J. Moss in a tear-off monthly calendar sheet *f*, the day numbers of the month are arranged in concentric rows *g*, and means is provided for indicating the particular date, such means comprising a disk *a* pivoted at *c* to the support *n* and having a series of spaced pointers *b* of different lengths each of which co-oper-

ates with a row of numbers *g*. The pointers may be shaped as shown in Fig. 1 or may be formed with apertures adapted to surround the date. In an alternative arrangement, the disk *a* is stepped so as to cover successively each row of numbers, and if desired an aperture may be provided adjacent to each step.

MESSRS. HAROLD SPALDING AND Co. have forwarded to us an attractive sample of their "174" Mill papers, which show how English mills are improving their standard of qualities of M.G. and rolled M.G. papers.

## City Printers and Country Competition.

The Problem as it is Working Out in the United States.

By DOUGLAS C. McMURTRIE  
(Greenwich, Conn., U.S.A.)

That the question of competition between printers working under city and country operating-and-labour costs is as live a one in Great Britain as in the United States is shown by the discussion reported in the issue of the *British and Colonial Printer and Stationer* of December 16th. The way in which the matter is working out in the States may be of some interest to British printers.

The costs of the country and city printers are, of course, far apart. The result is that the plant located in the country can take from the urban printer any work which it is fitted to handle effectively and with comfort to the customer. Before one can proceed, therefore, to an intelligent discussion of the situation, it is necessary to attempt a classification of the product of printing plants. The following rough classification may serve: (1) Newspapers; (2) Magazines of large circulation; (3) Periodicals of news value; (4) Periodicals of literary or scientific character, without special emphasis on news value; (5) Book printing; (6) Large quantity commercial printing, mail order catalogues, and so forth; (7) Fine advertising printing; (8) Miscellaneous commercial printing; (9) Printing specialties, envelopes, post cards, tags, calendars, and so forth. We may now consider these classes in order, in relation to their production in city or country.

Beginning with Class 1, it is evident that newspapers must be printed at their place of

publication, whether that be city or country, because of the pressure of time between copy and delivery.

The printing of Class 2, made up of magazines of a circulation of 100,000 or more, is, in the United States, produced almost exclusively in four of the largest cities of the country. The reason for this is that there are in the country almost no specialised plants equipped to handle this work, which is a field of its own. Yet this is work which should properly be done outside of the large centres of population. Already one magazine publishing house has built a plant in an Ohio city of moderate size, and I expect in time to see several of the other large plants moving countrywards. When they do, I think it likely that the composition and electrotyping will be done in or near the city of publication, plates only being shipped for running to the country plant, which can mail or ship from its local post office or railway station.

Printing of the third class, periodicals of a news character—mostly weeklies—must needs be printed in the city of publication on account of time pressure. On this work the city printer need not fear his rural competitors.

### Big Sphere for Country Printers.

When we come to the fourth class, periodicals of literary or scientific character, we enter the undisputed realm of the country printer. Practically all such publications in the United States are printed outside of the cities. Articles are set up well in advance of printing; edit-

ing and make-up are deliberate. Mailing is done at the point of printing. There is one country plant which I am sure prints at least thirty scientific periodicals; another prints a dozen literary magazines of considerable circulation; still another specialises in chemical journals. In all of these the chief expenditure is for composition, and rotary presses are seldom required.

Book printing, which constitutes the fifth class enumerated, has been captured almost exclusively by the country plants. The work is largely in the hands of a few plants—two in New York State, three in Massachusetts, one in New Jersey, one in Vermont, and one in Connecticut. Practically all book composition and plating is done in the country or suburbs, but some machining is done in the cities on account of the convenience to large binderies for edition work. Only four of the important American publishers have their own printing plants, all of the others depending on various printers. Of the four doing their own printing two have plants in the country—Doubleday, Page and Co., at Garden City, L.I., and G. P. Putnam's Sons, at New Rochelle, N.Y.—while two have plants in cities—Charles Scribner's Sons in New York, and Houghton Mifflin Co., in Cambridge, Mass. (practically in Boston). It is my belief, with constant improvement in mechanical facilities in the country plants, that they will eventually acquire all the book printing.

Coming to Class 6, we find that the large runs of commercial printing, mail order catalogues, and the like are all monopolised by three or four printers in New York and Chicago. The only reason for this is that no country plants have the necessary specialised equipment of rotary presses. Were a large rotary plant established in a small town, it would seriously worry the printers now doing this work. On several of the mail order catalogue jobs the bulk of paper is so great that to minimise shipping charges part of an edition is printed in Chicago, while the other part is produced in New York.

### **The Town Printer's Advantages.**

Most of the fine advertising printing constituting Class 7 is printed in the large cities where the customers are located. There are two reasons for this. One is that few country plants are geared to do the finest illustration printing, and few have the colour presses and other equipment required. The second reason is that there is such a mass of detail in this work, with composition, art work, engravings, alterations, and so forth, that the printer must be near the customer.

Coming to Class 8, we find little of the miscellaneous commercial printing going to the

country plant, the reason for this being that the majority of items are small, and that they turn over quickly. This indicates the necessity of production "just around the corner" from the customer. The minimum special overhead charge of handling a job of printing at a distance prohibits him from seeking jobs below a certain limit of size. Furthermore, jobs on which the customer delivers copy in the afternoon and wants proof the following noon will never be attractive to the out-of-town printer.

Most of the printing specialties enumerated in Class 9 are manufactured outside of the large cities. These specialties require quantity production of a few items, with the minimum of detail, and special jobs. The point of most economical manufacture is, therefore, the logical location for such specialty printers.

### **Specialisation the Probable Solution.**

These observations seem to me to indicate that competition between city and country printers is not so acute if each devotes his energies to securing work suitable to his facilities and location. If the city printer attempts book composition, he must not complain of cut-price country competition. In like wise, the country printer attempting to invade the field of general job printing will find himself pushed by the competition in service of his city rival.

## Paper Trade Revival Predicted.

The belief is expressed by the head of one of the largest manufacturers in the United States of writing and book paper that the trade will be among the first industries to show a revival of buying. Next spring, he thinks, will see the industry again close to normal. Paper mills throughout the country, excluding those producing news-print, are now operating on an average of 50 per cent. Speaking of writing and bond papers, this authority said: "Last July saw operations of paper mills producing these papers at their high point. A slight decline of buying thereafter became perceptible and orders fell off, touching their low point for the year around December 1st.

"Since then there has been improvement which, I believe, will continue. Merchants who retail the paper tell us that they expect a revival of buying to commence the latter part of January or February. These grades have not shown the heavy advances in price as have book papers, wrappings and bags, and for this reason the adjustment is not so severe.

"I do not look for a revival in buying for bags, wrappings and book papers until late in March or April. The advances in price for this class of paper have been heavy."

## The British Industries Fair.

**Printing and Paper to be Well Represented.**

A preliminary stroll through the various halls at the White City, where preparations are in full swing for the 1921 British Industries Fair, shows that printers, papermakers, stationers and publishers will provide in the Stationery Section an excellent showing of the products of British manufacturers in the printing and allied trades. Though some exhibitors have hardly started yet on the work of stall-erection, others have all but completed this part of their preparations, and the handsome oak stand of Messrs. John Dickinson, for example, already gives assurance of a very impressive exhibit, as does also the ornate columned erection which Messrs. Raphael Tuck are putting up. There are some 180 exhibitors in the Stationery Section, among them being many whose names are very familiar to readers of these pages, as, for instance, the Thames Paper Co., Ltd., Messrs. Samuel Jones and Co., Ltd., and Messrs. J. Kidd and Co., Ltd. We hope to give, after the opening of the exhibition, some notice of the stands which are of most interest to printers.

The British Industries Fair opens on the 21st inst., and continues until March 4th. It is confidently anticipated that even the "record" success of the 1920 Fair will this year be thoroughly eclipsed. Great efforts have been made to attract buyers, both home and overseas, an important feature of the Fair in this respect being that stands represent as far as possible the actual producers of the goods, the middleman being eliminated and only manufacturers, or direct selling representatives of manufacturers, being allowed space.

A hint worth passing on to visitors to the Stationery Section of the Fair is that the Wood-lane entrance to the White City is the more convenient side of approach as this entrance is in close proximity to the Stationery Section.

**AERIAL POSTAGE STAMPS.**—Over forty varieties of specially designed postage stamps for air mails have already been published, says *Handley Page Bulletin*. Italy has the credit for the first air stamp which was issued by the Italian postal authorities as long ago as 1917. The United States, Canada, Newfoundland, Sweden, Spain, Switzerland, Esthonia, Columbia and the Belgian Congo have all considered it desirable to issue special stamps to their peoples. Tunis has even produced a second contribution. Needless to mention, Germany and Hungary were early in the field. Great Britain is apparently satisfied with the words "AIR MAIL" in the upper left-hand corner of all letter packets.

## "A Compositor in Canada."

**Mr. Naylor at St. Bride.**

The fourth of the popular series of lectures arranged by St. Bride Foundation Printing School attracted a large audience on Friday evening, February 4th, when Mr. T. E. Naylor, J.P. (general secretary of the London Society of Compositors), conducted his listeners through the Canadian tour which he made as a member of the Imperial Press Delegation, who visited the Dominion last July and September. Mr. T. W. McAra, J.P. (chairman, St. Bride Foundation Printing School), occupied the chair, and welcomed the lecturer, remarking that Mr. Naylor required no introduction.

Mr. Naylor exhibited some 150 excellent lantern slides, a number of which were coloured, sustaining the interest of all present for two hours by the racy way in which he related his experiences of the journey through Canada, frequently interspersing humorous comments and anecdotes.

At the invitation of the chairman, Mr. R. A. Austen-Leigh (chairman of the London Master Printer's Association), proposed a hearty vote of thanks to Mr. Naylor for his delightful and instructive lecture; he was sure everyone had enjoyed the discourse which had been so admirably handled, and personally he was glad to have had the opportunity of seeing the beautiful pictures which had enabled them to form a better idea of the doings of the Imperial Press Delegation during their visit to Canada. The vote of thanks was seconded by Mr. H. Wilson Howes (secretary of the Printing Machine Managers' Society) who said that though he regretted that he had not been able to hear the whole of Mr. Naylor's address he had heard sufficient to convince him that they had all experienced an exceptional treat. Those present demonstrated their appreciation of the lecture by enthusiastically supporting the vote of thanks by acclamation.

The next lecture takes place on Friday, March 4th, and will be of exceptional interest to many, as "The Answering of Technical Questions" will be discussed by official examiners.

**PAPER SCENERY SANCTIONED.**—The L.C.C. Music Halls Committee reports to the council that they have given permission for paper scenery similar to samples which have been submitted to and tested by the Chief Officer of the Fire Brigade to be used in London theatres and other places of public entertainment licensed by the Council, subject to the scenery being found to give satisfactory results in use and on the understanding that the matter will be reconsidered at the expiration of twelve months in the light of any experience which may have been gained in the meantime.

## THE EMPLOYEE AND

# The Federation Costing System.

A New Departure at Nottingham in respect  
of Scientific Costing in the Printing Trade.

The subject of costing is generally regarded as purely an employers' matter, yet but little consideration is necessary to see that it must be of vital consequence to employees also. The latter aspect of the subject has been little dealt with, so that special interest attaches to a meeting, probably unique in the printing trade, which was held under the auspices of the Nottingham Master Printers' Association at the Albert Hall Institute, last week, when, in spite of a dense fog, over 400 employees attended the meeting, and listened with close attention to the speeches.

Mr. E. H. Lee (president of the Nottingham Master Printers' Federation), occupied the chair, and stated that for nine or ten years a campaign to inaugurate the Costing System in every printing office in the country had been carried on. Until quite recently the costing systems in the printing trade—if they could be called systems—had all been of the most higgledy-piggledy order, and he ventured to suggest that in many offices where the Federation System was not installed, it was quite impossible for the employers to arrive at an actual basis of cost.

Mr. W. Howard Hazell addressed the meeting, and said that printers were not in business for philanthropy, or for the benefit of their health; that they wished to make a living for themselves, and must secure a margin of profit above the actual cost of production of the printing they sold. Unless there were a reasonable margin, it was impossible for them to buy up-to-date machinery, to extend their factories and to face the many difficulties in the printing trade. If they did not have a reasonable margin above the cost, they could not pay the interest on their own or on borrowed capital, and a printer only kept out of the bankruptcy court when his charges for the work done exceeded the cost of production. If bankruptcy came, it was bad for the employer and bad for the employees, as the business would be wound up, and many elderly men and women would have great difficulty in finding any other regular job. If a trade were prosperous it benefited all concerned, and it was far easier for the employer, if he were making good profits, to pay good wages, keep the factory clean and well-lighted, provide refreshment and rest rooms, and other amenities which were so desirable. It must be remembered that about one-third of the working day was spent in a printing factory, and it was, therefore, manifest that a prosperous industry, which was better able to maintain the factories in thoroughly good condition, was greatly to the advantage of the employees.

### Importance of Scientific Costing.

It was essential that the customer should pay all the costs of production, including wages of the craftsmen, materials, and also the salaries of the overseers and office staff, rent, rates, heating, lighting and selling expenses. The great difficulty in the printing trade was to find a method which would easily show what these costs were, for until the master printer knew his cost he could not fix a reasonable price to charge. Just now the printing trade was suffering because the customers would not pay the present high costs of production. The Costing System, by showing where wastes or losses occur, either in material, worn-out machines or insufficient type, etc., pointed the way to increasing the efficiency of the factory and thereby lowering the cost, and as the cost of printing was reduced, so the demand would rapidly increase to the benefit of all concerned.

The aim of the Costing System was that every printer should make a reasonable profit, not only on the whole of his business, but on every job that he put through, for any printer who sold his product at less than its cost, was doing harm to his own business and harm to the other people in the trade.

Mr. Hazell then explained how the hourly rates were found by the system, and drew attention to a printed statement which had been circulated through the whole meeting showing how the "compositor hour" and the machine rate were built up. He explained that the basis was the time the compositor spent composing and correcting matter, and to the hourly wage was added the cost of distribution, reading, overseers, rent, rates and office expenses, etc., so that the hourly rate must be nearly three times the hourly wage paid to the compositor when setting matter in order to cover these various expenses.

### Wage Increases and the "Compositor Hour."

Mr. Hazell then said: "I recently saw a complaint that an advance of 5s. per week to the compositor was followed by a statement by the Cost and Charges Committee that the cost of the 'compositor hour' had gone up 3d. per hour, and as there are 48 hours in a week the employer was getting 12s. per week to meet the 5s. per week he paid to the compositor. It is evident this complaint was made by someone who did not understand the facts of the case. The compositor is earning 5s. per week more, and it is necessary to add one-third to this amount to cover the cost of distribution, making 6s. 8d. The overseers,

readers, reading boys, clickers, proof pullers, storekeeper and all the other persons expected the increase, and the extra wages and salaries alone would bring the cost of the 'compositor hour' to about 9s. 6d. The Cost and Charges Committee made the statement that the cost had increased about 3d. per hour in December. The December announcement covered the increases of all costs since their previous announcement six months before.

"Have your rates gone up in Nottingham? (A loud response of 'Yes.') The rates have gone up everywhere, as well as the cost of gas and many other items, and these have all to be borne in mind. The Committee investigated the costs in many printing offices, and found, taking all these expenses into consideration, that the 'compositor hour' was costing about 3d. more at the end of December than in the six months previously. There is no profiteering in this charge: it is a statement of actual facts.

#### The Square Deal.

"The costing system can benefit the employees in many ways. Your representatives on the Joint Industrial Council approve it, as they recommend in the constitution of the Industrial Council that it should be adopted by all employers. It is a square deal with the customer and the employee. It enables the employee to state if he is delayed by any inefficient machinery, or by want of material. It shows the printer what his actual costs are on every job, so that he can charge a fair price, and the customers are beginning to realise that the costing system is fair to them, as it enables the charges to them to be based on the actual cost of their work.

"The printing trade is at the present time under a cloud, as are all industries in the country, but we produce a necessity and not a luxury, and our products are the basis of education, civilisation and commerce; and as the trade of the country revives, our industry must be one of the first to feel the improvement. Let us all work with all our energy to improve the efficiency of the trade in which we work and by which we live, and look forward hopefully to the better times that I hope will soon be here."

Mr. James Forman spoke of the many advantages of the costing system, and of the very large number of applications for tickets for the meeting that had been received from all the printing offices in Nottingham.

A vote of thanks to Mr. Hazell was moved by Mr. W. Wesson (local secretary of the Nottingham branch of the Typographical Association), seconded by Mr. G. Sadler (local secretary of the Printing and Kindred Trades Federation).

ACCORDING to a Berlin report to Copenhagen, Herr Hugo Stinnes has acquired extensive forest areas in Zingst, on the Baltic coast, and elsewhere in North Germany, to produce wood pulp for his newspapers.

PLAYING cards are among the goods prohibited from importation into Latvia, having effect as from the 25th of November, 1920.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

#### EGYPT.

The Controller of Printing and Stationery, Cairo, has forwarded to the Department of Overseas Trade copies of specifications, conditions of tender and samples relative to a call for tenders for the supply of the following material required by the Government Press, Cairo, for the financial year, April 1st, 1921, to March 31st, 1922:—Paper and bristol board (tenders close March 15th, 1921); ink, roller composition and glue (tenders close March 1st, 1921); binding cloth (tenders close March 10th, 1921); antimony (refined), pig lead and tin, in rods or ingots (tenders close March 10th, 1921). The tenderer must be a person residing in Egypt or must have a representative there, and tenders should be addressed to the Controller of Printing and Stationery, Old Ismailia Palace, Sharia Qasr el Aini, Cairo. Copies of the specifications, conditions of tender and samples may be inspected by United Kingdom firms interested on application to the Enquiry Room of the Department of Overseas Trade either at 35, Old Queen-street, S.W.1., or 73, Basinghall-street, E.C.2. A limited number of copies of the specifications, etc., are also available for loan to firms who are unable to arrange for their inspection in London. Applications for these should bear the reference number 3,759/F.E/P.N.

#### SOUTH AFRICA.

A well-known firm of Cape Town manufacturers' agents, having branches in the principal towns of the Union, are desirous of securing agencies for paper, etc. (Reference No. 127.)

#### CEYLON AND SOUTHERN INDIA.

An old-established firm in Colombo, Ceylon, who have recently opened an office in Tuticorin, South India, are desirous of effecting trade connections with United Kingdom firms for the import of paper goods, etc. (Reference No. 128.)

#### MEXICO.

A Spanish firm of Mexico City desire to be put in touch with British manufacturers and exporters of picture post cards. (Reference No. 148.)

SWEDISH paper mills are to cut prices of fine papers by 20 per cent.

MESSRS. A. W. PENROSE AND CO., LTD., send us a copy of the handy "Penrose Process Pocket Book and Diary for 1921." In the preface Messrs. Penrose express regret at their inability to include the Notes, Formulæ and Tables previously inserted, but promise to publish these separately at an early date.

## In the Newspaper Realm.

**"GLOBE" - "PALL MALL" FUSION.**—London's oldest evening newspaper, the *Globe*, has this week brought to an end its 117 years of separate existence, it being on Monday merged with the *Pall Mall Gazette* under the title of the *Pall Mall Gazette and Globe*. Since first published on January 1st, 1803, the *Globe* has appeared continuously, except for a period of 12 days in 1915, when it was suppressed and the printing plant seized under the Defence of the Realm Act.

**"TIMES" READERS' DINNER.**—The annual dinner of *The Times* Reading Staff was held on Saturday at the Holborn Restaurant, when Mr. and Mrs. Lints Smith were the guests of the evening. A cordial telegram from Lord Northcliffe was read by the chairman, in response to a message of congratulation from the staff.

**"DAILY HERALD'S" LIBEL.**—A special jury, which included three women, on Monday awarded Mr. H. J. W. Booth £500 damages against the *Daily Herald* for libel. The libel complained of was contained in an article entitled "Spies and Agents-Provocateurs," published in the *Herald* on December 20th, 1919. Mr. Justice Coleridge, before whom the case was heard, laid down that certain evidence on which the defence was relying could not be allowed. This ruled out about 10 of the *Daily Herald* witnesses.

**ACTION AGAINST GLASGOW "WEEKLY RECORD."**—In the Court of Session, Edinburgh, on Saturday, Lord Blackburn issued an interlocutor instructing the editor of the *Glasgow Weekly Record* to appear before him on February 15th to explain publication of certain excerpts from the open record in an action for alleged breach of promise by Miss Marie Catherine Young against Mr. T. D. Armour, of Edinburgh, the well-known golfer. Counsel pointed out that the statements, which had appeared in certain English newspapers as well, must have been taken from open record. Newspapers were not at liberty to publish averments until the record was closed. Lord Blackburn said he was satisfied that publication amounted to contempt of Court, but the Court of Session had no jurisdiction over English newspapers.

**MR. BEGBIE'S LIBEL ACTION.**—It was announced last week that a settlement had been reached of an action for libel in which plaintiff was Mr. Harold Begbie, author and journalist, and defendants were Mr. George Rawson and the *Irish News*, Ltd. The *Irish News* and *Belfast Morning News* published the libel, it was stated, in a paragraph upon an article which appeared in the *Daily Chronicle*, but Mr. Begbie did not write the article referred to, and he had no connection whatever with that paper. Mr. T. Scanlon, on defendants' behalf, said he wished publicly to express regret for the publication of this

paragraph, and to offer their apologies to Mr. Begbie. They withdrew absolutely and unreservedly the imputations that had been cast upon Mr. Begbie's character.

**THE PARIS "HUMANITE."**—The offices of the Socialist newspaper *Humanité* were invaded last week by twenty men who came to inquire why an anarchist communication had not been inserted. As they did not consider the reply to be satisfactory they seized the manager of the paper, cut the telephone wires and smashed windows and furniture.

## New British Patents.

### Applications.

- Aurich, E., and Wolf, F. Art lithography. 3,240.  
 Bullock, C. A. H. Type-setting appliances. 3,017.

# Trade Notes.

MR. C. E. JERINGHAM has died at Earl's Court, aged 66. Mr. Jeringham was for 20 years associated with *Truth*, for which he wrote under the pseudonym "Marmaduke."

WILLS.—The late Mr. Charles Palmer, M.P., journalist, left £5,697 gross, £5,040 net. Mr. Thomas Barton Bumpus, head of the firm of booksellers, Messrs. J. and E. Bumpus, Ltd., 350, Oxford-street, left £30,491.

THE exhibition of Select Prints in the Gallery of Prints and Drawings at the British Museum now illustrates the history of English engraving and etching in the sixteenth and seventeenth centuries.

THE presence of ladies is being made a special feature of the annual dinner of the London Master Printers' Association, to be held at the Connaught Rooms, Great Queen-street, W., on Wednesday, the 16th inst.

THE announcement is made of the production of an all-British typewriter, having a single keyboard. The invention is British, the capital has been provided by English money, and the machine is made at works at Nottingham, which are equipped with British tools and machinery made by British work-people.

THE special issue of the *Sphere* celebrating Mr. Clement K. Shorter's completion of 21 years' editorship, to which we referred last week, has brought forth many expressions of praise for the excellence of the printing shown in this number, especially in respect of the many and varied examples of high-class illustration work.

By the courtesy of Sir Oswald Stoll, the Coliseum has been placed at the disposal of Mr. George Robey, who has kindly undertaken to organise a performance on a special scale in aid of the Newspaper Press Fund. This will take place on Sunday afternoon, April 10th, and the most eminent and popular artists in London will take part. Lord Riddell is acting as chairman of the Concert Committee.

WE hear that the proprietors of "Lithotex" (Pictorial Machinery, Ltd.), will very shortly be abandoning further leasing of their plant owing to the high rate of bank interest ruling and the generally difficult financial position. This firm's standard plant at present sells for £3,300, but they have hitherto leased it at £300 per annum, the rate fixed before the war, and not since altered. Reckoning the "Lithotex" plant as admittedly good value at £3,300, it is plain that this sum of money at present bank rate (7 per cent.) absorbs £231, leaving only £69 for working expenses, wear and tear, maintenance, publicity, and profit, if any. It would seem to be obvious, therefore, that the proprietors are up against a very steep proposition in continuing leasing on the old terms.

THE Malay States imported paper and stationery in 1918 to the value of £117,203, and in 1919 £189,040.

PRIOR to the negotiations which resulted in the amalgamation between the *Western Morning News* and the *Western Daily Mercury*, a valuation of the plant and machinery of the *Western Daily Mercury* was carried out by Frank Colebrook, of 146, Fleet-street, E.C.4.

STATIONERY to the value of 3,936,138 marks was imported into Lithuania from Germany during the first half of 1920. From Latvia, during the same period, Lithuania received paper articles to the value of 58,113 marks, and from Poland cigarette paper to the value of 56,055 marks, and books representing 396,834 marks.

ON an ex-parte application made on behalf of Mr. William Walter Crotch, formerly deputy manager of Farrow's Bank Ltd., a rule nisi, returnable Tuesday, was granted to commit the editor of the *Daily News* for alleged contempt of court in publishing a certain statement with regard to the prosecutions in connection with the failure of the bank.

TO THOSE who hesitate to advertise in these pages we commend the following paragraph—clipped from Messrs. Wm. Strain and Sons' (Belfast) neat little house organ, the *Monthly Statement*: Mark Twain, in his early days, was editor of a Missouri newspaper. A superstitious subscriber wrote him saying that he had found a spider in his paper, and asked whether it was a sign of bad or good luck. The humourist replied—"Finding a spider in your paper was neither good nor bad luck for you. The spider was merely looking over our paper to see which merchant was not advertising, so that it could go to that store, spin its web across the door, and live a life of undisturbed peace ever afterwards."

HANDSOME PRINTING.—We were presented with a most pleasing example of good printing the other day on calling at the House of Spottiswoode, Ballantyne and Co., Ltd.—whose restful and well-decorated sales-room, by the way, gives the inquirer after print a welcome that is in marked contrast with the rough and-ready reception that must meet him in too many printing offices. The piece of printing to which we refer is a brochure which is entitled "Printing," and contains a thoughtful and well-composed essay stressing the importance of high-class workmanship in printed advertising. The essay is "Written by William Warbis, set in 14-point Kennerley Type (designed by Frederic W. Goudy), and printed on Alexandra Japan Antique at the press of Spottiswoode, Ballantyne and Company, Limited, New Street Square, London, E.C.4, December, 1920." In a single fount of type throughout, and with the placing of panels and the balancing of margins carried out in accordance with the principles of the new-old style of beautiful simplicity—the brochure forms a thing to cheer the heart of every lover of the nobly printed page.

FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,  
at 58, Shoe Lane, London, E.C. 4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

**SUBSCRIPTION:** Per Annum, 8s. 8d. (POSTAGE EXTRA).

COPIES may be purchased at the Offices, as above  
or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.

THURSDAY, FEBRUARY 10, 1921.

## Current Topics.

### The Need for Price Reduction.

ONE cannot meet many employing printers nowadays without hearing frequent assertions that unless some means can be found of reducing the cost of the chargeable hour, there appears to be no hope of recovery from the slump in printing orders and the serious increase in unemployment. The printing industry is, of course, not alone in suffering from decreased trade due to prohibitive prices. That the trade of the country as a whole is similarly affected is evident from the Board of Trade figures just issued, which show that in January our imports were £117,050,783, a decrease compared with January last year of £66,292,205; with exports £92,756,094, a decrease compared with January, 1920, of £13,123,815. Printers are realising acutely that something has to be done at once. The trade unions, we imagine, as well as the employers must be waking to the necessity of finding some arrangement whereby costs can be sufficiently cut to enable

such reductions of prices as would increase the flow of printing orders and so provide more work and, on the whole, more wages in the industry. The distressing extent of unemployment is surely a plain indication that some steps must be taken at once if trade is to be stimulated, and it would seem that a joint conference on the subject could be productive of nothing but good.

### An Apparent Paradox.

ON first thought it may seem paradoxical, in the face of a poor demand, to emphasise the need of greater production. The truth is, it is necessary, in order to create demand, that goods should be cheaper, and they can only be rendered so by larger output, which is the only safeguard for the maintenance of present wages. We are all concerned with the development of trade, both in our own personal and in the general interest. We at once require cheap goods and plenty of them. But they can only be supplied in so far as the costs of production are reduced, and these costs can only be lowered by larger out-turn on the same expenditure. It means that by a united effort in the works better results must be obtained from the raw material, which item includes labour. Scientific management and more efficient machinery can do much toward improving production. With the hearty co-operation of labour all that is humanly possible can be achieved. It is a fallacy, of course, to imagine that more work can be provided by taking longer over a job than is necessary. On the face of it, it would appear to be so, and it might be if there was an absolutely definite amount of work only to be done. The truth is that more work would be created by turning out goods at a greater rate and, by consequence, at a lower ratio of cost, because the cheaper the goods the larger the sale. So it is an imperative necessity to get more production, which will ensure high wages and industrial prosperity. With the maintenance of wages, demand will continue; in conjunction with cheaper goods, demand will improve. In spite of all resistance which employers have made to the demands of employees, it is in their own interests to pay good wages, for the more money there is in circulation the better for trade generally. But it is an essential corollary that an adequate and proper return should be made for such wages. Indeed, the past year has been full of experience—valuable as well as painful—and if the captains and the rank-and-file in industry only learn the lesson aright the future will take care of itself.

## Personal.

LORD ASKWITH, K.C.B., D.C.L., is to be the chairman to-morrow (Friday) at 8.0, when Sir Lynden Macassey, K.B.E., K.C., lectures at the Central Hall, Westminster, on "Present-Day Industrial Psychology."

SIR WILLIAM A. WATERLOW has been elected Chairman of the City of London School Committee.

SIR T. VANSITTART BOWATER is taking a rest from his many public and private duties abroad.

MR. W. LEONARD TOD, president of the Papermakers' Association, will preside at the annual dinner of the Association, which will be held on March 4th at the Connaught Rooms.

MR. C. A. BATES received a cordial welcome on attending the monthly meeting of the South-East London Master Printers' Association on Tuesday—he having sufficiently recovered from his recent illness.

At the same meeting the president, Mr. Cecil Clay, announced, to the members' regret, that he would have to resign the presidency, as his firm was giving up printing in London.

MR. A. H. MUNDEY (Fry's Metal Foundry) is to deliver a lecture on "Metals" at the monthly meeting of the Electrotypers' and Stereotypers' Managers and Overseers Association on the 15th inst., at St. Bride Institute.

MR. EDMUND BLAMPID, Mr. Fred Richards and Mr. Gerald L. Brockhurst have been elected Fellows of the Royal Society of Painter-Etchers and Engravers.

THE resignation by Mr. R. A. J. Walling of his position as a director of the Western Newspaper Co., and the severance of his association with the papers published by the company, will be regretted by very many who came into touch with Mr. Walling in one or more of his varied activities as journalist, author, politician, and public servant.

MR. A. P. COPPLESTONE, a Newton journalist, has been presented by the staff of the *Mid-Devon Advertiser* with an inlaid-mahogany clock, by fellow journalists in the South with a silver-plated teapot, and by the directors of the *Advertiser* with a cheque, on the occasion of his marriage.

MR. A. GUEST has tendered his resignation from the Executive Council of the Typographical Association in order to take up the position of Labour Agent at West Bromwich.

## Students in Lighter Mood.

Last Thursday evening the day students of the Printing Department at the College of Technology, Manchester, held a successful social, there being present about 100 students and their lady friends. Mr. R. B. Fishenden, M.Sc.Tech., director of the Printing Department, filled the role of chairman and host.

During the evening there were interspersed between the various dances several songs by Miss E. Leggett, Miss Whittaker, Miss Lodge, Miss Taylor, and Messrs. Russell, Dutton and Menzies.

The majority of the students have been serving in the different forces of the Crown, and it was a pleasure to watch them stepping the light fantastic after passing through such a distressing period previous to returning to civil life. From the reports connected with the practical examinations in printing, we understand that the students are so eager that they are quickly overtaking the time lost in the country's cause. This being their first social evening, there is every likelihood of others being sandwiched in during their college term. There is no doubt that the powers that be are helping the returned warriors to make good in that homeland which is to be fit for heroes to live in. Mr. Swift proved himself an indefatigable M.C., and when the time arrived for Mr. Kerr to move a vote of thanks to the director of the Printing Department all were enthusiastic in showing their appreciation.

WEE MAC.

## Paper Mills Directory.

There have been some important developments in the paper trade during the past year. These render an up-to-date directory more than ever necessary. A welcome, therefore, is extended to the 61st annual edition of "The Paper Mills Directory of England, Scotland and Ireland for 1921" (Simpkin, Marshall, Hamilton, Kent and Co, Ltd., London). In addition to setting forth particulars of paper mills in Great Britain, it gives useful lists of millboard makers in England and Wales, wholesale stationers of London, and paper stainers of England and Scotland. The important features of the Directory, showing watermarks and trade names in general use are continued.

THERE has just reached this country the first number of the *South African Printer and Stationer*, an illustrated monthly journal (2s.) devoted to the printing, stationery and allied trades. It is printed in excellent fashion by McKowen and Radford, Ltd., and published by the Trades Journal Publishing Co., 115, Main-street, Johannesburg.

## DIVIDENDS AND REPORTS.

**LANSTON MONOTYPE.**—Net profit of the Lanston Monotype Corporation for year to September 30th, 1920, after providing for depreciation and other charges, was £69,095, plus £219,331 brought in, making £288,427, less interim dividend, further provision for deferred profits, stamp duty on increased capital and expenses in connection with new issue, £18,223, leaving £270,203. Additions to buildings and plant totalled £40,362. Rates of exchange which have prevailed since early part of 1920 have had considerable effect on net profit, difference from this cause being nearly £60,000. Final dividend of 5 per cent. is recommended, making 8 per cent., placing £50,000 to general reserve, carrying forward the balance. Issue of 74,780 fully paid shares was distributed to shareholders registered July 1st, 1920. Excess profits duty for 1919 has not yet been agreed. It is estimated that company will not be liable for excess profits duty in respect of 1920.

**R. W. CRABTREE AND SONS.**—At the special meeting of this company held in Leeds last week the proposal to create £200,000 debentures, debenture stock, or secured notes was agreed to unanimously. These debentures not proposed as a permanent issue, but only for the purpose of financing the very large amount of stocks and work in progress at the present time. So long as any debentures were outstanding it was agreed that the preference dividend should be 10 per cent., instead of the present 8 per cent.

**GEORGE NEWNES.**—Interim dividend of 5 per cent. on the ordinary shares for the year ending June 30th, 1921. Warrants payable on February 15th.

## NEW COMPANIES.

**WOOD, RAYMOND AND DAVISON, LTD.**—Capital £2,000, in £1 shares; manufacturers of and dealers in paper, paper and fancy goods, and articles of all kinds. Private company. First directors: F. W. Wood, G. S. Raymond and G. Davison. Registered office: 13, Pratt-street, Camden Town, N.W.1.

**BADDELEY, REYNOLDS AND DIX, LTD.**—Capital £10,000, in £1 shares; stationers, printers, lithographers, photographic printers, engravers, etc. Private company. Directors: H. S. Dix, W. W. Hull and F. E. Baddeley. Registered office: 11, St. Matthew-street, Westminster, S.W.1.

**BRITISH NUMBERING, LTD.** (London).—Capital £2,000, in £1 shares; to acquire from U. A. R. Dudley the benefit of an agreement for tenancy of 184, Copenhagen street, Islington, and to carry on the business of mechanical and general engineers, engravers, lithographers, stationers, printers, manufacturers of calendars, diaries, desks, filing cabinets and office and other furniture, etc. Private company. Subscribers: G. Howes and C. E. Cullis. First directors: U. A. R. Dudley, G. J. G. Bolton and W. Richards.

**RIEU, WILEY AND CO., LTD.** (London).—Capital £2,000, in £1 shares; printers, publishers, engravers, book and print sellers, advertising agents, papermakers, etc. Private company. Subscribers: E. V. Rieu and W. Wiley. Subscribers appoint first directors.

**JOHN ALBINSON, LTD.**—Capital £20,000, in £1 shares; printers, stationers, etc. Private company. First directors: F. Hardman, John

Albinson, James Albinson, L. Whipp and W. Prockter. Registered office: Chapel-street, Oldham.

**LONDON WHOLESALE PAPER CO., LTD.**—Capital, £500, in 49 preference shares of £10 each and 200 ordinary shares of 1s. each; manufacturers of and dealers in paper and all articles made from paper or pulp, and materials used in the manufacture of paper, cardboard, railway and other tickets, millboards and wall and ceiling papers, etc. Private company. Subscribers: W. H. Goddington and H. J. Marshall. Subscribers appoint first directors. Registered office: 11, Queen Victoria-street, E.C.

**WAISTEL COOPER AND CO., LTD.**—Capital, £2,400, in £1 shares; wholesale and retail newsagents, stationers, booksellers, and general merchants, etc. Private company. Subscribers and first directors: W. Cooper, J. M. Cooper, R. Cooper, M. M. Cooper and F. Cooper. Registered office: 12, George-street, Ayr.

**BADGER TRANSFER CO., LTD.**—Capital, £1,000, in £1 shares; manufacturers, purchasers and dealers in any process for transferring, impressing, etching, engraving and fixing words, lettering and designs of all kinds on glass, metal and other materials, etc. Private company. Subscribers: Miss H. Boulton and J. R. Salmon. Subscribers appoint first directors. Registered office: 62, Railton-road, Brixton, S.W.

**LUKER AND HILL, LTD.**—Capital, £1,500, in £1 shares, to adopt an agreement with J. M. Fortune and W. H. Hill for the acquisition of the business carried on by them at 238, Blackfriars-road, S.E., (1) as "Luker and Hill," and to carry on the business of printers, stationers, lithographers, typefounders, etc. Private company. Subscribers: W. B. Ruffle and E. O. Rollason. First directors: J. M. Fortune and W. H. Hill.

**NICKELOID ELECTROTYPE.**—The Nickeloid Electrotpe Co., Ltd., has been registered as a "private" company, with a nominal capital of £40,000, in £1 shares. The objects are to adopt an agreement with Eyre and Spottiswoode, Ltd., and to develop the business of electro-deposition, electrotyping, stereotyping and engraving, formerly carried on by the said company. The first directors are: G. E. Briscoe Eyre, Nigel de Mundeville Bond, G. O. Smith and A. T. Atkinson. So long as Eyre and Spottiswoode, Ltd., or their nominees, hold 20,000 of the shares allotted to them pursuant to purchase agreement, they may appoint the permanent directors. Registered office: 6, Middle New-street, Fetter-lane, E.C.

### NEW ISSUES.

**AMALGAMATED PHOTOGRAPHIC MANUFACTURERS.**—Nominal capital of £1,100,000, in £1 shares (100,000 "A" preference, 600,000 "B" preference, and 400,000 ordinary), to acquire all or any of the businesses carried on by Rajar, Ltd., at Mobberley, Cheshire, and elsewhere; by Marion and Co., Ltd., at

Southgate, at Soho-square, London, and elsewhere; by Marion and Foulger, Ltd., at Bedford and elsewhere; by the Paget Prize Plate Co., Ltd., at Watford and elsewhere; by the Kershaw Optical Co., Ltd., at Leeds and elsewhere; by A. Kershaw and Sons, Ltd., at Leeds and elsewhere; and by the Rotary Photographic Co. (1917), Ltd., at West Drayton and elsewhere; and to carry on the business of manufacturers, exporters and importers of and dealers in photographic cameras, plates, films, papers, mounts and frames, kinematograph, scientific and technical instruments, post cards, show cards, advertising specialities, etc. First directors: A. E. Parke, G. S. Whitfield, L. D. Whitfield, C. Kershaw, A. Kershaw, O.B.E., T. L. Parke, F. G. Thomas, H. C. Rich, G. M. Bishop and C. F. S. Rothwell, F.C.S.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**NATIONAL PAPER AND PULP CO. (1920), LTD.**—Particulars of £200,000 debenture authorised October 28th, 1920, and covered by trust deed dated January, 10th, 1921, whole amount issued; charged on lands, cottages and mills at Chipping Wycombe, Bucks, 66, Upper Thames-street, E.C., and the company's undertaking and property, present and future, including uncalled capital. Trustees: Royal Exchange Assurance.

**LINDENMEYR AND JOHNSON PAPER CO., LTD.** (London).—Satisfaction to the extent of £2,000, on January 12th, 1921, of debentures dated September 30th, 1920, securing £20,000.

**POULTON BROS., LTD.** (printers, Southwark)—Issue on January 5th, 1921, of £1,000 debentures part of a series already registered.

**EDWARD SANKEY AND CO., LTD.** (photographers, stationers, etc., Barrow-in-Furness).—Mortgage dated December 2nd, 1921, to secure £1,800, charged on 78, Duke-street, Barrow-in-Furness. Holder: J. Blanchard, Highclere, Dyke-road, Brighton.

**NEWSPAPER ILLUSTRATIONS, LTD.** (London).—Debenture dated January 26th, 1921, to secure £215, charged on the company's property, present and future, including uncalled capital. Holder: Mrs. E. E. Warhurst, 97, Tyrwhitt-road, Brockley, S.E.

**VEEVERS AND HENSMAN, LTD.** (printers and stationers, Burnley).—Mortgage dated January 19th, 1921, to secure £500, charged on certain properties in Burnley. Holder: J. T. Pickthall, 58, Mitella-street, Burnley.

**W. J. MAY AND CO., LTD.** (publishers, stationers, etc., Twickenham).—Particulars of £15,000 debentures (including £5,000 already registered) authorised by resolutions of December 20th, 1912, and August 11th, 1920, present issue £6,000, charged on the company's undertaking and property, present and future, including uncalled capital.

**IMPERIAL PAPER MILLS.**—A trust deed, dated January 15th, 1921, executed by the Imperial Paper Mills, Ltd., to secure first mortgage debenture stock for £1,000,000 with a premium of £3 per cent., has been registered at Somerset House. The property charged is land at Gravesend, with the Imperial Paper Mills and appurtenances thereon. The trustees for the debenture stock holders are the Royal Exchange Assurance, Royal Exchange, E.C.

**FLEETWAY PRESS, LTD.**—Satisfaction in full on December 30th of first mortgage debentures, dated July 28th, 1920, securing £10,000.

**PETERBOROUGH PRESS, LTD.**—Particulars of £1,000 debentures, authorised January 25th, 1921, whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**LABOUR PUBLISHING CO., LTD.** (London).—Particulars of £20,000 debentures, authorised January 7th, 1921, present issue £2,475; charged on the company's property, present and future, including uncalled capital.

**FORD PAPER WORKS, LTD.** Hylton, near Sunderland).—Satisfaction to the extent of £18,050 on June 23rd, 1919, of debentures issued pursuant to resolution of May 31st, 1889, securing £15,000 and all registered renewals.

### A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming any judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

### ENGLAND AND WALES.

#### PARTNERSHIPS DISSOLVED.

Alfred Montague Coleman and Philip Myer Coleman, paper merchants, 45, Newhall-street, Birmingham.

George Townley, Cedric Nixon and John Greatrex Campbell, printers, 339, Great Western-street, Rusholme, Manchester.

Andrew Marland and Henry John Thorpe Williams, general printers, Saint Michael's-square, Ashton-under-Lyne.

Eric Lloyd Sever and Charles St. Clair Elliott, stationers, 29, Lower Mosley-street, Manchester.

Arthur Jones and Edward Hurst, lithographers, 30, Summer-row, Birmingham.

#### THE BANKRUPTCY ACT, 1914.

##### RECEIVING ORDER.

Lilian Swaine, 35a, Broadway, Leigh-on-Sea, stationer. January 31st. Greenwich.

##### RECEIVING ORDER RESCINDED.

Henry Vincent Allanson, 9, Chestnut-grove, Balham, stationer. January 27th. Debts have been paid in full.

## Printers' Managers and Overseers ASSOCIATION.

### Lively Meeting of Parent Association.

#### Proposed Alterations to Rules.

An agenda that included numerous proposed alterations to the rules of the P. M. and O. A. brought together a well-attended and distinctly lively meeting on Tuesday the 1st inst. The meeting was held as usual at the "Old Bell," Holborn, and Mr. A. E. Jarvis, the president, was in the chair.

The minutes of the January meeting having been read and confirmed,

The general secretary reported that he had, as instructed at last meeting, written a letter conveying members' sympathy and good wishes to Mr. J. J. Smith, whose health fortunately had now improved.

The following gentlemen, nominated for membership, were duly elected and welcomed into the Association: Mr. E. Anderson (Hill, Siffken and Co., Holloway, N.7. Overseer—Composing); Mr. T. Burley (London Lithographic Co. General Manager); Mr. J. D. Davis (W. S. Cowell, Ltd., Butter Market, Ipswich, Works Manager); Mr. F. Smith (Page and Thomas, Ltd., Germain-street, Chesham. Overseer—Composing).

The president introduced two visiting members, Mr. G. W. Davis, of Calcutta, and Mr. J. Ostell, of Liverpool, both of whom said a few words of appreciation in response to the hearty welcome accorded them by the meeting. Mr. Davis, referring to his experiences in India during the last seven years, remarked that Indian compositors use both hands and feet in their work; it had given him a shock when he first saw a man sitting on a composing surface opening up rows of type with his big toes, and dropping in the leads with his hands!

Of the 50 or so proposed alterations to the Association's rules, many were merely verbal or formal, but others involved important modifications of the existing arrangements.

A dramatic touch was given to the discussion at the outset when Mr. S. A. Dawson asked whether the meeting had been called as the result of the requisition of 12 or more members, and if not, under what rule it had been called.

The secretary replied that such requisition was not necessary, the meeting being called by direction of the Council, in accordance with Rule 23.

Mr. Dawson objected that it was Rule 33 that regulated alteration of rules. He maintained that the calling of the meeting had been out of order, and that decisions reached would not be binding upon members not present.

The secretary read Rule 33, and maintained that all requirements had been complied with.

Mr. Dawson went on to protest warmly,

asserting that insufficient notice had been given to members, but

The president ruled that the matter was entirely in order. He pointed out that alterations approved would not become valid until agreed by the Centres in accordance with Rule 33.

Mr. Dawson having asserted that some members had never received copies of the rules,

Both the present secretary and his predecessor (Mr. Phillips) said it had been their invariable practice to give the rules to every new member.

#### **Rule Alterations Provisionally Sanctioned**

The proposed alterations of rules were then proceeded with, the secretary in each case reading the proposition and Mr. Pugh explaining the nature and scope of the change suggested.

It was agreed—with four dissentients—to alter Rule 4, so that membership should be made open not only to acting managers and overseers, but also to full-time letterpress or litho instructors under a recognised educational authority. It was pointed out that candidates would still be required to have held the position of manager or overseer in one establishment for at least two years.

In connection with the same rule, Mr. Dawson proposed, and Mr. Campbell seconded, that the present practice of interpreting the position of manager or overseer to imply the oversight of at least six journeymen in the same branch of the trade should be altered and ten journeymen be regarded as the minimum. No support, however, was forthcoming for this suggestion, and the motion was accordingly dropped.

In view both of the changed value of money and the improved financial strength of the Association, it was quickly agreed (Mr. Dawson alone objecting) to increase the entrance fee from half-a-guinea to a guinea.

Numerous other alterations of monetary figures were also agreed to. These included the increasing of the general secretary's salary from £50 to £100 (Mr. Pugh emphasising the increase of secretarial work in the Association, as well as the decreased value of the pre-war remuneration); increase of auditors' salaries, each auditor to receive two guineas for the general audit and one guinea for the local (the cost of the general audit to be charged to the general fund); increase of unemployment benefit from 20s. to 40s. for four weeks, and 30s. per week for a further four weeks; increase of maximum cost of legal assistance from £10 to £15; modifications of the death benefit provisions.

In the discussion on Rule 9, in connection with which it was suggested to reduce the number of the Executive Council from 16 to 12, Mr. Dawson vigorously advocated the retention of the present number of 16. Mr. Dawson's references to "cliquism" in the Association resulted in the atmosphere becoming somewhat stormy, and the discussion was descending into an interchange of personalities when the president interposed. He interpreted Mr. Dawson's criticisms to have

reference to the Association's past, not to the present. It was admitted there was no cliquism to-day, and the business of the meeting was not to stir up the past, but to discuss the rules.

Mr. Barker seconded Mr. Dawson's amendment that the number be kept at 16, and after a considerable amount of discussion the amendment was carried.

In Rule 9 consideration was given to the paragraph (v.) making two years' membership necessary before election to office, and it was decided (with about four dissentients) to reduce the qualifying minimum to one year.

The question of limiting unemployment benefit to members actually connected with the trade was considered at some length. While it was felt that the Association should not be liable in connection with the unemployment of members who had entirely cut themselves off from the printing trade, it was wished to avoid unfairness to members temporarily engaged in other work. Eventually it was decided to limit the benefit to those who had been "engaged in connection with the printing trade during the previous twelve months," explanation being made that the phrase "in connection with the printing trade" was to be broadly interpreted, and that "during the previous twelve months" meant for any part of that period.

The agenda being an extensive one, the meeting lasted beyond the usual time, it being nearly 10 o'clock when the proceedings came to an end.

## **"The Printers' Exchange."**

"The first meeting of creditors in this case was held at the London Bankruptcy Court, on January 31st, before Mr. Walter Boyle, official receiver. Proofs to the amount of £45,193 were dealt with, and the chairman reported that Donald Mackenzie, Frank Peter Reavey and George Wm. Macey had attended under the receiving order, which was made on January 17th upon the petition of Frank Crossley and Sons, Ltd. No statement of affairs had yet been lodged, but the joint liabilities of the firm were roughly estimated at £200,000, and the joint assets were valued at £730, plus any equity there might be in certain paper held by the bank.

In reply to the chairman the debtor Macey agreed that there could be no equity in that asset unless the price of paper went up enormously.

The chairman next read to the meeting the statements made by Mr. Macey in the preliminary examination under the receiving order made against that debtor, and a resolution was passed for Mr. F. S. Salaman, C.A., 1-2, Bucklersbury, E.C., to act as trustee and administer the estate in bankruptcy, assisted by the following committee of inspection, viz.—Mr. Frank Crossley, Mr. Syrett and Mr. Dixon (F. S. Dixon and Co., Ltd.). The fidelity bond to be given by Mr. Salaman was recommended to be for £1,000.

# Printing, Bookbinding & Kindred

## TRADES OVERSEERS' ASSOCIATION.

### Annual General Meeting.

The annual general meeting of the Association was held on Tuesday evening, the 1st inst., at St. Bride Institute, Bride-lane, E.C.4, when there was a very large attendance of members. The first part of the proceedings was presided over by Mr. A. J. Daines, who subsequently vacated the chair in favour of Mr. A. W. Hunt on that gentleman being elected to the presidency for the ensuing year.

According to the report and balance-sheet issued to the members, it is stated that although the work of the Association gives cause for mutual congratulation, at the same time it is pointed out that the maintenance of progress is more costly than in pre-war days, and that in order to ensure further success an increased revenue must be considered. Much eligible material is still outside the ranks of the Association, and an appeal is made for new blood with an invitation to members to enrol suitable candidates at the earliest opportunity. The membership has increased by 16 during the year, and it has lost two by death. The educational side of the Association's work has been well maintained, lectures having been given by the following gentlemen: Mr. A. A. Whalley, Mr. A. Williamson, Mr. Arnott, Mr. Chris. Atkins and Mr. Sansom. The report also makes mention of the cordial understanding between the master binders at the London Chamber of Commerce in regard to salaries. The Association has also interested itself in the newly-formed Technical Examining Board, and realises the importance of this body as a step in the direction of emancipating the apprentice and the laying of a foundation for efficient craftsmanship.

Brotherhood in the Association, concludes the report, has always been its greatest incentive, and that sentiment should be encouraged to the utmost, and the ultimate pre-eminence achieved by every member's hearty co-operation.

The Secretary then read the minutes of the last annual general meeting, which were duly confirmed.

### Annual Report and Balance-Sheet.

In discussing the annual report and balance-sheet, Mr. J. Lee expressed disagreement with several financial aspects contained in the report, particularly in regard to the statement that the Association should increase its revenue. He did not see any reason for raising the subscription.

The General Secretary replied on behalf of the executive, and said that if they were to maintain their prestige and continue their pre-war activities, they must increase their revenue to a post-war level.

After a question had been raised with reference to the low attendance of one of the

members of the committee, the report and balance-sheet was adopted on the proposition of Mr. J. Lee, seconded by Mr. W. Robinson.

### Correspondence.

A letter from Mr. F. C. Peacock, thanking the members for their support during the year to the Vellum Binders' Pension, was read.

A letter was also received from Mr. W. Bullett (Electrotypers and Stereotypers Overseers' Association) expressing his cordial thanks to the Association for its invitation to attend the annual dinner.

Mr. R. A. Austen-Leigh wrote stating that he was afraid it was too late for the Association to be included in the Master Printers' Annual, but he hoped it would be included next year.

Mr. F. W. Bridges, in a letter, stated that he would be pleased to arrange for the Association to pay an official visit to the forthcoming Printing Exhibition.

In regard to the last letter it was resolved on the proposition of Mr. Willmott, seconded by Mr. Griffiths, that April 30th be fixed for the visit.

### Election of Officers.

Mr. Daines said he had been in harness four years and he was not seeking re-election. Last year he asked them to place Mr. Hunt in the chair, and he would reiterate that statement again that night. They had had two years' comradeship together, and there was no one who had worked more assiduously for the Association than Mr. Hunt.

On the proposition of Mr. J. Walker, seconded by Mr. Willmott, Mr. Hunt was unanimously elected president.

Mr. Hunt, who was received with hearty applause, expressed warm thanks for the honour they had done him, and said he would continue to use his best endeavours in the interests of the Association.

### The New President.

Mr. A. W. Hunt, although of a very modest disposition, has been actively identified with the Association since its inception in 1904, and in turn has successfully filled the various offices of trustee, treasurer and vice-president. He was on the first committee that helped to frame its rules, and looks forward with personal pride to even greater days for the Association in the future. Mr. Hunt is with the firm of Messrs. William Clowes and Sons, whose binding department he started in 1860. Under his supervision the binding department of this famous house has been brought thoroughly up-to-date and ranks amongst the finest in the country. During the war Mr. Hunt served 3½ years as a special constable with the Wimbledon Section, receiving the medal.

Nominations were next asked for the position of vice-president, and a popular choice was Mr. H. Milton (Newnes and Pearson Printing Co., Ltd.), who briefly expressed his thanks for the honour shown to him.

The following gentlemen were duly elected:—Messrs. G. A. Eden (general secretary), A. G. Aves (financial secretary), S. J. Wills and J. Lee (trustees), and the committee

were—Messrs. W. T. Lingham, R. Gardner, A. Cox, T. Hill, A. C. Ware and J. J. Rawlings, the last three gentlemen being newly elected.

### New Rules.

Mr. E. W. Tuff, as one of the auditors, raised the question of the inadequate amount of the subscription and moved that subscriptions be raised by 1s. per quarter. This was seconded by Mr. W. T. Lingham.

The discussion that ensued on this matter revealed a very strong opinion that subscriptions should be raised so as to enable the Association to be placed on a sound financial footing.

Several amendments were put before the meeting with the object of raising the subscription to varying amounts, and eventually a substantive motion was carried fixing it at one guinea per year.

Another amendment to the rules was that any member not returning his card on the first Tuesday in December in each year be fined 2s. 6d., was also carried.

### The Retiring President.

Mr. J. Walker moved a vote of thanks to the retiring president, and said he was sure they were all grateful to Mr. Daines for the admirable manner in which he had conducted the business of the Association during the last two years.

Mr. Daines replied in suitable terms.

Included in the votes of thanks for services rendered during the past year, moved by Mr. Eden, were the two auditors and the retiring committeemen.

Mr. Hunt briefly drew attention to the untiring efforts of the secretary and the financial secretary, and the meeting then terminated.

THE *Pappers Travaru och Industritidskrift for Finland* (the Paper, Wood and Industrial Journal of Finland) is an amalgamation of the *Finnish Paper and Wood Journal* and the *Industrial News*, and is the organ of the Association of Finnish Paper Engineers and the Association of Private Forest Rangers. In its new form the journal will deal with questions of social politics as well as maintaining the usual features of the *Finnish Paper and Wood Journal*. The address is V. Henriks-gatan, 16, Helsingfors, Finland.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STATIONER," 58, SHOE LANE, LONDON, E.C.4.

## SPECIAL PREPAID ADVERTISEMENTS

### Situations Vacant.

**L**ARGE London Printing Company require qualified JUNIOR ASSISTANT; must be well educated and of good personality. Age 25-30. Practical training essential or must know the technique of all processes; progressive appointment for suitable man.—State full experience to Box 13816.

### Machinery for Sale.

**FOR SALE.**—2-Roll "VICTORY" Machine, to print 4, 6, 8 pages, 6, 7, 8, 9 columns, at 21,000 copies per hour. Length of sheet, 26½-in.; maximum width (9 columns), 49½-in.; length of printed columns, 24½-in. Overall measurements: Length, 18-ft. 6-in.; height, 7-ft. 4-in.; width, 8-ft. 6-in.; plates, 9-in.

**FOR SALE.**—2-Roll "VICTORY" Machine, Central Folder, to print 4, 6, 8 pages of 6, 7, 8, 9 columns, at 21,000 copies per hour. Length of sheet, 26½-in.; maximum width (9 columns), 49½-in.; length of printed columns, 24½-in. Overall measurements: length, 26-ft. 3-in.; height, 6-ft. 4-in.; width, 8-ft. 9-in.; plates, 9-in.—Tillotson's News-papers, Ltd., Bolton, Lancs. 13817

### Miscellaneous.

**BUCHANAN'S EQUIVALENT WEIGHT CALCULATOR.** A Time-saving Pocket Companion for Papermakers and Paper Users. Standard size (12-in. long), in box-wood; £2 2s.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

**GOOD BOOK PRINTINGS** for sale, from stock; also 74 by 98 M.G. Kraft.—Loveitt, Paper Merchant, 5, Grosvenor-road, Bradford, Yorkshire. 13728

**PRINTING.**—Tenders invited for the Printing of a Trade Journal.—Apply, Box 1022, c/o Street's, 8, Serle-street, W.C.2. 13818

## New Inventions.

### Feeding and Counting Sheets.

An apparatus for feeding and counting articles such as sheets has been patented by Mr. A. M. Ahern, and consists of a pair of shafts 4, 5 geared together by pinions 6, 7 and driven by a belt 9, the shafts having rough gripping feed-wheels 2, 3. The upper shaft 5

is journaled in a rocking-bearing 11 and held down by a spring 12, so as to allow the upper grip wheel 3 to yield when a sheet passes. Alongside the lower wheel 2 is mounted a roller 22, Fig. III, on a lever 23 connected by a link 26 to a lever 22 pivoted at 21 and linked to a spring controlled arm 15, 16 on the spindle of a counter 13. An adjustable stop-screw 27 for the lever 23 is provided.

### Sheet Delivery.

An invention by Mr. A. W. Field relates to an oscillating-fly delivery mechanism and provided with devices, operated by the fly, to engage the sheet as it is deposited on the pile and hold it during the greater part of the return movement of the fly, so as to prevent

displacement of the sheet by suction. As shown, the sheets 3 are deposited on the table 2 in the ordinary manner by the fly sticks 5 fixed to a rock shaft 6. The sheet holding devices comprise a number of fingers 13 adjustably secured to sockets 12 fixed on a shaft

11 arranged between the table 2 and the shaft 6. The fingers 13 are arranged opposite to the spaces between the fly sticks 5. A pair of arms 15, 16 is secured to each of the shafts 6, 11 and these arms are connected by flexible straps 17 as shown so that the shaft 11 is operated by the shaft 6 only towards the ends of the strokes of the fly, the straps remaining loose during the greater part of the strokes. The jogger 4 is provided with slots 19 for the passage of the fingers 13.

### Folding Boxes.

Mr. E. W. Lowry has patented a folding box which is composed of two scored blanks of millboard, etc., one being formed as shown in Fig. 1, and comprising a part *b* formed with V-shaped slots *g*, and ends *a*, all having strengthening-flaps *e*, the ends also having flaps *c* for securing to the second blank. The

blank described above is mounted, as shown in Fig. 3, on the centre panel of the second blank, and the box is closed by folding up the sides *h*, *k*, and engaging the tongues of the flaps *m*, *n*, in the slots *g*.

A PAPER mill is to be erected at a cost of £200,000 in Southern Saskatchewan, to utilise the thousands of tons of straw that is annually going to waste. This will be the second straw paper plant in Canada.

## News-Print Comedy.

The recent history of news-print in the United States represents something akin to "a comedy of errors"—from the point of view of the onlooker. In the case of those directly concerned, the pathos and the humour of the situation alternated sharply.

For some time there has been rather strong feeling between the publishers and the producers of news print in the States, and that feeling is not lessened in intensity to-day. The publishers have always demanded supplies of the raw material at the lowest possible price, while the papermakers have held out for their just reward.

Then came the opportunity of the consumers. New tariff legislation was being promoted, and they saw to it that that part of the scheme passed into law whereby Canadian news-print was enabled to enter the United States free of duty. Thus the publishers were assured of ample and cheaper supplies of news-print, owing to the lower production costs in the Dominion.

This was a bad day for the American news-print manufacturers, and the mills along the Canadian Border were forced to close down. "The publishers had them flat on their back," said the gentleman who outlined the record of events.

But the turn of the papermakers was yet to come. During the war Canada put an embargo upon the export of news-print to the States, and the Dominion manufacturers were not sorry to be thus relieved of their contracts at pre-war prices, for they were able to sell their product elsewhere at very much higher figures.

Then the United States "news" makers woke up. They re-opened their mills and began to manufacture the paper so sorely needed by the publishers. But they held the whip hand, and demanded a price which would not only cover their cost of production but reimburse them for some at least of the losses sustained during their enforced closure.

It was not a pleasant situation for the publishers. The boot was on the other foot, but after their previous want of consideration for the papermaker, there was no alternative but to "grin and bear it."

Still, in spite of this turning of the tables, it is urged that news-print manufacturers in the United States are not making such very good profits. Nor are publishers willing to finance paper concerns. They will put their money into anything else save a paper mill. Although it is understood over here that some of the larger newspapers possess their own paper mills, we have recently been assured that the threat of going into news print production is only used by the publishers when they want some lever for depressing prices.

The little comedy is not yet at an end, perhaps; a policy of retaliation can be carried to indefinite lengths. We are only glad to think that the game is played in this country with less vindictiveness.

## Caxton Convalescent Home,

Limpsfield, Surrey,

Devoted exclusively to the use of Men and Women engaged in the Printing, Bookbinding, Stationery, and Kindred Trades. Patients received from all parts of the Country.

A Subscription of Two and a Half Guineas annually by an Employer, Society or Workshop gives the right to nominate a Patient each year for a Three Weeks' residence at the home.

Penny-a-week Subscriptions from employees are earnestly solicited. Annual Subscribers, through a collector or direct to the Office, are entitled to a Three Weeks' stay at the Home entirely free.

## A Bindery That Has Made History.

A Glance at the Past and Present Activities of Messrs.  
Leighton, Son and Hodge, Limited, Bookbinders.

Of some special interest among London bookbinding establishments is the house of Leighton, Son and Hodge, of 16, New-street-square, E.C.4. Making history bindings is a very different thing from "making" binding history, and while the Leighton firm has done plenty of work in the former category—Mr. Wells' famous "Outline of History," by the way, is now among the books going through their bindery—they can also lay claim to having "made history" in some degree, as their name stands identified with some important innovations recorded in the annals of the binder's craft.

Like many other denizens of the centre of London's printerdom, this firm is closely linked with the London of days long past. Their story started when Mr. Archibald Leighton set up for himself as master book-binder in 1767. He was a Scotsman, from Aberdeen, and was evidently a man of character and ability as he succeeded in building what was then regarded as a very substantial business. He died in 1784 and was succeeded by his son, Mr. Archibald Leighton, junior, whose enterprise was shown in his being prominently associated with what proved an important new departure in the use of materials. Up to the third decade of the nineteenth century, cloth was not used for book covers. Apart from fancy binding in silk and the like, leather was the staple material, while the cheapening of book-production (with the advent of cheaper paper) led to the turning out of books of the more ephemeral type in paper boards. It was Mr. Archibald Leighton who, in 1822, first introduced cloth as a material of commercial bookbinding. The cloth then used was thin

calico, dyed, stiffened and glazed, and the change was gradual from that to the specially made and finished book cloth such as is used to-day. It was not until about 1832 that cloth binding came into common use. It was in that year, too, that Mr. Archibald Leighton pioneered another important innovation, namely, the practice of gold-blocking direct on to the cloth cover. It was the custom of the time to print or block the title on to a piece of paper, silk or other material, which was afterwards stuck on the cloth. As the result of experiments made in his own works, Mr. Leighton in 1832 produced the first books with gold blocked directly on to the binding. This transition is shown in interesting fashion in the 8vo. edition of "Byron's Life and Letters," which the firm were binding at the time. Extant copies show that of this edition volumes I. and II. carry stuck-on gold-blocked labels, while in the case of volume III. and the numerous succeeding volumes similar gold-blocking is effected on the cloth itself.

In 1842 Robert Leighton, son of the last-named, succeeded to the control at the business at the early age of 20. He proved an energetic and enterprising chief, and under his régime the firm was among the London houses which pioneered the adoption of much of the bookbinding machinery which, in more or less developed form, is of so much importance to the trade to-day. He passed on the management to his sons, Robert and Thomas Leighton, whose names are closely associated with the big forward movement in English bookbinding in the period made famous by such craftsmen as William Morris, Aubrey Beardsley and Walter Crane.

At the present day the Leighton tradition is worthily carried on by the brothers Robert Leighton and Douglas Leighton, who, with Mr. Joseph Brown, now constitute the directorate. Mr. Brown, by the way, is distinguished as the designer of some admirable book-covers, and is at present specialising in colour blocking, a notable feature of which is the delicate colour-gradations achieved. Among recent designs of his may be mentioned those for the new Harmsworth Self-Educator, the Keats Centenary Volume

The plan of the works provides for the reception of materials in the basement, where also the sheets are cut in a number of guillotines of different makes. Here, too, the greater part of the folding is done, among the folding machines employed being not only a large "Dexter" folder that has proved its usefulness by many years of faithful service, but also a "Chambers" quadruple book-folding machine with "King" automatic continuous feeder—a piece of machinery which is attracting a good deal of interest in the

**"Chambers" Quadruple Book-Folding Machine, with "King" Automatic Continuous Feeder.**

and the *Daily Telegraph Victory Atlas* of the World.

A peep into the works of Messrs. Leighton, Son and Hodge to-day shows that laurels gained in the past have not been allowed to hinder the adoption of modern methods. While old and tried apparatus and processes are maintained where they cannot be bettered, one finds them now side by side with the latest inventions in machinery and labour-saving contrivances.

bookbinding world—which is regarded by Messrs. Leighton Son and Hodge as an important asset to their business. We illustrate the machine herewith. It can take a 64-page sheet, and fold, slit and deliver either as four separate 16 page sections or as two 32-page sections (one 16-page section being inserted in another). The machine runs at the rate of 2,500 to 3,000 sheets per hour, producing 10,000 to 12,000 16-page sections hourly. An important feature is the fact that a sheet goes on to this machine

just as it comes from the printer, so that not only is preliminary cutting entirely obviated but the pages can all be machine-folded with accuracy of register, the lay-edge of the sheet as printed being used as the lay-edge for the folding. The advantages of thus dispensing with unnecessary cutting and with hand-folding are obvious. We understand that Messrs. Leighton's "Chambers" folder is to be joined in a few weeks' time by a couple more of the same machines.

In this basement already one is reminded of the great advantages that are now being gained from motion-study as applied to the elimination of unnecessary movements in industry. Here, as on the other floors, careful arrangements are made for the easy transportation of materials so as to keep each operative well provided with all that he needs. In more than one case gravity rollers are installed to enable consignments to be slid rapidly down the shop to the point of requisition. Another device which merits special mention is the new form of truck (the "Ajax"), developed in the stress of munition works' requirements, whereby ceiling-high stacks of paper, boards or books can be moved *en masse*, as much transportation being done in quarter of an hour as used to occupy the best part of a day. The stacks are piled upon a sleigh-shaped device, the runner-like sides of which raise the horizontal boarding from the ground. Thus the specially designed truck can be run underneath the whole, and when the height of the truck is forcibly increased, by the use of lever gear which it embodies, the stack stands clear of the floor and mounted on wheels ready to be pushed wherever desired.

From the basement the folded sheets go by lift to the top of the building, where they are next gathered and sewn. While the up-to-date touch is here given to the work-room by the presence of a large battery of Smyth sewing machines, one sees also in action hand-sewing frames which are still in use for extra large or special bindings when occasion demands.

Then in the case-making and casing-in departments hand case-making processes are to be seen in close juxtaposition to the Smyth and Sheridan case-making machines. One may meet here an old friend, *Punch*, whose covers have been made in this establishment ever since our national humourist was quite a youngster of a journal.

It is by machinery also, of course, that the nipping, rounding and backing and trimming are performed, and one notices the Seybold three knife trimmer at work giving striking evidence of the speed and precision which the developments of engineering have made possible.

Thus, conserving good features of past craftsmanship, while at the same time welcoming the economies which present day invention has to offer, this old-established bindery is endeavouring to link quality with quantity and to show that wholesale and inexpensive production is not incompatible with a product that is both beautiful and durable. And certainly every effort in this direction represents energy well spent, for it is on to-

day's best time-saving and labour-saving methods in combination with the sound materials and careful finish of days gone by that we must rely if we would see the book-binding craft achieve the widest service and greatest prosperity.

## Lanston Monotype.

### Progress of the Undertaking.

The thirteenth ordinary general meeting of the Lanston Monotype Corporation, Ltd., was held on Thursday, last week, at Cannon-street Hotel, E.C.

Lord Askwith, K.C.B., K.C. (Vice-Chairman), presided, and in moving the adoption of the report, said that the directors recommended that out of the net profit of the year's trading, after providing for depreciation and other charges, a final dividend of 5 per cent. should be paid, making 8 per cent. for the year, that the sum of £50,000 should be placed to general reserve account and that the balance should be carried forward. The net profit upon the year's trading was £69,095, as compared with £39,480 for 1913. In concert with many other companies they had to meet three difficulties, namely, patents, excess profits duty and the rates of exchange. The company was built up upon patents which were taken out to conserve and to surround the original patents which had to be taken out in many other countries besides Great Britain and the United States. Considerable efforts had had to be made during the past year, and were still being made, on the success of which he congratulated the managing director, Mr. Duncan, for the re-establishment of their rights and patents in Germany and Austria.

The next point was the excess profits duty. Anyone who was connected with any company must be glad to know that that duty was to come to an end. If it had not existed they would have at least £100,000 in cash to introduce into the industry and to use in the development of the corporation.

The third point was the question of the rates of exchange. Although they made very large portions of the machines in this country, they got other portions of the machines from the United States of America, and they also had a large and developing trade throughout the Continent of Europe. They were hit both ways; they had to buy from America, and they had to pay the Americans larger sums than they had done in the past. It was not only in the United States that these provisions prevailed, but in other countries, too, including Europe and India. The corporation might appear from the balance-sheet to have suffered from the unfavourable exchanges, but it was interesting to note that the claim for excess profits duty would be considerably abated on this account. The corporation was in a strong position.

The report was unanimously adopted.

## The Need for Cost-Reduction.

### South-East London Master Printers' Resolution.

At the monthly meeting of the South-Eastern District of London Master Printers' Association, which took place on Tuesday of last week, discussion turned from the affairs of the local Association to the urgent question of the general high cost of printing, in regard to which a noteworthy resolution was forthcoming. The proceedings were of informal character, being carried on over the tea-cups. Mr. Cecil Clay was in the chair.

Mr. C. A. Bates, now back in London, was able to be present for the first time since his illness, and was cordially welcomed. The reading of the minutes provided an opportunity of which he availed himself to thank Mr. E. B. Smith and the members of the South-Eastern Association for the message of good wishes sent him from the January meeting.

The secretary read a letter received from 24, Holborn, to the effect that, in view of the small support forthcoming from other London districts, the suggestion of a grading scheme for the outer suburbs could not be acted upon.

#### Mr. Cecil Clay's Resignation.

The secretary read another letter from headquarters reporting an intimation received from Mr. Cecil Clay (chairman of the S.E. Association) that his firm, Messrs. Richard Clay and Sons, Ltd., were giving up printing in London and that he would accordingly have to retire from the Council of the L.M.P.A. and from his connection with the S.E. Association.

Mr. Clay said he would be very sorry to dissociate himself from the printing trade of London, but his firm had sold their London works and would not be printing in London after the end of the month. He would still be connected with the Federation, however, the firm of Richard Clay and Sons being members of the Norwich Association. It was with much regret he tendered his resignation; he could only hope a change of president might prove of benefit to the Association.

Mr. J. R. Brigenshaw proposed a very hearty vote of thanks to Mr. Clay, expressing members' gratitude for the generous way in which he had helped the association. He said that besides ably filling the position of chairman of the S.E. Association Mr. Clay had put in a great many hours—perhaps few members present knew how many—in the service of master printers at 24, Holborn. Mr. Clay had suggested they might get a better chairman to succeed him; if they got one who would do as well as Mr. Clay had done they would be very well satisfied.

Mr. Bates cordially seconded the motion, expressing his regret at the Association's loss of Mr. Clay, and assuring those present, from

his own experience of Council meetings, of the great assistance Mr. Clay had been able to give at headquarters.

The vote being carried unanimously with acclamation, Mr. Clay made a brief response of thanks.

The question of the election of a new chairman was left to the committee, the matter to be brought up at the next meeting.

The finding of two members to fill vacancies on the Council of the Camberwell Unemployment Committee was left in the hands of the joint secretaries.

#### Printers' Prohibitive Costs.

Reference having been made to the "little red book" the new minimum price list sent to all members—a discussion ensued on the possibilities of reducing the cost of printing, with a view to counteracting the falling off of orders caused by the present high costs. The discussion eventually crystallised into the following resolution, for transmission to L.M.P.A. headquarters, which was unanimously carried: "That the South-Eastern District Association is of opinion that the time has arrived for the Parent Association to approach the federated unions for a conference with a view to remedying unemployment, and to consider means to that end."

Some criticisms, though not in very precise terms, were forthcoming with regard to the new standard rates. Reference was made to allegations of printers' charges being exorbitant.

Mr. W. Whyte said the L.M.P.A. had been in touch with Roneo, Ltd., respecting their advertisements, and had been assured that the attitude of the company, was not that they wished to take work away from printers, but that they wished printers to install Roneo machines and undertake duplicating work themselves.

Mr. E. B. Smith pointed out that the new minimum rates were in no way arbitrary but represented, he thought, necessary modifications of the previous list which was based upon very careful and extensive investigation of printers' costs by a committee of jobbing printers.

#### The Minimum Subscription.

Announcement was made of a proposal from headquarters that the minimum subscription to the L.M.P.A. should be increased. A short discussion followed, the preponderance of feeling being apparently that the subscription of a guinea was quite inadequate.

Mr. Whyte remarked that after deduction had been for the Federation appropriation, and for the proportion refunded to the local association, minimum subscriptions did not leave headquarters enough even to meet the specific expenses incurred on behalf of the individual members concerned.

Mr. H. N. Prentice, the treasurer, suggested the inauguration of local classes in connection with the Federation costing campaign.

It was decided that Mr. A. Williamson be invited to attend the next meeting, when there would be an opportunity to arrange for classes, and also to discuss the new price list.

# Printers' Managers and Overseers ASSOCIATION.

## MANCHESTER CENTRE.

### The Annual Dinner.

Seventy-four ladies and gentlemen assembled at the Victoria Hotel, Deansgate, Manchester, on Saturday last, the occasion being the annual dinner of the Manchester and District Centre of the Printers' Managers and Overseers' Association. Mr. Thos. Rignall, the president, had the support of Messrs. F. E. Robinson (vice-president), J. E. Wilson and F. Martin (Liverpool Centre), J. W. Wormald and W. H. Wray (Yorkshire Centre), John Sever and W. Geo. White (president and secretary Master Printers' Association), Harry Skinner (general secretary, Typographical Association), John Allan and Thos. Sproat (chairman and general secretary of the Lithographers' Society), J. Marsh (president, Manchester T.A.), and others.

After full justice had been done to a substantial repast, the cloths were removed, when the chairman proposed the toast of "The King," which was enthusiastically received.

A feeling reference was then made to the late Thos. Kirkwood, whose remains had been laid to rest on the previous Monday, the company upstanding in silent respect.

The toast of "The P.M. and O.A." was proposed by Mr. John Sever, who remarked that managers and overseers held responsible positions, having to stand between the employer and the craftsman. Their qualities had to combine character with firmness and urbanity. It was not an easy thing to deal fairly between master and man, and he (the speaker) on many occasions sympathised with the overseer who tried to do his best, but through force of circumstances was unable to please both the employer and the craftsman at the same time. Touching upon the question of the Joint Industrial Council, he thought there should be some provision made for managers and overseers, as under the present arrangements there was no proper representation for them. The employers' association was in sympathy with the P.M. and O.A., as it was those gentlemen on whom they had to rely for the successful carrying on of the various businesses.

Mr. F. E. Robinson briefly replied.

Mr. J. E. Wilson chiefly directed his remarks to the challenge cup trophy, which was in front of the chairman, and he stated that Liverpool later on in the year would strive to become the holders for 1921-22.

Mr. J. W. Wormald (Yorkshire) observed that such gatherings as the present one showed that they were in unison one with another. Members of the P.M. and O.A. were often between the devil and the deep sea, and at times it was difficult to tell the other from which. They were ambassadors of all that pertains to print, and many times they were

in difficulties in attempting to distinguish the various standpoints between the masters and the men. It augured well for the craft when the officials of the various craft unions and associations met together in harmony around the festive board. The Association was progressive, its special objects being educational and sociable, and every manager and overseer who was outside its ranks was failing to keep in the van of progress. Yorkshire Centre had taken up that attitude, one of its aims during the coming year being to make great efforts to see that neither Manchester nor Liverpool should be possessors of the Bowling Cup during 1921-22.

### Wages in the Printing Trade.

Mr. Harry Skinner (T.A.), mentioned the black cloud that was hanging over the trade, it being very depressing to the employer, the manager, the overseer, and the craftsman. At the present time there seemed to be a propaganda through the press to expect a reduction in the wages of the craftsman. Fortunately for their particular craft the employers had not attempted to put the necessary machinery in motion, as its operations would not be agreeable to even managers and overseers, let alone the craftsman. In the past the workers in the printing trade had not been too well paid, therefore there would have to be an extraordinary drop in the prices of all commodities before any attempt could be put forward to make reductions. If at a later date it should be suggested, the unions were prepared to resist to the uttermost any endeavour to lower the scale of living to the basis of what it was in pre-war days. As regards the P.M. and O.A., he could safely say that whatever suspicion there was felt amongst the rank and file it had died away by a larger experience of the actions and motives of its members. He wished success to the Parent Body, the Centres, and particularly the Manchester centre.

Mr. Marsh (T.A. local) apologised for his secretary, Mr. W. Hunt, who was laid aside through illness. He remarked that his committee had found the relationship between the two local bodies to be of the happiest nature.

Mr. J. Allan (Litho) said by coming into contact with and getting fully acquainted with the aims and objects of the P.M. and O.A. his members were becoming less suspicious. The chairman that evening had done a lot of good in helping various craftsmen. He looked to such an association to have sympathy with those under them because by tact they could get the best out of the craftsman.

Mr. Thos. Sproat (Litho) had every sympathy with the manager and overseer who was conscious that his buffer position required carefulness in handling both the employer and the craftsman. The printing trade had not suggested any reduction in payment to the producers, but if it did come he would recommend that they resist it to the last penny. Prices had gone up and wages had afterwards followed, therefore when prices had greatly come down wages may be com-

pelled to show a slight reduction. In the past the craftsman had not been adequately paid, and it was up to all of them to see that remuneration was forthcoming according to the skill and requirements of the craft. The question of apprentices was one that he would like every overseer to take an interest in. Many times the lads were neglected, sometimes because the overseer did not interest himself in the lads, or the force of circumstances prevented the overseer from giving the necessary time and attention. If unable to do so, he should appoint some responsible man to see that the apprentices were properly trained.

At this stage the secretary (Mr. F. J. Hughes) was instructed to forward a letter of sympathy to Mr. W. Hunt, wishing that his recovery to perfect health would be rapid.

The toast of "The Ladies and Artistes," was given by Mr. Edward McVay in a humorous speech, Mr. Wm. Teer replying.

There was a varied selection of musical items interspersed between the speeches, the artistes being Messrs. J. H. Nuttall, A. Hellewell, E. Fisher, A. Young, W. R. Cannell, Miss Barbara Orrell, with Miss C. Maben as accompanist.

### "The Printers' Exchange."

SIR,—With reference to the report of the meeting of creditors in several of the trade papers in connection with the *Printers' Exchange*, we think it should be known that we are the original holders of the copyright of a register under the name of the *Printers' Exchange*, and that we gave permission, for certain considerations which need not be specified, to the company above mentioned to use the same title. In their first issue they made an acknowledgment to us, but as they stated we had incorporated our publication with theirs and that we were discontinuing ours, which was not in accordance with the arrangements or the facts, they made the necessary correction in their second issue.

We therefore beg to state that we have no connection whatever with the journal which has a receiving order against it, and that we continue to issue the *Printers' Exchange*, which title now belongs to us exclusively.

Yours faithfully,

H. J. COLES.

For W. J. CONNOLL AND CO.

69, Leather-lane, London, E.C.1.

February 11th.

## Costing Lecture at Derby.

By arrangement with the Derby Master Printers' Association and the local Education Authority, Miss G. E. Etherington, the well-known costing instructor at St. Bride Institute, gave, on Friday, February 11th, an interesting explanation of the working of a costing system; dealing with the necessity and reasons for using a system, the advantages and benefits to be derived by its use by (a) the worker (b) the firm (c) the industry—followed by a lucid explanation of the working of the system advocated by the Federation of Master Printers.

Those present evidently appreciated the able manner in which the lecturer dealt with the principles of the costing system. The lecture was all the more valuable in that it was given by one who has no propaganda campaign to consider, the conclusions arrived at being based on actual daily experience encountered in a large London printing establishment.

At the end of the lecture a number of questions were asked, and were duly answered by Miss Etherington and by the chairman, Mr. Simpson, of the Derby Master Printers' Association.

The usual votes of thanks were carried with enthusiasm.

## Trade Notes.

THE Paper Box Trade Board has postponed for two months consideration of an application to increase male workers' wages from 55s. to 65s. a week.

BROUGHT forward a week, the annual dinner of the Newspaper Press Fund will be held at the Hotel Victoria, Northumberland-avenue, W.C., on April 28th.

SIR LEICESTER HARMSWORTH was the buyer in the sensational transaction last week when the Moncton Papers were sold for £5,050. Messrs. Quaritch acting on Sir Leicester's behalf.

THE trial of the three men concerned in the "Bank Note Case"—Ford, Levy and Kurasch—for offences under the Forgery Act, was begun on Monday before Mr. Justice Lush at the Old Bailey.

THE late Mr. Charles Hickson Waterlow, son of the late Sir Sydney Waterlow, Bt., left gross estate of £49,827, bequeathing £1,000 to his secretary, and one year's wages to each of his servants.

AN interesting and informative lecture was given in the Bury Y.M.C.A. on Saturday evening, on the "Art of Etching," by Mr. Joseph Knight, headmaster of the Bury School of Art.

SIR HENRY DALZIEL, M.P., on Tuesday informed his supporters in the Kirkcaldy Burghs that, for reasons of health, he has reluctantly decided to apply for the Chiltern Hundreds forthwith.

MANY notable items will be included in the sale, which Messrs. Sotheby announce for March 10th and 11th, of books from the library founded by Mr. William Henry Miller of Craigentinnny (1789-1848).

AMONG the prophecies which the reporters succeeded in drawing from Mr. Edison on the occasion of his seventy-fourth birthday last week was one to the effect that books and newspapers will be printed on nickel instead of paper.

THE death has occurred at Edinburgh, of Mr. Arthur Giles who was for over half a century identified with the firm of Messrs. Robert Grant and Son, booksellers, 107, Princes-street. Mr. Giles was the proprietary editor of the County Directory of Scotland.

MR. W. HOWARD HAZELL's series of articles in the *Times* (Trade Supplement) on "Modern Costing"—to which we have previously referred—have just concluded with one on "How to Instal the System," in which reference is made to the costing organisation of the Federation of Master Printers.

THE death at Highgate last week, in his 70th year, of Mr. James Alexander Manson, removes a well-known literary figure of London. From 1894 to 1900 he was chief editor at Messrs. Cassell's, and edited "Cassell's Encyclopædia," and later was on the "Encyclopædia Britannica" editorial staff.

MR. WALTER RANDALL, of 207, Jockey-road, Wyld Green, Sutton, Coldfield, printer, left £10,320 (net personalty £6,907).

ROCHDALE stationers and newsagents have suffered a great loss by the sudden death last week of Mr. W. McDowell, who has been the secretary of the Rochdale Stationers' Co., Ltd., for many years.

MR. W. E. HICKS, for many years editor of the *Western Daily Press*, Bristol, has died at the age of 69 years. He was a past-president of the Bristol branch of the Institute of Journalists and of the West of England Press Fund.

AN end was made on Tuesday to the action for alleged incendiarism in connection with the recent mysterious fire at Arthur-street. Charged at the Central Criminal Court with setting fire to a quantity of paper at 11, Arthur-street, E.C., Simon Isaacs (27), printer, was found not guilty on the judge's direction and acquitted.

AT the annual dinner of the Society of Somerset Men in London, held on Friday, 11th inst., at the Holborn Restaurant, under the chairmanship of Col. the Hon. Aubrey Herbert, M.P., there was a good sprinkling of people connected with the world of printing and journalism. The toast of "The County of Somerset" was in the able hands of Mr. Percy Hurd, M.P. (Frome Division), while the response to the toast of "The Society of Somerset Men in London" was made by Mr. W. A. Perkins (chairman of the Society's committee).

COSTING LECTURES AT ROCHDALE.—Under the Rochdale Education Committee, the Rochdale Master Printers' Association have arranged for a series of six lectures on "Costing in the Printing Trade," to be delivered by Mr. John Taylor, of the Queen's Press, Manchester. The opening lecture was delivered last week in the Rochdale Technical School, when Mr. J. P. Howarth, of the Rochdale Master Printers' Association, took the chair. The lecturer dealt mainly with the necessity for costing on a sound basis if the printing industry is to prosper. Subsequent lectures will cover different phases of costing and the methods used.

A RESOURCEFUL N.Y. PRINTERY.—Specimens of two well-printed booklets are sent us from the printing office of Mr. Douglas C. McMurtrie (the Arbor Press, Inc., New York City)—the author of the interesting article, "City Printers and Country Competition," in last week's issue. One of these booklets is entitled "Printing for the Inhabitants of the Island of Hainan, China," and it certainly has a touch of the unique about it, inasmuch as it contains specimens of printings from types which, Mr. McMurtrie explains, were cut in steel in his own type foundry, and from which was printed for the first time a newly-invented script alphabet, devised by a missionary. In the other booklet Mr. McMurtrie gives specimens of, and some particulars about, a dainty outline type, Le Moreau-le-Jeune, which he has imported from the Fonderie Peignot, Paris.

THURSDAY, FEBRUARY 17, 1921.

## Current Topics.

### District Committees of the J.I.C.

THE subject of the advisability of forming District Committees of the Joint Industrial Council of the Printing and Allied Trades is very much to the fore at the present time. The J.I.C. is again urging the setting up of a Committee in each centre, as provided for in the Council's constitution. Both the employers and the T.U. representatives unite in this endeavour, for they realise that without District Councils the parent Council loses much of its usefulness and of its means—as a composite body—of keeping in touch with the trade throughout the country. There are those who still doubt the need for the J.I.C., and consequently for the District Committees. To these it may be said that the Council has undoubtedly done some good work already; indeed, it is the only joint and fully representative body we have which has an "atmosphere of its own," an atmosphere very different from that of the

Joint Labour Committee and other similar committees, at which "contentious" matters are always being considered.

• • •

### Functions of District Committees.

THE Council has useful constructive work in hand, and is now dealing with the subjects of apprentices, health, unemployment, advocacy of the costing system, organisation throughout the country, Parliamentary matters, educational problems and the social amenities and general welfare of employees in the printing and allied trades. It is in continual touch (by duly appointed officers), with the Ministry of Labour and the Board of Trade, and it has, as is well known, acted on several occasions in its capacity of a conciliation body with beneficial results. The District Committees are created for similar purposes, but they, acting locally, have the great advantage of bringing employers into closer touch (apart from actual business) with those they employ, under conditions which permit of free discussion on matters of the advancement of the trade and those employed in it. There can be little doubt as to the better understanding and greater confidence which these meetings bring about; they often prove illuminating to both sets of representatives, and they go a long way towards removing the complaint, too often justly made in the past, that the worker is not consulted on matters which closely concern his daily life. The centres at which these committees are in operation are enthusiastic as to the advantages they are reaping, and it is expected that the formation of District Committees will proceed much more rapidly as their possibilities for good become more widely realised.

• • •

### Annual Conference of the P. and K.T.F.

FOLLOWING close upon the heels of the annual convention of the Joint Industrial Council (to be held, as we have previously announced, at Brighton on April 12th), will come the annual administrative conference of the Printing and Kindred Trades Federation of the United Kingdom. This conference will meet in the Royal Pavilion, Brighton, from April 13th to 15th, and it is expected that about 60 delegates will be present, representing over 200,000 organised workers in the industry. Unemployment, unemployment insurance, apprentices, and many other subjects of vital importance will be discussed, and we gather that prominence will be given again to the question of further amalgamation

among the numerous unions in the printing and allied trades.

■ ■ ■

### Slump in Paper Imports.

THERE was a decrease of 606,555 cwts. in the imports of paper, etc., into the United Kingdom last month as compared with January of last year. In printing and writing paper in large sheets there was a drop of 42,847 cwts., and in packings and wrappings (including tissues) a reduction of 262,392 cwts. A heavy falling off also took place in the receipts of strawboards, the quantity being 204,379 cwts. below that for the first month of last year, whilst mill, leather, card and paste-board show a decrease of 100,551 cwts. Among countries supplying the British market Germany stands almost alone in regard to increased shipments. Last month the receipts of printings and writings in large sheets from the source mentioned were 11,121 cwts. of the value of £31,157, as against 401 cwts. and £1,903 in January of last year; packings and wrappings, 21,711 cwts. valued at £70,012, as against 3,746 cwts. and £8,517; and coated papers, 818 cwts. of the value of £4,870, as against 108 cwts. and £263. Canada, formerly included with other countries, is now shown separately in the list of countries of supply. It is noteworthy that printings and writings (4,920 cwts. of the value of £14,377) and also packings and wrappings (5,682 cwts. valued at £14,342) from Canada last month fall considerably under the receipts from Germany. Another country given status in the list is Finland, from which source we received last month packings and wrappings, etc., to the extent of 5,810 cwts. of the value of £16,194. The total imports for January, viz., 402,273 cwts., show a decrease of 60 per cent. as compared with first month of last year and 59.3 per cent. as compared with January, 1913. Last month's total value—£1,006,141—shows a decrease of 44.6 per cent. as compared with January of last year and an increase of 64 per cent. as compared with January, 1913.

IN aid of the Printers' Pension Almshouse and Orphan Asylum and of local charities, East Ham and Upton Park Auxiliary is arranging a Bohemian Concert to be held in the Green Man, Upton Park, E., next Saturday.

MR. ROBERT H. RUDDOCK is to preside at the grand Bohemian concert to be held on behalf of the Lithographers' Auxiliary to the Printers' Pension Corporation at Cannon-street Hotel on Monday next.

**AN Advertisement is always working.**

## Personal.

At a meeting of influential City business men held at the Guildhall on Monday to protest against the new telephone charges, Sir G. Rowland Blades (who was a member of the Parliamentary Committee which inquired into the 'phone charges) defended the Government position.

THE principal guest at the monthly dinner of the Press Club on Saturday was Sir Harry Lauder.

THE Newport and Monmouthshire Master Printers and Allied Trades' Association, at its recent annual meeting, elected as president for the ensuing year Mr. A. Whittaker, as vice-president, Mr. J. Gould, and as executive committee, Messrs. G. Bell, G. T. Wright, H. Ll. Hughes, G. E. Dibdin, W. Iles and W. E. Lee.

MR. ROBERT GARNER, the late editor of the *Bradford Daily Telegraph*, was the recipient the other day of a presentation by his former colleagues. Mr. W. Fleming, the present editor, in making the presentation, spoke of the excellent relations which always existed between Mr. Garner and his staff.

MR. FREDERIC W. GOUDY, the celebrated American type designer, has just been appointed Art Director for the Lanston Monotype Co., of Philadelphia. The appointment gives further evidence of the efforts being put forth to make the work of the Monotype equivalent to that of the best hand composition.

MR. MAX PEMBERTON has been invited by Columbia University to go to Honolulu as representing the London School of Journalism at the World's Press Congress, to be held in October.

## Stationers' Social Society.

The annual winter dinner, to which ladies are invited, promises to be one of the greatest successes ever achieved by the Stationers' Social Society. It will be held at the Hotel Cecil, Saturday next, February 19th. Considerable energy is being infused by the committee lately appointed and the officers are also strenuously working to advance the welfare of the organisation. So much so that it is stated that 60 new members have been introduced during the present year.

The future programme of the Society includes arrangements in regard to bowling, golf competitions, and another whist drive and dance is being planned for the next month or so.

## DIVIDENDS AND REPORTS.

**SUNDAY PICTORIAL NEWSPAPERS** (1920).—Dividend at 8 per cent. per annum, less tax, on preference shares for half year.

## NEW COMPANIES.

**HYDROLROID, LTD.** (London).—Capital £20,000 in £1 shares; to acquire certain patents relating to an invention for the manufacture of oil and water-resisting papers and boards, etc. Private company. Subscribers: A. W. Claremont and Irene L. Claremont.

**HEALTH RECORD PUBLISHING CO., LTD.** (London).—Capital £1,000 in £1 shares; printers, engravers, publishers, bookbinders, etc. Private company. Directors: T. Han-son-Lowe and A. Hallan.

**HILL, SIEFFKEN AND CO., LTD.**—Capital £50,000 in £1 shares; to acquire the assets, undertaking and all or any of the liabilities of the London Printing Alliance, Ltd. Private company. Subscribers: H. C. Hill and

**E. Hill.** Registered office: Grafton Works North-road, Holloway, N.7.

**COUNTY END PAPER MILL CO., LTD.**—Capital £30,000 in £1 shares; manufacturers of and dealers in all kinds of paper, paper stainers, decorators, engravers, printers' book-cloth manufacturers, etc. Private company. First directors: J. Seddon and A. C. Witby, jun.

**M. STEINART, LTD.**—Capital £3,000 in £1 shares; to take over the business of paper and twine merchants carried on by S. H. Steinart, J. Steinart and Marie Angel, at 40 and 43, Hanover-street, Shudehill, Manchester, as "M. Steinart," and to carry on the business of manufacturers of and dealers in paper, strawboards and packing materials, ropes, cables, cords, strings, twines, hessians, etc. Private company. First directors: S. H. Steinart, J. Steinart and Mrs. Marie Angel. Registered office: 40 and 43, Hanover-street, Manchester.

**SANDS AND McDougall (PROPRIETARY).**—Particulars filed at Somerset House pursuant to Section 274 of the Companies' (Consolidation) Act. Capital £500,000 in £1 shares. The company was registered in Victoria, Australia, on June 30th, 1919, to carry on the business of printers, stationers and publishers of the "Directory of Victoria." The British address is at 37-38, Mitre-street, Aldgate, E.C., where N. Hamilton-Smith and L. J. McDougall are authorised to accept service of process and notices on behalf of the company. Directors: F. H. Wilson, N. H. Smith and D. McDougall, of Melbourne; and G. Fraser, of Adelaide.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 19 8, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**SOUTH-EASTERN PRESS, LTD.**—Mortgage debenture dated February 3rd, 1921, to secure £250, charged on company's undertaking and property, present and future, including un-called capital (subject to prior debenture for £250). Holder: Mrs. B. E. Bucklow, 272, Shrewsbury-road, Forest Gate, E.

**BRITISH COLOUR PRINTING CO. (1920), LTD.**—Mortgage and land registry charge on cer-

tain freehold properties in Briant-street, New Cross, S.E., both dated January 31st, 1921, to secure all moneys due or to become due from company to Barclay's Bank, Ltd.

LEACH AND SON, LTD. (printers, etc., Wisbech, Cambs.).—Debenture dated January 27th, 1921, to secure £1,000, charged on company's property, present and future, including uncalled capital. Holder: J. Leach, "Carmen," Wisbech.

W. H. BLIGH AND CO., LTD. (printers, Ramsgate).—Particulars of £700 debentures authorised January 17th, 1921, whole amount issued; charged on company's undertaking and property, including uncalled capital.

C. J. CULLIFORD AND SONS (LITHO), LTD. (London).—Charge on certain land and premises in West Norwood, dated January 31st, 1921, to secure £7,000. Holders: Bank of Liverpool and Martins.

E. N. MASON AND SONS, LTD. (engineers and general stationers).—Mortgage dated January 29th, 1921, to secure £2,500, charged on certain buildings and premises in Colchester. Holder: H. G. Elwes, 3, High-street, Colchester.

SAGAR'S UNIVERSAL STORES, LTD. (job dealers, printers, stationers, paper bag merchants, etc.).—Particulars of £2,000 debentures authorised January 5th, 1921, present issue £870. Charged on company's property, present and future, including uncalled capital.

G. L. COLLINS, LTD. (publishers, newspaper proprietors, etc., Fulham).—Issue on January 12th, 1921, of £100 debentures, part of a series already registered.

### BANKRUPTCIES, etc.

Re THOMAS R. HEARNE.—The adjourned public examination in bankruptcy took place at Wells of Thomas Ralph Hearne, until recently proprietor of the *Wells Journal*, printer and stationer, who is now serving three years penal servitude for bigamy. The official receiver said the statement of affairs had now been amended and showed unsecured creditors amounting to £10,003 instead of £10,871. On the other side the chief alteration concerned the value of the stock-in-trade which was formerly fixed at £2,079 and was now scheduled at £2,700. Another item had been inserted, viz., a moiety of the goodwill of the *Wells Journal* and associated publications, £500, making the total estimated assets £7,514 instead of £5,828. The amended statement showed an estimated deficiency of £3,664 as against £5,512 in the original statement. Pressed by Mr. A. M. Taylor (for the trustee) as to the name in which he was registered or baptised, debtor eventually wrote his Christian name and surname on a piece of paper, which was handed to the registrar. Claims by Hearne's real wife and Miss Calder to furniture were considered at some length. Replying to Mr. Taylor, debtor said he did

not know what became of the sword he had worn; a lot of things had disappeared from the house to all accounts. Questioned as to his claim to an interest in Russian bonds and cotton mills, debtor said he meant simply that he was asked by a man to dispose of the bonds; and he was to receive a commission. The examination was closed.

Re AUBREY M. COHEN, 37, Cambridge-terrace, Hyde Park, formerly printer.—This debtor attended before Mr. Registrar Hope at the London Bankruptcy Court on February 9th for public examination upon accounts showing gross liabilities £17,059 5s. 10d. (unsecured £559 5s. 10d.), and assets "nil." In the course of his evidence the debtor stated that in the middle of 1913 he commenced business in partnership with another person at Hampstead-road, N.W., as offset printers, under the style of "Ettling and Aubrey." He then introduced £4,000 capital into the business, and at later dates further capital amounting to another £4,000, both sums raised on mortgage of his reversionary interest under his late grandfather's will. The business proved a failure from the first, and witness lost the whole of his capital. He attributed his insolvency to the loss of that £8,000 and to insufficiency of income to meet charges on the before-mentioned and other mortgages raised on his interest under the will. The examination was concluded.

## Mr. Naylor on Wage Cutting.

Mr. T. E. Naylor, secretary, London Society of Compositors, contributes an article to yesterday's *Daily Herald* under the title of "The War on Wages." He questions whether a reduction of wages would cause a considerable fall in prices, and he represents it as unfair that wage cutting should be suggested as the first step in the matter.

"Although labour costs are a considerable item in most forms of production," he writes, "it is questionable as to how far they influence cost as compared with other factors of the problem, such as interest, profits, and middlemen's charges. It is significant that at a time when nominal wages have reached their highest, prices have declined several points. In some departments of manufacture considerable cuts in price have taken place. There is no influence so strong in the bringing down of prices as a falling off in demand, and in this we may find the explanation of the present drop. In any case, it is evident that other margins have been cut, margins wide and deep, margins of interest and profit. Whatever the cause, however, the result is there—a lowering of prices, and that in advance of any reduction of wages. Surely, then, to ask the would-be wage cutters to hold their hand awhile is not an extravagant request. Who knows: prices may fall further yet, and so obviate any necessity for tampering with wages. Let us wait and see."

## Concert at the Printers' Almshouses.

One of the best concerts ever given at the Printers' Almshouses at Wood Green was provided on Saturday evening through the kindness of Mr. H. B. Isaacs (of North Finchley), who secured the assistance of several members of the Central Concert Party (hon. secretary Mr. Sidney Simons, of Stamford Hill), an organisation founded in 1900 for the purpose of giving entertainments at hospitals and other institutions and for benevolent purposes. The arrangements were made by Mr. W. A. Perkins (member of the Council of the Printers' Pension Corporation), in conjunction with Mr. W. Vandy (the chairman of the Almshouse Committee), the latter presiding over a very full gathering.

Songs, concerted pieces, and instrumental music followed each other in quick succession, to the evident delight of the audience. During an interval refreshments provided from funds raised among members of the staff of the Cornwall Press (late Richard Clay and Sons) through the agency of Mr. A. D. Newbery were served to the old people, who seemed much to appreciate the kindly thought shown.

A vote of thanks to Mr. Isaacs and his friends was passed on the motion of the chairman, seconded by the Right Hon. C. W. Bowerman, M.P.

Mr. Isaacs expressed the pleasure it had given the party to be of service to the institution, and Mr. W. A. Perkins voiced the thanks of the company to Mr. Vandy for his conduct in the chair and his many services to the Almshouses.

Regret was expressed at the absence through illness of Mr. Percy Lewingdon (who had generously given the concert programmes) and also of Mr. Joseph Mortimer, O.B.E., who had an engagement at one of the Printers' Auxiliary concerts in South London.

## Italian Paper Import Regulations.

According to an Italian Ministerial Decree, which came into effect on January 12th, the importation of playing cards is reserved to the State, and may not be imported on private account. Paper wares and cardboard wares are not subject to import licence requirements when coming from the United Kingdom, Canada, Australia, or the United States of America.

"MAGIC LANTERN" NEWSPAPER.—A novel type of newspaper is reported from Moscow, it being stated that the Tamboff Soviet daily newspaper "issues" an evening addition by means of a magic lantern. Every day some 200 lines of print, illustrations, and portraits are shown.

## London Newspaper Clerks.

The newspaper clerks section of the National Society of Operative Printers' Assistants, whose London secretary is Mr. Allan Maclean, reports that this organisation has increased from 1,000 members in July last to 2,000 at the present time. The recent arrangement with the N.P.A. for an all-round increase for those engaged in newspaper offices has had a stimulating effect upon the membership. Negotiations are at present in progress with other sections of the trade in London with a view to bringing the members into line with the newspaper offices.

The newspaper clerks who have benefited by the co-ordination with the Society have shown their appreciation by sending along their subscriptions to the "Natsopa" Memorial Home, and a movement is now on foot for the newspaper clerks' section to endow two cubicles, one for men and one for women.

We understand that it is expected that the Home will be ready to receive patients by Easter.

## A Printers' Memorial.

An impressive ceremony took place at Grafton Works (Hill, Siffken and Co., Ltd.), on Tuesday, February 8th, when, in the presence of practically the whole staff, a tablet was dedicated in memory of the eleven men from the firm who fell in the war.

In unveiling the memorial, Mr. H. C. Hill referred to the fact that it is possibly the only one of its kind in the Kingdom. Consisting of a lithographic stone, prepared by lithographers, designed and drawn by lithographic artists, with portions set in type by compositors, it is representative of both sides of the craft with which the fallen men were familiar in life. The work entirely of their fellow workers, it forms a true printers' memorial to their dead comrades.

The dedication service was conducted in a most impressive manner by the Rev. Frank Stone, M.C.M.A., Vicar of St. Luke's, West Holloway.

NEW LONDON OFFICES.—Messrs. Felber, Jucker and Co., Ltd., the well-known wholesale paper agents, of Manchester, have removed their London offices from 37, Walbrook, E.C., to 77-79, Cannon-street, E.C.4, where most commodious premises have been secured offering greater facilities for the conduct of the firm's business. The offices are well arranged and equipped, there being two telephone lines (Nos. 6988 and 6989 City), thus making it more convenient for clients to get in touch with the London sales department, which, for many years, has been under the successful management of Mr. H. Haxton, whose popularity is well known in trade circles owing to his urbanity and genial disposition.

# New Inventions.

## A Binding Invention.

The covers 1 of a flexible-band file, patented by Mr. L. R. Lewis, are provided, near the binding edge, with one or a number of pairs of slots 5 through each of which pass loosely the ends of a strip of flat flexible material 8 extending over the outside of the binder, the slots being formed in alignment with the hinge connection 6 between the covers and the back. One or both ends of each strip is

formed with a number of perforations 10 to permit of adjustment to accommodate a larger number of leaves 7, held by means of metal paper-fasteners 12 or a cord, the ends of which are hitched round the ends of the strips 8, passing through the leaves and the perforations 10. The strips 8, extending round the back of the binder may be variously coloured for classification purposes, or they may be covered by a strip of sheet material 14. Stiff covers may be attached to the flexible back portion.

## Filing Papers.

Under this invention index files, of the kind having parallel expanding pockets formed with dividing leaves and expansible folds at the ends and backs, are provided with a cover having one or more folds or hinges so arranged that the back and at least one of the sides may lie flat on the table, the pockets

when expanded resting on the back and one side of the cover, the file itself being attached at one end of the cover only. The cover comprises a back *a* sides *b c* hinged at *d* and *e*, the dividing leaves being provided with expansible folds *g h* to form pockets. The side *c*

may have a short flap *k* with spring clip for locking to the cover, or it may have a long flap to be wound round the cover. A strap may be provided to encircle the cover. The file may be constructed to close in the manner of a box. The invention is patented by Messrs. G. H. Baker and J. Walker and Co.

## Printer's Type-High Gauges.

Mr. G. J. O. Gillam has patented a printer's gauge which comprises a pair of arms pivoted together and adapted to be turned to lie parallel, leaving a space between them of correct dimension for gauging whether a printing block or the like is correctly "type-high," or they may be turned at right angles and used to set a form at correct distance from the edge of the bed. When used for gauging the

height of a block, as shown, the arms 1, 2, hinged at 3, are maintained with the edges 9, 10, at the correct distance apart corresponding with the height of a block 11 by a pair of shoulders 7, 8. Other shoulders 12, 13 maintain the arms at right angles for use on setting a form on a bed, the arm 2 being provided with an adjustable slider 15 which may be secured by a screw 16 at the position the edge of the form is to occupy.

## Wedding.

### Captain Noel Bowater and Miss Constance H. Bett.

The wedding took place on the 1st inst. at Hasketon, Woodbridge, Suffolk, of Captain Noel Vansittart Bowater, M.C., eldest son of Major and Mrs. Bowater, and Constance Hilton, only daughter of Mr. and Mrs. D. Gordon Bett, of Hasketon, Suffolk. The event attracted a good deal of attention owing to the popularity of the bride and

Her bouquet was composed of lilies and white heather. Attending her were four bridesmaids, Miss Beryl Bowater, Miss Daisy Bett, Miss Muriel Dow, and Miss Doreen Charrington, who were attired in bronze-coloured velvet, with hats of velvet and charmeuse of the same colour, and adorned with tassels. Captain J. M. Grant, R.F.A., acted as best man.

A large number of handsome presents were received. Among those representative of the paper trade might be mentioned the gifts of Lord and Lady Riddell, Sir T. Vansittart and Lady Bowater, Sir Fredk. and Lady Bowater, Sir Hedley Le Bas, Sir Ernest and Lady Harvey, Mr. and Mrs. Pomeroy Burton, Mr.

CAPTAIN NOEL V. BOWATER, M.C.

MISS CONSTANCE H. BETT.

bridegroom in a wide circle of friends and Captain Bowater's many acquaintances in the paper and printing trades.

The bridegroom is a director of Messrs. W. V. Bowater and Sons, Ltd., and a member of the Vintners Company and of the Constitutional Club. He served with distinction during the war as an officer in the R.F.A. (Territorial Force), to which he had been attached since 1913. He was in France from 1915 to 1919 with the 56th (1st London) Division, and was awarded the Military Cross after the battle of Arras in 1917. His father, Major Bowater, also rendered good service during the war as an officer in the R.F.A.

The ceremony at Hasketon was very pretty. The bride's dress was of cream charmeuse, with train of the same material lined with pink Georgette and adorned with silver leaves.

Rider (*Daily Express*), Mr. and Mrs. H. Bradly (Chas. Marsden and Sons), Mr. and Mrs. Edgar Fifoot, in addition, of course, to members of the family.

Next day a reception was held at the Empress Rooms, Royal Palace Hotel, Kensington, where the guests were received by Major Frank and Mrs. Bowater, the bride and bridegroom being the object of warm congratulations from "troops of friends."

After the reception Captain and Mrs. Bowater left for a few days' honeymoon in Paris, whence they will proceed to Egypt, returning via Italy in March.

While business is dull in the paper market generally, stationery lines of linen and rag papers are said to be "firm as a rock."

## The Annual Dinner of the L.M.P.A.

**All-round Progress Reported at the Chief Social  
Event of the London Master Printers' Year.**

The second post-war annual dinner of the London Master Printers' Association, held at the Connaught Rooms on Wednesday of last week, proved to be a brilliant and most successful function. Under the chairmanship of Mr. R. A. Austen-Leigh (president of the Association), there gathered a company of some 250 ladies and gentlemen, among whom were to be seen, of course, many whose names are familiar to everyone connected with printing and allied trades. Accompanying the president at the top table were Mrs. R. A. Austen-Leigh, The Rt. Hon. Augustine Birrell, P.C., K.C. (the guest of the evening), Sir W. A. Waterlow, K.B.E., and Lady Waterlow, Mr. E. W. Humphries (president of the Federation of Master Printers of Great Britain and Ireland) and Mrs. Selby Bigge, Mr. James MacLehose, LL.D. (vice-president of the Federation of Master Printers) and Mrs. MacLehose, Brig.-Gen. W. W. Bemrose, V.D., J.P. (president of the Midland Alliance of Master Printers), Sir Cecil Harrison, K.B.E., Mr. Edward Unwin (Master of the Worshipful Company of Stationers), Mr. J. H. Williams (treasurer of the London Master Printers' Association) and Mrs. Williams, Mr. Alfred F. Blades and Mrs. Blades, Mr. E. C. Austen-Leigh and Mrs. Austen-Leigh, Mr. H. C. Hill (vice-president of the L.M.P.A.) and Mrs. Hill, Mr. R. T. Rivington, Mr. A. Chenevix-Trench, Mr. R. J. Lake, Mr. J. C. Coppock (president of the Lancashire and Cheshire Alliance of Master Printers), Mr. Henry Godfrey (president of the Employers' Federation of Envelope Makers and Manufacturing Stationers), Mr. W. A. Clowes and Mrs. Clowes, O.B.E., Mr. J. R. Riddell (principal, St. Bride Foundation Printing School), Mr. Joseph Mortimer

(secretary of the Printers' Pension Corporation), Mr. Percy Barringer (president of the Stationers' Association of the United Kingdom), and Mr. Frank Murrell (past chairman of the Cardiff Master Printers' Association).

All the arrangements had been made with care and skill, and the proceedings proved most enjoyable throughout. Many appreciative remarks were to be heard regarding the handsomely produced souvenir brochure which served as menu, toast list and musical programme. Designed with exemplary taste, and printed in Bodoni type (the date being the anniversary of the birth of John Baptist Bodoni—1740 to 1813), this booklet was a feature of the occasion. The imprint was that of Messrs. Spottiswoode, Ballantyne and Co., Ltd.

An excellent repast was followed by numerous toasts, interspersed with well-rendered concert items.

The chairman gave first the toast of H.M. The King, and then that of H.M. The Queen, H.M. Queen Alexandra, H.R.H. The Prince of Wales, and the other members of the Royal Family.

### **The Prince and the Printers.**

Mr. Austen-Leigh called to mind the gratifying interest which H.R.H. the Prince of Wales continues to take in the printing craft, he having presided in that very room about three months previously at the most crowded, enthusiastic and successful festival the Printers' Pension Corporation had ever held, and having also shown his interest by recently inspecting in 'a most thorough fashion the offices of *The Times* newspaper. Mr. Austen-Leigh ventured to make the suggestion that

he hoped the Prince might follow that up by visiting the offices of some general printers. Whether he should select the offices of His Majesty's printers, or of the largest printers in the country, or one of the printing houses on his Duchy of Cornwall estate, or the offices of the president of the Association for the time being—any possible envy would be swallowed up in the gratitude all would feel at the honour done to the craft.

The loyal toasts having been honoured, the toast of "Literature" was given by Dr. James MacLehose, who coupled with it the name of the Rt. Hon. Augustine Birrell. Dr. MacLehose said that although it could not be contended that all their work as printers was connected with literature, the printer, nevertheless, shared with booksellers, editors and publishers the pleasure of being associated, even though at a great distance, with the intellectual forces that were shaping the world. As examples of what literature truly was he cited the wonderful characterisations of eighteenth century life and thought to be found in the writings of the chairman's distinguished relative, Jane Austen, or, coming to later days, the delightful essays with which their fellow guest, Mr. Birrell, had delighted and instructed his contemporaries. But though not all that printers printed was literature, yet what printers could lay claim to was that they had made the access to literature more easy. They had brought the treasures of the past and the present close to the doors of our own houses. Though printers were but hewers of wood or drawers of water in the outer court of the great temple of literature, yet he, for one, found it one of the greatest pleasures of his life to be associated with literature even distantly, and he looked to literature to show the way out of the industrial and social difficulties of the present time.

#### **Mr. Birrell's Choice of Authors.**

Mr. Birrell, who made humorous reference to the years he spent in the "cloistered shade" of Lincoln's Inn—years "of comparative obscurity, but not wholly unprofitable" (laughter)—went on to give what he said he had frequently refused to give to numerous copy seeking editors whose requests had been unaccompanied by cheques, namely, a list of authors to whom he owed a great deal of the happiness that had come to him in the course of his allotted mortal span. In alphabetical order they were: Edward Arber (1867), whose publications included the transcript of the Stationers' Register from 1554 to 1640, which was almost the fountain-head of English bibliography; A. H. Bullen, not only an editor but a printer, whose volumes ranked amongst the most comely in our libraries; Austin Dobson, one of the finest veterans of literature; Dr. F. J. Furnivall, who made the text of Chaucer available; Rev. A. B. Grosart, and Prof. Henry Morley, both of whom carried the lamp of literature into the humblest homes and cottages; Dr. Richard Morris, the grammarian; and the Rev. W. W. Skeat, the etymologist. These were the eight men whom in the mood of the moment he

most delighted to honour, for they had produced what was permanently good in literature. To the toast of such literature he was proud to respond.

Brigadier-General W. W. Bemrose (president of the Midland Alliance of Master Printers) gave the toast of "The London Master Printers' Association." He began by making complimentary reference to the position of London as No. 1 among the alliances. He said this alliance was extremely fortunate in personnel, their officials being men who spent an enormous amount of time and thought in the interests of the trade, and many of whom occupied high and important civic posts in their great city. The best example No. 1 Alliance could set to the rest of the country would be to arrange that every member of the alliance should put in the Costing System. (Hear, hear.) General Bemrose commented upon the very much more hearty good will and closer co-operation existing to-day between London and the provinces and between one part of the country and another. The Federation had an excellent executive. Progress had been made in the development of better relationship between master printers and those they employed, but it would be well to have some ideal to live up to. He suggested the consideration of the question whether employees could not be given a little extra say in matters closely relating to their daily toil. Another point that it might be possible to consider at some time was one much mooted now amongst the unions and in the Press, the question of whether they could not formulate some scheme whereby in return for greater effort and co-operation on the part of the workers they might give them some small interest financially in the results which they themselves helped to bring about.

#### **Progress of the L.M.P.A.**

Mr. R. A. Austen-Leigh, responding on behalf of the council, thanked General Bemrose for the way in which he had proposed the toast of the Association, and recalled the General's long and valued services in the cause of the organisation of master printers. Refraining from declaiming on the iniquity of the telephone, railway and many other rates with which printers were faced, Mr. Austen-Leigh briefly surveyed the history of the L.M.P.A. The first date, he said, of which he found any mention in their history was 1785, when London master printers assembled in the Globe Tavern in Fleet-street to discuss what they had frequently had to consider since—proposals of the London Society of Compositors. Ten years later the country printers—those tiresome people who were still present (laughter)—were quoting the London booksellers 20 per cent. under the London rates. In 1836 the first organised constitution of London master printers came into existence, on the committee of which were the names of Clowes, Clay and Spottiswoode. In 1841 the finances were in such a satisfactory condition that no subscription was necessary for the following year. (Laughter.) Two years later, however, the annual dinner was

not a success, and had to be stopped. Bereft of that pleasant function, the association lingered on until 1870, when it was dissolved, the relations between employer and employed being so satisfactory as to render it no longer necessary. There was no association until 1890, when it was re-formed. From that date there had been fairly steady progress. A year ago the membership was nearly 1,000, but owing to amalgamations of businesses and the encroachments of His Majesty's Stationery Office, together with almost daily depredations of Messrs. Berry, it was feared that master printers would soon be so few as to be able to go in a taxi-cab to 24, Holborn. (Laughter.) However, the membership to-day was approaching 1,100, and the funds were in a decidedly better state than they could have hoped a year ago. Unfortunately, there was another side to the medal, there being at present a very considerable slump in the printing trade. There was a lack of orders, a great amount of unemployment, newspapers were being forced to disappear or to amalgamate, and duplicating machines were displacing a certain amount of printing. He could see no great hope of a better condition in the trade until there occurred a decrease in the price of printing. Prices had been forced upward by the cost of material and the cost of living, and the only real hope of solving the present difficulty lay in reducing prices by means of increased production and cheaper cost. But if only they would profit by the lessons of the last few years, and by the costing campaign of the Costing Committee, headed by that most eloquent prophet, Mr. Howard Hazell, he had not the slightest doubt that in a year's time prospects would be fairer, and the association in an even more prosperous state than to-day.

Mr. H. C. Hill (vice-president of the L.M.P.A.), gave the toast of "The Federation of Master Printers of Great Britain and Ireland," or, as he would prefer to term it, "Our Federation." Mr. Hill spoke of General Bemrose's services in consolidating the Federation and urged that the Federation should be conducted on broad and liberal lines with the object of safeguarding the interests of employers, employees and customers alike. After speaking of the office of president of the Federation as the highest position to which a master printer could aspire, he mentioned the names of past presidents—Mr. Walter Hazell, Mr. Lake, Mr. A. F. Blades, Mr. E. G. Arnold and Sir Wm. Waterlow ("whom we hope to see at a not too distant date occupying the chief position in the City of London"). This year the president was Mr. Humphries, a man of sturdy character and sound principles, who had already as president earned their gratitude and esteem.

#### **Happier Relationships in the Industry.**

Mr. E. W. Humphries, responding for the Federation, emphasised the social side of the Federation's activities, and said that the feeling throughout Great Britain to-day among master printers was very much more cordial, much freer, and more trustful than it was in earlier days. There was a time when, if a

printer saw another coming down the street he crossed over to avoid meeting him. To-day there was a vastly different feeling amongst members. The Federation was doing much also in the matter of costing, which he thought should be a primary subject of members' thought and talk to-day. Referring to the good relations existing between employers and employed in the printing industry, Mr. Humphries estimated that roughly one-fortieth of the people of these islands were dependent for their livelihood upon the printing trade, and it was a great achievement that most other trades now pointed to the printing industry as providing an example of what the relationship of masters and workers should be.

Sir Cecil Harrison then gave the toast of "The Visitors." In happy reference to the presence of the ladies, he said he thought they should hardly be regarded as visitors: the ladies alone could master the master printers, and they should have entry, as it were, by "right of capture." In welcoming the various visitors, he made special mention of those from allied trades, including the stationers and envelope-makers. Coupling the toast with the name of Mr. Henry Godfrey (president of the Employers' Federation of Envelope Makers and Manufacturing Stationers), Sir Cecil said he regarded Mr. Godfrey's presence as an illustration of the much greater sympathy and community of idea with which all branches of the trade were being worked at the present time.

Mr. Henry Godfrey, briefly returning thanks on behalf of the visitors, also spoke appreciatively of the closer and beneficial relations now existing between the various allied trades in the industry. He made mention of the Consultative Council of the allied trades, from which he hoped still further benefit might accrue.

Mr. J. H. Williams (hon. treasurer of the L.M.P.A.) proposed the health of the chairman. Making brief reference to the numerous official capacities in which Mr. R. A. Austen-Leigh was serving the industry, he said the Association owed their president a very great debt of gratitude.

The proceedings ended with a few words of response from the chairman, who expressed the thanks of the gathering to Messrs. Langley, Bennett, Griffith, Major Birch and Mr. Willsher, who were responsible for the excellent arrangements made. He thanked also the artistes—Miss Gladys Ashton, Miss Winnie Vaughan, Miss Minna Deacon, Mr. Clifton Yates and Mr. Ernest Cherry, whose very acceptable services were rendered under the musical direction of Mr. Chas. J. Winter.

THE new issue of *Marshall's Monthly Message*, the elegant little house organ of the Marshall Engraving Co., contains an interesting pair of half-tone illustrations made, one from a retouched photograph and the other from a proof of the former. The second well illustrates the disadvantage of making a half-tone block from a half-tone print, the resulting "checking" of the screen being clearly observable.

# The British Industries Fair.

## A Glance at Some of the Printing Exhibits.

Monday saw the opening of the 1921 British Industries Fair at the White City. Practically all preparations were complete on the opening day; and the exhibitors, as a whole, contrived, in spite of limited space, to make an excellent show.

While paper and stationery firms are numerous represented, the letterpress printer does not, apart from book-publishers' showings, occupy much space, though illustration work in a variety of processes is well to the fore. We note here, in alphabetical order, a few of the stalls which catch the printer's eye, and we propose in next week's issue to notice others.

**CAMBRIDGE UNIVERSITY PRESS**, Fetter-lane, London, E.C.4, have a large showing chiefly of high-class bookwork, covering Bibles and prayer-books in a wide variety of bindings, and including books in many foreign languages.

**CARDIGAN PRESS, LTD.**, Cardigan-lane, Leeds, give evidence of considerable capabilities in colour printing by various processes, particularly by rotary offset in which they specialise. Some fine picture work for use on box tops for confectionery, haberdashery, etc., also on booklet covers and the like, attracts special notice among many examples of high-class process printing.

**PETER CARMICHAEL AND CO., LTD.**, Southampton-street, London, S.W.5, are distinguished as having working machinery on exhibition, as well as samples of finished work. They show the "Carmic" envelope-making machine in operation—a machine notable for the fact that each one of the five standard sizes in which the machine is made, is adjustable, so as to turn out envelopes of a considerable range of sizes. The machine exhibited, No. 4, folds a range of sizes 5½-in. by 3½-in., up to 13-in. by 7-in.

**G. DELGADO, LTD.**, East-road, London, N1, emphasise their "Union Jack" series of Christmas and other greeting cards, calendars, with a number of fancy stationery lines, and some useful advertising novelties.

**THE DESIGN AND INDUSTRIES ASSOCIATION** has some instructive and interesting exhibits, including many from the Institute of Industrial Art.

**EYRE AND SPOTTISWOODE, LTD.**, East Harding-street, E.C.4, have three stalls: two in the Stationery Section, showing a variety of magnificent picture reproduction work in colours and monochrome, also books, chiefly Bibles and the like in superior bindings; and a third stall in the Fancy Goods Section, showing embossing plates and rollers, their "Albert Galvano" lead-moulded electros, and "Nickeloids" for long runs on hard stock.

**C. W. FAULKNER AND CO., LTD.**, Golden-lane, London, E.C.1, have much admirable colour printing on show, including photo-gravure and colour reproductions, and a wide variety of calendars, Christmas cards, post-cards and publicity work of several kinds.

**HILLS AND CO., LTD.**, Bayer-street, London, E.C.1, make a striking display of colour printing against a stall background of black. Christmas and other greeting cards, calendars in a large variety of designs, including many with reproductions of famous pictures, form the staple of the exhibit, while an attractive range of fancy stationery is also an important feature.

**HILLS PRESS, LTD.**, Holmeside, Sunderland, is another of the firms showing admirable fine art work. Their exhibit consists mainly of calendars, of which an excellent range is shown executed by various modern processes, in colour and monochrome. Their colour printing on satin and textiles deserves special mention, while they show also the application of their work to advertising and other commercial purposes.

**JOHN KIDD AND CO., LTD.**, 11, Wine Office-court, London, E.C.4, the well-known ink-makers, show many examples of printing done with their printing inks, indicating a very fine range of qualities and hues of inks for general printing, litho, three-colour, poster and other work, with such specialities as gloss inks, gold and silver metallic inks and copyable inks. They also display their special roller composition.

**ODHAMS PRESS, LTD.**, Long-acre, London, W.C.2, in a striking display of colour printing, include many admirable examples of collotype, lithographic offset process, etc.

**OXFORD UNIVERSITY PRESS**, Amen-corner, London, E.C.4, in a fine show of books, give prominence to reproductions of ancient manuscripts, early printed books, etc., by chromolithography and collotype, and include also Bibles and prayer-books, books in foreign languages and foreign grammars.

**GEORGE PULMAN AND SONS, LTD.**, Thayer-street, London, W.1, have an impressive showing of fine art work, including reproductions of famous pictures, some admirable calendars, and a few specimens of superior letterpress work in the way of booklets and publicity matter.

**R. ROBINSON AND CO., LTD.**, Clavering-place, Newcastle-upon-Tyne. Besides a showing of account books, boxed stationery, paper bags, cardboard containers and similar items, there are exhibits of this firm's work as letterpress, process and lithographic printers, die-stampers and engravers.

**JOHN RISSEN, LTD.**, Clerkenwell-green, London, E.C.1, ensure notice by the novel and ingenious design of "Account Book Villa," which bears the legend "This is the House that John Built," and has its walls built up not of bricks but of account books laid brick-wise.

**J. SALMON**, High-street, Sevenoaks, makes an excellent showing of colour printing, three-colour work being a speciality, and the exhibits include pictures, calendars, oil-chrome panels, post cards in variety.

**RAPHAEL TUCK AND SONS, LTD.**, Moorfields, London, E.C.2, have an artistically-designed stand that is in keeping with the fine display of the high-class art printing for which they are famous. A wide range of colour and monochrome processes are illustrated in their selection of Christmas and New Year cards, picture postcards, calendars, pictures, books, fancy stationery, show cards, and several other lines.

**VALENTINE AND SONS, LTD.**, Westfield Works, Dundee, make a good display of the very large range of picture cards for which they are famous as printers and publishers. Calendars, children's books and pictures, both in collotype and colour are other items in their excellent exhibit.

**GEORGE WATERSTON AND SONS, LTD.**, St. Bride-street, London, E.C.4, give chief prominence to the very large variety of sealing waxes which they manufacture. They also provide good evidence of their capabilities as manufacturers of general stationery, as account book makers, and as bank note and cheque printers, engravers and lithographers.

EVIDENTLY with a view to economy, the Stationery Office has notified local authorities of the suspension of the free issue of Parliamentary Papers to public libraries.

**BRITISH PAPER WANTED FOR SOUTH AMERICAN MARKETS.**—Among callers at our offices last week were visitors from South America, who are open to buy paper for Brazil, Argentine and other markets, and are desirous of getting into direct touch with British mills with the view of opening up permanent business connections.

**SWISS COMMERCIAL MISSION.**—Thirty Swiss merchants, constituting a Swiss Mission for the study of commercial and economic subjects will arrive in London on Saturday next as the guests of the Federation of British Industries, and will be entertained at different factories and establishments. Further information can be obtained at the Swiss Bank Corporation, West End Branch, 11c, Regent-street, Waterloo-place, S.W.1.

For Warrior's Day, which is being organised throughout the country, paper and ink manufacturers are giving their ink, paper and printing free of charge, and the Bill-Posters' Association have offered free posting for 14 days.

## Librarians and the Printing Art.

Mr. C. T. Jacobi at University College.

In connection with the School of Librarianship at University College, Gower-street, W.C., Mr. Charles T. Jacobi was the lecturer on the 14th inst., when he took as his subject "The Art and Craft of Printing." The lecture was enhanced by the showing of some 50 lantern illustrations, and interesting examples of printing were on exhibition after the lecture. Dr. Baker, the director, was in the chair. There was a good attendance, and much interest was evoked in Mr. Jacobi's treatment of a subject of which he is a foremost exponent.

Referring to the various departments of knowledge with which the librarian of to-day has to be acquainted, Mr. Jacobi stressed the importance of some familiarity with printing—especially to those whose work might embrace authorship or editing. He then went on to discourse on the improved standard of modern printing, largely due to the efforts of William Morris and his friends, and he dealt in interesting and informative fashion with the important subject of the choice of types. Touching, in closing, on the question of printers' costs, he said: "The prevailing conditions in the cost of production are a great problem. With wages almost trebled, owing to the war, also the cost of materials—that is paper and cloth and leather for binding purposes—the total cost is now, all round, three to four times as much to turn out the complete volume. That this does affect very seriously the output of the better class of printing must be apparent to all. Perhaps not so much the more ordinary kind of book, that may be considered as of commercial necessity, but rather the learned and other societies who, with their limited subscriptions, are so severely handicapped in issuing their different proceedings, transactions and other requirements. This also applies to another class of printing that falls under the head of 'printing for private circulation,' such as catalogues of private libraries, family histories and similar things. All this is due to the excessive taxation now demanded, and, on the other hand, the enhanced cost of production which are practically prohibitive in many cases. We can only hope for some relief in these matters in the near future."

"HANG IT!" say Messrs. Hayward and Martin, Ltd., of Clerkenwell, referring to a card they send us, holed for hanging, which carries a reminder that they do punching, cutting and mounting for the trade.

A PAPERMAKING class was opened recently at the Maidstone Technical Institute. A course of 12 lectures has been arranged, dealing particularly with the requirements of the mills in the neighbourhood. There is an attendance already of between 40 and 50, and Mr. A. A. Whalley is the lecturer.

## Costing Lecture at Manchester.

"The Chargeable Hour" was the subject chosen by Mr. A. Williamson, F.C.W.A., secretary, Cost and Charges Committee, Federation of Master Printers, when he had a talk with 130 members of the Printing Crafts Guild, in the Municipal College of Technology, Manchester, on Friday, the 11th inst.

After defining the chargeable hour, Mr. Williamson said that it had been found that taking the present week of 48 hours, the average chargeable was 32 hours, the rest of the time being counted non-productive; the press-room averaged 32 to 36 hours; and the bookbinding—hand labour—42 to 46 hours. As soon as machinery came into use then this last high percentage began to fall. The average for composition at the present time was about 5s. 8d. per hour. To run a double-demy machine costing £600, and taking the unit at £50, the running charge was about 7s. 6d. per hour. Of course, where there was mass production there might be a greater average, say 42 to 46 hours, and general jobbing 36 to 40 hours, the rest of the time, oiling up, etc., being non-chargeable.

In the discussion which followed, Mr. Williamson, when answering questions, said that the 10 per cent. depreciation was a fair estimate for a period of 10 years. At the end of that time it was not always found that machines were useless for commercial purposes, as they might be producing fairly good work at the end of 15 years. As the machine aged, the amount that had to be spent in repairs and renewals to keep it up to concert pitch began to climb up. Overtime was a cost on the establishment except where the customer expressly desired his work and he was informed that to work overtime to meet his wishes would entail extra charges. As to the extra rate of pay to the craftsmen and the lighting and heating of the establishment, these were partly accounted for by the spreading of the hour costs over a period of 10 instead of 8 hours, if the overtime were for two hours. The non-chargeable hours in some large establishments seemed abnormal when an average of two-fifths in one year came under the non-productive head. Some people became a bit puzzled as to how to reckon costs, if they had, say, eight or ten men in the composing-room and were charging from 5s. 3d. to 5s. 6d. per hour. Then afterwards they introduced a type setting machine which might only be running about 12 hours per week. It would not be fair to add the burden of upkeep to the hand composing department. The deficiency on the mechanical side of the room, if any, should be made up from the profits of the business. The best advice he could give to any firm placed in such a position was to tell them to "get busy" so as to provide work for the machinery that was idle.

### Country versus City Printing.

Many craftsmen ran away with the idea that country offices could do work more

cheaply and cut prices against the large town printer. That was a mistaken idea, because when everything was taken into consideration, it might be found that a fraction of a penny or so per hour was all that divided the two classes of printers—country and town. The factory expenses did not seriously affect the hour rate, and while the large city houses had a steady flow of business and were continually producing, the country houses had business of a spasmodic character, there being slack periods and brisk periods with overtime added.

Where a compositor set up the job, and then printed it, the expenses would certainly be higher. For bookbinding, the present chargeable hour was 3s. 9d. to 4s. on a productive week of 42 to 44 hours. For the information of a gentleman who had stated that bookbinders had 48 productive hours, Mr. Williamson remarked that waiting for work, clearing up, untidiness, mistakes of individual workers, lost time, etc., all helped to reduce the 48 to 42 or 44 productive hours. It was a mistake to charge upon 48 hours, because that was seldom or never attained. In theory, non-chargeable time was *nil*, but in practice it was otherwise. No craftsman cared to think his labour was non-chargeable, but the fact was there all the same. The query, "Why are there so many prices given for one particular job?" was answered by stating that the human element must always be taken into account. A practical man might one day be asked how many hours it would take to execute a certain job, and if the same question were put to him the next day, he would probably give another time. Estimating always had the stamp of some guess work, and that was the reason why the Employers' Federation compiled records relating to nearly every job, so that they could work out the fixed charge for each productive hour. Better equipment, better organisation, specialising, etc., all tended to vary the total costs comprised in an estimate. As to rent of premises, the fair charge would be 12 per cent. on capital outlay. Costing, said Mr. Williamson, ought to be more popular, because the average craftsman did not realise the incidentals that had to come into consideration when making up totals. At the College of Technology Mr. R. B. Fishenden, director of printing, had for years made provision for estimating and costing classes, so that the craftsman would better appreciate and understand the necessary changes that had to be added when his own labour had been remunerated.

Mr. John Taylor, president, when moving a vote of thanks to Mr. Williamson, remarked that his composing department averaged 36 hours, and his press-room 40 hours' productive work. He would like to see master printers make a firmer stand when giving prices.

The large attendance and the enthusiasm of the questioners showed that the coming craftsmen were keenly interested in the subject, many of them being students at the college.

WEE MAC.

# Trade Notes.

MEMBERS of the National Committee of the Monotype Users' Association are to meet at dinner at the Trocadero on March 1st.

THE Ministry of Labour issued on Saturday statistics which show that during January there occurred a drop of 14 points in the cost of living.

It is stated that the Government have given the T.A. Approved Section of the National Health Insurance scheme permission to pay extra benefits applied for. The surplus is nearly £60,000.

THE "Printers' Exchange" for March takes again the form of an 8-page register of machinery and plant offered for sale and wanted. It is issued by Messrs. W. J. Connoll and Co., 69, Leather-lane, E.C.1.

MUCH regret is expressed in the Hull district at the death, from a recent accident, of Mr. Michael Waller, a local master printer who took a very practical interest in philanthropic and social efforts.

THE Manchester Branch of the T.A. have received the sanction of the Executive Council to put into force their recently-passed levy of 1s. per week, which is to continue until the bank overdraft has been paid. Also a levy of 1d. an hour is to be paid on all overtime.

THE seventy-eighth annual meeting of the Vellum Binders' and Machine Rulers Pension Society will be held in the St. Bride Institute on March 3rd, at 7.0 p.m., when the election of officers, the election of one pensioner, and other business will be on the agenda. Lt.-Col. James R. Truscott will preside.

THE annual dinner of the Cardiff and District Master Printers' Association was held at the Park Hotel, Cardiff, on Monday. Mr. T. W. Tucker presided over a gathering which included not only a big muster of local master printers but a number of visitors from a distance, among the latter being Mr. E. W. Humphries, Mr. A. E. Goodwin and Mr. R. A. Austen-Leigh.

A SUM of £35 was realised for the benefit of the Caxton Convalescent Home (Limpsfield), on Saturday by the annual *Daily News* and *Star* concert given at the London and Brighton Hotel, Peckham. Mr. H. Murch, *Daily News* staff superintendent, presided, supported by Mr. L. Menage, father of the *Daily News* chapel, and Mr. G. Howard, father of the *Star* chapel.

**NORTH WALES MEETINGS.**—The North Wales Alliance of master printers is bestirring itself, and has arranged to hold two important meetings—one at Colwyn Bay on March 3rd and another at Barmouth on March 4th. At both meetings, Mr. Frank Murrell, who represents the whole of Wales on the J.I.C., is to be one of the speakers and Mr. A. E. Goodwin another.

MR. W. R. BOELTER, founder of the *Small-holder* and its editor until May, 1915, died at Wimbledon on Sunday from bronchitis.

THE late Mr. Hibberton Alfred Sheldon, of Wells, Somerset, paper manufacturer, left £7,733.

"EL PAIS," the newspaper which has been for 30 years the organ of the now decaying Republican Party in Spain, has just ceased publication.

THE National Paper and Pulp Co. (1920), Ltd., forward attractive samples of paper which they have for disposal, including glazed imitation parchment, duplicating and type-writing, bank, etc.

SO SUCCESSFUL was the last meeting on the football field of the Press and the Stage—on behalf of Earl Haig's fund—that a return match has been arranged to take place at Stamford Bridge on March 14th. On this occasion the proceeds will be devoted to the London Hospital.

THE annual report of the Comptroller and Auditor-General on the Civil Service and Revenue Departments mentions that large quantities of printing and machinery plant, valued after depreciation at approximately £14,000, have disappeared, and cannot be traced in the books of the depot at Walworth.

**50 YEARS WITH "THE TIMES."**—The death has taken place, at Ilford, of Mr. Henry Mundy, who was for 50 years on the printing staff of *The Times*. He joined the paper as a lad, and when he retired some years ago held the position of overseer in one of the printing departments. Mr. Mundy was 83 years of age.

AN exhibition of "Books for the Church Overseas" has been showing for the last few days in the Church of St. Mary Aldermary, Queen Victoria-street, E.C. They are in 150 different languages and dialects, and were printed by the Society for Promoting Christian Knowledge for all the missionary societies.

RIOTS occurred in Naples last week when students holding meetings to protest against the high prices of books came into conflict with the police. The Prefect of Naples is said to be taking steps to have book prices reduced by 30 per cent. Publishers in defending their prices, lay considerable stress on the State tax on paper, and the greatly increased postage rates.

MESSRS. WOODALL, MINSHALL, THOMAS AND CO., LTD., of the Caxton Press, Oswestry, deny a statement that has appeared in the Press to the effect that the *Llangollen Advertiser* ceased publication some time ago and Llangollen was without a newspaper. They point out that the *Llangollen Advertiser*, long published in the town of Llangollen, was acquired by Messrs. Woodall, Minshall, Thomas and Co., in 1916, and continued to be published by them from Oswestry up to November of last year, when it was merged into the *Wrexham Leader*. Llangollen, therefore, has continued to have its newspaper, although it has not been printed in the town.

**FORTY-THIRD YEAR.**

*Printed and Published EVERY THURSDAY  
by STONHILL & GILLIS,  
at 58, Shoe Lane, London, E.C. 4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.*

**SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE EXTRA).**

**Charges for Trade Advertisements:**

(Full page 8 by 5½ ins.)

Whole Page ...	£4 10 0	s. d.
Half Page ...	2 10 0	
Third Page ...	1 17 6	
Quarter Page ...	1 10 0	
One-eighth Page	17 6	
One-third Column	22 6	
One inch in Column	9 0	

**An Extra Charge for Cover and Special Positions.  
Discounts according to Number of Insertions.**

**Representatives throughout the United Kingdom and  
also in Australia, India, South Africa, United States  
Canada, etc.**

**All communications for the "BRITISH AND COLONIAL  
PRINTER AND STATIONER" should be addressed and  
Cheques and Post Office Orders made payable to—  
STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C. 4**

**COPIES may be purchased at the Offices, as above  
or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.**

**THURSDAY, FEBRUARY 24, 1921.**

## Current Topics.

### **The White City Exhibition.**

This year's British Industries Fair shows a marked advance upon the Fair of a year ago; it forms the largest exhibition of British goods ever held. The total number of exhibitors is about 1,200, and the four miles of stands of the firms represented are estimated to be showing some 50 million pounds' worth of goods. Though the exhibitors in the section devoted to paper and print occupy less than one-sixth of the total stall-room, it will be seen that this proportion is no small consideration when the enterprise as a whole is on such a colossal scale. While the printing industry generally is not adequately represented—a fact due in part, no doubt, to the proximity of the Printing Exhibition which opens at the end of April—the trade has nevertheless shown a very substantial interest in this praiseworthy attempt to increase British exports. Efforts have not been spared by the promoters of the

Fair to attract foreign patronage. Invitations to likely foreign buyers have been sent out to the number of 60,000. By noon on the opening day already, visitors from over thirty different countries had arrived. Seventeen countries are sending commercial missions and eight Foreign Ministers of Commerce will visit the Fair. The essentially business character of the exhibition is safeguarded by the fact that only potential buyers are admitted—not the general public. Thus some considerable impetus should accrue to British export trade as a whole, and it is to be hoped that the printing industry will not fail of its due share of the benefit.

### **Scottish Trade in Difficulties.**

THE past month or two has been the worst period which the Scottish printing trade has ever experienced. Some of the bigger firms have been on short time and have had to pay off workers for the first time in their history. In Edinburgh the position is aggravated by the depression in the publishing trade, and so far as unemployment is concerned, it also has to be borne in mind that one or two big local firms went out of existence just before or during the war, leaving a floating quantity of workpeople to be absorbed elsewhere.

### **Excess Profit Duty.**

THE removal of E.P.D. may affect the printing trade in two ways. In the first place—and probably permanently—it will help matters greatly so far as it stimulates trade and industry in general; in the second place—perhaps temporarily—it may induce firms who have recently gone in for expensive catalogues, etc., to make a new study of economy. Quite recently there has been some increase in the number of inquiries, and it is hoped that ere long many of these may be translated into orders.

### **Dulness of the Paper Market.**

THERE is no material change in tone of the market. Mills and machines are no less idle than they were, and output, after all the urging and appealing of 1919-20, is compulsorily at its lowest ebb. Printers are in a worse state now than they were at the beginning of the year and unemployment in that trade is more rife now than then. Wholesale stationers report a total lack of large orders and "making" inquiries, but an improvement in small orders and inquiries generally. However slow trade may be, the fact remains that stocks are slowly being consumed and many lines have already become

depleted. Mostly the small demand is for proprietary brands of paper, but in printings and cheap writing papers users still appear to be well stocked. On the raw material side of the market the stagnancy is absolute. Wood pulp merchants and agents are doing nothing at all and appear to have no confidence in any early revival of their business.

#### Paper Prices at Mills.

SOME of the new-level prices now quoted at the mill are: Duplicating paper at 7½d. lb., common bank 8d. lb., seconds printing 6d. lb., fine writing 7½d., common A.L. 7d., tub-sized azure 1s. 1d. lb., tinted writings 8d. lb., esparto writing 8½d. per lb., pure S.C. 7½d. lb., fine S.C. 6½d. lb., common cream woves and laids 6½d. lb., tinted banks 9d. per lb. The prices are for reasonably large making orders and there is no hope of fat profit to the maker at these figures. The situation at the mills is such that they are more anxious about finding employment than securing ample returns of profit. The overhead costs of any mill remain to be faced whether machines are running or idle. Rent, rates and taxes, salaries and administrative charges, depreciation and interest—all have to be met in any case. It is a sound proposition to accept orders at a low margin in order to recover some of this overhead expense rather than allow machinery to stand idle in hopes of better business and bigger profits. Consumers and buyers who are dubious as to whether prices are now low enough to justify the placing of orders should ponder this explanation.

#### Further Paper Prices.

SPECIAL offers of kraft at £43 per ton, grease-proof at 6½d. and 7d. per lb., and bleached greaseproof at 8½d. have been made during the week, whilst from another quarter vegetable parchment is on offer at 1s. 3d. per lb. We have also seen M.G. poster at 7d. lb., glazed colours at 6d. per lb., imitation parchment at 6½d. per lb., and art paper at 7d. lb.

THE Association of Master Printers of the London Central Districts are holding their next monthly meeting on Wednesday evening (next), March 2nd, at Stationers' Hall, Ludgate-hill, E.C., when an address will be given on "How Can Money be made in a Printing Business?" by Mr. J. R. Riddell, principal of the St. Bride Printing School.

A STOCK of stationery was damaged by fire at the premises of Mr. W. J. Potter, wholesale stationer, 4, Alfred-street, Blackpool.

## Personal.

THEIR MAJESTIES THE KING AND QUEEN are to visit the British Industries Fair to-day (Thursday).

MR. FRANK MURRELL, chairman of directors of Messrs. Wm. Lewis, Ltd., the Cardiff printers, has been invited to contest Weston-super-Mare in the Liberal interest against Sir G. A. H. Wills, M.P., Coalition Unionist, the sitting member. It is understood that Mr. Murrell intends to accept the invitation.

MR. S. J. SANDLE, of Sandle Bros., wholesale manufacturing stationers, has been appointed Deputy Alderman on the City Corporation for the Farringdon Within Ward. Mr. Sandle was first elected a member of the Common Council in 1904, when he was presented with an illuminated address by the employees in Paternoster-row.

MR. WILLIAM ASTLE, of the *Stockport Advertiser*, has been elected president for the fourth year of the Lancashire, Cheshire, and Derbyshire Federation of Weekly Newspapers.

AT the City Temple last week, a cheque for £200 and an address, was presented to Mr. Albert Dawson, the hon. secretary of the church, on his resignation. Mr. Dawson is the late editor of the *Christian Commonwealth*.

MR. WILLIAM PICKERING, veteran Newcastle ex-printer and journalist, will attain his 90th year on March 6th.

COMMISSIONER T. H. KITCHING, an outstanding figure in Salvation Army activities, has been appointed editor-in-chief of all the army's publications.

THE St. Clements Press and their friends held a very successful masked and fancy dress ball in aid of the J. Gomer Berry Pension in connection with the Printers' Pension Corporation at the Caxton Hall, Westminster, last Friday.

THE new Trinidad tariff is to be amended so as to give Canada a 50 per cent. instead of a 33½ per cent. preference.

THE "Banknotes Case" was ended at the Old Bailey last week, when Frederick Ford, Morde Samuel Levy, and Hyman Kurasch, charged with contravening the Forgery Act and attempting to obtain £100,000 from Mr. Hubert Seymour Boxer, an official of the Bank of England, were found guilty of conspiracy to defraud but not guilty on the forgery count. Ford and Kurasch were sentenced to 15 months' hard labour each, and Levy to nine months' hard labour.

## DIVIDENDS AND REPORTS.

"COUNTRY LIFE."—The net profit on trading for 1920 amounted to £21,521, against £21,911 in the previous year. The sum of £1,750 is again placed to reserve, and a dividend of 12½ per cent.—same as for 1919—recommended on the ordinary shares, £6,111 being carried forward, against £4,339 brought in. Directors have voted out of profits a further £500 to staff pension and sick fund.

## NEW COMPANIES.

INTERTYPE, LTD.—Capital £10,000, in £1 shares; to carry on the business of manufacturers of and dealers in all kinds of typesetting or printing machinery and parts thereof, or contractors or agents therefor, and to adopt an agreement with the Intertype Corporation. Private company. Subscribers: J. W. Lindsay, Mrs. J. S. Lindsay and F. Owen. The Intertype Corporation or the assignees may nominate five directors while holding three-quarters of the issued shares. First directors not named. Registered office: 28, Fleet street, E.C.

WHELDON AND WESLEY, LTD.—Capital £35,000, in £1 shares; booksellers, publishers and printers, dealers in scientific instruments, etc., to acquire the businesses (1) carried on by H. K. Swann at 38, Great Queen-street, W.C., as "John Wheldon and Co.," and (2) carried on by E. F. Wesley at 28, Essex-street, W.C., as "William Wesley and Son." First directors: H. K. Swann, F.Z.S., M.B.O.V. and E. F. Wesley, A.K.C.Lond. Registered office: 38, Great Queen-street, W.C.2.

DEFIANCE SUPPLIES (BOXES), LTD.—Capital £5,000, in £1 shares; to take over the whole, or any part, of the business of the Defiance Supplies Co., Ltd., now carried on at Redditch, Worcestershire, and to carry on the business of box makers, cardboard manufacturers, engravers, publishers, book and print sellers, bookbinders and art journalists, etc. Private company. Directors: L. W. Goold, L. H. Millington, H. J. Weighill and R. A. Goodall. Registered office: 5, Corporation-street, Birmingham.

O. J. BRADBURY AND SON, LTD.—Capital £12,250, in £1 shares (6,000 7½ per cent. cum. pref. and 6,250 ordinary); to take over the business of jacquard card manufacturers, printers, merchants, stationers, paper manufacturers and dealers, now carried on at Forest Works, Russell-street, Nottingham, as "Carson and Bradbury, Ltd." Private company. First directors: O. J. Bradbury, Mrs. Hannah Bradbury and J. D. G. Bradbury. Registered office: Forest Works, Russell-street, Nottingham.

WILLIAM J. LIGHT AND CO., LTD.—Capital £6,500, in £1 shares (1,000 pref. and 5,500 ordinary); to take over the business of a manufacturer, manufacturers' agent of printing trade specialities and paper merchant, carried on by William J. Light at 127, Fenchurch-street, E.C.3. and 73, Hamilton-road, West Norwood, S.E., together with all the property and assets (except book debts). Private company. First directors: W. J. Light and O. O. Hayward. Registered office: 127, Fenchurch-street, E.C.3.

BROCK BROTHERS AND ATKINSON, LTD.—Capital £5,000, in £1 shares; general merchants and agents, importers and exporters, printers, publishers, art journalists, book, picture and print sellers, newspaper proprietors, etc. Private company. Directors: G. W. Brock, W. E. Brock, S. Atkinson and Capt. J. J. Martin, M.C. Registered office: 48, Russell-square, W.C.

## COMPANY MORTGAGES AND CHARGES.

Fr-sh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1918, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**YORKSHIRE DIE STAMPING CHRISTMAS CARD Co., LTD.**—Mortgage dated January 25th, 1921, to secure £650, charged on certain land and premises in Sun-street, Bradford. Holders: Waite and Saville, Ltd., Otley, and Yorkshire Die-Stamping Co., Ltd., Bradford.

**SKERNE PRINTING Co., LTD.**—Mortgage dated February 3rd, 1921, to secure all moneys due or to become due from the company to London Joint City and Midland Bank, Ltd., charged on certain property in Darlington.

**CLERKENWELL FOLDING BOX Co., LTD.**—Satisfaction in full on January 27th, 1921, of debenture dated September 22nd, 1919, securing £1,500, notified. Debenture dated January 31st, 1921, to secure £2,500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: F. W. McGowan, 11 and 12, Clerkenwell-green, E.C.

**ODHAMS PRESS, LTD.**—Mortgage dated February 8th, 1921, to secure £4,000 charged on 57, 58 and 59, Long-acre, W.C. Holders: Blériot, Ltd.

**DOLLIEN MANUFACTURING Co., LTD.** (manufacturing stationer, etc., London).—Particulars of £1,893 debentures authorised February 7th, 1921, whole amount issued, charged on the company's undertaking and property, present and future, including uncalled capital.

**H. J. RYMAN, LTD.** (stationers).—Mortgage and Land Registry Charge on 8, 10 and 10a, Portland-street, W., dated January 26th, 1921, to secure £10,000. Holder: L. N. G. Montefiore, Coldeast, Southampton.

**WILLIAM SESSIONS, LTD.** (printers, York).—Satisfaction in full on February 5th, 1921, of charge dated February 20th, 1920, securing all moneys due or to become due from company to bankers, notified. Mortgage debenture dated February 5th, 1921, to secure £6,000 charged on land, premises and machinery, etc., near Earswick Station, Hunts, and company's other assets, present and future, including uncalled capital. Holders: Friends' Provident and Century Life Office, 42, Kingsway, W.C.

**CORNWALL PRESS, LTD.** (Coventry).—Mortgage and Land Registry Charge on various properties in Fleet-street, E.C., and Southwark, S.E., both dated January 27th, 1921, to secure £175,000. Holders: London Life Association, Ltd.

**WILLIAM POLLARD AND Co., LTD.** (printers, etc.).—Satisfaction in full on February 4th, 1921, of mortgage or charge dated March 13th, 1920, securing all moneys due or to become due.

**W. JONES AND Co., LTD.** (stationers, etc., Liverpool).—Two mortgages dated January

12th, 1921, to secure £1,225 and £1,240 respectively, charged on 36 and 34, Cable-street, Liverpool. Holders: J. H. Wright, 15, Harvey-road, Wallasey; and others.

**EDEN FISHER AND Co., LTD.** (stationers, etc., London).—Satisfaction in full on January 1st, 1921, of debentures, dated April 11th, 1901, securing £4,700.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### WEST INDIES.

A communication has been received by the Department of Overseas Trade from the office of His Majesty's Trade Commissioner at Port of Spain, Trinidad, under recent date, stating that the representative of a local firm of commission agents desires to be placed in touch with United Kingdom manufacturers of typewriters and office equipment of all kinds, with a view to taking up an agency. The applicant has been appointed by his firm specially to open a new branch of the business for the sale of typewriters and typing accessories, office stationery, etc., and will devote all his attention to this work. United Kingdom manufacturers interested may obtain name and address of applicant, with some additional particulars relating to the foregoing inquiry, on application to the Comptroller-General. (Ref. 4084/ED/SC (2)).

## Gazette.

### A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

### ENGLAND AND WALES.

#### PARTNERSHIP DISSOLVED.

William Alexander Greathead Montgomery and Henry Ward, printers, Berridge-street, Leicester.

#### THE BANKRUPTCY ACT, 1914.

##### RECEIVING ORDERS.

Westmoreland, Norman (trading as Northcote Printing Co.), 11, Bateson-street, Green-gates, Bradford, printer, February 16th.

Bergen, Harry, 172, Stone-street, Newcastle-upon-Tyne, lithographic printer, February 16th.

Foulkes, Edmund Alfred George, Wyle Cop, Shrewsbury, stationer, February 19th.

# Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

## Interesting Lecture on Metals.

There was a large gathering at the monthly meeting of the Association at St. Bride Institute, Bride-lane, E.C.4, on the 15th inst., the chair being occupied by the president, Mr. A. Chadwell. At the close of the formal business of the Association Mr. A. H. Munday (London manager, Fry's Metal Foundry) delivered an interesting talk on "Metals," and his masterly grasp of the subject was fully appreciated by a very attentive audience. Quite a number of men well known in the world of printers' metals were present, including Mr. John Fry and Mr. Glen Steel.

Mr. Chadwell at the opening of the evening's business welcomed, in the name of the Association, Mr. Howell, a member from Coventry.

After the minutes had been formally disposed of, the four following gentlemen were unanimously elected to hon. membership:—Messrs. A. F. Bell (Fry's Metal Foundry), Glen Steel (T. G. and J. Jubbs), A. Roddick (Air Smelting Co.), and H. Williams (H. Williams and Co.).

Mr. Bullett announced that the auxiliary concert had been fixed for April 27th at the Cannon-street Hotel, of which further particulars would be given later.

In regard to the concert Mr. Sharvell moved, and Mr. F. S. Pelham seconded, that £5 be allocated from the funds in order to assist the younger members who were taking the chair on the occasion. The motion was carried.

The president extended a warm welcome to the distinguished gentlemen present who had come along to hear Mr. Munday's lecture, and then called upon that gentleman for his address.

### Mr. Munday's Lecture.

Mr. Munday, who was received with cheers, said he did not wish to appear before them as a teacher, but rather was it his intention to informally relate some of his experiences, which he hoped would prove to be a peg upon which to hang a discussion, so that they would all get to know a little more on the subject of metals.

Going straight to his subject Mr. Munday proceeded by saying that it has been said that civilisation started practically when metals came into use. Whether the earliest type was made of lead we are not certain, quite likely it was, thought Mr. Munday. Speaking of lead, he said, being soft, it had a low melting point. When we speak of a soft metal, have we a definite understanding of what we mean by soft metal? We should be clear in our own meaning when we speak of softness or hardness in relation to metals. The softness of lead was exemplified by the marks which it made when rubbed on paper, it having a very small resistance to abrasion.

If the early type-makers made type alone of lead they would soon have had trouble. Lead alone has another peculiarity; being very soft, it will easily compress. Mr. Munday, after dealing with the physical properties of lead, next referred to the crystalline character of metals. A piece of lead examined under the microscope will reveal crystals, and after a little time it will be observed that in certain circumstances these crystals have grown. Mr. Munday next dealt with the peculiar properties of tin, and said that it was probably put to use long before the building of Solomon's Temple. Tin had the property of hardening other metals, and here the lecturer made a digression and spoke of the usefulness of alloys in the mixture of metals. Two parts of red metal—copper—and one part of white metal—tin—when alloyed, make a hard metal, which is whiter than the white constituent (tin) and so hard that if an ingot be dropped on the floor it would break, like glass.

The next metal to receive attention was antimony, which had a very early history, being used some thousands of years ago by the Eastern people. This metal is highly crystalline and hard. One can see the crystals in its structure, and what is known as the orientation is very well marked. Experience has proved that, properly combined, lead, antimony and tin will give the kind of metal required by the craftsman. Lead alone will not stand the pressure, antimony is too brittle, tin is not suitable and is too costly. The correct alloy, based upon experience, is found to be just sufficiently mobile, that is, that it flows freely and expands slightly on solidification, thus filling up the fine lines of the mould, whether it be flong or matrix. When skilfully mixed, it is just hard and strong enough to withstand the complex stresses which the service of the printer imposes upon it.

While speaking of the necessity of getting the right kind of metals, Mr. Munday said they had to get that combination of metals first of all based on lead, and then had to reinforce it with hard constituents, and then after the constituents have been refined get a tough and desirable structure before it is possible to get the kind of metal required. Lino-type metals did not have to stand the same stress as other metals, and it was very important that they must flow as mobile as water or alcohol, and must have no impurities which would be likely to have the effect of closing the apertures of the valves through which the metal must pass to the matrix.

Speaking of the harmful effects of zinc, Mr. Munday said he had the privilege of going into a well-organised foundry recently, and was surprised to see zinc was getting into the melting pot by a little carelessness, regardless of its effect on other metals. It was important that they should insist on having metal that contained correct proportions, and that it be clean and free from impurities. Zinc was a disease, and should be eliminated, like small-pox or scarlet fever. With regard to carefulness in the use of metals, Mr. Munday thought they could not replace the human element, for they should see that their

metal was kept from alloys that would impair its purity. To allow their metals to become dirty and unworkable would be a serious matter, for he could not conceive anything more awful than holding up a newspaper through the use of dirty metal.

Mr. Munday, in concluding, referred briefly to the necessity of metals for type-setting being at the right temperature and flow to prevent the valves being choked up.

#### Points from the Discussion.

Mr. Latimer, in opening the discussion, said the great bugbear to the stereotyper was the presence of zinc in the metal, and asked the lecturer if he could tell them how to eliminate it.

Mr. Munday said it could not be got rid of unless there were very excellent furnaces kept up, producing high temperatures, and unless trained metallurgists were on the spot.

Mr. J. S. Sunderland raised the question with regard to the crystallising of metal due to storage hardening of stereotype plates with surfaces of copper.

Mr. Munday replied that the experiences of the previous speaker confirmed his remarks about the growth of crystals.

Mr. A. Latimer referred to the hardness of the metal of electros when they had been melted down after standing for twelve months.

Mr. Munday said a metal was bound to get hard, as there was certain to be some copper in it, and hardening due to the presence of copper was very pronounced.

Mr. Sharvell brought forward the question of the corrosion and fibrous nature of the face of stereotype plates after a number of years standing.

Mr. Munday said the atmosphere of London was particularly irritant and corrosive, and it was small wonder that plates should get like that, considering the large number of chemical works and factories there were in London, and metal foundries, of course.

Further contributions were made to the discussion by the President, and Messrs. Black, Wood, and Ward, Mr. Munday replying in a very capable and interesting manner.

Mr. Sharvell moved, and Mr. Longley seconded, a vote of thanks to the lecturer for his able discourse.

Mr. Glen Steel (Messrs. T. G. and J. Jubbs), speaking in support of the motion, expressed his admiration for the lecture, and said if he had the chance he would be pleased to come again.

The vote of thanks was very heartily applauded, Mr. Munday briefly returning thanks, after which the meeting terminated.

Mr. A. COSTA is assuming Mr. R. W. Cuthill as a partner in the business at present being carried on at Edinburgh, and will now trade as "Costa and Cuthill, paper merchants, wholesale and export stationers, 37, York-place, Edinburgh." These gentlemen have been associated together in different spheres in the trade, and their joining forces now is the consummation of a pleasant life-long business connection.

## The Stationers' Livery.

The monthly meetings arranged by the Livery Committee of the Worshipful Company of Stationers are bringing forward a number of notable men who give an address on some matter of especial interest to the craft.

On Wednesday, February 16th, Sir Israel Gollancz, Litt.D., F.R.A., Professor of English Language and Literature, King's College, gave an eloquent address on "The Printed Book: Its Place in University Studies." Sir Israel held his audience spellbound for some twenty minutes as he idealised the printer's art and its value to mankind in general and to the universities in particular. The lecturer suggested that those connected with the Stationers' Company should press for a course leading to the granting of a university degree. He also appealed for the support of the members of the Stationers' Company in making a success of the tercentenary functions to be held in 1923 in connection with the first publication of Shakespeare's work in 1623, claiming that the Company had a special interest, in so far that the record of Shakespeare's first work was entered in the registers at Stationers' Hall.

Sir Israel took the opportunity of paying a high compliment to the honorary secretary of the Livery Committee (Mr. J. R. Riddell) for presenting to those present a copy of his excellently printed account of the Stationers' Company, adding that this valuable souvenir would make the meeting a memorable one.

Mr. Geo. W. Jones, in a characteristic manner, proposed a vote of thanks to the lecturer, expressing the hope that the Livery would have the pleasure of again listening to Sir Israel's eloquence in their historic hall when he would not be confined to twenty minutes but something more like one hour and twenty minutes.

Mr. F. Murrell, of Cardiff, seconded the vote of thanks, mentioning that the University of Wales was considering the setting up of a press to print their national works.

There were a few prominent American educationists at the meeting, and Dr. Maclean—president of the American University Union in Great Britain—in a striking speech expressed his gratitude and that of his fellow countrymen for the opportunity afforded them of visiting Stationers' Hall and hearing the illuminating address given by Sir Israel Gollancz.

The chairman (Mr. R. A. Austen-Leigh) announced that the next meeting would be on March 16th, when Mr. R. W. Sindall would give an address on "What is Paper?"

THE article "Self-Boosters I Have Known," in the February *Pearson's Magazine*, is written with marked shrewdness and knowledge of human weaknesses. There are many hints for the business man on how *not* to boost himself.

## Printers' Pension Corporation.

### Lithographers' Auxiliary hold Successful Bohemian Concert.

Another very successful bohemian concert of the above Auxiliary was held on Monday evening at the Cannon-street Hotel. The musical programme, of its usual high quality, was enjoyed by a large gathering, which included several well-known gentlemen connected with the trade. Mr. R. H. Ruddock, who occupied the chair, was accompanied by Mrs. Ruddock, and among those present whom the chairman spoke of as having helped him in the raising of his "plate" were Mr. Sydney Cumbers (Johnson and Cumbers), Mr. L. H. Blades (past president) and Mrs. Blades, and Messrs. Herbert Haycock, G. Phillips (Odhams), J. Aves (Lorilleux and Bolton), H. Bartlett (Winstone's), Mr. Albert Gronow (Waterlow Bros. & Leighton), and Ward Cox (Linotype and Machinery Limited).

Mr. Ruddock, in a few remarks made at the interval, expressed his warm gratitude to his friends who had helped him to raise money for the funds of the Printers' Pension Corporation, and said it was rather difficult to "tap" people nowadays in view of the large sums collected at the Festival dinner at which the Prince of Wales presided. From his friends in the trade he had collected £138 12s. 6d., and Mrs. Ruddock had augmented that sum by £200.

Mr. Ruddock announced the result of the collection which amounted to £18 11s., which brought the amount up to £357. The chairman, in auctioneering fashion, then appealed to the further generosity of those present. From £357 the amount gradually rose to £370, and there being no further bidding the chairman knocked the sum down to £400.

This further donation was greeted with hearty applause.

A vote of thanks to the chairman was moved in his customary breezy manner by Mr. Sydney Cumbers, who reminded the gathering that Mr. Ruddock had, only recently, distinguished himself at the Prince of Wales' Festival.

Mr. Laurence Blades (Blades, East and Blades) briefly seconded the vote of thanks and said that the chairman exhibited all the characteristics of a true sportsman, and he thanked him for his efforts on behalf of the Auxiliary.

The various items of the musical programme were carried through in the usual highly successful manner, under the directorship of Mr. N. T. Hammond. The artistes were as follows: Gioconda Papacini (Italian soprano), Miss Leonora Radcliffe (contralto), Miss Nellie Lowe and Messrs. A. Cox (son of Mr. Ward Cox, violin), F. M. Vincent (baritone), Chas. Clarke (cornet solo), Gerald Adams (tenor), Harry Speller (humorist), Lionel King (modern magic), Percy Albert (humorous) and Fred Ives (accompanist).

## L.S.C. Jobbing Guild.

The monthly meeting of this live Auxiliary of the L.S.C. was held on Wednesday night, when Mr. E. Pheby gave an address on "The Factors which bear on Charging up Jobbing Work." Mr. F. W. Bridges occupied the chair.

The secretary mentioned that an effort was being made to found a pension in connection with the Printers Pension Corporation, to be named the "Chris. Fowler Pension," and it was decided by the meeting that the sum of one guinea should be given towards this object.

The lecturer, in the course of his remarks, said that the suitability or otherwise of the premises in which the business was carried on was shown to have a great bearing upon the time necessary to set a job. The sufficiency and suitability of the plant also has a direct influence upon working costs. Lighting, eye-strain, and fatigue were also brought under consideration. The advantages of modern equipment—cases, racks, stones, the display linotype, etc., were also passed under review.

At the end of the address came questions and discussion upon the topics which had been presented, and several points were raised which were dealt with by the lecturer.

During the evening, Mr. Bridges promised to grant facilities for a guild gathering at the exhibition at the Agricultural Hall in May.

Votes of thanks to the chairman and lecturer closed an interesting evening.

A **MANUAL OF PHOTOGRAPHIC TECHNIQUE**, by L. J. Hibbert, F.R.P.S. London: Sir Isaac Pitman and Sons, Ltd. Price 2s. 6d. net.

Messrs. Pitman's "Technical Primers" series of foolscap 8vo. volumes in paper boards are not only excellently produced as books but they are also admirably designed to give the busy man in small compass a comprehensive survey of certain fields of technology right from the fundamental scientific principles on which they are based to the details of practice in the crafts or industries of the present day. Both photographers and non-photographers will welcome this volume by Mr. L. J. Hibbert, who is lecturer in photography, photo-optics, and photo-chemistry at the Regent-street Polytechnic, and has special qualifications for handling this particular subject. In these 115 lucid and freely-illustrated pages the inquirer into photography will find a great deal of practically useful information about the properties of light, the principles of lenses, the camera and the other apparatus and materials the photographer uses, with clear instructions as to the various processes employed.

THE German machine manufacturers announce an average reduction of 20 per cent. in the price of all their productions.

## SALE BY AUCTION.

### To Printers, Bookbinders and Stationers.

**FOR SALE BY PRIVATE TREATY**, as a going concern, the **OLD ESTABLISHED BUSINESS** of Messrs. C. VICKERMAN & SONS, Commercial and General Printers, Bookbinders, Stationers and Account Book Manufacturers,

No. 19, Union Square, Bury,

including the Double-fronted Shop, Works Premises, Motive Power Millwright's Work, Excellent Plant and Machinery, full complement of Utensils and Accessories, extensive Stock-in-Trade of Paper and Stationery, together with the Valuable Goodwill and Trade Interest in the concern.

The Property is leasehold for a term of 99 years, from October 14th, 1887, subject to a ground rent of £12 per annum.

The Premises are well equipped, and the business was established in 1829, since which time the same has successfully carried on and is at present in full operation and well staffed.

Principals only dealt with.

## In the Newspaper Realm.

"WESTERN DAILY MERCURY."—It was decided in the Chancery Division last week that no order would be made on the application for the appointment of a receiver and manager of the assets of Western Newspapers, Ltd., which owned the *Western Daily Mercury* before that journal was merged with the *Western Morning News*. Sir Leicester Harmsworth is to pay off the debentures in three weeks.

**SWEDISH NEWS SERVICE.**—An important move with regard to the Swedish Press telegraph service is the selling, last week, of the Svenska Telegrambyran and Nordiska Press-centralen to a syndicate consisting of all the Stockholm and Gothenburg papers, a couple of Skane papers and some Social Democratic journals.

**GLASGOW "CONTEMPT" ACTION.**—An end was made last week to the action against the *Weekly Record*, Glasgow, for contempt of court in connection with the republication from English newspapers of matter in open record in respect of an Edinburgh breach of promise action. Defendant's explanation and apology was accepted and no fine inflicted.

**LISBORN PRESS STRIKE.**—Reports from Lisbon last week showed no prospect of immediate renewed publication of the 14 leading Lisbon daily newspapers suspended by the Press strike which was declared in mid-January. There are being issued two special newspapers, with morning and evening editions—the *Jornal*, representing the United Press, and the *Imprensa de Lisboa*, the strikers' organ.

## Wages and the Slump in Printing.

### Does Wage-Reduction Offer a Way Out of the Present Printing Trade Depression?

With orders so difficult to obtain, the problem that is most urgently taxing the brains of printers to-day is the very troublesome one of how to reduce the price of print while the cost of materials shows so little abatement and while wages remain at the greatly increased figure to which they have risen since pre-war times. It is but natural, in the circumstances, that many eyes should be turned to the item of wages, with the thought that this is a direction in which retrenchment might be made with general advantage to the trade. The past week has brought a striking example of the putting into effect of the belief that this possible advantage is a real and practicable one. The example referred to is of a very unusual character, a proposal of a cut in wages having originated with the wage-earners themselves.

#### Employees' Request for Wage Reduction.

It appears that the employees of Messrs. Robert Williams and Sons (Gorton), Ltd., of Gorton, Lancs. (a paper embossing and dry finishing firm of some 200-300 hands), found themselves reduced to only intermittent employment. They reflected that they all preferred a full working week to days of idleness, and when the suggestion was brought forward from the workpeople that a reduction in wages might bring more business along, increase the hours of employment, and generally benefit everyone, it caught on immediately. Not a single objection was raised, and a round robin was in the employers' hands in a day or two. This remarkable communication addressed to the directors of the firm, was in the following terms:—

"Gentlemen,—Your employees (as shown on the attached list) have decided to approach you with the suggestion that our wages be reduced by 10 per cent.

"We hope that this offer will be accepted, as it is felt that the present high cost of living exists primarily owing to the very high cost of production.

"Also, in making this voluntary offer, it is hoped and believed that our example will become contagious—in other trades as well as our own, and the result would then be a lowering in cost of living and consequent increase of purchasing power."

The directors accepted this offer, and, with a view to making the example a conspicuous one, and so allowing it a fair chance of effecting its ultimate purpose, have given it wide publicity through the Press. Certainly every move in the direction of greater community of interest between workpeople and employers is to be welcomed, and especially praiseworthy at the present time is any action based upon some broader ground than mere immediate personal advantage. Apropos of this particular case the *World's Paper Trade Review* says: "The employees of Messrs. Robt. Williams and Sons (Gorton), Ltd., one of the largest and best known firms of cloth and paper embossers in the United Kingdom, have set an excellent example to the workpeople of the country. Realising that prices must come down if manufacturers are to be able to extend business, they have, on their own initiative, approached the directors with a suggestion that their wages should be reduced by 10 per cent. In making the offer, they express the opinion that the present high cost of living is due primarily to the very high cost of production,

and they add the hope that workers in other trades may be induced by this example to follow suit. The directors of Messrs. Robt. Williams and Sons have accepted the offer in the spirit in which it was made and in the hope that the objects aimed at may be achieved. In taking the course indicated, the workpeople at Chatsworth Mills have assumed a very broad and liberal view of the situation, and the initiative thus displayed might well be followed in many other directions. The position of trade at the present time is indeed a grave one, and only by rising to the occasion in such a way as the workpeople of Messrs. Robt. Williams and Sons have done can there be any hope of bringing about a brighter state of affairs. An enlightened member of the paper trade remarked with some force this week that prices would have to come down still further. If, therefore, the paper trade is to be allowed to have any profit at all upon the sale of its products, costs of production must be lowered in some way. The employees at Chatsworth Mills have indicated a willingness to assist in this direction, and they deserve every credit for the step they have taken."

#### **What About Printers' Wages.**

This voluntary 10 per cent. cut in wages presents an interesting spectacle to those in the printing trade who are concerned about the high costs, the shrunken volume of business, and the serious unemployment of the present day. Obviously every reduction of printers' costs makes for lower prices to customers, and lower prices open the door to more plentiful business, and make some contribution towards a fall in the cost of living. As is well known, the Federation of Master Printers were able recently to make out an impressive case, showing how the increasing cost of printing had been accompanied by a serious cutting down of orders. Thus it would not be difficult to find many employing printers who, in face of the slump in printing, look to wage reduction as a remedy not to be despised.

On the side of the trade unions, however, one naturally finds a different view of the situation. When approached on this subject, Mr. A. E. Holmes (secretary of the Printing and Kindred Trades Federation of the United Kingdom) was inclined to make light of the suggestion of wage reduction as a restorative for ailing order books. Printers' prices, he said, are not responsible for the slump in printing. He had prophesied three years ago the serious trade depression that would follow the Great War. Had not printers experienced a woeful slump after the Boer War—in spite of admittedly inadequate wages and inadequate prices then prevailing, when stupid competition ran riot, and printers had no reasonable basis for charging? It remains to be proven, he said, that high wages are a cause of the slump, and that wage reduction is a practicable counter-measure. When confronted with the announcement of the example set by Messrs. Williams' employees and their voluntary 10 per cent. reduction, Mr. Holmes was visibly unimpressed. How much reduction,

he asked, does a 10 per cent. drop in wages render possible in the finished product—2 per cent.? Would that suffice to make an impression on the cost of living, or so resuscitate trade as to effect an appreciable reduction of unemployment?

A little thought on the lines indicated by Mr. Holmes will tend to check a too rosy optimism as to what may be expected from wage-reduction. As the cost of living falls there will come an obvious opening for mooting some drop in wages—especially to the unskilled workers, who have benefited disproportionately by the increases of recent years. But we fancy that such reduction as can reasonably be looked for will not make master printers eager to promise any considerable cut in prices—especially in view of the number of employers who have not yet paid the last increase, and in view of the difficulty, indeed in many cases the impossibility, of passing on to customers the increased cost of production which, to those who paid it, the last increase involved.

#### **The Question of Output.**

A communication from a prominent master printer in our issue of February 3rd laid emphasis on another consideration which should not be overlooked in any discussion on wages. The employer's difficulty is not a matter of the mere figures of the wage-sheet. His difficulty is that the present ratio of wages to *output* does not allow him to reduce prices to the customer. Even without a fall in wages, an increase in the other factor, output, would better the position. The correspondent referred to stated that, in his opinion and in that of other master printers, there has recently been such serious slackening of effort on the part of employees that the present production per man and woman is probably on the average throughout London as much as 25 per cent. less than pre-war, especially in the machine and warehouse departments. Now a 25 per cent. increase of production would be more satisfactory to everyone than a 10 per cent. cut in wages, so there is surely some ground here for profitable investigation and endeavour. Mr. George A. Isaacs (secretary of "Natsopa," and Mayor of Southwark), wrote recently: "It is no exaggeration to say that printing is the pivotal industry upon which all efforts will turn to secure a return to commercial prosperity at home and supremacy abroad." Is it not then "up to" the printing industry to lead the way to better times by such means as will depreciate nobody's status, but will, by bringing about increased efficiency and heartier community of effort, redound to the benefit of all?

At the annual meeting of the Hollingsworth and Vose Co., manufacturers of rope and jute manila papers, Boston, U.S.A., held in January, the following officers were elected:—Mr. Z. T. Hollingsworth, chairman of the board of directors; Mr. Valentine Hollingsworth, president; Mr. Louis E. Vose, vice-president; and Mr. Robert W. Lennox, treasurer.

## Government Printing Criticised.

### Keen Discussion in the House.

The growing activities of H.M. Stationery Office came in for some close criticism when the House went into committee of supply, on Friday, on the Supplementary Estimates for the Civil Services and Revenue Departments.

In introducing a supplementary estimate for £485,000 on buildings, Sir Alfred Mond stated that there were three items in connection with the Stationery Office which made up a total of £222,150—£22,150 for the purchase and adaptation of premises at Old Ford, E. (the total estimate for this was £160,700); £15,000 for purchase of premises at Hare-street, Bethnal Green; and £185,000 for the purchase of premises at Hollinwood (a former U.S.A. Aircraft Factory).

Sir Donald MacLean (L.) moved a reduction of the vote by £100,000. He asked what reason, urgent and unforeseen, had arisen since last year for a large expenditure of £185,000 in setting up a new branch office of the Stationery Office in Manchester.

Colonel Archer-Shee (C.U.—Finsbury) said a committee of which he was chairman recommended that the policy of the Stationery Office maintaining a large printing establishment should be the subject of a departmental inquiry. The committee never had before them the large expenditure on the Hollinwood establishment. Apparently the Stationery Office were going to buy buildings all over the place to put in their 1,700 employees. Last year they increased the staff from 1,400 to 1,700, and they were spending something like half a million yearly on these people. The House had not given authority to set up a new Government Department.

Mr. S. Baldwin (Financial Secretary to the Treasury), defending the acquisition by the Stationery Office of the premises in question as a business proposition, said it was decided to try as an experiment storage in Manchester as a convenient centre for the North of England, Scotland, and Ireland. By that means a considerable amount of transport was saved, and printers in the North of England were enabled to enter into competition with those in the south, and a great deal of the work had been distributed in the north, which gave a very necessary check on prices.

Colonel Archer-Shee asked whether any part of the premises at Hollinwood would be used for printing, whether they had yet to build railways up to these premises, and what the cost would be.

Mr. Baldwin said he thought a further sum not exceeding £50,000 would be all that was required both for Hollinwood and for London. It was not the policy of the Stationery Office further to develop printing.

Mr. Chamberlain (Chancellor of the Exchequer) admitted that there was a general feeling that the House had not sufficient con-

trol over expenditure—(cheers)—and that the Government was not sufficiently alive to the necessity for economy or not successful in securing economies.

When the committee divided on the reduction proposed by Sir D. Maclean, the voting was: For the reduction, 78; against, 88. Thus the Government carried the vote by a majority of only 10.

## A Sensational Accusation.

The *Daily Herald* published a sensational article on Monday reproducing in facsimile part of the front page (in Russian) of what it alleges to be a bogus copy of the Moscow *Pravda*, produced and sent abroad for propaganda purposes by the British Secret Service collaborating with Russian emigrés. The title heading, says the *Herald*, is identical with that of the genuine *Pravda*, the official communist organ, and is dated Moscow, September 22nd, 1920, but the contents consist of anti-Bolshevik propaganda disguised as news. The *Daily Herald* alleges that this bogus issue was printed in London by a well-known London printing house and the firm's imprint afterwards removed, the "guillotining" of these imitation *Pravdas* being done under the supervision of Home Office officials at a secret printing office in Scotland House.

## Technical Lectures at St. Albans.

On February 15th, another of the series of technical lectures arranged by the Herts Master Printers' Association and the St. Alban's Education Committee, was held at the Art School, St. Albans, when over one hundred printers met to hear Mr. A. H. De la Rue, chief lithographic instructor of St. Bride Printing School, give a lecture on "Lithography and Its Possibilities." Mr. De la Rue dealt with the early developments of the art, introduction of power machines, working from zinc and aluminium plates, development of the direct rotary machine, followed by a description of offset and present-day methods of reproduction by photo-lithography. The lecturer had with him a fine set of samples of lithography, representative of the various periods, but owing to the keen interest which was manifested by numerous questions and keen discussion, these were unfortunately not able to be shown and discussed.

The chair was taken by Mr. Underhill, of the Dangerfield Printing Co., who proposed a hearty vote of thanks to the lecturer for his interesting and informative lecture, expressing the hope that they would hear Mr. De la Rue again at no distant date.

# The British Industries Fair.

## Further Exhibits of Interest to Printers.

The event of last week at the British Industries Fair at the White City was, of course, the visit on Thursday of Their Majesties the King and Queen with Princess Mary, who were received at the Fair by Sir Robert Horne (President of the Board of Trade), Mr. F. G. Kellaway and others, and were conducted right through three miles or so of exhibits, showing great interest in many of the stalls inspected. In the stationery and printing section special notice was bestowed by the Royal party upon the exhibit of Messrs. Raphael Tuck and Sons where features of interest were pointed out by Sir Adolph Tuck, Bart., Mr. Gustave Tuck and Capt. Desmond Tuck. The fine enlarged pictures of the photographs taken by Messrs. Raphael Tuck and Sons the previous week by Royal command in the Robing Room of the House of Lords on the occasion of the opening of Parliament, were inspected and elicited the unqualified approval of Their Majesties; these hanging side by side with the historic engraving—"A Drawing Room at Buckingham Palace"—published by Messrs. Raphael Tuck and Sons by command of Queen Victoria in 1886, testified to the lengthy and unbroken period during which the firm has held the privileged appointment of art publishers to the Royal Household. The Royal party also inspected the fine manuscript and other exhibits of the graphic arts shown by the British Institute of Industrial Art, while at the stall of Messrs. Myers and Son, Ltd., of Birmingham, the King smilingly accepted a specimen of a pen-nib appropriately named "His Majesty's pen."

In adding to our last week's selection some further notices of exhibits by firms closely connected with the printing trade, we regret that space forbids a review of more than a few of the numerous excellent displays by paper-makers and stationers; these are worth a visit by the Home printer as well as the foreign buyer.

### Book Producers.

Besides the exhibits of book printing previously mentioned, there are many other displays by firms more or less closely connected with the printing of books. Messrs. Blackie and Son, Ltd., of London, Glasgow and Bombay are showing, besides general examples of book printing and binding, a special selection of children's books. Messrs. Gate and Polden, Ltd., Aldershot, London and Portsmouth, confine themselves almost wholly to children's books, all printed and bound at Aldershot. The Medici Society includes examples of high-class book work in a showing consisting mainly of pictorial art reproductions—in multi-colour, litho-

graphy, collotype, etc.—for which it is famous. Messrs. Thomas Nelson and Sons, Ltd., Edinburgh, besides a fine exhibit of children's books, show general literature, with a few books in foreign languages. S. W. Partridge and Co., Ltd., London, provide examples of their productions in the way of children's magazines and books, greeting and wall cards, with original illustration work for books and magazines. The Religious Tract Society, London, have a small showing of books and of colour printing in the way of cards, almanacs, etc. Messrs. Ward, Lock and Co., London, emphasise mainly their complete editions of the great poets, Mrs. Beeton's Cookery Books and other well-known publications. Among Messrs. Frederick Warne and Co.'s book exhibits are notable examples of illustration, including work by Kate Greenaway and Walter Crane.

### British Fine Art Society.

This Hammersmith firm makes a principal feature of its oil painting facsimiles, produced by special process from lithographs, process work, collotype, photogravure, etc. The process is applied successfully to magazine illustration, and such things as almanacs and box tops.

### Cooper and Wright.

From their works at Aldersgate-street, Messrs. Cooper and Wright produce an attractive range of cards suitable for many of the printers' requirements. Their showing includes boxed visiting cards, boxed correspondence cards, boxed post cards, menu cards, and many other varieties.

### E. T. W. Dennis and Sons, Ltd.

Coloured post cards, calendars, view books, Christmas cards, menus and ball programmes are among the exhibits of this Scarborough firm of lithographers, letterpress and collotype printers.

### John Dickinson and Co.

The largest stand in the paper and stationery section is that of John Dickinson and Co., and the light oak fittings, dignified in style, arrest the attention at once. A special feature is made of window display, and the very artistic products of Apsley and Croxley lend themselves admirably to such treatment. The range of linen-faced writing paper and envelopes is likely to extend the fame of John Dickinson under the name of Croxley. The coated and other boards from Nash and Home Park Mills are also produced in great variety, both as to colour and finish.

### Dux Chemical Solutions Co.

Waterproof writing paper is the novelty emphasised by this company. A specimen

book, bound in Duxeen, has been in water for seven years and yet it remains intact, as visitors to the Fair could see for themselves. Many important signatures had been obtained in 1913, and they are still legible. Both writing paper and the binding material are especially suitable for India and similar climates. Thus we are shown the results of placing the ordinary paper and the Dux product in an ant heap for nine days. The former is badly eaten away and discoloured, the latter untouched.

#### **"Geographia," Ltd.**

Maps and atlases, of course, form the staple of the exhibit from "Geographia," Fleet-street. The general letterpress, process and lithographic printing of the firm is also represented. They specialise somewhat in children's picture books, painting books and the like, besides producing picture post cards, in respect of which they lay emphasis on their work in local view cards.

#### **Chas. Goodall and Son, Ltd.**

The Camden Town works of Messrs. Goodall are represented by an impressive showing of examples of the firm's speciality of card printing by letterpress and lithography. Playing cards are, of course, a prominent feature, while scoring cards, invitation cards, and a variety of stationery items are also represented.

#### **A. T. Guinness and Co., Ltd.**

This London firm of rulers and binders to the trade show examples of their work as manufacturers of memorandum and exercise books, note books and account books of all kinds, and general items of stationery.

#### **Gummed Paper Manufacturing Co.**

Gummed paper and linen tapes of the "Tiger-tiger" brand, together with box-makers' stay paper, are displayed by this Narborough firm.

#### **Harrison and Sons, Ltd.**

This firm turn out coated papers at Hayes, Middlesex, and these products, as well as enamel and imitation leather papers, are shown in their various uses. A Jazz design effectively illustrated the colours employed, while an interesting exhibit consisted of British and Egyptian stamps as printed at Hayes.

#### **Geo. H. Harrison and Son.**

Messrs. Harrison's Statue Printing Works, of Leeds, have an impressive display of their well-known "Statue" series of colour printing productions done by offset, litho and three-colour processes. Their speciality of confectionery box tops and prints for similar ornamental purposes is attractively exemplified, and specimens are also shown of the high-grade printed containers, cartons, etc., which they supply to the trade.

#### **S. Hildesheimer and Co., Ltd.**

The fine art work of Messrs. Hildesheimer, of London and Manchester, is represented by some excellent show cards, Christmas cards, picture post cards, calendars and birthday cards.

#### **Hudson and Kearns, Ltd.**

This firm, which incorporates the business of Taylor, Garnett, Evans and Co., are the printers, at Blackfriars, of the high-class periodicals *Country Life*, *Ladies' Field*, *The Garden*, *Our Homes and Gardens*. Their exhibit shows their capabilities as fine art, colour and general printers. Catalogue and show card work is a speciality, and their work by machine photogravure, offset lithography, and the Frey process of screenless photo-lithography makes an impressive showing.

#### **Samuel Jones and Co., Ltd.**

Under the sign of the Camberwell Beauty butterfly, Messrs. Samuel Jones and Co., Ltd., exhibit their well-known non-curling gummed paper and cloth. These materials are used for a big range of commercial purposes and have gained an abiding place by reason of their quality. The adhesive tapes produced by Messrs. Samuel Jones are all British made and are taking the place of foreign makes. They are at once economical and tidy, important assets in these days. The firm are developing in the direction of enamelled and coated papers and the mill at Devonvale, Tillicoultry, N.B., which was taken over last year, is expected to be running shortly and will give Messrs. Samuel Jones and Co., Ltd., a wider range of paper wares to put upon the market. An attractive feature of the stall at the White City is a display of Parian marble box covering paper of a very realistic pattern. Stay paper for box-making is also a strong line and an improvement has been made upon the sealing machine marketed by this firm, the new model enabling fixed lengths to be cut so that economy of paper may be achieved in wrapping up parcels of the same size.

#### **A Vivian Mansell and Co.**

Show cards and posters are important items in the work of Messrs. Mansell, of Finsbury-square, London. These are shown to good effect, while emphasis is also given to the "Vivian" art series of pictures for all mounting purposes, as supplied to box makers, confectioners, and other trades.

#### **Millar and Lang, Ltd.**

This Glasgow firm show their "National" series of Christmas and New Year cards, with picture post cards, calendars, fancy stationery and other lines.

#### **Millington and Sons, Ltd.**

Stationery of every variety, boxed and otherwise, is shown at Stand G. 68. The cabinets of linen finished notepaper and envelopes were an arresting line.

#### **Chas. Morgan and Co., Ltd.**

A very attractive display of stationery of every description was found at this stall, embracing tastefully designed compendiums and notepaper of distinction. The Charta Regia Brittannica stationery, in white and azure and azure bond, is known throughout the world. A speciality is made of envelopes, and a new series of high-cut envelopes is

manufactured in about 20 different qualities. Account books are another special line, and a large well-bound telephone call book indicates that Chas. Morgan and Co., Ltd., cater for the latest needs of the public.

### R. T. Morgan.

Calendars in wide variety are a prominent note in the exhibition of this Anerley printery. Complete editions of hand-printed Christmas cards for the trade are a speciality, and picture postcards also form a strong feature.

### Paper Tube and Box Co., Ltd.

Cartons of all sorts form the basis of Stand G. 117, including postal tubes and collapsible boxes. Waxed strawboard to resist moisture is a speciality.

### George Pulman and Sons, Ltd.

The fine art work of this London firm includes the reproduction in facsimile colours of the work of foremost artists. They show also some excellent letterpress productions in the way of booklets, etc.

### Sandle Bros.

The range of stationery exhibited by this firm extends from envelopes to Christmas cards, and embraces compendiums, albums, note books, advertising novelties and so on.

### James Spicer and Sons, Ltd.

The imposing stand of James Spicer and Sons, Ltd., is in keeping with the size and reputation of the firm. Their stationery display is both varied and attractive, covering every section, from cards and filing devices to writing and printing papers. Fancy stationery is set out with an eye to effect. Large quantities of waxed papers are manufactured by this firm, and the various important uses are demonstrated at the Fair. An important section of the stand is devoted to containers of every kind, this line having been developed to still greater perfection. Every class of food almost is now encased in cardboard containers, and James Spicer and Sons have improved both the design and the appearance at their Ponders End factory. It is good to learn that orders for all the lines stocked at Upper Thames-street are coming in from the Colonies.

### Thames Paper Co., Ltd.

The Thames Paper Co., Ltd., have an interesting stand exhibiting their paper boards for folding boxes and cartons, rigid boxes and containers. There are also an excellent Dutch strawboard substitute and a leather board substitute, together with wood pulp boards and grey boards made to specification on machines trimming 110 inches to 111 inches, substances between '013 and '120. These products have found great favour both in home and export markets. Fiberite packing cases of two types form an important part of the exhibit. The capacity of the Thames Paper Co.'s mills is now over 1,000 tons per week, and when the new mills at Bromborough are in operation this will be considerably increased. It is interesting to note that the stand itself is built of the firm's own SX wallboard, an excellent testimony to the substantial character of this new product.

## New British Patents.

## Postage on the Cheap.

In a question addressed to the Postmaster-General Mr. Pennefather (C.U., Kirkdale) points out that 240 marks' worth of German postage stamps can be purchased for a pound, and asks the Postmaster-General if it is possible for persons in the United Kingdom desiring to transmit large quantities of circulars, etc., through the post to addresses in this country to ship them in bulk to a German port to be stamped and posted there.

Mr. Illingworth, in reply, says it would be possible to do this and effect a saving. He has no power either to prevent the despatch of unaddressed circulars in bulk to Germany or to fix rates of postage in that country; nor does he see how he could obtain or exercise extended powers in the matter.

# Trade Notes.

ONE case of lead poisoning was recorded in the month of January.

THE late Mr. Arthur Walter, Tabernacle-street, E.C., printer, left £19,120.

THE National Society of Operative Printers report the admission of over 3,000 new members during the last five months of 1920.

THE "Prince of Wales's Book" will be issued by Hodder and Stoughton on March 10th, on behalf of St. Dunstan's Home, at 7s. 6d. net.

FOR the late Mr. A. Lucas, art publisher, whose death took place last Tuesday, a funeral service was held at Golder's-green Crematorium.

SUMMER time this year will begin at midnight on Saturday-Sunday, April 2nd-3rd, and end at midnight on Sunday-Monday, October 2nd-3rd.

A POPULAR series of dances is being conducted by the Newcastle Press Dancing Society, the dances taking place in the Banquetting Hall at Jesmond Dene.

THE annual dinner of the Cambridge Association of Master Printers is to take place on March 8th, when several Federation representatives are expected to be present in addition to the officials of the East Anglian Alliance.

Six lectures on various phases of unemployment are being given in the Lecture Hall, Toynbee Hall, by Mr. Joseph L. Cohen, M.A. The subject covered are: Suggested Solutions of Unemployment; Unemployment Insurance; Labour Exchanges; Labour Remedies for Unemployment.

THE Labour Committee of the Federation of Master Printers held a special meeting yesterday (Wednesday), when a number of important matters were discussed. Consideration was given to recent correspondence with the Ministry of Labour with regard to the competition of Government printing works.

A J.I.C. FOR PAPERMAKING TRADE.—At a meeting last week of the Interim Joint Reconstruction Committee, consideration was given to the proposed rules for a J.I.C., and it was agreed to transform the Interim Joint Reconstruction Committee into a body to be known as the Joint Industrial Council for the Paper-making Trade.

THE South London Caxton Musical Society held a successful concert on behalf of the War Memorial Fund of the Caxton Home, at the London and Brighton Hotel, Peckham, on Saturday last, Mr. W. Harold Walbrook (Fleet Printing Works) in the chair. The concert hall was crowded, the chairman being well supported by the staff of his firm. It was announced, as a result of the effort, that nearly £40 had been contributed to the "plate."

THE third annual festival of the National Advertising Society is to be held at the Hotel Cecil on March 14th.

THE death occurred on the 22nd ult., of Mr. T. F. Wright, for many years an advertisement manager with Sells, Ltd.

THE Rt. Hon. J. R. Clynes, M.P., contributes an interesting article entitled "The Worker and His Leisure" to the current issue of the *Journal of Industrial Welfare*.

THE principal feature of the March meeting of the Printers' Managers and Overseers (Parent) Association—to be reported next week—is a lecture on "The Elizabethan Sea Kings" by Mr. Denison H. Allport.

AT the concert of the auxiliary of the City of London Printers' Musical Society held last week at Anderson's Hotel, a sum amounting to £70 was raised towards the funds of the Printers' Pension Corporation. Mr. Chas. Roud (Bank of England), occupied the chair, and it was generally deemed that there was an excellent array of musical talent.

FOR Mrs. Mary Ann Phillips, 74 (widow of the late Mr. J. H. Phillips, who was for 39 years a compositor in the office of the *Daily Telegraph*)—on whose behalf votes and interest are being solicited in respect of the forthcoming election of the Printers' Pension Corporation—Viscount Burnham is the recommending subscriber, and the case is also recommended by the *Daily Telegraph* chapel.

PRINTERS' PENSION CORPORATION. — The annual pension election will take place at the Connaught Rooms, Kingsway, on Saturday, April 2nd, from one to three o'clock. There are 106 candidates, 81 of whom will be elected to pensions, whilst 13 will receive grants. The annual general meeting of the Corporation will be held at St. Bride Foundation on Saturday, April 9th, at two o'clock, under the presidency of Sir G. Rowland Blades, M.P.

THE COSTING CAMPAIGN.—The subject of costing is very much to the fore just now, and efforts are being made in various parts of the country to increase printers' interest in the matter. Very successful meetings were held at Norwich on Monday and at Ipswich on Tuesday, while, arrangements are in hand for a full day's congress at Manchester on March 9th, to be followed by meetings at Bradford on the 10th, and at Leeds on the 11th, while the Sheffield annual meeting of master printers on the 17th will include a cost congress.

VERDICT for the defendants, with costs, was given in the King's Bench Division, where Mr. Findlay Watt, of Carmichael-place, Langside, Glasgow, formerly organiser for Scotland of the National Democratic and Labour Party, sued the Argus Printing Co., Ltd., the printers and publishers of the *British Citizen and Empire Worker*, and Mr. Geo. William Simon Jarrett, of Kensington-mansions, for damages for libel. Defendants pleaded that the statements complained of were true in substance and fact, and that they were fair comment on a matter of public interest.

## FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,  
at 58, Shoe Lane, London, E.C. 4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

**SUBSCRIPTION:** Per Annum, 8s. 8d. (POSTAGE EXTRA).

### Charges for Trade Advertisements:

(Full page 8 by 5½ ins.)

or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.

THURSDAY, MARCH 3, 1921.

# Current Topics.

## The State as Printer.

THE vexed subject of the tendency of H.M. Stationery Office to extend its activities further and further into the domain of the private printer is brought into the spot-light once more by the inclusion of large sums of money for the Stationery Office in the supplementary estimates presented in the House of Commons on Friday, as reported on another page of this issue. The long and spirited debate, of which we indicate salient features, shows that the Government is faced with formidable opposition when it attempts to increase its employing capacities by venturing, at ratepayers' expense into commercial enterprises. Though it is denied that the expansion of Government printing activities is contemplated, printers are by no means satisfied on the point, and certainly the acquisition of additional premises is a step that will not tend to allay their apprehensions. It is notable that in this debate over 40 sup-

porters of the Government voted with the opposition, and the vote was carried by the very narrow margin of 16. This should be regarded as a serious warning that there will be a close watch kept upon the future course of Government printing, the extension of which will be viewed with very considerable disapproval.

\* \* \*

## Paper Sizes Chaos.

WHAT has become of paper standardisation nowadays? The very carefully prepared scheme of the Master Printers' Federation, the principles of which have been very piously adopted at two or three successive conferences by printer members, appears to have been hung up in the air so high as to be out of sight. Meantime, paper standard anomalies not only continue—they accumulate. It is safe to say that there is less attention paid to standards to-day than at any time previous for the last twenty years. Even proprietary brands of high-grade paper, which in pre-war days at least maintained their uniform size consistently, are now turned out by some of our most reputable mills with small regard to traditional dimensions. On many an occasion printer and stationer find it impossible to adhere to the standards they have set when repeating orders for certain classes of work. There is absolutely no reliance on paper sizes until measured with the yard stick; name size is of no account. That is the position to-day, and it reflects no credit on any of the parties concerned that such a state of affairs should be allowed to continue.

\* \* \*

## A Helpful Factor.

ONE thing which should help the merchants to view the matter of standardisation from a more enlightened standpoint is the fact that there are few of our big houses now who are not actually papermakers or intimately connected with mill interests. Slowly but surely the wholesale trade is realising that its future depends upon a closer amalgamation with the manufacturing side of the trade. The mills on the one hand, and the small dealers and agents on the other, have between them placed the wholesale distributor in a difficult position. With extremely high selling costs and heavy maintenance expenses, there is no scope for any wide margin of profits and successful competition against the distributor who sells his own manufactures. The movement toward mill buying by wholesalers has not yet exhausted itself and is not likely to do so for some time to come.

## Personal.

SIR ROWLAND BLADES, M.P., has been elected President of the Stationers' and Paper Manufacturers' Provident Society in succession to the late Rt. Hon. Sir T. Vezey Strong.

THE newly-appointed American Secretary of Agriculture, Mr. Henry Wallace, is a publisher of farming journals.

MR. A. E. GOODWIN is taking a "busman's holiday" during the weekend, attending meetings at Colwyn Bay, Barmouth and Wrexham, with a view to consolidating the work of the Federation of Master Printers in this area.

MR. E. W. WHITTLE, of Messrs. Burrup, Mathieson and Sprague, Ltd., is taking the chair at a bohemian concert to be held on March 5th at the Harmonic Hall, "Green Man," Upton-park, E. The concert is in aid of the East Ham and Upton Park Auxiliary of the Printers' Pension Corporation, of which auxiliary Mr. Whittle is president.

THE retirement of Mr. John Robertson from the secretaryship of the Glasgow Typographical Society, takes from the helm a most capable and successful trade union leader, under whose surveillance Glasgow newspaper houses have become 100 per cent. "union." His retirement is being marked by a number of presentations and other honours.

THE new secretary of the Glasgow Typographical Society is Mr. Charles Jackson, well known in printing trades-unionism.

OFFICIAL examiners, Mr. A. H. Wilson, Mr. J. J. Derrick and Mr. J. C. Pugh discuss at the St. Bride Printing School to-morrow (Friday) the interesting subject of "The Answering of Technical Questions,"

MR. J. C. HOWARTH, the Rochdale "T. A." branch secretary, is a candidate for the executive of No. 1 Area of the "T. A." caused by Mr. Guest's retirement.

**COSTING LECTURE AT ROCHDALE.**—The third of the costing lectures given by Mr. John Taylor, of Manchester, in the Rochdale Technical School covered the relation of costing to estimating. Sample forms and methods were shown by which correct estimating can be assisted by reference to costing sheets. The method of analysing the cost-of-production sheets was also dealt with. Question time brought out the point of employer's salary and its relation to interest on capital and profit. Mr. Taylor contended that interest, profit and employer's salary (where he actually helped in the business) were all three legitimate charges.

## The State of Employment.

Employment during January in the paper, printing and bookbinding trades showed a further decline, being generally slack or bad. With few exceptions, short time was worked in all sections of these trades.

With letterpress printers employment was not so good in London as in December last, except in the case of electrotypers and stereotypers. Compositors and readers in some offices worked overtime, whilst others were reported to be on short time or totally unemployed. In the provinces short time was reported from most centres, and employment was worse than during the previous month.

In the lithographic printing trade employment was generally slack and worse than a month ago. From returns received by the Government it is estimated that nearly one-third of the workpeople employed in the letterpress and lithographic printing trade were working on an average 9½ hours per week short of full time.

There was a further sharp decline in January in employment in the bookbinding trade and it was described as bad in most cases. Among 5,000 bookbinders covered by the returns received, 38 per cent. were working short time to the average extent of 15 hours per week.

According to returns received by the *Labour Gazette*, out of 81,470 members of trade unions in the printing industry, the percentage of unemployed at the end of January was 4.8, as compared with 1.1 a year ago and 3.7 a month ago, the increase being 1.1 compared with a month ago and 3.7 a year ago. In the book-binding section out of a total membership of 14,913, the percentage of unemployed is given as 4.6 for January, 2.3 for December, 1920, and 1.1 for January of the same year; the increase being 2.3 as compared with a month ago and 3.5 for the corresponding month of last year.

Returns made by employers show the number of workpeople in the printing offices concerned to be 9,834, a decrease of 3.0 as compared with a month ago and 2.2 a year ago. The total wages paid amounted to £35,909, a decrease of 7.5 on January and an increase of 7.9 on the corresponding month of last year.

A CORRESPONDENT draws attention to the significance of the cost of living figure of 151 per cent., as given in the *Labour Gazette*. It is understood that the wages in the printing trade before the last advance was given were sufficient to cover a figure of 153 per cent. But since then a further advance of 5s. was granted to cover the extra cost of living!

THE late Mr. Walter Mitchell, for many years chief engineer at the Amalgamated Press, was laid to rest on Saturday of last week at Wandsworth Cemetery. A large gathering of his old friends, to the number of over 100 was present at the graveside.

## DIVIDENDS AND REPORTS.

**OLIVES PAPER MILL, LTD.**—Olives Paper Mill announces interim dividend at the rate of 10 per cent. for periods from July 23rd to January 22nd.

**ANNANDALE AND SON, LTD.**—The 21st annual report to December 25th records a balance to the credit of profit and loss account, after providing for E. P. D. and Corporation Tax, of £20,640. A dividend of 7½ per cent. on the ordinary shares will absorb £4,500, depreciation and reserve £5,000, preference dividend £1,750, and depreciation on investments £1,000, leaving £8,390 to be carried forward, subject to directors' and auditors' fees.

**CULTRER MILLS PAPER CO., LTD.**—The report of Cultrer Mills Paper Company for 1920 shows profit, after making provision for excess profits tax, of £10,222, plus £0,056 brought forward. Directors recommend a dividend of 10 per cent., or 2s. per share, less tax, (payable one-half on 4th March and balance on 1st Sept. next), carrying to works and property, thus reducing value to £75,000. £7,355, and leaving at credit of profit and loss £7,423.

## NEW COMPANIES.

**INTERNATIONAL STUDENTS' SUPPLY ASSOCIATION, LTD.**—Capital £10,500, in 10,000 ordinary shares of 1s. each, and 10,000 8 per cent. cumulative preference shares of £1 each. Maine and Co.," and to carry on the same and the business of manufacturers of paper bags and similar goods, dealers in wood pulp and other fibrous products, etc. Private company. Subscribers: W. J. Maine and J. S. Liptrot. First directors: W. J. Maine, J. Maine, J. S. Liptrot, W. H. Heywood and A. E. Baucher. Registered office: 9, Mealhouse-lane, Bolton.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**CHADWICK AND SHAPCOTT, LTD.** (manufacturers of and dealers in paper, London).—Particulars of £15,000 debentures authorised by resolutions of January 28th and February 10th, 1921; present issue £3,000, charged on

company's undertaking and property, present and future, including uncalled capital, subject to £3,000 first debentures.

**LABOUR PUBLISHING Co., LTD.**—Issue on February 11th, 1921, of £250 debentures, part of a series already registered.

**G. L. COLLINS, LTD.** (publishers, agents, printers, etc., Fulham).—Issue on December 1st of £100 and on December 15th, 1920, of £100 debentures, parts of a series already registered.

**NOTTINGHAM DAILY EXPRESS Co., LTD.**—Particulars of £50,000 debentures authorised October 19th, 1920; present issue £30,000, charged on the undertaking and property, present and future, including uncalled capital.

**PEARLITE BOX Co. (1918), LTD.** (London).—Issue on February 1st, 1921, of £1,200 debentures, part of series already registered.

**J. M. DENT AND SONS, LTD.** (publishers).—Mortgage and land registry charge on Aldine House, Bedford-street, 66, Chandos-street, W.C., and assurance policies, both dated February 4th, 1921, to secure £36,000. Holders: Legal and General Assurance Society, Ltd.

**W. WHITTAKER, LTD.** (wholesale stationers and paper bag manufacturers, etc., Manchester).—Mortgage dated February 14th, 1921, to secure £5,300, charged on 29, Shudehill, Manchester. Holder: O. O. Ashworth, Fairhaven, Millport.

**JOHN HORN (LONDON), LTD.** (publishers).—Debenture dated February 11th, 1921, to secure £5,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Janet Horn, 5, Newark-drive, Pollokshields.

**BRITISH DOMINIONS TRADES PUBLISHING Co., LTD.**—Debenture dated February 9th, 1921, to secure £1,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Osborne Peacock Co., Ltd., County Buildings, Cannon-street, Manchester.

**CORFE AND SECCOMBE, LTD.** (printers, etc., London).—Particulars of £1,500 debentures authorised January 10th, 1921; whole amount issued, charged on the company's undertaking and property, present and future, including uncalled capital.

**GEM SUPPLIES Co., LTD.** (manufacturers of paper clips, stationery, etc., Southwark).—Particulars of £1,500 debentures authorised December 16th, 1920; present issue £1,000, charged on company's property, present and future, including uncalled capital.

**LONDON AND PARIS ALLIANCE TRADING Co., LTD.** (dealers in leather goods, stationery, fancy goods, etc.).—Debenture dated February 5th, 1921, to secure £1,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: C. Brown, Kingston Lodge, King's-road, Richmond.

## In the Newspaper Realm.

THE annual meeting and dinner of the Newspaper Society will be held on May 11th.

THE German Royalist newspaper, the *Kreuz-zeitung* appeared on Sunday for the first time since the Revolution.

A FIRE late on Thursday night at the offices of the *Rugby Advertiser* seriously damaged the news and jobbing rooms. This week the paper celebrates its 75th birthday.

THE "ROCHDALE TIMES" Co. gave a dinner to their staff last week in celebration of the installing of new and additional machinery.

INDIAN PRESS ACT.—At Delhi, last week, the Legislative Assembly, after a brief discussion, accepted the Government resolution to appoint a committee, two-thirds of the members of which will be non-officials, to examine and suggest modifications to the Press Act.

L.S.C. NEWS COMMITTEE.—To the six vacant seats on the News Committee of the London Society of Compositors the following have been elected by ballot:—Morton, A., 770; Rodford, W. A., 745; Grevatt, A. G., 713; Thompson, F., 688; Lemaire, F., 674; Taylor, F., 545.

ANOTHER AMALGAMATION.—The amalgamation is announced of the *Lady's Pictorial* with *Eve*, and in the joint enterprise will be incorporated the *Woman's Supplement*, hitherto issued by the *Times*.

NEWSPAPER CEASES PUBLICATION.—The announcement has just been made that, owing to the continued increase in the cost of newspaper production, the proprietors of the *Leicester Daily Post*, Leicester's only morning newspaper, have reluctantly determined to suspend publication of that journal at the end of March.

NEWSPAPER PRESS FUND.—Lord Burnham, presiding at the annual meeting of the Newspaper Press Fund on Saturday, said that newspaper-land seemed to be in a state of topsy turvydom. Unemployment among journalists was likely to increase rather than to diminish, and there was all the more necessity for the exercise on the part of the Fund of wise and sympathetic benevolence, and all the greater reason for thrift and providence. Last year's total grants and bonuses were just over £8,000, the largest amount for any one year. The membership was constantly increasing, and the Fund was in the lucky condition of not having to increase its subscriptions. The council had added 50 per cent. to the pensions and had added to the grants when necessity required. The invested funds now exceeded £100,000.

MANCHESTER PRESS CLUB.—Mr. A. J. Chapell, Haslingden, was on Saturday, at a meeting in the Manchester Press Club, re-elected chairman of the Manchester district of the Institute of Journalists, which includes most of Lancashire and parts of Cheshire and

Derbyshire. Mr. Walter Scott, Manchester, was re-elected hon. treasurer, and Mr. James E. Archibald, Preston, hon. secretary.

LIVERPOOL PRESS CLUB.—At the annual meeting of the Liverpool Press Club the retiring president (Mr. E. H. Prince) was presented with a picture by Mr. John A. A. Berrie (a member of the club) to commemorate his year of office. The following officers and committee members were elected for the coming year:—President, A. Laycock; senior vice-president, S. Wakefield; junior vice-president, J. Wolfe; hon. secretary, J. S. Dean; hon. treasurer, W. A. Walker; committee: ordinary members, E. H. Prince, C. Rees and J. Grime, F. A. W. Campbell, S. F. Jones, W. Dobell; associate members, H. A. Thomas and Colin Brooks.

"GALLERY" MEN ON STRIKE.—As a result of the Swiss National Council rejecting a request of members of the Press Gallery that there should be no sittings of the Council on Wednesday afternoons, the reporters concerned have now unanimously decided that none of them shall present himself for duty in the Gallery on Wednesday afternoons or make any report whatever of these sittings to his newspaper.

NEWSPAPER COSTS IN AMERICA.—Newspaper publishing costs are at the very highest point and are still increasing, said T. R. Williams, of Pittsburg, president of the American Newspaper Publishers' Association, recently. Mr. Williams contended that there can be no hope of reducing skilled labour required by newspapers for years to come, and that while spot news-print prices are softening, the contract price of 6½ cents a pound is the highest in 25 years.

## Fleet Street Revel and Carnival.

The Third Fleet-street Revel and Carnival will be held at the Royal Opera House, Covent Garden on April 1st next. Everything is being done to make it the night of nights, long to be remembered in Fleet street and outside. As on the two previous occasions the Revel is being run by the Press Club, which has a membership of upwards of 700 working journalists and of which Lord Burnham is president.

The gathering will again be representative of every element in the great world of the Press, and not the least among the evening's attractions will be the republication of that witty and unique little journal *The Reveller*, which will be produced and edited on the spot by well-known journalists with the collaboration of equally well known artists and cartoonists. Herbert Grover is again Master of the Revel. He is to be found at a special office at 146, Fleet-street, E.C.; Tel.: Central 9972.

Grimsby	"	640	2,423
Harwich	Austria	7	14
Hull	Sweden	1,195	3,010
"	Germany	2	4
Manchester	Sweden	15	40
"	Germany	18	70
"	Netherlands	95	260
"	Belgium	14	153
"	United States	38	1,209
"	Canada	106	138
Newhaven	France	4	58
"	Switzerland	8	120
Leith	Sweden	30	60
"	Germany	8	17
"	Netherlands	47	274
Total		16,412	56,492

### Leatherboards.

The imports of leatherboards into the United Kingdom during January were as under:—

Port of Importation.	Country whence Consigned.	Quantity. Cwts.	Value. £
London	Netherlands	435	584
"	Sweden	64	300
Hull	Norway	103	154
Manchester	Sweden	95	154
Grangemouth	Norway	40	69
Belfast	Sweden	98	186
Total		835	1,447

### Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

#### BELGIUM.

A Belgian residing in Brussels desires to secure for the whole of Belgium the agency, on commission, with travelling and subsistence expenses, of United Kingdom firms exporting stationery and fancy goods. (Reference No. 225)

#### MALTA.

TENDERS are invited for the supply of stationery to the Government of Malta. Forms may be obtained from the Crown Agents for the Colonies, 4, Millbank, S.W.1.

MR. HUGH ANDERSON, JUNR., has, we understand, severed his connection with the Elan-gowan Paper Co., Ltd., Milngavie, near Glasgow.

## Wholesale Stationers.

### THE ANNUAL MEETING.

The annual meeting of the National Association of Wholesale Stationers and Paper Merchants was held at the headquarters of the Association, 11, King's Bench-walk, Temple, E.C., on February 18th, Mr. H. G. Spicer presiding.

On this occasion Mr. J. W. Cooke (Burr Bros. and Cooke, Ltd.), was elected president in succession to Mr. Spicer, and the vice-presidents elected were Mr. F. M. Carson (Richard Herring and Co., Ltd.), and Mr. F. Machin (Roberts, Mart and Co., Ltd.).

The report of the Council for 1920-21, which was adopted, contained some interesting references to the work which has been accomplished. It is mentioned that the National Association, although embracing local associations, some of which have been in existence for many years, has just completed its first financial year. During the twelve months there have been conferences with the various branches of the Papermakers' Association, and various matters have been discussed and settled. Apart from the decisions reached, however, these continual conferences, it is remarked, have the advantage of creating an atmosphere of friendship between both parties, have led to a greater appreciation of the difficulties on both sides, and are all to the benefit of the trade.

With reference to the revised Trade Customs, much work has been devoted to this matter and the hope is expressed that they may be brought into operation at an early date. Another important matter which has engaged the attention of the Council is the question of forming a Paper Export Association, by means of which it is hoped to extend the export of British paper; but so far no definite scheme has been adopted. Railway rates and the Consultative Council, which had been found of the greatest assistance in dealing with various wages and labour questions, and the settlement of disputes are also mentioned. The problem of collapsed exchanges has been under consideration in the hope of finding a satisfactory solution to lay before the Government, and various legislative proposals have likewise received attention.

In conclusion, the report states that although the National Association has been at work only for a year, there has been created a strong and widely-felt opinion that an organisation of the sort is of vital importance to the trade, and as the Association gradually increases its membership it will become a still more valuable asset.

A SPECIAL cheap postage rate for books and letters for the blind has been obtained through the efforts of Sir Arthur Pearson on behalf of the National Institute for the Blind.

## Gazette.

### PARTNERSHIP DISSOLVED.

Harold Edward Marshall and Cecil Hubert Higson, photographic trade printers, 251A, Mansfield-road, Nottingham.

### RECEIVING ORDERS.

Frederick Charles Gooch, The Cottage, Springfield, Essex, managing director of Cardbox, Ltd. July 12th.

### RECEIVING ORDER RESCINDED.

Joseph Henry Deacon (trading as Charles Terrey and Co.), 3, Errol-street, Whitecross-street, Christmas card manufacturer. February 22nd. It appears to the Court that all the debts have been paid in full.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STATIONER," 58, SHOE LANE, LONDON, E.C.4.

## SPECIAL PREPAID ADVERTISEMENTS

Telegrams: STONHILL, FLEET, LONDON.  
Telephone: No. 8407 CITY.

Length of sheet, 26½-in.; maximum width (9 columns), 49½-in.; length of printed columns, 24½-in. Overall measurements: Length, 18-ft. 6-in.; height, 7-ft. 4-in.; width, 8-ft. 6-in.; plates, 1½-in.

FOR SALE.—2-Roll "VICTORY" Machine, Central Folder, to print 4, 6, 8 pages of 6, 7, 8, 9 columns, at 21,000 copies per hour. Length of sheet, 26½-in.; maximum width (9 columns), 49½-in.; length of printed columns, 24½-in. Overall measurements: length, 26-ft. 3-in.; height, 6-ft. 4-in.; width, 8-ft. 9-in.; plates, 1½-in. Price £1,400.—Tillotson's Newspapers, Ltd., Bolton, Lancs.

13817

### Machinery Wanted.

IMPOSING SURFACE, 48 by 36-in., wanted. State price, etc.—Box 13820.

### Miscellaneous.

GOOD BOOK PRINTINGS for sale, from stock; also 74 by 98 M.G. Kraft.—Loveitt, Paper Merchant, 5, Grosvenor-road, Bradford, Yorkshire.

13728

Electrotyping and Stereotyping have always formed part of the business of the King's Printer, but of late years it has been extended to the making of all the printing plates required, including those for the "Sphere," "Tatler," and "Eve," under the management of Mr. J. A. Corey, and generally as a Trade Electrotyping and Stereotyping business, orders being received and executed direct.

During the 21 years Mr. Corey has been with us, he has been responsible for many forward movements in the perfecting of printing plates—the greatest being the "Albert Galvano" method of duplication, which ensures a printing plate equal to the original. A complete Block-making Department was installed in 1914 and has met with increasing business from the first. It is to-day producing a variety of three and four colour work (in Half-Tone and Line) and is making blocks for half-a-dozen of the best illustrated papers and magazines, together with the usual Half-Tones and Line Blocks. Important contributions to the Gramophone industry have emanated from this department.

Other specialised work has been, and is still being, undertaken—for instance, plates for Multigraphs and other automatic machines; and Nickeloids for Carton printing and big editions.

Owing to the present and prospective growth of the Department we have decided to transfer the same to the Nickeloid Electrottype Company, Ltd., in which Mr. Corey is interested and of which he will be the General Manager.

*Eyre & Spottiswoode, Ltd.*  
*East Harding Street*  
*London, E.C. 4*

As from February, this Company started, not as a new business, but under a new title—that of the Nickeloid Electrottype Company, Limited.

No change has taken place in the personnel, and the services of Mr. J. A. Corey are retained for a term of years, and he will be the General Manager.

During the past 21 years Mr. Corey has been responsible for many improvements in the art of reproduction and duplication; the greatest benefit, however, accruing to the printing trade was that of the "Albert Galvano" method of electrotyping, whereby PERFECT duplicates of original plates were assured.

It is probable that the future will see other developments in plate-making which will meet the needs of the printing trade. One important development is under way at the present moment: the exclusive rights for London and District to make for the letterpress trade plates by the "Printex" Process—a process for the making of multiple image negatives and printing blocks—have been secured, and will be developed in the near future.

The whole of the staff co-operates with the General Manager in the endeavour to give the best service and quality in the making of every kind of printing plate—originals and duplicates.

It will be the object and aim of the Nickeloid Company to maintain the high reputation established by Eyre & Spottiswoode, Ltd., for fair dealing and helpful co-operation in the production of perfectly printed jobs.

*Nickeloid Electrottype Co., Ltd.*  
*New Street Hill*  
*London, E.C. 4*

**THE SIXTH INTERNATIONAL  
PRINTING, PAPER, STATIONERY, BOOK-  
BINDING, BOX-MAKING & ALLIED TRADES  
EXHIBITION**

will be the largest and most representative Exhibition  
ever held.

**The Main Hall, Gilbey Hall,

April 30th to May 14th, 1921.**

**Kidd's  
Printing Competition**

John Kidd & Co., Ltd., invite Printers to send specimens of Pictorial Printing suitable for exhibition on their Stand at the International Printing Exhibition. They offer three prizes for the best specimens exhibited.

<b>First Prize</b>	-	-	-	<b>£10</b>
<b>Second Prize</b>	-	-	-	<b>£5</b>
<b>Third Prize</b>	-	-	-	<b>£2</b>

**CONDITIONS.**

1. Any employing printer, or any of his pressmen, with his consent, may compete.
2. All specimens must be printed throughout with Kidd's Inks, and be accompanied by a certificate to that effect, giving the names of the inks used.
3. They must be of a size suitable for hanging on the walls of the stand, and the imprint may appear. The competitor's name and address should be written on a sheet of paper and accompany the exhibit for purposes of identification.
4. Only samples of actual jobs which have been turned out at the competitor's works are required: not specially printed exhibits.
5. Colour scheme and presswork will be the deciding points, and John Kidd & Co., Ltd., will be the judges, their decision being final.
6. Entries must be sent to 11, Wine Office Court, E.C.4, by April 15th, marked "Competition."
7. All entries to become the property of John Kidd and Co., Ltd.

**REMEMBER  
APRIL 15th**

is the last day on  
which entries for  
the competition  
can be received.

Quite apart from the money value of the prizes offered the exhibition of the entries will form a valuable advertisement for the printing of the competitors.

NUMBER 10.

LONDON: MARCH 10, 1921. **Special Export Issue 4d.**

## Notes and Comments.

### **Can Printing Trade Wages be Maintained?**

We all know that printing work to-day is a costly item. This is the outcome of repeated advances in wages and higher cost of materials. To justify present wages and reduced hours of labour, it is imperative that there should be no slackening as regards individual effort. Serious complaints, however, are being made by prominent London firms that production per man and woman on the average shows a decrease of 25 per cent or more as compared with pre-war. The machine and warehouse departments are alleged to be very tardy. An instance was recently cited of a machine, with the minder and his assistant, standing idle for some time because the man responsible for handling the required paper, which was stacked close by, happened to be temporarily absent. It is production, and more production, that is wanted to bring down cost and to allow of high wages. If the latter are to be maintained and unemployment stayed, all workers—trade unionists and otherwise—must individually and collectively work with a will to develop business on a sound and permanent basis. The war taught us to practise many economies from pure necessity, and, no doubt, at the present time economy in the use of paper and print is being still practised owing to prohibitive cost; increased parsimony in ordering printing must follow, involving greater unemployment, unless increased production and good service

on the part of workpeople bring about more stable conditions.

### **Maximum Efficiency.**

WHATEVER views may be expressed by leading authorities in the hope of mitigating trade depression, hard work is the essential element in restoring economic stability. There is a wide-spread need in all parts of the world for goods and material, and it is highly important for British firms catering for requirements of the printing and allied trades, in common with other manufacturers, to aim at the highest efficiency in production and distribution. Employers must also be backed up by their workpeople, as it is only by the realisation of hard and conscientious work that stability and confidence can be restored. Efficiency is the keynote to success, and it is incumbent upon the workpeople to give their co-operation and support in order to achieve the best results. With characteristic energy, resourcefulness, intelligence and power to work, British firms may face the future with courage.

### **The Chinese Market.—A Charter for British Industries.**

AN important development has recently taken place which ought to help to encourage British trade with China. The Chinese Government has granted a charter to two

prominent Englishmen in that country and the new Chartered Corporation is the outcome. One of the principal features of the new corporation will be equal opportunities for all representative Chinese and British manufacturing and trading concerns, both in the direction of obtaining from the corporation technical and financial assistance for setting up works and factories of all kinds in China and as to the best means of the disposal of British home-made products in the Chinese markets.

### Trade Openings.

In leaving London for Washington His Excellency Sao-ke Alfred Sze (the retiring Chinese Minister) has given to a representative of the *Daily News* one or two hints which should be useful to those British manufacturers and merchants who hope to develop trade with China. They embody advice which should have weight with all who are concerned in the welfare of British industry (employers and employed alike). "I am more and more convinced," he said, "of the importance to both countries of close co-operation between Great Britain and China. We need western capital and western experience. You need the trade openings China can offer. But there is one point British manufacturers and merchants must remember, that is that Chinese purchasers want to be assured of punctual delivery. British goods tend in any case to be a little more expensive as a rule than the wares of competing nations. That is no serious drawback, because the quality justifies it. But unless prompt delivery can be guaranteed British commerce must suffer."

### Hindrances to Colonial Trade.

REPRESENTATIVES of British printing machinery firms speak of the difficulty of placing orders owing to the continual fluctuations of prices. The effect of this is to drive business to the United States. Even if the competing price is a little higher, preference is given to the American firm because they can quote a firm price. Specific instances to illustrate this have been quoted. Another hindrance to the development of British trade in the Colonies has been the strikes of last year. On this account deliveries were upset, and in some cases it required twelve months or more to fulfil an order. Naturally such uncertainty militates against business, and a habit has grown up among colonial and foreign printers to hold on to their old plant as long as it will at all serve their purpose.

### Printing Machinery Required.

AMONG the classes of printing machinery required in the Australian colonies and South Africa are platens, wharfedales, guillotines, type, chases and printers' sundries generally. There is also a demand for bookbinding and box-making machinery. But for the conditions mentioned above, a good business might be done in these lines. Paper, stationery and periodicals are also objects of steady inquiry, we learn, and "plenty of orders" are being booked.

### Longer Credits.

THE position, so far as supplies to Australia from the United Kingdom are concerned, is, however, complicated for the time being by reasons of finance. According to what one hears, it is anticipated that this difficulty will be settled in a month or two. In the meantime British paper mills are assisting export houses by giving longer credits than have been customary for export business. Thus the terms are three or four months instead of the customary one month. This helps to stimulate business, naturally, though a continuance of this generosity is subject to the ability of the mill to do it.

### More Printing in Australia.

THE tendency in Australia is toward a greater use of the domestic printing plant. In order to encourage printing in the Commonwealth, a fairly heavy duty has been placed on all advertising matter such as circulars, leaflets, and so on. The effect ought to be to create a larger demand for printing machinery and supplies, and this is the avowed object of the duties. The first care of the Australians are their home industries; but after that, subject, of course, to considerations of terms and conditions, the desire is to deal with the Mother Country. In order to encourage that friendly feeling it is necessary that our manufacturers and supplying houses should be able to make firm quotations and assure delivery. When conditions become normal, these questions will be of supreme importance, together with such matters as reliability and packing.

### Fulfilment of Contracts.

THE effect of the trade slump at home has been to make buyers cautious. Supplying houses, therefore, are confining themselves to the fulfilment of contracts and no more. As soon as there is a possibility of conditions becoming normal, then the usual methods will be revived and orders will flow in again.

### **Machinery Standardisation.**

Efforts are being made to standardise British printing machinery, and in so far as this is successful, it will help to develop overseas trade. British printing machinery is held in high esteem abroad, and especially in our Colonies. Any standardisation which will quicken output and reduce costs of production cannot but be of advantage both to producers and customers. Our export trade is a matter of great importance, and if printers either in the Colonies or in foreign countries can get their requirements met more fully from the United Kingdom, they are coming here with their orders. Our notes on "What British Manufacturers are Doing" in another part of this issue clearly demonstrate that British manufacturers of the varied assortment of machines, appliances and raw materials which are employed in the art of printing are alive to the necessities of overseas printers, and it only remains to place foreign buyers in touch with them. It stands to reason that Colonial printers would prefer to use British materials if they can get them, and it is to be hoped that the economic difficulties which may be in the way will be overcome to enable this desire to be fulfilled. If, however, British goods are to have any chance at all, efficiency of workmanship and reduced costs of production are essential. Employers are doing their best in these directions, and they only need to be backed up by the other elements in industry to enable them to cope with competition from other countries.

### **Printers in South Africa.**

The first issue of the *South African Printer and Stationer*, which began its career at the commencement of this year, indicates that the craft is well developed in the Union. Opportunities are thus provided for British suppliers both of printing materials and stationery. When it is authoritatively stated that the number of trade union employees in the printing trade alone in South Africa totals at the present time nearly five thousand persons, the importance of the industry will be the better appreciated. The selling value of the products of the three hundred or more printing establishments in the Union and Rhodesia amount yearly to several million sterling, while the buildings occupied by printing works in the Union alone are assessed at nearly one million sterling. The value of the printing materials—comprising paper, machinery, type, etc.—imported during the year 1918-19 totals nearly a million pounds, and this during a period of short supplies when many lines of paper and ma-

chinery were absolutely unprocurable. Manufactured stationery, books, etc., imported during the same period also total about a million sterling, and the year 1919-20 should show a very considerable advance on these figures when the returns are available.

### **A Hint for Supply Houses.**

These facts should encourage supply houses in this country to pay more attention to the needs of South Africa. It is urged that the opportunities which the development of printing in the Union presented have been overlooked by United Kingdom firms. We are assured that the greatest need of the printing and stationery trades at the moment in South Africa is modern, labour-saving machinery and equipment. And the evidence should convince machinery manufacturers and supply houses that South Africa proffers a splendid and practically unexploited field for their advertising activities.

### **The Australian Market.**

A glance at the *Bulletin* of the Queensland Master Printers and Allied Trades' Association points to the necessity of giving good service by British firms to Colonial printers. While there is much to be done in the way of organisation among master craftsmen in Australia, the officials of the Association are putting thought and energy into the work, and if the materials required are not forthcoming in the manner desired, steps will be taken locally to provide them. There is a hint in the *Bulletin*, for instance, that "much of our raw material which is at present imported might be manufactured in Australia had we a strong Australian Association to deal with the matter." So it is "up to" manufacturers in this country to give such service as will not have the effect of forcing our Colonial friends into activities they would prefer not to assume. Or, what would be worse, to force them into markets other than Imperial. So far the attitude of Australia to German goods gives the advantage to those turned out by British firms; but questions of price and quality might remove any objections to Teutonic influence. Again, there is the competition from the United States. From every point of view it is essential for United Kingdom supply houses to cultivate favour in Australia, where the disposition is friendly and only the right service is required to encourage trading relations.

### **India's Needs.**

There is much leeway to be made up in India. During the war India received great attention from the United States, with the re-

sult that strong sections of the Indian public felt that the United States was the only country which could economically produce certain types of plant, machinery and tools. Mr. Thos. M. Ainscough, H.M. Trade Commissioner in India and Ceylon, addressing the Royal Society of Arts during his recent visit to this country, mentioned the severe rivalry which British manufacturers would meet with in India from America. Fair, straightforward rivalry, he said, but the result, he added, would entirely depend upon the ability of our manufacturers and distributors to provide as suitable goods at a lower price. A closer alliance between British and Indian manufacturers and merchants was advocated. We believe there is already a good understanding and British printing plant holds its own in the Eastern Empire, and a continuance of good service may be relied upon.

## Tariff Changes.

### Movements of Interest to the Printing Trade.

A French Presidential Decree of February 2nd modifies and completes the schedule of "co-efficients of increase" of Customs duties annexed to the Decrees of July 8th, 1919. According to this the new co-efficient on paper of all kinds is altered from 2-3 to 3 and on all cardboard in sheets or plates, weighing at least 350 grms. per sq. metre (rough) from 1-5 to 3. In the case of "paper of all kinds," the co-efficient does not apply to the under-mentioned paper when destined for printing newspapers, periodicals, books: (1) paper, other than fancy, machine-made, weighing more than 30 grms. per sq. metre; and (2) fancy paper, coated (*couche*) in white.

A revised list of duties on goods exported from Bulgaria specifies 1-20 leva per 100 kilos. gross for waste paper.

Revised export prohibitions of Swiss Government departments still leave the following raw materials for paper manufacture subject to individual licence. Rags of all kinds, except those for manure; old ropes and other waste for the manufacture of paper, waste paper (maculature), etc. Fibrous materials for paper manufacture by chemical processes (cellulose, straw, esparto, etc.), wet or dry, bleached or unbleached.

### Proposed Portuguese Changes.

A Bill has been introduced into the Portuguese Chamber of Deputies which proposes the following new rates of Customs duty on paper goods, the figures in brackets representing rates where they now exist: Fabrics of paper, even containing cotton, linen, or similar yarns, which do not, however, predominate in warp and weft, 08 cts. per kilogram; plates, films, paper, etc., sensitised for photography (including weight of interior packages) 08 cts. (10 cts.); post cards, cut or in sheets, 25 cts. (15); cardboard and pasteboard, 03 cts. (04

and 02-5 cts.); cardboard and pasteboard boxes, not including those customarily used as packing, 1 esc. 00 cts.; cardboard and pasteboard manufactures, not otherwise specified, 10 cts. (08); playing cards, of any size, 1 esc. 20 cts. (60 cts.); engravings and prints of one colour, drawings of all kinds, and music, 04 cts. (04 cts.); engravings and prints of more than one colour, 1 esc. (same); printed matter, loose, 1 esc. (same); blank books, bound or stitched, ruled or not, with or without printed or lithographed inscriptions, 60 cts. (1 esc.); books and pamphlets, stitched or in loose sheets, and maps and atlases exclusively in foreign languages, free (01 cts.); books and pamphlets exclusively in foreign languages, bound in any kind of leather, 30 cts. (51 cts.); books and pamphlets, exclusively in foreign languages, not otherwise specified, 06 cts. (10 cts.); books and pamphlets, stitched or in loose sheets, atlases and maps, with text in Portuguese, 24 cts. (40 cts.); books and pamphlets, stitched or in loose sheets and atlases and maps, exclusively in Portuguese, when printed in countries where the author resides and the language is Portuguese (free) per kilogram; books and pamphlets, bound, with text in Portuguese, 60 cts. (90 cts.); writing paper, white or coloured, and envelopes (including the weight of interior packages, 10 cts. (14 and 20 cts.); printing paper, common (news-print), albumenised paper, paper *couche*, paper in bands or tapes, perforated or not, solely for use in telegraphy 01-5 cts. (00-1 and 02-5 cts.); wall-paper, painted or printed, and paper for similar purposes, 10 cts. (14 cts.); paper, not otherwise specified, 04 cts. (05 cts.); paper, manufactures, not otherwise specified, 30 cts. (50 cts.); portfolios, book-covers, finished or not, with or without engravings or ornaments of any kind of leather, 1 esc. 20 cts. (2 esc.); portfolios, book-covers, finished or not, with or without engravings or ornaments, not otherwise specified, 1 esc. (1 esc. 60 cts.).

It should be noted that the existing rates of duty set out above do not include the surtaxes now leviable under the Decree of November 12th last.

THE "BRIDGE" PAPER MILLS, LTD.—A petition for the compulsory winding-up of "Bridge" Paper Mills was dismissed recently without costs, the petitioning creditors having been paid.

PRINTING CRAFTS GUILD.—On March 5th the Printing Crafts Guild connected with the Manchester Technical School, Sackville-street, Manchester, held a benefit concert in the Technical School. The proceeds are to be devoted to the orphan fund of the Printers' Pension, Almshouses and Orphan Asylum Corporation. On Saturday, February 26th, the members of the Guild had an interesting programme, when they visited the P.P. Press, King Edward-street, Liverpool. The P.P. Press is a noted "colour" house, one of its most famous productions being "Bibby's Annual." The members were shown round the works, and the various processes were explained, and an exhibit of the firm's colour work was on view.

# What Our Manufacturers are Doing.

**Facing Difficult Conditions at Present, but  
Working for an Expansion of Export Trade.**

## **Messrs. COATES BROS. & CO., Ltd.**

Messrs. Coates Bros. and Co., Ltd., play an important part in the inks and sundries branch of export trade, and they report that they are now better equipped than ever to meet the requirements of the overseas buyer. The British Government's war-time call for such things as dope colours, for aeroplanes and the like, led Messrs. Coates to increase their plant and to work temporarily under conditions of overcrowding. With the close of hostilities they took the opportunity to extend their premises, building an additional large main shop nearly the size of their existing factory, and planning the equipment and the lay-out of machinery with such care that they now regard their works with pride as being something like a model of what a printing ink factory ought to be. Their moderate pre-war export trade increased greatly after the armistice, and the improvement was maintained until a few months ago, when this firm found, like so many others, that the depreciation of the mark was giving the German exporter so big a pull over the British manufacturer that orders for export showed a serious decline. But while this decline was evident in their trade with Greece, Egypt, Turkey and the Near East, it was found that the Colonies, fortunately, were among the importing countries which did not respond to the German pull, and Messrs. Coates are hoping that while their present very considerable export trade is maintained, means may be found to mitigate the exchange handicap and so re-open to British traders important territories from which they are now practically excluded. Besides producing a very wide range of printing inks, Messrs. Coates supply also printers' blankets, cylinder covers, varnishes, driers, and sundries generally. Worthy of mention to overseas buyers is their excellently produced export list, which is handily arranged, plain prices of goods being given, and numerous examples being included of printing actually done by customers with the various inks mentioned.

## **Messrs. OSCAR FRIEDHEIM, LTD.**

This firm reports that their business at the present time exceeds their pre-war output by four times. During and since the war they have sewn the seeds of enterprise in foreign and colonial markets, more particularly in connection with their "Simplified Book-Sewing Machine," and one result, among others, has been a recent order for nine machines from one agent alone. This machine

has been shipped to all parts of the world, and achieved its marked success on account of its simplicity of manipulation, which is a prime feature, especially where continual service cannot be given, as in England, and where in many cases only native labour is employed. The special point of interest regarding the "Simplified Book-Sewing Machine" is that no needle heads are required. Experience for many years has been that if a sewing machine gives trouble at all it is generally with the needle heads that it is to be looked for. The fact that the "Simplified Book-Sewing Machine" entirely eliminates needle heads, the whole of the work being done by a small spiral needle, which can be replaced at a small cost, makes the machine not only simple in operation, but reduces the cost of up-keep to a minimum. Another feature of interest is that with the average book-sewing machine the book is sewn to suit the machine, whereas on this machine the machine sews to suit the book; furthermore usually the needle heads take up a certain amount of space, allowing only a limited number of stitches in the book, whereas on this machine, the needle head being dispensed with, it is possible to put many more stitches into the book and sew over more tapes in a given size than has hitherto been possible. We understand this machine is made in three sizes, and can deal with the smallest pocket diary as well as the largest account book. The fact that it has recently been installed in some of the largest houses in this country and in many Government printing offices in the Colonies, who have spoken highly of its capabilities, speaks well for its further success. Other improvements have been made to the Thread Stitching and Knotting machine which Messrs. Friedheim have had on the market for several years, and in use in the principal scholastic and printing houses in the world, and which has also met with unqualified approval wherever it has been introduced. The firm also handle other types of machinery for the box-making, bookbinding and kindred trades. Printers and others who are interested will have an opportunity of seeing some of the firm's well-known specialities at the forthcoming Printing Exhibition.

## **FRY'S METAL FOUNDRY.**

This well-known firm have made rapid strides during recent years. Not very long before the war the number of employees in the foundry could be counted on the fingers of one hand, while to-day nearly one hundred are engaged in that department alone. Since

the war the various departments have been brought thoroughly up-to-date, and the export side of the business has been handled with commendable enterprise. Fry's Metal Foundry are at present specialising in their well-known brands of printers' metals, and to meet the requirements of printers abroad they have appointed agents in nearly all the Colonial and foreign countries. Their printing metals are in use by daily newspapers in South Africa and many of the large newspapers in India, as well as by important houses and Government printing establishments in those countries. It is interesting to note that a recent order received by the firm has been executed in the Fiji Islands. To meet the special requirements of the Colonial printer, there has been placed on the market the "Fryotype Portable Melting Pot," which

typing side. An interesting machine which has found great favour at home and one likely to commend itself to oversea offices in that it covers, practically speaking, all the demands of a stereotyper or block-maker is the "Combined Electrotyper and Stereotyper, Saw, Edge Planing, Bevelling, Rebating, Jig Saw and Drilling Machine." This machine, as the title implies, covers all the operations, completely finishing a plate. Each unit of the machine is self-contained, and is always ready for use. It is the intention of Messrs. Hewitt Bros. to demonstrate the machine at the forthcoming Printing Exhibition. Another machine modernised and recently brought up-to-date, is the Rougher or "Back Edge Planing Machine." The experience gained in the firm's engineering works with modern machine tools has been applied to this ma-

**The Chemical Laboratory in Fry's London Foundry.**

is adaptable for melting and cleaning type, slugs, stereotype plates, etc. Another production is a special design of burner for use on composing machines with oil and electricity in out-of-the-way places where the quality of the gas is poor or unobtainable. The unique design of quotations, metal furniture and spacing materials, which have now been on the market two or three years, have met with a good reception among Colonial printers. These are manufactured with a view of reducing the weight of formes and of securing a minimum of lightness, at the same time giving to the metal a maximum of strength. It is claimed that the metal used in these productions is 25 per cent. lighter in weight than other varieties of metal furniture.

### **Messrs. HEWITT BROS.**

Representatives of Colonial houses will find at the works of this old-established firm of printers' engineers and material makers, a wide range of machinery suited to the requirements of the printing and kindred trades, especially on the electrotyping and stereo-

**The Hewitt Roughing Machine..**

chine, with the result that the planing of the plate is performed much more accurately and faster than has been accomplished hitherto. The work done has been much appreciated by the many firms of high reputation in the country who have installed it; for it is claimed that owing to the increased accuracy of the plates the cost of making-ready is reduced to a minimum. Messrs. Hewitt also make and supply other modern appliances for the printing and kindred trades.

### **Messrs. T. G. & J. JUBB.**

Jubb's stereo and lino metals are a valuable asset to the printing office, particularly for newspapers. The firm are regularly improving the quality of their products and large sales to the *Daily Mail* speak for the results arrived at. With works at Leeds and offices in London, Messrs. Jubb can handle big business expeditiously.

### **Messrs. JOHN SHAW & SONS.**

Messrs. John Shaw and Sons, in Ruling Machine Works, Honley, near Huddersfield,

are making an Improved Disc Ruling Machine, to be named the "Super-Imperial." This machine will be firmer and more substantially constructed, especially on the ruling cylinders and fittings than the firm's New Imperial Disc Ruling Machine. The machines will be made with cylinders 31½-in. or 80 c/m in circumference, which will strike sheets up to 30-in. long, and also 43½-in. or 110 c/m in circumference, which will strike sheets up to 42-in. long. The machines will be made in 2, 3, or 4 colours. Machines will be turned out for ruling one side only or both sides at one feeding. On wide machines for ruling sheets 39-in. wide there will be a centre support for the disc rods which will support the rods in the middle and prevent skipping of lines. There is also more room for the operator to work than on the other style of machines. There will thus be more accurate work on this new model. The machines will be made for hand feeding only or with latest model ream feeder attached or patent pile feeder attached. Also with the Bailey rotary perforator attachment and patent sheet cutter. Messrs. Shaw are also making a new model combined pen and Disc Ruling Machine for ruling and striking both with pens and discs. The disc fittings are set in a light steel frame, which are easily fixed to the beam of machine. These fittings are constructed very firm and rigid, and first-class striking can be done both with pens and discs. On wide machines there is a centre support for the disc rod. The ordinary striker pen machines, we hear, are more popular than ever, and the only difficulty is in executing orders promptly. It is good to know that the works are always extremely busy with these machines. A "New Imperial" Rotary Perforating Machine, which makes a slot perforation and cuts the bits clean out of the paper, is another product of the Honley Works. This machine is made for straight-through perforating only or straight-through and striking, and made in three sizes to perforate sheets up to 30-in., 36-in. and 42-in. wide. This machine is constructed to ensure rigidity and firmness, and it is a first-class machine in all respects. The makers supply with each machine, six sets perforator cutters. Scoring cutters and cutters for trimming the edges of the sheets can also be supplied with machine. Honley Works has been increased twofold in the past two years, and over 100 workpeople are employed.

### Messrs. B. WINSTONE & SONS, Ltd.

This well-known firm of printing ink manufacturers report a very satisfactory extension of trade with foreign and Colonial Governments in their various commodities. Among the class of goods that are at present appealing to the home and Colonial printer are their "Non-Forgeable Bank Note and Treasury" and "Permanent Stamp" inks. A big demand is also being experienced for rotary photogravure, copperplate, offset and high-class letterpress inks. Messrs. John Dickinson, who are the agents for Australia and South Africa, are in a position to execute promptly all orders in these countries where

the products of Messrs. Winstone may be required. Other overseas markets are also well represented, the firm having agents in practically all parts of the Colonies. With regard to future enterprise, a special ink will shortly be introduced in the Colonial market which is expected to revolutionise the printing trade. A hint with reference to this new development in printing inks has already been made in these pages by Mr. Wm. Gamble.

## German Competition in "News."

### The Exchange Problem.

A communication has been received in the Department of Overseas Trade from the Commercial Counsellor to His Majesty's Embassy at Rome (Sir E. H. Capel-Cure) to the effect that the proprietors of a local newspaper wish to receive tenders for news-print paper.

The Commercial Counsellor adds that the applicants have received a tender from Germany for the supply of this paper of an average weight of 48 to 50 grammes per square metre, free at the Brenner Frontier, at a price of 250 lire per quintal. This tender, he understands, has not as yet been accepted and quotations from United Kingdom manufacturers would be considered if such offers are financially advantageous.

It is appreciated that the price quoted by the German manufacturers renders competitive quotations very difficult, but United Kingdom manufacturers may care to take the matter up with the inquirers whose name and address will be furnished by the Overseas Department on application.

The German quotation brings into view the severe handicap which the debased exchange rate puts upon British manufacturers. If the exchange were normal the German quotation would be in the neighbourhood of £95 a ton. With the exchange where it is the present offer represents a price of £24, which is considerably less than the price of pulp in this country. The present price of British "news" (4½d. a lb.) brings the quotation per ton to £40. The incidence of the exchange rates, therefore, precludes British mills from hoping to compete in such a case as that mentioned above. And the effect, of course, is to add to loss of employment for British workpeople, while the Germans benefit. If the process is continued far enough, our former enemies will resuscitate their industries at the expense of our own.

THE United States Marines who recently raided a newspaper office at Managua (Nicaragua), and destroyed the printing press there because of the alleged publication of statements derogatory to the United States Navy, have been sentenced to two years' confinement and dishonourable discharge from the navy.

## U.S. Paper Cheaper.

The International Paper Co. announces a reduction in the price of news-print paper next quarter to 5 7 cents a pound, or \$114 £28 10s.) a ton, compared with \$130 (£32 10s.) in the first quarter of this year. The company is also giving customers the option of contracting from April 1st to December 31st at \$110 (£27 10s.) a ton, or of continuing the present arrangement, whereby prices are adjusted quarterly to conform with market conditions.

MR. RICHARD SHAW BOND, a partner in the firm of Messrs. Shaw and Sons, law publishers and stationers, of Fetter-lane, E.C., has died at Surbiton, aged 77.

## The Stationery Trade.

### A Year of Expansion and Prosperity.

There is not the slightest doubt that taken as a whole the condition of the stationery trade during 1920 was one of expansion and prosperity. Thus writes Mr. Percy Barringer (president of the Stationers' Association) in *The Times* (Trade Supplement), and he adds:—In spite of the excessive price to which paper had risen, the demand was continuous and insistent. Towards the end of the year, however, the trade slump brought about a downward tendency in the price of cheap papers. The better class qualities remained firm, and in some cases, especially rag and hand-made papers, the prices to-day are even in excess of the highest prices during the past year. The continuous rise in wages, and in the costs of raw materials, caused great difficulty to manufacturers, who seem, however, to have risen to the occasion, and to have been able to satisfy a public which had become too much accustomed to foreign goods in many branches of this trade. While all are anxious that prices should soon return to more or less normal figures, one cannot help feeling that much of the cut-throat competition of past years for many stationery articles has vanished for ever. When cheap foreign envelopes, for instance, were imported into this country, at prices with which British manufacturers had to compete, ranging as low as 1s. 3d. to 1s. 6d. per 1,000 retail, the condition of trade could not be regarded as satisfactory.

While the difficulties of manufacturers appear to have increased during the past year, the position of the retail distributor would seem to have been amazingly prosperous. Certainly during the last three months while there was a falling off in the sale of many of the fancy lines in which a stationer generally deals, there can be no doubt that the returns from stationery proper were above the average; and speaking generally, the retailer's figures would, I think, show an increase on any previous year.

Fortunately, the demands of labour have been met in a thoroughly practical and amicable manner, thanks to the institution of the Interim Reconstruction Committee, which was formed by a committee of the leading manufacturers, in conjunction with a similar number of representatives of the trade unions. These meetings, many of which were held during the year, were conducted in a spirit of friendliness and common sense, and were quite free from all acerbity or recrimination.

We are still far too prone to import foreign goods from mere force of habit, but signs are not wanting that the British dealer, and the British consumer, are becoming alive to the excellence of their own country's manufactures; and given a healthy public opinion in this matter, there is no reason why our particular branch of trade should not continue to expand to the advantage of manufacturer, dealer, and the public generally.

## Mr. T. E. Naylor and the L.S.C.

### Unemployed Catch the Executive Napping.

When is a trade union leader not a trade union leader? A suggestion for an answer to this riddle may be found in the strange position in which Mr. T. E. Naylor, of the London Society of Compositors, finds himself to-day.

Naturally a well-regulated society of over fifteen thousand members does not find that massed general meetings are conducive to the convenient and expeditious transaction of business, and therefore members' participation in the conduct of affairs is ordinarily effected by means of delegate meetings, the annual general meeting, however, being an exception, as it is open to every member of the society. But it happens that this one meeting at which all members are allowed to be present and vote is usually but sparsely attended, the yearly-recurring items of the agenda having become largely a matter of form, and it being taken for granted that the usual course will be followed, and the expected decisions recorded.

We understand, however, that last week's annual meeting provided an example of startling departure from precedent. An amusing, though somewhat regrettable, piece of sharp practice proved dramatically effective. The customary small attendance found itself unexpectedly augmented by a force of some 200-300 unemployed members, who were able in the voting to carry things as they pleased. The outstanding result of this swamping of the meeting occurred when the reappointment of the society's officers came up for consideration. To draw attention, we suppose, to their demands for still more than the already generous financial support and other assistance which the society is allowing them, these unemployed members negated the reappointment of the general secretary, Mr. T. E. Naylor, and of the chairman, Mr. T. Timberlake. This means that the society is temporarily without a general secretary and without a chairman.

The removal of an official from office by the vote of a general meeting is an almost unheard-of thing in the L.S.C. It is something like thirty years since anyone was thus deposed, and the case then in question was one of a quite exceptional character. This opens up possibilities of misunderstanding of the present position by those who do not know the peculiar circumstances, and gives a regrettable aspect to the occurrence. Allowance should be made, however, for the unfortunate plight of the insignificant minority of members responsible for this demonstration, the tragedy of unemployment providing some extenuation for their acting thus contrary to the dictates of fair play and even of decency.

For the present, Mr. F. A. Davies, the redoubtable assistant and organising secretary, is first in command, and under his direction no time is being lost in the carrying out of a

ballot of the members on the question of the election of a general secretary and a chairman. Meanwhile, numerous communications, including resolutions passed by chapels, are reaching the society's offices by post and by telegram, expressing regret at what has occurred and affirming unabated confidence in Mr. Naylor. Those who know the society best say that there is not a shadow of doubt that the result of the ballot will be an overwhelming reversal of the freak decision of last week's meeting, and will make Mr. Naylor once more the leader *de jure* that he still is *de facto*.

## East Ham Auxiliary.

The East Ham and Upton Park Auxiliary to the Printers' Pension broke all records on Saturday evening with a "plate" of £65. The president, Mr. E. W. Whittle, occupied the chair, and the hall was exceptionally crowded, and many could not get in. The heartiness of the proceedings is evidenced by the outcome being the highest amount during the 27 years' existence of the Auxiliary to the Pension Fund. Amongst those present were Messrs. J. Mortimer (Secretary to the Corporation), W. Irons, F. Anderson, J. Butcher, H. Roberts, G. Watts, Oliver C. Day and E. Wiggins. This occasion was the eighth consecutive time the president had occupied the chair.

The artistes were: Miss Connie Whittle (mezzo-soprano), Miss Doris Molen (soubrette), Miss Winnie Daniels (soprano), Miss Alice Palmer (soprano), Mr. Douglas Berridge (pianoforte selection), Mr. Lionel Brooks (female impersonator), Mr. Leslie Roberts (baritone), Mr. Bernard Roberts (entertainer), Mr. Fred Everett (humorist) and Mr. Bert Vann (comedian).

THE T.A. half-yearly report shows a very satisfactory return financially and numerically. The membership has increased by 1,151, making a total of 31,000. The financial gain is £22,933 11s. 11d., making total assets of £142,766 8s. 8d.

THE London Society of Compositors' Annual Report for 1920, just issued, consisting of 80 pages, places before its members a mass of information regarding the work of the Society during the period dealt with. With reference to finance it is stated that the superannuation credit account stands at £6,876, an increase of £5,204, which brings the total up to £96,273. Adding to this the value of the freehold property, £20,000, gives the grand total of £116,273, an increase on the year's working of £15,633. Unemployment allowances amounted to £11,144, an increase of £2,331 on 1919. In regard to membership, the report states that the number of journeymen is 14,153, an increase of 689; apprentices, 677, a reduction of 11; and superannuated members, 670, an increase of 22.

## How to Make Money in Printing.

**An Urgent Problem of the Moment  
Discussed by Central London Master  
Printers.**

The intriguing question "How Can Money be Made in a Printing Business?" was chosen by Mr. J. R. Riddell (principal of St. Bride Printing School) as the title of a lecture which he delivered last week at the Stationers' Hall, at a meeting of the Association of Master Printers of the London Central Districts. In a written announcement of the meeting, the secretary of the Association, Mr. W. H. Burchell, had suggested, in respect of this question of money-making printing, that "as this is the elusive hope which brings printers to London day by day, they should all make a point of being present at the meeting so as learn the 'Open Sesame.'"

The president of the Association, Mr. J. D. McAra, F.C.I.S., was in the chair, and introduced Mr. Riddell as a keen educationalist with a reputation throughout the printing trade, and remarked that he would earn the gratitude of all printers if he would tell them how they could make money in the business—especially to-day in London, where they were faced, not only with reduced demand for printing, but also with keen competition from the country.

Mr. Riddell began in somewhat startling fashion by alleging that his subject had been entirely misrepresented. He pointed out that the title of his address was not "How Money Can Be Made," but "How Can Money Be Made in a Printing Business?" which he submitted was a very different matter, susceptible even of the interpretation "How Can one possibly Expect Money to be Made in a Printing Business?" However, Mr. Riddell went on to deliver an address bristling with noteworthy and challengeable points of practical interest, at the end of which several members remarked that, in spite of the disclaimer, his lecture had contained many hints that were calculated to be genuinely helpful in the direction of more profitable printing.

Mr. Riddell first insisted that practical knowledge needs to be supplemented by other qualifications, such as business ability applied in the directions of finance and salesmanship, also by knowledge of human nature. He suggested that the printing business offers as great scope for making money as any other of our national industries, but he asserted that success could only be achieved by the elimination of waste, including the cutting down of all non-productives throughout the business.

### Ways of Cutting Costs.

Mr. Riddell went on to indicate a number of ways in which, he suggested, more profitable working could be secured.

Dealing first with the costly item of labour, he emphasised the need for such conditions

and methods as would elicit the greatest measure of production from the workers. In this connection he turned aside to comment upon the prohibitively high present cost of blocks, and he remarked upon the special opportunities which this gave to the lithographic printer in the production of illustrative work, particularly by photo-lithography. Mr. Riddell, of course, emphasised the importance of catching the young printer early and training him in economic methods. He remarked that if the conditions in London offices were reflected in the ways of the young craftsmen who came under his care, then the waste that went on in those offices must be appalling. After speaking of the advanced conditions of technical education in the printing industry, he raised the question of the so-called "College for Master Printers," about which there has been some talk. Master printers, he thought, did not want a special college to themselves, as it was a great advantage for them to associate with, and gain experience in the supervision of, the young craftsmen going through the existing courses of instruction.

In regard to the equipment of printing offices, Mr. Riddell expressed the opinion that while in this country we have a number of model offices, many plants are more fit for a museum than for taking part in a highly competitive business like printing. Plant not continually being used was a dead weight and a cost-increase that should be got rid of.

After stressing the importance of healthy and convenient conditions as aids to production, the speaker had a good word to say for "the fascinating and profit-earning science of motion study." He laid special emphasis on the need for greater efficiency and thoroughness in the making out of "works orders," and on the better co-ordination of the equipment and of the rotation of work in the different departments.

Costing was the next matter dealt with and Mr. Riddell said that no firm could afford to be without an efficient cost-finding system, and it was advantageous to use a standard method even though it might not be all that they would like it to be.

Proceeding to speak of salesmanship, the lecturer laid it down that every business, however small, should have a sales department. Touching on some of the principal points of salesmanship, he said representatives should have a knowledge of modern methods and technical details, and should be impressed with the fact that they are not out merely to complete sales, but also to render service; they should bear in mind, too, that it is possible to have a large turnover which is productive of little or no profit.

### Taps that Leak.

Much could be achieved, he said, in the reduction of costs, by the stopping of taps that leaked. Among the openings for economy to which Mr. Riddell called attention were the following: causes of difference between estimates and costs; securing harmonious working between departments; proper oversight of stores; systematic "dis"—it being preferable

to have a man set aside for continual dissing ; schemes to reduce the standing time of machinery ; wastefulness in power and light, through insufficient control or the use of inefficient apparatus ; materials, oil, rags, paper, inks, etc. ; cutting of stock to advantage.

Mechanical composition the speaker considered to be a frequent cause of loss. He went so far as to say that in the case of 80 per cent of jobbing printers mechanical composition, of whatever kind, did not pay. In conclusion, Mr. Riddell laid emphasis upon the serious problems confronting the industry, but said that in his opinion little could be looked for in the reduction of wages ; lower costs, therefore, would have to come by means of the elimination of non-productives. He suggested that it might be necessary for printers in certain districts to co-operate in undertaking only the work for which they were suitably equipped. Money was made by specialists. It might be advantageous to arrange that one firm in a district should do poster work, another book work, another colour printing, another lithography, and so on. It would be largely by co-operation and co ordination that more money would be obtained from the printing business, which hitherto had been more or less the Cinderella of our national industries.

#### Points from the Discussion.

The chairman having declared the meeting open for discussion,

Mr. Wise spoke in confirmation of several of the points touched upon. He emphasised the importance of costing, and said that since he had installed the Federation Costing System he had had a decreased turnover with a considerably larger percentage of profit.

Mr. J. W. Carley, in the course of an interesting speech, remarked that it was said—and he believed it was correct—that in America the employee produced three times the amount turned out by the English worker. He believed that controlled production as practised in the States was the key to this success. He emphasised the importance of the planning of work. Planning, he said, ought to be separated from performing. He advocated also the standardisation of operational times, recommending that standard operational times should be made the basis of charging, so that increased efficiency would mean increased profit.

Mr. Pitman said he hoped they were wealthy enough to have Mr. Riddell's address printed. After criticising the Federation Costing System as at present very imperfect, he went on to speak of the problem of getting more production from labour and remarked that owing to lack of proper equipment printers did not make the most of their workers, in fact, they often tended rather to break their hearts.

Mr. A. Spring disagreed with Mr. Riddell's remarks about mechanical composition. He considered mechanical composing machines to be a great benefit, especially to the small printer.

Mr. W. H. Gillard referred particularly to the training of the young craftsman and said

he thought it would pay the employer to send lads to school for four hours a week.

Mr. Burchell asked for some further information as to how letterpress printing was going to be knocked out by the photo-litho process. He referred particularly to illustrated catalogue work. In regard to the wastage of labour he thought the trade unions were a lot to blame. As to costing, he had yet to be convinced that the adoption of the Federation system would bring any more work or any more profit. He entirely disagreed with Mr. Riddell in regard to mechanical composition which he said was making more strides to-day than ever ; indeed, it was on the cards that they might have to put all their moveable types into the melting pot.

Mr. Riddell replied briefly to some of the points raised. He adhered to his statement in respect of mechanical composition. As to Mr. Burchell's question about photo-litho, he replied that he had not, when speaking, had illustrated catalogue work in mind, though some very fine photo-litho work in that line was being done, particularly in America.

The chairman closed the meeting by thanking Mr. Riddell on behalf of the Association, his expression of thanks being endorsed by hearty applause.

## The Duxeen Waterproof Book.

Their Majesties, the King and Queen, were much interested in the Duxeen waterproof book and white ant proof book exhibited at the British Industries Fair by the Dux Chemical Solutions Co., Ltd., St. Leonards Works, Hancock-road, Bromley-by-Bow, London, E. We have already referred to these striking exhibits, which are bound in the new material, Duxeen, the interior leaves consisting of Duxeen waterproof paper. The King was presented with two copies of the waterproof and white ant proof Duxeen book, and the Queen accepted a copy of *Daniel Gardner* (The Bodley Head), bound in Duxeen.

The Dux Chemical Co.'s stand at the Fair was well arranged. In an aquarium full of water, containing gold fish, etc., were placed Duxeen waterproof books complete with waterproof paper leaves and Duxeen binding fabric, beautifully printed and blocked in coloured inks. After continual immersion for days on end, the books are unaffected by the water. The colours in the fabric have not run, and the paper and Duxeen binding are as good as before they were put in. It is claimed that this is the first time in the history of the world that such a book has ever been exhibited, and it is expected to arouse interest in India, especially on account of the resistance of Duxeen binding and Duxeen paper to insects, mildew, etc., including the white ant.

In 1919 there were 46,312 deaths from tuberculosis in England and Wales, compared with 58,073 in 1918 and 55,034 in 1917. The figures for 1920 so far as known show further decreases.

# Current Topics.

## The Export Trade Situation.

WHILE there is ample evidence that British exporting firms are wide awake to the possibilities of the present juncture, and are making strenuous efforts to take advantage of every available opportunity for increasing this country's export trade, there is no denying the fact that the British exporter is at present up against very formidable difficulties. Not the least of these is the substantial advantage which Germany now enjoys by reason of the artificial inflation of the differences of exchange, an advantage which Germany knows how to utilise to the uttermost. Her efforts to extend her trade in respect of the printing industry admit of no misunderstanding. Emphatic witness is borne to this by reports now coming from the world-renowned trade centre of Leipzig, the city of 250 printing houses and a host of allied concerns. The Leipzig Fair, opening this week, promises to be a still more important international market than heretofore, as is evidenced by the proposal now mooted to erect in Leipzig an "Inter-

national Central World Commerce Palace," at a cost of some 30 million marks. Yes, it is clear that in many directions British manufacturers are up against very severe competition. This fact is strikingly reflected in the latest Board of Trade returns, just issued, which show that our February imports, £96,973,711, were £20,077,072 less than those of January, while exports were even more seriously down, the total of £68,221,731 showing a decrease of £24,534,363. While the handicaps under which our exporters are labouring are not all of them immediately remediable, it is certain that some of them are. The chaotic and unreasonable state of the exchanges is one of the most serious obstacles to our trade, and this unquestionably admits of some mitigation. It is encouraging to hear that the Board of Trade is at work on an approved scheme for the provision of export credits, and it is fervently to be hoped that the outcome of this will be something substantial and not much longer delayed, for this is a matter in which the British exporter is most urgently in need of assistance. Given a fair field and no favour, our manufacturers are not the men to whine about competition, but the present conditions constitute a quite unconscionable state of affairs which demands immediate rectification.

✱   ✱   ✱

## Alternatives for Trade Revival.

IT is understood that the "strike" of buyers which has produced the long-drawn-out depression in general trading, is due to high prices. People have still got it in their heads that present quotations are unreasonable, ignoring, perhaps, the costs which still enter into the production account. And so long as there is stagnation in the general trade, so long will the depressing atmosphere overhang our own industry. In order, therefore, to start up a revival of business, it would seem that prices must be reduced. There are three general alternatives put forward by the chairman of the Bradford Dyers' Association, by which it is possible to achieve this consummation. These three are: 1. A reduction in profits; 2. A reduction in wages; and 3. Increased output. The alternative which would appeal most to all concerned would be the third. By larger and more efficient production costs would decline all round. Manufacturers would find their materials cheaper, and their resultant product would carry on the story. Without doubt, during these dark days prices are adjusting themselves, though it be by slow and painful degrees. The question of lower wages is not likely to be a

palatable one for the employees. Indeed, employers are not anxious to lower them. It is common sense to prefer brisk trading and higher wages to stagnant trade and lower wages. The present state of industry, however, is forcing matters forward. From the workers' point of view it would naturally be better to have more work at a lower wage than to spend unremunerative time in idleness. Any readjustment, therefore, must have this consolation. The process from start to finish, however, is not an agreeable one; but conditions are pressing it forward, not only in this country, but elsewhere. The present phase of reconstruction is worse than any that has gone before, and its safe passage will demand the exercise of patience and forbearance on the part of everyone. The first alternative, a reduction of profits, it is stated, has already been adjusted by force of circumstances. The relation of demand to supply will take care of this item, and any resistance to it is bound to create an artificial state of things which must be bad for trade. Perhaps the attitude to this law on the part of retailers has helped to bring about the present slump. In paper and stationery lines, however, prices have long since been fairly adjusted in the main; but the trade is affected so much by conditions outside its sphere that it suffers from causes beyond its control. So there is no margin of profit to be cleared away. Indeed, from the manufacturer's point of view, it has been a question of selling at cost, or below, and those responsible for large works have been only too glad if they could recover their running expenses. In divers ways, therefore, the process of deflation is proceeding steadily and surely, and in course of time business will begin to move normally again.

### Precept and Example.

CERTAIN sections of the daily Press would sometimes be well advised to take their own medicine or cease their efforts to force it down the throats of other people. In the midst of a frantic campaign to keep out foreign manufactures and find employment for our own people, it is not an edifying spectacle to see the paper come through the streets on reels stamped "made in Finland" or "made in Norway." We quite admit ourselves that if foreign stuff is just as good, cheaper in price and available here for purchase and use, the business man will buy it and use it; but he ceases to be a good business man when he loudly condemns its use for other people whilst taking any advantage it offers for himself. Sooner or later these things come home to roost.

## Personal.

LORD RIDDELL is to preside at the fifty-eighth annual dinner of the Newspaper Press Fund, to be held at the Edward VII. rooms, Hotel Victoria, Northumberland-avenue, on April 28th.

SIR ERNEST HODDER-WILLIAMS has been elected chairman of Messrs. Wakley and Son, proprietors of the medical journal the *Lancet*.

MR. R. A. AUSTEN-LEIGH, the President of the London Master Printers' Association, is having a busy week. On Tuesday he presided at the Association monthly lunch, and gave an address on the organisation of the American printing industry. Wednesday, Thursday and Friday he was down to address costing meetings in Manchester, Bradford and Leeds.

MISS ETHEL SAYERS (Messrs. A. J. Wilson and Co.) attended the monthly luncheon of the L.M.P.A. on Wednesday, the first time a lady has honoured these gatherings with her presence.

MR. CECIL ROBERTS, editor of the *Nottingham Journal*, has accepted an invitation to become prospective Independent Liberal candidate for East Nottingham.

MR. E. B. SMITH was unanimously nominated as president of the S.E. London Master Printers' Association, at the monthly meeting of the Association held on Tuesday at the Bridge House Hotel. A report of the proceedings will appear next week.

WE are glad to hear that Mr. A. D. Phelps, the well-known East London printer, has recovered from his recent indisposition. He has just issued in brochure form his paper read before the Leyton Literary Club on "The Age of Youth," a novel feature being the provision of blank pages for "criticism, comment or contribution."

MR. H. C. POOLER, the former manager of Messrs. John Dickinson and Co.'s Calcutta office, has been appointed as export general manager in London. Mr. Pooler's sterling qualities gained for him many close friends among the paper merchants in Calcutta.

MR. R. H. WARREN, assistant manager in the same office some five or six years ago, has been appointed manager of Messrs. Dickinson's Melbourne office.

MR. WILLIAM PICKERING, who a good many years ago was editor of the *Newcastle Courant*, attained his 90th birthday on Sunday. As a young man he was in the bookselling and printing business, but afterwards he had a long and honourable connection with journalism.

## "The Elizabethan Sea Kings."

**Mr. Denison W. Allport Lectures before  
the P. M. and O. A.**

A breath of the sea and of the days of chivalry was brought into the March meeting of the Printers' Managers and Overseers (Parent) Association—held at the "Old Bell," Holborn, on Tuesday of last week—when the principal item on the agenda was a lecture by Mr. Denison W. Allport on "The Elizabethan Sea Kings." The president, Mr. A. E. Jarvis, was in the chair.

The president drew attention to the presence of Mr. J. J. Smith, who was welcomed by the members and who briefly returned thanks for their kind reception.

No less than eleven candidates were nominated for membership, their names being:—Mr. H. L. Baker (Bank of England Printing Dept. Overseer—Composing; Linotype Section); Mr. W. T. Burton (W. Speaight and Sons, Ltd. Overseer—Letterpress); Mr. G. C. Calthorpe (Millington and Sons, Ltd., South Tottenham, N.15. Overseer—Letterpress and Litho.); Mr. E. J. Chequer (St. Luke's Printing Works—Bank of England. Overseer—Letterpress Printing Dept.); Mr. A. J. England (Cornwall Press, Ltd., Paris Garden, S.E. Overseer—Machine-room; Letterpress); Mr. F. L. Hills (Bank of England Printing Dept. Overseer—Composing-room); Mr. S. J. Hoit (Howard and Jones, Gray's-inn-road. Overseer—Litho. and Collotype); Mr. S. M. Jackson (Messrs. Lowe and Brydone, Willesden, N.W.10. Overseer—Lithographic Colour Dept.); Mr. F. Last (Anchor Press, Ltd., Tip-tree, Essex. Overseer—Composing-room); Mr. G. W. Smith (Fleetway Press, High Holborn, W.C.1. Overseer—Machine-room); and Mr. T. J. B. Williams (Truscott and Son, Overseer—Lithographic Dept.). The nominations were proposed and agreed to *en bloc*, and a number of the new members who were present were personally welcomed by the president, who raised a laugh by insisting upon asking all of them whether they had duly received the book of rules and list of members.

Mr. E. W. Whittle, the general secretary, then introduced the question of the Dublin centre, the proposed dissolution of which had been several times previously before the Parent Association. Mr. Whittle referred to the difficulties of the present time in Dublin, and made clear the wish of the council to act considerably in the matter, but spoke of the impracticability of Dublin being represented at the delegate meeting to be held on May 7th. Mr. Whittle therefore read to the meeting the council's recommendation, namely:—"That a further six months' grace be allowed, but that in view of existing circumstances the Centre be not invited to the forthcoming Delegate Meeting." This he moved on behalf of the council.

Mr. E. H. Berryman seconded, emphasising the impossibility of any real representation of

Dublin in the circumstances in which that centre now finds itself.

The motion was carried unanimously.

The president then introduced Mr. Allport in complimentary terms, saying that the lecturer had already established a fine reputation by reason of the eloquent and interesting nature of previous lectures.

In introducing his hearers to "the Spacious Days of Great Elizabeth," Mr. Allport approached his subject by explaining that the outstanding feature of the time of which he was to speak was the life-and-death struggle between the Reformation and the old Popish faith. He then sketched briefly but realistically the characters of the champions of the two camps, Queen Elizabeth and King Philip of Spain. The character of Elizabeth, excessively vain and with many other failings, but good-hearted and beloved of her subjects, being contrasted with that of Philip, the heartless bigot. Mr. Allport then plunged into his epic story of the sea kings, whose doings are an outstanding feature of the most adventurous period of English history. He told of Sir John Hawkins and Sir Francis Drake and their thrilling and romantic voyages undertaken with the double object of humbling the flag of Spain and gaining what measure of treasure and renown might be obtainable in the process. The story is a fascinating one, and it was vividly and eloquently told as the lecturer added to the names of Hawkins and Drake those of Sir Humphrey Gilbert, Sir Richard Grenville and others of their kind, at times reciting passages from those dramatic treasures of English verse in which some of the doings of these old heroes have been enshrined, special attention of course being paid to the thrilling story of the defeat of the Spanish Armada. He stressed the service these men had rendered in raising England to the status of a great maritime power and in laying the foundations of the wider religious and civil liberty which we enjoy to-day. Mr. Allport concluded by referring briefly to the many illustrious men of the time who were connected more with peace than war, but whose fame is none the less immortal.

The vice-president, Mr. S. M. Bateman, having succeeded Mr. Jarvis in the chair, briefly expressed his interest in the story that had been told and his appreciation of Mr. Allport's way of telling it.

Mr. E. H. Berryman in a thoughtful speech then proposed a vote of thanks to the lecturer, and Mr. G. W. Davis (of Calcutta) briefly seconded, the motion being carried with acclamation.

Mr. Whittle, after re-echoing the hope, which had already been expressed by Mr. Berryman, that the association would have the pleasure of hearing Mr. Allport lecture again, drew attention to the forthcoming Printers' Pension Election, and asked, on behalf of the council, that all votes possible should be sent in for use of the association's two candidates.

Mr. Allport then brought the meeting to a close with a few words of thanks for the very hearty reception that his lecture had received.

## Answering Technical Questions.

### St. Bride Lecture.

A helpful and inspiring meeting was held at Bride Institute on Friday, March 4th, when an opportunity was given to the official examiners of the City and Guilds of London Institute (printing) to give their views on "The Answering of Technical Questions." Unfortunately Mr. J. J. Derrick was unable to attend through illness, but a paper which he submitted was read by the chairman, Mr. T. W. McAra, J.P. Mr. A. H. Wilson, composing examiner, and Mr. J. Pugh, machine examiner, by lucid explanation, drove their points home, each emphasising the need for careful reading of questions before an attempt was made to answer them, mentioning that invariably students gave answers that were not asked for, but rather something which they thought the questions referred to. It would pay every student to spend at least a quarter of an hour in carefully reading the questions before attempting to write their answers. It was stated that students should not pay too much attention to the answers to questions which appear in trade journals.

A keen discussion was entered into by Messrs. Harris, Sayers, Goldsack, Meeks, Collis, Almond, Pitman, and the Principal, who said that he had been waiting for this meeting for eight years and it was a matter of regret to him that one of the oldest examiners had not been able to take part in that gathering. He was not quite sure whether this gentleman was responsible for some of the ludicrous questions which had been set in the past, and he thought discretion the better part of valour. A number of questions set in the past were read and explanations asked as to their meaning. He (Mr. Riddell) would like to pay tribute to the two gentlemen on the platform, who since their association with the City and Guilds, had certainly helped to place the questions on a much more practical basis, but he was afraid that they had come into the movement too late. One of the speakers had said the City and Guilds Certificate did not stand for anything, which was probably correct, but the examination was a national one and from that standpoint the results may be considered comparable, although he doubted if any two examiners would give the same answer to a given question.

Mr. F. Collis, in a happy speech, proposed that the best thanks of the meeting be given to the speakers and Mr. Derrick whom they were sorry could not be with them. He said that in his opinion such meetings should become annual events, for nothing but good could come out of them; it enabled both examiners and those in the Technical Institutes to appreciate the point of view of each other. Mr. J. Fuller, Deputy Principal, in seconding the vote of thanks, said that, as a student who had sat for many City and

Guilds' examinations, he recognised that there were many questions set which made one wonder if they had been compiled by those with practical experience.

## Nickeloid Electrotype Dinner.

The annual dinner of the Nickeloid Electrotype Co., Ltd. (formerly a Department of Eyre and Spottiswoode, Ltd.), took place at Carr's Restaurant, Strand, on Saturday, March 5th, when the chair was taken by Mr. F. C. Napier, supported by Mr. R. Andrew Spottiswoode. The function, attended by 62 members of the Process Department, was a great success, the catering being first-class, and the programme excellent.

Mr. Theodore Agar's monologues were especially enjoyed, and Mr. Bert Smith proved himself a comedian of great resource. Mr. Henry Snoswell and Mr. George Cartali sang duets and solo items which were much appreciated, while special mention should be made of Mr. Bert Mowlam, Mr. A. G. Leech, Mr. Fred Eaton, and Messrs Frith and Humphreys. The accompaniments were ably shared by Messrs. P. W. Reynier and D. F. Jarman.

The stewards, Messrs. Eaton and Skitterall, were congratulated and thanked for arranging a most enjoyable evening.

## Manchester Printers' Cost Congress.

An attractive programme was arranged by the Manchester and Salford Association of Master Printers, Lithographers and Bookbinders for a specially convened Costing Congress at the Memorial Hall, Manchester, yesterday (Wednesday). Mr. J. C. Coppock (president, Manchester and Cheshire Alliance), was the chairman; Mr. John Sever, vice-chairman; and those down to address the gathering were: Mr. R. A. Austen-Leigh, "The immediate importance of stabilising prices; the Costing System as a basis"; Mr. Andrews, "The importance of and general aims of cost-finding"; Mr. Wykes, "Educational and social aspect of Costing"; Mr. King, "The importance of a uniform basis of Costing, and the futility of mixed methods or 'just as good' systems"; Mr. Waterhouse, "The necessity of a Lancashire lead in Costing"; Mr. Cooke, "The applicability of Costing System to litho printing, to deal also with the criticism that F.C.S. is only concerned with letterpress"; Mr. A. E. Goodwin, "The futility of sympathy with aims of F.C.S. unless accompanied by practical application and the advantage of the system to worker, employer and customer"; and Mr. A. Williamson, "The Costing Course and the provision of capable costing clerks."

AN Advertisement is always working.

## Trade Notes.

GERMAN picture post card productions: before the war, 32,000,000 monthly; to-day, 7,000,000 monthly.

MR. A. A. REID has been appointed editor of debates in the House of Lords in succession to the late Mr. Walter.

THE Manchester Printing Crafts Guild will be addressed by Mr. G. W. Jones, of "The Sign of the Dolphin," London, on "Printing Types," to-morrow, March 11th.

DISSOLUTION of the following partnerships is announced in the *London Gazette*:—Walter Hingley and Thomas Fox, printers, 122, Monument-road, Birmingham; Stanley Hope Pellatt and Dudley Edward Cooper, art publishers, 37, Russell-square, W.C.

MR. ALFRED GORDON SPRIGG, editor of the *Leicester Mail*, and vice-president of the Newspaper Society, has died after a long illness. Mr. Sprigg, who was 60 years of age, was formerly managing editor of the *Scarborough Post*, and had also been on the editorial staff of daily newspapers in Sheffield and Leeds.

MR. SHORTT, for the Home Secretary, replying to a question in the House with regard to the bogus *Pravdas*, to which we have already referred, admitted that the Director of Intelligence arranged for the removal of the English printer's name from the news-sheets and for their being forwarded to an address in one of the countries bordering on Russia.

NEWSPAPER PRESS FUND.—The annual meeting of the Newspaper Press Fund (Manchester district) was held last week, Mr. J. Mears presiding. Pensions amounting to £228 and grants to the extent of £155 have been made in the district, the amount of pensions having been increased by 50 per cent. to meet the higher cost of living. Thus there is necessity for increasing the donation list.

PRINTERS FINED.—At Sunderland Police Court, Andrew Douglas, printer, of Frederick-street, was fined £5 for having printed 1,500 football coupons for ready money betting. James Dowell Todd, printer, was fined £5 for having printed 300 coupons which were used for ready money betting, and William Jackson and James Garbutt, for having circulated 1,500 coupons stated to have been used for ready money betting, were also fined £5 each.

THE libel action by Miss Cicely Debenham, the actress, against the owners, printers, and publishers of *Thompson's Weekly News*, which was brought before Mr. Justice Darling and a special jury, ended in a verdict for £500 damages. Miss Debenham, who is unmarried, complained that the newspaper published a photograph of her with a child, adding the words, "Miss Cicely Debenham, who is playing in 'Who's Hooper?' at the Adelphi Theatre, with her little daughter Peggy."

MR. J. T. M. HORNSBY, ex-M.P. for Wairarapa and a well-known New Zealand newspaper proprietor, has just died.

FOR 60 years with Messrs. Miller and Richard, the Edinburgh typesetters, Mr. Alexander Brodie died last week, aged 74.

THE death took place on Sunday at Hayward's Heath of Mr. Charles Clarke, the founder, 40 years ago, of the *Mid-Sussex Times*.

THE death occurred last week, after a brief illness from pneumonia, of Mr. W. Sutcliffe, a well-known Darlington journalist, who had been on the literary staff of the *Northern Echo* for about thirteen years.

BY his will, proved at £44,581, Mr. J. S. Wood, chairman and managing director of the *Gentlewoman Illustrated*, Ltd., directed that his executors and trustees should not invest any money in Ireland.

THE Treasury have based their sanction of the Government Printing Works at Harrow as a three years' experiment on an estimated capital expenditure on plant and adaptations to buildings of £200,000.

A CIRCULAR has been issued by George Newnes, Ltd., to the shareholders, giving notice of an extraordinary general meeting to be held at the Savoy Hotel at noon, March 17th, to confirm a provisional agreement between George Newnes, Ltd., and C. Arthur Pearson, Ltd.

CHATHAM and District Master Printers held their first annual dinner at the Mitre Hotel, Chatham, on Friday, Mr. L. B. Mackay, president-elect, being in the chair. During the proceedings sympathetic reference was made to the serious illness of Mr. George Neves, editor and managing director of the *Chatham and Rochester News*.

AN eloquent appeal was made by the Duke of York at a Mansion House conference last week in support of the Industrial Welfare Society, of which he is the president. The Lord Mayor presided over a large and influential gathering, which included several representatives of the printing trade, among them being Sir. William and Lady Waterlow, Mr. G. A. Isaacs, and Mr. Stanley Machin.

THE directors of the Caxton Insurance Co., formerly Printing Trades and General Insurance Co., have notified the shareholders that an offer has been made for the purchase of the whole of the shares at 12s. 6d. per share, ex any dividend that may be declared for the year ended December 31st, 1920, which the present shareholders will receive in addition to the price.

GEOGRAPHIA, LTD., Fleet-street, was summoned before Alderman Sir William Dunn, at the Mansion House on Thursday, for selling a road map of the Isle of Wight which was an infringing copy of the Ordnance Survey maps of the Isle of Wight, contrary to the Copyright Act, 1911. Sir William Dunn said he thought the defendants had sinned in error. He directed that payment be made of a penalty of 40s. and costs.

THE March *Royal* is full of excellent reading.

THE February *Librarian* contains a further instalment of Mr. Ross's "Select Bibliography of the Art of Printing to 1640."

THE Stationers' Social Society are arranging another whist drive and dance to be held at the Stationers' Hall, on April 8th, on similar lines to those which proved so successful in November last. The "Knock-out" golf competition of the Society is fixed for April 1st and the competition for the Horsburgh Cup for May 26th.

THE death is reported at Bournemouth, from pneumonia, of Mr. Henry Harrison, who, after 30 years' work, produced a dictionary of the "Surnames of the United Kingdom." The dictionary was first published in instalments in 1907, but the completed work was not ready until 1918, when it took the final form of a two-volume work.

**PAPER AND THE CENSUS.**—Mr. Baldwin states in Parliamentary Debates that the total cost of printed matter for the forthcoming census to date was approximately £20,300, of which £16,000 was in respect of paper. Of the tenders received that of the Stationery Office Press at Harrow was the lowest for the portion of the work which had been entrusted to them.

CONSIDERABLE damage was done by a fire which broke out recently at Messrs. Bethell's cardboard box manufactory in Boundary-place, Liverpool. The prompt work of the brigade, saved the main building. A corrugated iron shed containing empty cardboard boxes and cardboard cuttings was destroyed, and the top floor of the store was damaged by fire and water.

"PEARSON'S MAGAZINE" is to be congratulated on securing from Mr. Herbert Jenkins, the creator of "Bindle," a new series of Bindle stories, in which Mrs. Bindle plays the leading part. Other attractive features include an interesting article by Sir John Martin Harvey, who tells the romantic story of how the famous play "The Only Way" came to be written.

THE total cost for printing and paper of the first issue of the complete London and provincial telephone directories, produced at the Government printing works at Harrow, is £71,762, says Mr. Baldwin. For subsequent issues the cost will be approximately £48,900. It was decided that it would be more economical to print the directories at the Government printing works than to give the work to a private contractor.

## DIVIDENDS AND REPORTS.

**RAPHAEL TUCK AND SONS (LTD.)**—An interim dividend has been declared on the ordinary shares at the rate of 10 per cent per annum for the six months ending October 31st, 1920, payable on March 30th.

**"ILLUSTRATED LONDON NEWS" AND "SKETCH."**—Report for 1920 states that, after transferring £500 to bad debt reserve, £6,000 to reserve for tax and corporation profits tax, and deducting £285 for loss on sale of war bonds, accounts show unappropriated profit of £25,497, which it is proposed to carry forward.

**D. F. TAYLOR AND CO., LTD.**—This firm of colour printers to the trade reports that, for the year ending December 31st, 1920, net profits, after deduction for management expenses, depreciation, income-tax, E.P.D., corporation profits tax, etc., amount to £20,677. Directors recommend dividends of 2s. 6d. per share, preference, and 7s. 6d. per share, ordinary, making 5 per cent. and 10 per cent. respectively for the year, £3,000 to be placed to reserve, and £8,762 to be carried forward.

**RAITHBY, LAWRENCE AND CO., LTD.**—At the annual meeting on February 28th it was decided that a dividend be declared on the preference shares for 1920, at 5 per cent. per annum, less income-tax, and on the ordinary

shares and deferred shares for 1920, at 10 per cent. per annum, less income-tax, also that a bonus of £300, free of income-tax, be paid to the directors. Mr. Harry Whetton, a retiring director, was re-elected a director of the company.

**VAUS AND CRAMPTON, LTD.** (photographers, engravers, etc., London).—Particulars of £10,000 debentures authorised November 25th, 1920; present issue £9,000, charged on company's property present and future.

**EDUCATIONAL PUBLISHING Co., LTD.**—Debenture dated February 8th, 1921, to secure £5,000, charged on company's property, present and future, including uncalled capital, ranking *pari passu* with and subject to prior charges.—Holders: F. Greenslade, Cardiff, and R. Richards, 5, Threadneedle-street, E.C.

**PATEx, LTD.** (Sheffield).—Issue on January 31st, 1921, of £50 debentures, part of a series. (Previously issued £2,250).

### BANKRUPTCIES, etc.

**Re THE PRINTERS' EXCHANGE** (40, Fleet-street, E.C.)—A sitting of the London Bankruptcy Court was appointed to be held on March 8th, before Mr. Registrar Mellor, for the public examination of Donald MacKenzie, Frankpeter Reavey, and Geo. Wm. Macey, who carried on business as above and failed in January last as the result of depreciation in the market value of paper. The firm entered into big paper contracts, and they estimate their liabilities thereunder at anything between £100,000 and £150,000. Mr. Warren, official receiver, reported that the statement of affairs had not yet been lodged but was being prepared by a firm of accountants. The case was a very heavy one, and he required further time for purposes of investigation. By consent of all parties the sitting was adjourned till April 19th next.

## Readers' Pension Committee.

### Annual Meeting.

The annual meeting of the Readers' Pension Committee was held at St. Bride Institute on Saturday afternoon, when there was a fair attendance of new members.

Mr. W. A. Perkins (hon. treasurer) presided in the regrettable absence of Mr. J. Feldwick (chairman), who is seriously ill. It was agreed to send a letter to Mr. Feldwick expressing the regret of the members and the hope that he would speedily recover.

Nearly 30 new members were added to the roll.

The annual report commented on the success of the annual dinner, a success to which the chairman (Viscountess Rhondda) greatly contributed by the manner in which she filled the position. The establishment of the Committee's 12th pension was recorded, and the report further made an earnest appeal to readers to join the Committee not only for the purpose of obtaining help to obtain pensions themselves, should they ever require it, but in order to help their fellows who might fall by the way.

The receipt side of the balance-sheet showed, among other items, donations by friends given in connection with the annual dinner amounting to £371 6s. 6d., while members' donations and qualifying subscriptions showed the gratifying total of £81 1s. During the year the Committee has paid £332 10s. to the Printers' Pension Corporation to complete the 12th pension, and £134 10s. has been paid towards founding another pension, which is to be named the W. H. Shortell Pension, in acknowledgment of the work done on behalf of the funds by Mr. Shortell during the many years he acted as a member of the Committee as hon. secretary, and finally as treasurer. Altogether the Committee has paid into the Printers' Pension Corporation £5,778 15s. 7d. to found pensions in the interests of readers and readers' widows.

The report and balance-sheet were unanimously adopted. The following officers were re-elected: President, Right Hon. Viscount Burnham, C.H.; trustees, Messrs. J. Chandler and J. Randall; executive—Messrs. J. H. Bedford (hon. collector), W. Kemp, J. Hood, H. C. Golding, G. J. Warne and C. J. Tyrer.

Messrs. H. A. Goodall, A. C. Cook and E. A. Groves were elected to places on the executive vacated by Messrs. W. H. Jones, F. C. Peel and A. Wettlaufer respectively.

Mr. W. A. Perkins was re-elected hon. treasurer, and Messrs. C. G. Atherton and H. M. Gurr hon. secretaries.

The votes accruing to the Committee were allocated to five candidates for pensions at the annual election of the Printers' Pension Corporation on April 2nd, and an appeal was made to members to place in the executive's hands as many more votes as possible in order to ensure the success of those candidates (four of whom are widows).

A FEW HISTORICAL NOTES ON THE WORSHIPFUL COMPANY OF STATIONERS, by J. R. Riddell. London: Printed for private circulation by disabled men being trained as printers at St. Bride Foundation Printing School.

This handsomely-produced demy quarto brochure provides in permanent form a handy and interesting outline of the history of that ancient and dignified livery company of the printing and allied trades, the Worshipful Company of Stationers. Mr. J. R. Riddell, the well-known principal of the St. Bride Foundation Printing School, compiled these "Notes" in the first instance as an address to the young printer-craftsmen under his tuition. The information given, however, is of such general interest to the craft that many will welcome the somewhat wider publicity now given to this authentic résumé based upon the historic records of the Company. The brochure bears as a frontispiece an excellent reproduction by offset photo-litho of a water-colour portrait of Mr. Edward Unwin, the present Master of the Company, a short biographical sketch of whom is appended.

"IN SEARCH OF A PEACEFUL WORLD: The Practical Views of a Leader of Industry," by Sir Charles W. Macara, Bart. Manchester: Sherratt and Hughes. Price, 6s. net.

All students of social and industrial questions are familiar with the name and with the writings of Sir Charles W. Macara, and we doubt not there will be a wide welcome awaiting this volume, which is, in the main, a compilation of the author's contributions to the periodical Press since the last issue of his volume "Social and Industrial Reform"—which, by the way, has had a circulation of 20,000 copies. In the present volume a variety of industrial and economic problems are treated in informative fashion.

THE claim by Messrs. Thomas Crosbie and Co., Ltd., the proprietors of the *Cork Examiner*, for malicious injuries came on for hearing on Tuesday last week before the Recorder of Cork. It will be remembered that the three rotary newspapers were damaged by the Sinn Feiners with bombs and heavy hammers. The claim was for £15,000. Mr. Edwin W. Evans, the well-known printer's auctioneer and newspaper valuer, of 150, Fleet-street, London, E.C., acting for the plaintiffs, gave expert evidence as to the damage, and also the consequential loss, and succeeded in obtaining for his clients, an award of £14,970, practically the full claim.

# **Printing, Bookbinding & Kindred** **TRADES OVERSEERS' ASSOCIATION.**

## **Monthly Meeting.**

The monthly meeting on the 1st inst., at St. Bride Institute, the first one to be held with the new set of officers, gives every promise of even further success in the future, judging by the large and enthusiastic muster of members that were present. The chair was occupied by Mr. A. W. Hunt (president) and Mr. H. Milton (vice-president) supported.

The minutes of the last monthly meeting were read and confirmed.

## **New Members.**

The following candidates for membership were next submitted for approval: Messrs. R. Huggins (binding, Brown and Rowley), A. H. J. Carroll (composing, Brown and Rowley), J. E. Simmonds (fancy leather, J. E. Billing and Co.) and F. E. T. Fox (binding, Shaw and Sons).

Mr. Ware proposed and Mr. Wills seconded that the candidates be elected *en bloc*.

This was carried unanimously.

Mr. Hunt, in welcoming the new members said he was sure they would find amongst them something to help and encourage in the general atmosphere of the meetings. It was a great pleasure to him, on the first occasion he had of occupying the chair, to welcome four new members to the Association.

The new members briefly replied.

Items of correspondence and several announcements next came before the attention of the members.

Letters were read from two old members, Messrs. G. J. Hellery (Aylesbury) and J. W. Davis (Edinburgh), who sent best wishes to the members.

Mr. F. W. Bridges wrote saying that he could arrange for tea on the occasion of the Association's visit to the Exhibition on April 30th.

It was agreed to accept Mr. Bridges' kind offer and leave the arrangements in the hands of the secretary.

## **Programme for 1921.**

As the outcome of invitations from the president with regard to the programme for 1921, the members suggested various means by which the year's activities could be usefully and profitably spent.

A proposal to hold a whist drive in place of the members' smoker in October was agreed to, and it was also agreed that the annual outing and the bohemian concert should be held as hitherto.

The secretary was also instructed to get into touch with the following gentlemen with a view to the arranging of lectures:—Messrs. E. A. Clifford, A. J. Daines, Chris Atkins, J. Walker, B. J. Sansom, and J. E. Simmonds.

The secretary was asked to send a letter of sympathy to Mr. Daines (past president), who was absent on account of ill-health.

## **Annual Dinner.**

This event, to be held at the Holborn Restaurant on March 14th, promises to be one of the biggest things undertaken by the Association. Of 400 tickets sent out, 300 are still outstanding. One of the stewards, Mr. J. Fleming, said the concert artistes were the best that could possibly be secured, and he was quite sure their services would be thoroughly appreciated.

## **The Overseer.**

The evening being still young, Mr. Eden read to the members an amusing sketch of the overseer as portrayed by "Mac" in "Printshop Portraits," as it appeared in the October number of the "St. Bride Foundation Printing School Bulletin." Such choice sentences as the following caused much amusement:—"We will forthwith, and without further digression, discuss that important biped—the overseer." "A wise manager chooses sad, satirical fellows, with keen, green eyes, for his overseers. They need not be clever craftsmen—they are not employed to print, but to keep proficient printers printing."

Pleasure was evinced at this rendering of the character of the overseer, as revealed by "Mac," and there being no other business before the members, the proceedings terminated.

# New Inventions.

## Chain Driven Cylinders.

In an invention patented by Mr. A. Terrey the printing and impression cylinders of a rotary machine and the other driven-elements such as the inking cylinders are provided with one endless chain for driving all the elements of each printing unit. As shown applied to a double perfecting machine in which there are four printing units, each unit is driven by

a chain *a* which passes around the printing cylinder *e*, impression cylinder *f*, and the ink fountain and distributing rollers *b*, *d*, and also around an idle sprocket *h* which is preferably spring mounted. The driving rollers *g*, *g'* or pair of printing units are preferably geared together, and are driven by a chain *k* from a countershaft *i* driven from a motor *j*. The shaft *i* is preferably geared to the folding and delivery apparatus by helical gearing.

## Printing Cylinders.

A cylinder, of the kind adapted to be expanded or contracted to retain or release an intaglio or other printing shell, as patented by Messrs. A. Terrey and J. W. H. Smith, is divided longitudinally by a single slit along

its whole length and is formed with a double conical bore decreasing in diameter towards the middle of the cylinder for engagement with longitudinally adjustable conical sleeves, by which the cylinder may be expanded. The cylinder *a*, split at *a'* and coned internally as shown, is supported at the ends on heads *b* having bosses *c* threading in the conical sleeves *d* which are keyed to the spindle *g*. Pins *j* may be provided on the

sleeves *d* engaging slots *i* in the cylinder *a* to prevent the latter rotating. Holes *e* are provided on the heads *b* to receive a tool for rotating them, and the heads may be held against backward rotation after the split cylinder *a* has been expanded within the printing shell by suitable means, such as a pawl *h* pivoted on the outer face of the head *b* engaging with a ratchet wheel *f* secured on the spindle *g*.

## Loose-Leaf Binders.

Under a patent by Mr. J. T. Cartwright in a loose-leaf binder of the type in which the filing-posts fixed to the bottom bar are provided with a T-shaped head engaged by a turn-button on the top bar, the button is attached to a lever, on which means are provided to hold the lever in the closed position. Fig. 3 shows the parts open and Fig. 6 shows the parts closed. The top plate *c* is hinged to the upright portion *b* of the bottom plate *a*, and is formed with a number of openings, corresponding to the number of filing-posts, each of which is provided with flanged rings

*e*, *g* to act as bearings for the hollow hub *f'* of a lever *f*. Diametrically opposite projections on the hub *f'* are turned in to form an interrupted flange *f''* which engages with the projections of the T-shaped top *d'* of the post *d*. A stud *h* on the lever is adapted to snap into the recess *i* in the plate *c* to hold the lever, which is made of springy material, in closed position, or alternative methods may be provided. The levers may be connected together so that all may be operated simultaneously. The locking means may be in the form of a bayonet joint.

## Collapsible Boxes.

In a box or lid of the type in which the bottom of the box or top of the lid is divided

diagonally into halves  $e, f$  that are creased at  $e^1, f^1$  respectively, so as to allow the sides and ends  $a, d$  to be folded upon each other, the box etc. is retained in the set-up condition by a string  $i$  etc. permanently attached near the

edge of the part  $f$  and extending from the underside thereof, up through a hole  $k$  near the edge of the part  $e$ . The free end of the string etc. is secured by passing it round a button  $m$  fastened to the part  $f$ . The parts  $e, f$  are flanged for attachment to the sides and ends of the box or lid, and the part  $f$  overlaps the part  $e$ . One or both of the parts  $e, f$  may fold inside or outside the collapsed box or lid. The patentees are Messrs. W. Gibbons and Sons and Mr. C. C. Gibbons.

### Creping Paper.

A British patent has been granted to Mr. Walter W. Colley, managing director of Colley's Patents, Ltd., Bermondsey, London, for an invention which seeks to secure greatly increased output from a paper-creping machine and to produce a composite creped paper possessing greater substance or thickness or presenting different characteristics (such, for example, as textures, degrees of toughness, absorption, colour, etc.), at its opposite surfaces, thus being better adapted for various purposes, as for decorative, toilet or sanitary use, than the creped paper manufactured hitherto.

The apparatus for creping two or more layers 15, 16 of paper, suitable also for creping

paper thicker than usual, comprises an upper roll 24 having a relatively soft and resilient surface of rubber, felt, or other material, a lower roll 25 having a smooth and rigid surface, and a straight-edged flat metal blade 27 extending between the rolls as shown. Lines of weakness may be produced transversely by a row of pins on a roller 29 co-operating with corresponding holes in a roller 30, and longitudinal slitting by discs 35 co-operating with grooves 34 in a roller 32 which may be the take-off roller from which the reels 36, 37 are wound, or the layers may be wound together on one reel. The several parts are driven by spur-gearing.

### PAPER AND PRINTING TRADE PUBLICATIONS.

STONHILL AND GILLIS, 58, Shoe-lane, London. Publishers of the *British and Colonial Printer and Stationer* and the *World's Paper Trade Review*.

The up-to-date Colonial printer is naturally anxious to have information as to the latest improvements in machinery, new processes, and all labour and time-saving devices. He is also very desirous of having a knowledge of paper prices and trade movements generally. There is a fund of information in the weekly issues of the *British and Colonial Printer and Stationer*, which appeals to printers, stationers, box makers, envelope makers, bookbinders, etc. Why not have the journal regularly delivered to your office or works? It is a good investment at a low price—13s. for one year (subscription 8s. 8d., plus 4s. 4d. postage). Send the publishers a remittance at once.

In the Colonies quite a number of movements are on foot to build pulp and paper mills. Who are the makers of special machinery? What is the selling price of wood pulp and other papermaking materials? What are the conditions of the world's pulp and paper markets? All this information, and much more, will be found in the *World's Paper Trade Review*. Interviews with leading men associated with the industry are published, latest inventions described and illustrated, new processes dealt with; in fact, its pages teem with practical information and commercial intelligence relating to paper, pulp, paper stock, engineering and the allied trades. Order the *Review*, which is published weekly, for a year, and send a remittance of 32s. 6d. to cover cost (subscription 26s., plus postage 6s. 6d.).

# Paper and Print—Export Figures.

Shipments of British Manufactures during the Opening Month of the Year show on the whole an Encouraging Development.

## Boards.

It is satisfactory to notice that the exports of boards, which fall under the general heading of millboard, strawboard, cardboard, etc., show an improvement. The shipments during the opening month of the year were 8,361 cwts., an increase of 4,702 cwts. as compared with corresponding month of last year, the respective values being £33,637 and £10,931. January's exports were slightly above those for the pre-war period, January, 1913.

## Boxes and Cartons.

Boxes and cartons of paper and cardboard (including folding boxes) were exported during January to the extent of 2,841 cwts. valued at £21,922. Cancellations of orders have placed manufacturers at great inconvenience, as the boxes are invariably "made to order." Notwithstanding, exports were better than in January of last year when they amounted to only 1,524 cwts. valued at £9,312. In January, 1913, the shipments were 5,555 cwts. of the value of £9,086.

## Coated Papers.

Printed and embossed paper hangings were shipped during the opening month of the year to the extent of 9,523 cwts. and other sorts (not including waterproof wrappings, roofing paper and sensitised photographic paper) 3,131 cwts., of the value of £77,308 and £41,047 respectively. "Other sorts" show considerable expansion, being even better than the pre-war month, January, 1913.

## Packings and Wrappings.

In packings and wrappings the British manufacturer has to face keen foreign competition, and exports from the United Kingdom are by no means large. Taking the first month of the year, the quantity was only 11,869 cwts. of the value of £49,809, quite a slump compared with the corresponding month of last year when the shipments amounted to 45,750 cwts., valued at £66,112.

## Paper Bags.

An encouraging start has been made in the exports of paper bags, the quantity for January amounting to 3,149 cwts., an increase of 436 cwts. compared with the corresponding month of last year, the respective values being £15,091 and £8,169. In January, 1913, the shipments were 3,826 cwts. valued at £4,140.

## Playing Cards.

Playing cards of British manufacture are well known for their high quality, and the export demand, although considerably under the pre-war standard, shows a steady expansion. For instance January's supplies

were 5,124 dozen packs of the value of £3,453, as compared with 3,233 dozen packs, valued at £1,578, in January of last year.

## Printed Books.

In printed books, the overseas demand shows an important development, the value for the opening month of the year, reaching nearly half-a-million sterling, whilst the quantity greatly exceeds the pre-war standard. The actual shipments for January of the years given were:—1921, 49,304 cwts. (£495,162); 1920, 20,656 cwts. (£242,223); 1913, 35,531 cwts. (£208,898).

## Printing Paper.

The year opened with quite a good spurt in the exports of printing paper (not coated). The home market for some months had been under a cloud of depression, and shippers have naturally given more attention to overseas trade. The total exports for January were 130,300 cwts., of the value of £617,598, increases of 73,117 cwts. and £420,208 as compared with the first month of last year. More headway has still to be made to bring exports up to the pre-war footing, as shipments in January 1913, were 187,865 cwts., with, of course, a much lower value, viz., £177,004.

Many of the colonial markets have been looking to other sources of supply during the disturbed trading conditions that have ruled since the armistice. It is very encouraging to find now that British Possessions are again turning to the Mother Country for their requirements. The returns for January last show the exports to be 102,259 cwts., an increase of 73,459 cwts. as compared with the first month of last year.

The increased purchases on the part of Australia are very noteworthy, the figures for January last being 48,860 cwts. of the value of £222,791 as compared with only 2,334 cwts. and £6,838 for the corresponding month of last year.

India is also an important market for British printings. The supplies during January last were 17,526 cwts. of the value of £77,470, as compared with 14,700 cwts. valued at £43,043 for January of last year.

A pleasing expansion is to be noted in buying for South Africa, as the exports in January last were 16,390 cwts. and a year ago only 2,674 cwts., the values being £81,848 and £8,828 respectively.

New Zealand and Canada also figure as buyers on a larger scale.

Shipments of British printings to Foreign Countries show very little fluctuation as compared with a year ago.

**Printing Type.**

A satisfactory improvement is shown in the exports of printing type, which amounted to 34 tons, of the value of £11,539, in January, as compared with 17 tons and £5,911 for the corresponding month of last year. Pre-war—taking January, 1913—the exports were 48 tons of the value of £7,312.

**Stationery—Envelopes, etc.**

Although envelopes (not including boxed stationery) were not so largely exported in January as compared with the corresponding month of last year, 3,059 cwts. as against 3,447 cwts., yet the value shows a substantial advance, £35,644 as against £19,904.

Other sorts, including account, note and exercise books, etc., were exported during the first month of the year to the extent of 19,020 cwts., valued at £275,925, an increase of 5,596 cwts. and £134,958 as compared with January last year.

**Writing Paper.**

A splendid recovery is shown in the exports of British writing paper in large sheets, the shipments being well in advance of pre-war business. In January of the following years the exports were:—1921, 22,505 cwts. (£156,161); 1920, 12,519 cwts. (£66,043); 1913, 10,272 cwts. (£35,788).

British Possessions took a total of 17,598 cwts. in January last, 41 per cent. going to Australia, 21 per cent. to India, 11 per cent. to New Zealand and a similar quantity to South Africa. In January of last year the

total exports of writings to British Possessions were only 5,722 cwts., which gives an increase of 207 per cent. in favour of the opening month of this year.

British writings going to Foreign Countries in January last amounted to 4,907 cwts., as compared with 6,797 cwts. for the corresponding month of last year, a decrease of nearly 28 per cent.

**New Paper Mill in Australia.**

Good progress is being made with the construction of the new paper mill which the Australian Paper Mills Co. is erecting at Fairfield, Victoria. It was expected that the mill would be in operation by January 1st. It is to occupy 23½ acres and cost approximately £200,000 and will have about 300 employees. It will be the largest of its kind in Australia, with a capacity of about 160 tons a week.

N. V. NEDERLANDSCHE PAPIERHANDEL AMSTERDAM.—This Company have increased their capital up to one million guilders and will consequently be one of the few Dutch houses in a strong position, as soon as trade revives, to be in a favourable position to furnish their customers with all kinds of paper, boards, etc., on competitive terms.

## At the Sign of the Wheatsheaf.

### Some Historical and Descriptive Notes about "Wheatsheaf Works," Messrs. Straker's Bindery.

Associated with the world-wide prestige of London as a great centre of the publishing trade is its long-established and extensively acknowledged reputation in bookbinding. This handicraft has for many years been intimately identified with the industrial life of the metropolis, and numerous London binderies can claim a history reaching back many decades into the past. Among them must be numbered the establishment of Messrs. A. Straker and Son, Smith Bros., Ltd. This was founded by the Straker family over a century ago, and in the sixties the works were moved to New-court, Farringdon-street, and named "Wheatsheaf Works." Antiquarians will note with interest that this name was taken from an ornamental boss, representing the head of a lion holding a sheaf of wheat in its mouth, which was on an old gateway leading into Wheatsheaf Yard. The design of the gateway and boss has always been attributed to Inigo Jones. The site of this is now covered by Messrs. Harmsworth's building, known as Fleetway House, and when the old buildings were in course of demolition Messrs. Straker endeavoured to purchase the original gateway, but were unsuccessful owing to the keen competition of others to obtain this relic. The wheatsheaf design is perpetuated in the present emblem of Wheatsheaf Works.

After spending many years at New-court, Messrs. Straker were compelled, in 1893, to make a further move owing to need of increased space. They then leased a site from the Corporation of London on the Victoria Embankment, and from the designs of Messrs. Wilson and Long proceeded to build their present handsome and commodious building. For some years this building stood isolated,

but to-day, of course, the whole neighbourhood is built over with fine premises, one of which is the Guildhall School of Music, which is just opposite.

In 1908 the firm further extended their activities by purchasing the old-established business of Messrs. Smith Bros., of Ivy-lane. This business was taken over lock, stock and barrel, but as the Ivy-lane premises were not convenient, Messrs. Straker eventually erected a new and extensive building in Clapham, known as the Ivy Works. The two factories are kept in close communication with each other by a fast motor service.

The Straker family are to-day largely represented in the control of the business by Mr. Ernest Straker, who is chairman, and by his cousin, Mr. A. Stuart Tomson, the two together acting as managing directors. With them in the direction are associated Mr. H. A. Harnett, former manager to Messrs. Smith Bros. and Mr. Edward Turner, who has been connected with the old firm of Messrs. A. Straker and Son for many years, and who also acts as secretary to the company.

In visiting Wheatsheaf Works, one naturally turns first to the receiving department, where the quires are delivered from the vans. In addition to the receiving facilities of this department, there are also two or three broad shoots which lead directly into the basement, and down which work can be sent rapidly when there is an accumulation of vans waiting to discharge their loads. From the receiving room or the shoots the work is taken to the basement, where the parcels are opened and any cutting necessary is performed. The sheets are then placed in a lift and taken to the top floor, where all the work is folded.

A General View of the Sheridan Case-Maker.

This top floor is lighted by skylights, and by side windows on practically all sides, making a very airy and well-lighted work room. After folding, the work is passed down shoots to the next floor, where it goes into the hands of the gatherers and collators, and from them is passed on to the sewing machines, of which there are a fine range, the well-known Smyth sewing machines being a noticeable feature.

#### Bookbinding Machinery.

The books having been nipped, so that the air is pressed out, they are then passed down lifts to the forwarders, where the edges are cut or trimmed. Prominent here is the Seybold Three-Knife Book Cutter, that very powerful and fast machine, which cuts three sides of the books practically simultaneously. There is also, of course, a good range of guillotines for cutting the edges of the books, and here too are to be seen Crawley Rounders and Backers. After rounding and backing, the books are ready for putting into cases. Some of this is done by hand, but the bulk is done on the fast Smyth Casing-In Machines.

After being dealt with by the hydraulic presses, the books go on to the despatch department where they are jacketed and packed. Here, until last week, there have lately been immense stacks of "The Prince of Wales' Book," which was published last Thursday by Messrs. Hodder and Stoughton, in aid of St. Dunstan's Hospital.

Descending to the next floor, one enters the case-making department, where all the cases or covers are made for the various books to be bound. Here attention is at once attracted by a large Sheridan Case-Making Machine, which has recently been installed with all the latest improvements. Messrs. Sheridan make big claims as to the productive capacity of their case maker, which is certainly a remarkable machine. A good view of it is shown in the full-page illustration which we are able to give herewith. The cloth is automatically fed from a continuous roll and automatically cut into the proper lengths. The gluing of the cloth, feeding of boards, insertion of hollows, indeed, the entire making of the case, is automatic. The machine as shown makes cases from  $5\frac{1}{2}$ -in. by  $8\frac{1}{2}$ -in. up to 11-in. by 17-in. at the rate of 22 per minute; it weighs 5,500 lbs. and occupies a floor space of  $10\frac{3}{4}$  ft. by  $5\frac{1}{2}$  ft. In this same department are to be seen at work, a number of the excellent and most interesting Smyth Case-Making Machines, which we have previously illustrated and described. Here, too, are rotary board cutters and ingenious little cloth-cutting machines, etc., whilst the great store of book-cloth of every conceivable shade gives quite a gay effect to this department.

Reaching, next, the blocking department, one finds that here the cases are being blocked in gold or colour as may be required, for which work the department is equipped with a fine range of gold blocking presses, some very heavy embossing presses, and a big battery of colour printing presses.

Visiting these works from time to time, one would see being done every kind of cloth binding as shown in the work of the leading

publishers. Not only have Messrs. Straker kept consistent pace with the improvements which a century of continuously progressive activity has introduced, but they themselves have allied their efforts with the inventive faculties of the trade by patenting several advanced features in bookbinding machinery, tending alike to secure rapidity and a high grade of output.

The Wheatsheaf Works give employment to a large staff, numbering in normal times about 500 at the two factories. Evidence of Messrs. Straker's interest in their employees' welfare is seen in the commodious cooking ranges provided in the women's department, and in the sick fund which has been established for many years for the assistance of the staff, providing much-appreciated benefits; moreover the long terms of service to the credit of many of their employees bear witness in the same direction.

#### The Present Trade Depression.

As to the present state of trade, we gather that Messrs. Straker regard the much-wished-for break in the slump as being still but little more than a pious hope. The high cost of production blocks the way. The materials used on the modern cloth-bound book, they say, though slightly reduced, are still dear. The predominant factor, however, is labour, and whilst labour in every department from the mere porter to the skilled journeyman has to be paid for at its present high rate, they think it is obvious that it is impossible to bind books at anything less than double or treble the old pre-war charges.

However, it is encouraging to remember that the cost of living has already shown signs of being on the down grade. This means, we trust, that the worst is past, and that costs in every direction will surely, if slowly, decline. By increased use of the most efficient methods and the most up-to-date machinery—especially if these can be coupled with heartier co-operation of all towards the achievement of greater production—it should be possible for the binding industry to go forward into a future of steadily increasing prosperity.

A CATALOGUE of books—including a number on printing and the graphic arts, some dating from the fifteenth century—reaches us from Martin Breslauer, Versteigerungsstelle, Berlin, W.8.

MESSRS. HENNINGSEN AND WOLF-JURGENSEN, the leading wholesale house for the bindery trade in Denmark, is now represented in this country by Mr. Henningsen, junr., at 24, Pennywern-road, Earl's Court, London. The firm also have extensive export connections in Finland, Sweden and Norway. Before the war most of the binding materials used in Scandinavia were of German origin. Messrs. Henningsen and Wolf-Jurgensen now, as during the war, obtain most of their supplies from England. Only recently the firm have taken over the general agency for Denmark for the Smyth sewing machine, and they are the originators and sole manufacturers of the hand-marbled paper "Dansk Kunst" (Danish art).

# Costing Campaign in Full Swing.

## Enthusiastic Support at Manchester and Elsewhere.

The conference organised by the Costing Committee of the Manchester and Salford Master Printers, Lithographers and Bookbinders' Association was held at the Memorial Hall, Albert-square, Manchester, on Wednesday of last week. The hall was packed for both the afternoon and evening sessions, and the enthusiasm shown augurs well for the future trend of cost-finding in Manchester. No effort had been spared by the Costing Committee to make the affair a success, and the meetings were a signal testimony to the efficiency of the arrangements made. The day's proceedings commenced with a luncheon at the Midland Hotel, to which the presence of distinguished speakers from London and elsewhere lent added interest. After the usual exchange of compliments the party adjourned to the Memorial Hall to take part in the conference.

To a full assembly Mr. J. Sever (president, Manchester Association) extended a hearty welcome, and expressed the opinion that in view of the lamentable state of trade and a renaissance in price cutting, this effort of the local Costing Committee was peculiarly opportune. The course of the meeting he then placed in the hands of Mr. J. C. Coppock, as chairman.

Mr. J. C. Coppock (president, Lancashire and Cheshire Alliance), in his opening remarks commented on the programme motto, "Manchester Must Lead," and sympathetically referred to the late Mr. J. E. T. Allen, of Manchester, as a pioneer in the cost finding movement. As far back as 1911 Manchester could thus claim to have a lead in costing, but since then she had lagged behind, but so much time had been devoted to big labour questions in the last few years that Manchester was not alone in neglecting this prime interest.

The aim now should be to go for better prices and surer profits, with the costing system as a basis. If the printer could prove his costs, customers were willing to pay a reasonable price. The men had taught the masters the lesson of higher status, and it should not go unheeded. After a comment on the disloyalty of members one to another, the chairman commended the Minimum Price List as at least a stabiliser and educator in uniformity of price. But the foundation of everything was the Standard System of Cost Finding, by means of which every printer would know and could check his own costs. Tribute was paid to the early pioneers, some of whom were present on the platform, and the names of Mr. Harry Cooke, Mr. Austen-Leigh, Mr. Goodwin and Mr. Humphries were loudly acclaimed by the meeting.

### Not Argument, but Practice.

Mr. E. W. Humphries (president Federation of Master Printers) then went for apathetic lingerers in costing in typical fashion, and in a very direct and forceful manner bade them not to argue, but to get it (the F.C.S.) in. Not claiming to be an exponent of costing detail, he said the whole craft was under an immense debt to those who worked out the system, and some of them were here on the platform. One by one he proclaimed these pioneers—Mr. Harry Cooke, Mr. Austen-Leigh, Mr. Goodwin, and one who was not present, Mr. Howard Hazell, the vigorous announcement of each name being the signal for a storm of applause. Paying a tribute to the F.C.S., Mr. Humphries said that in earlier days his own firm evolved a costing system, but at the first London Costing Congress he realised that the F.C.S. was absolutely necessary for ensuring stability and co-ordination. In conclusion, the president appealed for education of the workers in cost-finding principles, and for the employer there was only one thing to do—to put the system in and work it.

Mr. Williamson (secretary Costs and Charges Committee) spoke of the minimum price list as a preventive of price-cutting, and dealt strongly with the apathetic attitude of English printers as compared with their American confrères. The majority of the members of American associations contributed data to a common fund and thus made possible the periodic production of invaluable statistical tables on costs, etc. Over here the great difficulty is to get more than the odd few enthusiasts even to reply to requests for data; attempts to establish standards on the basis of average records fail owing to this indifference of the English printer.

The main essential in cost-finding is the number of chargeable hours, and the Federation Costing System showed how to get them and what to do with them when you had got them.

Mr. R. A. Austen-Leigh (vice-president of the Federation) made a touching reference to the late Mr. J. E. T. Allen, and then proceeded to examine, with a dry and caustic wit, the reasons for variation in estimates and the averageprinter's ignorance of cost-finding. The variations he attributed to different opinions as to actual costs, errors and miscalculations of time performances, diverse applications of the profit ratio and different principles of cost-finding. It was difficult to eliminate the variation of time computations, but uniformity could be approached and price-cutting reduced by installing the Federation Costing System, applying the average rates and

making use of the minimum price list. The imprint movement might not be liked by some northern printers, but it was a step in the direction of lifting the status of the craft and would help to eliminate the price-cutting tendency.

#### Litho Costs and Charges.

Mr. Harry Cooke (president, Leeds Association) in a very clear and lucid speech deprecated the idea of a printer aiming to perform every class of work. The successful printer found out his best line, the one he understood most and became a specialist in it. A letterpress printer could never be a lithographer, and *vice versa*; often enough the small litho section of a general printing establishment proved a white elephant. In regard to costing, the printer who adopted hourly rates did justice to the customer but not always to himself. He must determine his own costs and hourly rates. If they proved higher than the district rates the weaknesses could be traced by the data from the costing records. Specialisation was the remedy for high rates, and enabled the printer to reduce his costs. Taking litho costing in more detail Mr. Cooke dealt with the question of free sketches, the cost of which, when unsuccessful, should be recovered as a percentage on successful ones. Speculative sketches were an essential feature of the chromo-litho business, and at least one house was built on the judicious handling of sketches. Dealing with the percentage on artists' rates he explained that a set factor was impracticable, the best method being to adjust each artist's wage and recover as much of the cost as possible.

In the stone and plate polishing section the conditions of working rendered a fixed scale of charges, according to area of surface, indispensable.

A peculiar feature of the litho section was the low relationship of turnover to capital. Jobs in several colours, involving many operations, were a common occurrence, and where letterpress orders might remain in the house for weeks, litho jobs would take months. With a turnover represented by two-thirds of the capital per year, an apparent profit of 10 per cent. is reduced in reality to 6½ per cent. For reasons such as this, the costs and charges in the lithographic trade require a treatment specially adapted to deal with them.

Mr. Waterhouse (managing director, Tillotson and Sons, Ltd.) brought the afternoon session to a close with a paper on "Lancashire's Lead in Costing." The special forte of Lancashire was to lead in industry, politics and social development. Long association with costing had abundantly proved its value in every direction.

Several questions were dealt with at the close of the session and the meeting then adjourned for tea.

A report of the evening session, with news of the campaign in Bradford and other towns, will follow in next week's issue.

---

**An Advertisement is always working.**

## Caxton Convalescent Home, LIMPSFIELD.

The annual meeting of the Governing Board of the above printing trade institution was held at St. Bride Institute on Saturday, when Mr. C. J. Drummond presided over an attendance of over 50 representatives, including the Right Hon. C. W. Bowerman, M.P., Messrs. E. Briscoe and J. J. Deasy (trustees), T. E. Naylor, W. F. France, J.P., W. Vandy, etc.

A very satisfactory report of the year's work was presented. Financially the Home was in a good position, the income for the year reaching over £2,505, and enabling the committee, after discharging all liabilities, to place £600 to their reserve fund for the further extension of the building. The increased number of patients admitted also bore testimony to the steady growth of the Home's convalescent work in the printing and allied trades. The War Memorial Wing is nearly completed. Building conditions have been responsible for the delay in connection with this work. Designs for the Roll of Honour, of over 2,400 names, are being considered. To complete this memorial, towards which over £5,200 has been subscribed, a further £2,500 is required to enable the new wing to be opened free of debt. The committee's recommendations, increasing the value of letters to three guineas, giving a three weeks' free stay, and paying patients' terms to one and a-half guineas per week were agreed to.

Mr. C. J. Drummond was re-elected president, the Rt. Hon. C. W. Bowerman treasurer, and Mr. S. J. White secretary. The additions of the names of Mr. Woodgate Stevens (Lithographers' Society) and Mr. Harry Murch (*Daily News*) to the vice-president's list was agreed to, and the vacancies on the committee filled by the appointment of Messrs. W. Capes (Printing Department, Bank), J. Tweed Close (Vaus and Crampton), and J. S. Hodgkinson (Williams, Lea and Co.).

An interesting presentation of honorary certificates to seventeen collectors for the Home, whose services ranged from 12 to 25 years, brought a very successful meeting to a close.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

#### SOUTH AFRICA.

A Cape Town firm of manufacturers' agents desire to secure further agencies for United Kingdom manufacturers of paper of all descriptions; twines, etc. (Reference No. 273.)

#### ARGENTINE.

An Argentine firm is desirous of representing in the Argentine British manufacturers of stationery. (Reference No. 293.)

## S.E. London Master Printers.

### Various Points Under Discussion.

The usual monthly meeting of the Association of Master Printers of South-East London took place on the afternoon of the 8th inst. at the Bridge House Hotel, London Bridge, Mr. H. N. Prentice, in the absence of Mr. Cecil Clay, being unanimously voted to the chair.

Mr. F. Mason, one of the secretaries, read the minutes of the last meeting, which were duly confirmed, and afterwards submitted several items of correspondence. Among these were letters from Mr. A. Williamson regretting the impossibility at present of starting the costing class.

A discussion regarding organisation arose on a letter from 24, Holborn. Several members expressed the opinion that they were not getting sufficient support from headquarters in the matter of securing new members in the district, and it was stated to be impossible for the organiser, Mr. J. Johnson, to do all the work single-handed.

Mr. Norman proposed, and Mr. Smith seconded, that in view of Mr. Johnson's heavy duties, and the extent of the work to be done, he should be afforded more assistance.

The resolution was carried.

Another item which arose out of the correspondence was with reference to a resolution on the question of unemployment, which had been moved and passed at the previous meeting. It had been sent to 24, Holborn.

A resolution was then moved in the following terms: "That this meeting of the Master Printers of the S.E. District regrets that this matter has been shelved for another month, and wishes to call attention to the fact that the cost of living has decreased, and that they feel strongly that the question of wages should be re-opened with a view to a reduction, thus providing more employment, and as speedily as possible."

A member who spoke in support of the resolution, said the matter was two or three months overdue already.

The resolution was unanimously carried, and it was decided that the resolution be sent to other District Associations.

### The New President.

The next item of the agenda was the nomination for the position of president to fill the vacancy caused by removal from London of Mr. Cecil Clay. Several names were put before the meeting, and eventually Mr. E. B. Smith was unanimously nominated for the post, his election to take place at the annual meeting in April.

### Organisation of the Woolwich District.

Mr. Smith regretted that the committee had been unable to do anything in organising the Woolwich District.

A member suggested that they endeavour to secure the assistance of Capt. Gee, M.P.,

who, he understood, was connected with the trade.

After some discussion Mr. Starkie promised to organise a meeting of Woolwich printers if Mr. Johnson would agree to address them.

Mr. Johnson promised his hearty support.

### Annual Meeting.

The annual meeting of the South Eastern Association was fixed to be held on April 6th at the Bridge House Hotel, and a sub-committee consisting of the secretaries, Messrs. Prentice, Poulton, Brigenshaw, and Starkie, were asked to arrange a meeting which would be of a musical and social character, the idea being to make it attractive to new members.

Messrs. Poulton and Brigenshaw were nominated to represent the Association on the council of the L.M.P.A., also Mr. Mason, subject to acceptance.

Mr. Johnson announced the securing of three new candidates for membership, who were duly elected.

### Alteration of Rules.

Mr. Poulton mentioned three points in the alteration of the rules which he moved should be postponed for the present, but should eventually come under the consideration of headquarters, viz.: (1) That new members should be proposed by one of their own members; (2) that the Association should accept as full members printers who have a plant of their own, and those who have not as associate members, with no power to vote, and (3) that in regard to the question of subscriptions a definite percentage should come back to the District Association.

The deliberations were carried on under the influence of the customary benign cup of tea, and after a vote of thanks had been accorded to the chairman the proceedings terminated.

## Stationery Office Paper Stocks.

In the House of Commons on Tuesday Mr. Baldwin, replying to Col. Sir A. Holbrook, said that the total stocks of paper held by the Stationery Office were: January, 1914, 3,625 tons; value, £118,320. January, 1921, 7,700 tons; value, £639,000. He had no reason to believe that the purchase of paper by the Stationery Office had at any time had a material effect on the advance of prices of paper. The Stationery Office did not buy much paper at the high prices ruling last year, as since the Armistice the department had been living to a great extent on surplus war stocks. No Government control existed over paper mills in this country.

THE Lithographers' Auxiliary to the Printers' Pension Corporation is holding another grand bohemian concert at Cannon-street Hotel on Monday next, March 21st.

# Trade Notes.

PRICES of all Newcastle newspapers are reduced to 1d. as from Monday, the 14th inst.

THREE HUNDRED members of the staff of *The Times*, representing all the departments concerned in the production of the paper and its supplements, were present at a House dinner held on Saturday night at the Holborn Restaurant.

**JOURNALISTS' SALARIES.**—A joint meeting of the Central London and Parliamentary branches of the National Union of Journalists on Saturday agreed to accept the revised offer of the Newspaper Proprietors' Association with reference to salaries and conditions on London newspapers.

THE Printers' Managers and Overseers Association are raising the value of their second pension and creating a third pension in the Printers' Pension Corporation. Anyone desirous of assisting in this laudable object may be glad to know that the address of the hon. secretary (Mr. G. H. T. Freeman) is 64, Darfield-road, Brockley, S.E. 4.

**L. S. C. PIECE SCALES.**—At a special delegate meeting on Wednesday of last week the London Society of Compositors considered the report of the special committee on the Revised Piecework Scale. The meeting resulted in a decision to adjourn the discussion until the 23rd inst., when it was expected the election of general secretary would have been completed.

**L. S. C. BALLOT.**—The ballot is in progress for the election of general secretary and chairman of the London Society of Compositors. Mr. T. E. Naylor for secretaryship, and Mr. T. Timberlake for chair, both have as proposer and seconder the two members who received the highest number of votes in the recent election of executive committee. It is expected that the result of the ballot will be known on the 23rd inst.

**"NATSOPA" WAGE ADVANCE.**—In respect of demands of the National Society of Operative Printers and Assistants for a revision of the rates of male and female workers, increases of 5s. per week are awarded by the Industrial Court for male adult workers in the first four grades of the ink and roller section of the printing trade. No advances are given to women and juniors. The new minimum rates will range from 72s. 6d. to 92s. 6d.

SIR CHARLES EVES, addressing the shareholders of the *Illustrated London News and Sketch*, Ltd., on Friday, said that the two important problems with which they had been faced were those of the increased cost of materials and labour. The net result of these increased charges was a trading profit of about £32,292, as compared with £47,573 for the previous year. This profit when added to the balance brought forward gave more than sufficient to meet the preference dividend, but the board were unable to recommend any dividend at the present time.

OWING to pressure on our space a report of the recent L.M.P.A. luncheon is unavoidably held over until next week.

AN interesting function took place on Saturday afternoon at the Lloyd Memorial Caxton Seaside Home at Deal, when some 50 members of the staff of the *Daily Telegraph* participated in the unveiling of the three tablets connected with their paper.

THE death has occurred of Mr. R. C. Spencer, a well-known journalist, who was the first president of the National Union of Journalists, which he helped to found. For a long period he was chief reporter of the *Manchester Guardian*, and was 70 years of age.

AFTER having been for the past twelve years printed and published for the North of England from Manchester, the *Daily News* has decided after Thursday, March 24th, to publish exclusively from London. The statement is made that the heavily increased price of paper, wages and other costs of production has made duplicate publication no longer commercially practicable.

MESSRS. A. H. JAMES AND CO. have started in business as paper merchants on their own account at 130, Queen Victoria-street, E.C. Mr. James has associated with him Mr. Cedric Jackson, Mr. C. R. Bedwell, and Mr. R. C. Sutcliffe. All have had experience for many years in the paper trade, with Messrs. Spalding and Hodge, Mr. James for 30 years, Mr. Jackson for 15, Mr. Bedwell for 14, and Mr. Sutcliffe for five.

MR. ESMOND HARMSWORTH has been urging in the House of Commons that, in order to effect economy, the *Labour Gazette* should be sent out in thin wrappers instead of in large stout envelopes, "nearly two feet long and over a foot wide." Dr. Macnamara, in reply, stated that of the 10,000 copies monthly about 9,000 were issued in thin wrappers and less than 100 in envelopes, which were much below the size indicated. An hon. member suggested that the information contained in the *Labour Gazette* should be issued through the ordinary Press channels and save what he held was a very expensive and unnecessary publication.

**NEWNES-PEARSON ALLIANCE.**—The agreement entered into in 1913 between George Newnes, Ltd., and C. Arthur Pearson, Ltd., for working in close association has proved very beneficial to both companies, and the directors of both undertakings now suggest that a still closer association should be effected. Each company is to maintain its individuality, but it is proposed that profits shall be pooled and divided between the two in the proportion of 58 per cent. to Newnes and 42 per cent. to Pearsons. This percentage is based upon profits earned by the companies respectively over a period of five years. A joint board of control made up of representatives of each directorate is to be established. A meeting at which shareholders will be asked to sanction this new arrangement has been called for to-day (Thursday).

or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.

THURSDAY, MARCH 17, 1921.

# Current Topics.

## The Five-Day Week.

Nor much has lately been heard about the five-day week for printers, and we gather that the position has for some time been stationary, those firms that adopted the shorter week a year or two ago having adhered to it, while other firms have not in the meantime seen sufficient reason for making a change. Our thought is directed again to the subject by learning that a well-known London printery, that of Messrs. Harrison, Jehring and Co., Ltd., has just decided to abandon the five-day week and revert to the older practice. Two years ago—in March, 1919—when the working hours in the printing trade were reduced from 50 to 48 per week, this firm, in full agreement with its employees, decided to close entirely on Saturdays. "In making that arrangement," say Messrs. Harrison Jehring, "we had two things in mind—the greater convenience to our workpeople, and the belief that the 'Free Saturday' would soon become the rule in the printing trade. However, during the two years' trial we have found

that considerable business has been lost to us owing to our works being closed entirely on the last day of the week, and, very reluctantly, we are obliged to come again into line with the usual practice in the printing trade. While we shall be only too willing to revert to the 'Free Saturday' arrangement if the trade in general decides to adopt it, until then we shall be open on every working day in the week." Thus it would seem that Messrs. Harrison, Jehring and Co., though they are convinced that the five-day week does offer some advantage to the printer—in benefit to employees, and, we presume, also, in economy of working—feel compelled to forgo it until such time as general agreement in the trade shall prevent its adoption from carrying with it a handicap in competitive printing. Is not this a matter which—like the question of standard prices and of the respecting of the other printer's imprint—demands missionary work to persuade the trade not to deprive itself of advantages which would be easily obtainable by concerted action?

## Last Month's Paper Imports.—Heavy Fall in Packings and Wrappings.

A DROP of nearly 53 per cent. is shown in the imports of paper, etc., into the United Kingdom during the first two months of the year, as compared with the corresponding period of 1910, the respective totals being 874,845 cwts and 1,861,932 cwts. The receipts during February were 472,572 cwts., whilst a year ago the imports amounted to 853,104 cwts. In printings, not coated, and writing paper in large sheets the arrivals last month were heavier than a year ago, viz., 155,615 cwts., as against 142,989 cwts. Sweden was responsible for 38 per cent. of the supplies of printings and writings received last month, an increase of 23,864 cwts. over the shipments in February of last year. The receipts from Norway were 10,110 cwts., a drop of 48,591 cwts. Supplies received from Germany were 7,355 cwts., an increase of 7,065 cwts., and from Belgium 6,565 cwts., an addition of 5,846 cwts. Only 65 cwts. were received from the United States, as against 2,148 cwts. a year ago. There were no arrivals from Canada or Newfoundland. A heavy shrinkage is shown in the imports of packings and wrappings, last month's quantity being 91,765 cwts., a decrease of 69 per cent. compared with a year ago. Germany is the only country that increased its shipments to this market, the quantity amounting to 22,111 cwts. last month, as against 8,557 cwts. in February of last year. Supplies from Sweden were 31,324 cwt., and from Norway 12,773 cwts., decreases

of 101,290 cwts. and 87,075 cwts. respectively. Canada sent only 1,610 cwts., as against 14,865 cwts. a year ago. Finland figures in the countries of supply as sending 11,303 cwts., and Belgium 5,084 cwts. Of last month's imports of coated papers, amounting to 4,528 cwts., Germany was responsible for 2,108 cwts., an increase of over 2,000 cwts. compared with February of last year. The receipts of strawboards last month amounted to 163,278 cwts., and mill, leather, card and pasteboard 40,480 cwts., decreases of 63,562 cwts. and 95,262 cwts. respectively.

## Testimonial to Mr. C. W. Bowerman.

It is only now been made generally known that at the quarterly conference of the Joint Industrial Council in January opportunity was found to consider the advisability of acknowledging in some tangible form the many services rendered to the trade during the past 30 years or more by the chairman of the Council, the Right Hon. C. W. Bowerman, M.P. Although he has during that period held an honoured position in the industry, Mr. Bowerman has at no time received special recognition of his work except at the hands of the London Society of Compositors, of which he was secretary until elected to Parliament in 1911.

The first Annual Convention of the Joint Industrial Council—to take place at Brighton on the 12th April—is to be the occasion for presenting to Mr. Bowerman, in some form or other, the testimonial to which the trade is now being invited to subscribe. The committee which is considering the matter has not yet decided what form the testimonial shall take, and it is suggested that this may be left for the decision of the committee, who will naturally be guided by the response that is forthcoming.

We understand that the desire of the promoters is rather to make the testimonial thoroughly representative of the trade than to raise a large amount of money, as Mr. Bowerman, happily, is not in a position that would make him desire anything more than the recognition of the services he has rendered to the printing and allied trades. It is to these trades that the invitation to subscribe is being addressed, and we hope that all sections and grades in the industry will respond by sending along subscriptions to one or other of the joint secretaries of the Joint Industrial Council, Mr. A. E. Goodwin (Federation of Master Printers) and Mr. A. E. Holmes (Printing and Kindred Trades Federation).

MR. A. W. FOSTER, secretary of the Paper-makers' Association, is to address the members of the North-West London Master Printers' Association on the subject of paper on March 23rd.

## Personal.

MR. T. Mc'Donald Rendle has been appointed chairman of the Council of the Newspaper Press Fund for the ensuing year, and Mr. C. Stewart-Caine, vice-chairman.

MR. G. EATON HART, of St. Clement's Press, Ltd., Portugal-street, is arranging for a party of London master printers to visit printeries and other places of special interest in the United States, the pilgrimage to start at the end of April.

MR. W. HOWARD HAZELL, J.P., has been appointed chairman of St. Bride Foundation Printing School Committee in succession to Mr. T. W. McAra, J.P., who has completed two years of most valuable service in that office. The position of chairman which Mr. Hazell now assumes suits well with his educational ideals, and it can fairly be expected that during his occupancy of the chair there will be further developments at this well-known and progressive institute. We understand that Mr. R. A. Austen-Leigh has recently been co-opted on the same committee. St. Bride has behind it in its educational work some of the best and foremost progressive printers in London, which probably has much to do with the remarkable progress of the school during recent years.

## Major H. Fordyce-Birch.

Major H. Fordyce-Birch, who has been secretary of the London Master Printers' Association since September, 1919, has just tendered his resignation.

Major Fordyce-Birch is a Fellow of the Chartered Institute of Secretaries, and before the War was manager of the Cordite and Ammunition Department of Nobel's Explosives Co., Ltd. Receiving a commission in September, 1914, he served in France until March, 1916, then becoming Staff-Captain Aldershot Command, D.A.Q.M.G. 72nd Division and 23rd Army Corps and S.O. II. Royal Air Force. Organising abilities of a high order have been shown in his work both in the Army and on behalf of the London Master Printers' Association, which he leaves in order to take up the position of business manager to the National Institute for the Blind. Printers are all aware, no doubt, of the wide scope and extensive ramifications of this important national institution which counts H.M. the King as patron, and which has accomplished so much good work under the very able and devoted supervision of Sir Arthur Pearson.

While London master printers will regret to lose his services, we take the opportunity to offer to Major Fordyce-Birch, on behalf of the trade, good wishes for his success in the new sphere of work which he is shortly to enter.

# Commercial Intelligence.

## CURRENT SHARE PRICES.

Amalgamated Press, 94s. 4½d., 95s., Pref., 15s., 15s. 9d.; Associated Newspapers, 7 p.c. Cum., 18s. 7d., Pref., 13s. 3d.; British Glues and Chemicals, 16s. 1½d., 16s. 9d.; J. ## DIVIDENDS AND REPORTS.

C. DAVIDSON AND SONS.—The directors have decided to pay on April 1st, an interim dividend of 2½ per cent. less tax, on the capital stock.

ANNANDALE AND SON (LIMITED), POLTON.—The twenty-first annual general meeting of the shareholders was held on Friday in Edinburgh, Mr. Jas. A. Hood, chairman of the company, presiding. On the motion of the chairman, seconded by Mr. Faichen, the accounts were adopted. Mr. Strathern, W.S., was re-elected to the board on the motion of Mr. Hood, seconded by Mr. Faichen.

ALEX. PIRIE AND SONS, LTD.—Report of Alex. Pirie and Sons for 1920 shows credit balance, including £43,450 brought in, of £150,601. Directors recommend dividend of 2 per cent. on Ordinary shares, making 6 per cent., less tax, and of 8 per cent. on Deferred shares, less tax, payable April 5th, placing to works and property (reducing book value to £620,905) £20,000, general reserve (making £170,000) £20,000, forward £44,270.

## NEW COMPANIES.

LEISURE AND SPORT, LTD.—Capital £2,000; printers and publishers, etc. Private company. First directors: A. Holmes and A. MacKenzie.

MARGARET EDGAR STUDIOS AND PHOTOGRAPHIC SUPPLY CO., LTD.—Capital £3,000; artists, photographers, printers, art publishers, artists' colourmen, artists' supply stores, etc. Private company. Permanent directors: H. Mansell and Margaret E. Mansell. Registered office: Friday-street, Minehead.

C. CAKEBREAD, LTD.—Capital £18,500; to take over the business of printers and stationery manufacturers carried on by W. L. Cakebread and Edith E. Cakebread at 15, Hill-street, Finsbury, as "C. Cakebread." Private company. First directors: W. L. Cakebread (managing director) and M. Timberlake. Registered office: 15, Hill-street, Finsbury, E.C.

THOMAS RAE, LTD.—Capital £3,000; stationers, printers, lithographers, stereotypers, electrotypers, photograph printers, engravers, etc. Private company. First directors: T. Rae and W. Rae. Registered office: 32, Hamilton street, Greenock.

SAVING STAMP CO., LTD.—Capital £1,000; to issue saving stamps to tradesmen and others, to carry on the business of grocers, furnishes, etc., printers, publishers, etc. Private company. Subscribers: A. Urban and H. J. Godfrey. Registered office: 246, New Kent-road, S.E.

CARTON MANUFACTURING CO., LTD.—Capital £2,000; to adopt an agreement with T. Harris for the purchase of the business carried on by him, and to carry on the business of manufacturers of and dealers in cartons, boxes and show cards, paper of all kinds, and articles made from cardboard, millboard, paper or pulp, etc. Private company. Subscribers: L. S. Woolf and B. A. Woolf. Registered office: 4, Great Portland-street, W.

FRANK HUGHES, LTD.—Capital £300; printers, publishers, photographers, paper and machinery makers, etc. Private company. First directors: F. W. Edmondson and Mrs. M. P. Edmondson. Registered office: 7, Southampton-row, High Holborn, W.C.

CATCHLITE, LTD.—Capital £10,000; advertisers, advertising agents and contractors, etc. Private company. First directors: T. Sapp, H. E. L. Purcell, F. J. B. Hill and H. H. S. Wright. Registered office: 24, Essex-street, Strand, W.C.

**JOHN W. ADAMS, LTD.**—Capital £5,000; to adopt an agreement with W. A. B. Adams and to carry on the business of printers, publishers, manufacturing stationers, etc. Private company. First directors: W. A. B. Adams and W. E. Rands. Registered office: Church-lane, Hull.

**DACRES RABJOHNS, LTD.**—Capital £1,000; to carry on the business of architects, engineers and general printers, etc., as formerly carried on by F. J. Oldacres at 14, Victoria-street, Westminster. Private company. First directors: F. J. Oldacres and T. W. Rabjohns. Registered office: 14, Victoria-street, Westminster, S.W.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

**CHAPPELL AND CO., LTD.** (publishers, London).—Trust deed and Land Registry charge, both dated February 28th, 1921, to secure £100,000 debentures, charged on certain freehold and leasehold properties in London and company's undertaking and other assets, including uncalled capital. Trustees—W. H. Chantry, 61 and 62, Lincoln's-inn-fields, W.C., and G. B. Brooks, 10, Old Cavendish-street, W.

**TAPP AND TOOTHILL** (printers, etc., Bramley, Leeds).—Satisfaction in full on February 14th, 1921, of debentures dated May 2nd, 1910, securing £6,000.

**HENRY GOOD AND SON, LTD.** (stationers, printers, etc., London).—Mortgage dated February 28th, 1921, to secure £2,000, charged on 79, Milton-street, E.C. Holders—Marine and General Mutual Life Assurance Society.

**STANDARD CATALOGUE CO., LTD.**—Issue on November 15th, 1920, of £6,000 B.S.E. debentures, and on January 5th of £8,500 B.S.E. and £1,250 E.S.C. debentures, parts of a series already registered. Satisfaction to the extent of £750, £4,000 and £6,000 on December 31st, 1920, of B.S.E. debentures, dated July 1st, August 6th and September 10th, 1920, securing £5,250, £4,000 and £13,500 respectively.

**MANCHESTER GUARDIAN, LTD.**—Mortgage dated February 28th, 1921, to secure £15,000, charged on Bowker's-buildings, Strutt-street, Manchester. Holders—Refuge Assurance Co., Ltd., Oxford-street, Manchester.

**BIRMINGHAM GAZETTE, LTD.**—Mortgage and Land Registry charge on 169 and 170, Fleet-street, and 2, 3, 4 and 7, Red Lion-court, Fleet-street, E.C., both dated March 4th, 1921, to secure £25,000. Holders—Prudential Assurance Co., Ltd.

**PORTEOUS, LTD.** (printers, etc., London).—Satisfaction in full on February 17th, 1921, of debentures dated December 18th, 1911, securing £5,000, notified. Particulars of £10,000 debentures authorised February 17th, 1921, also filed; whole amount issued. Charged on the company's undertaking and property, present and future, including uncalled capital.

**PEARCE AND GARDNER, LTD.** (printers, publishers).—Satisfaction in full on February 16th, 1921, of charge dated August 2nd, 1918, securing all moneys due or to become due from company to bankers notified. Mortgage dated February 16th, 1921, to secure £6,500. Charged on certain land and premises in Chorlton-cum-Hardy, Lancs. Holder—T. Wood, Queen's-square, Liverpool.

**HUNT, BARNARD AND CO., LTD.** (printers, London and Aylesbury).—Satisfaction in full on February 7th, 1921, of mortgages or charges dated March 8th, 1911, and May 29th, 1919, securing £2,450.

**RICHARD CLAY AND SONS, LTD.**—Satisfaction (a) in full on February 9th, 1921, of debentures dated January 4th, 1910, and November 3rd, 1911, securing £6,800, and (b) to the extent of £23,200 on same date of debentures authorised May 9th, 1888, securing £30,000.

## Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

### The Annual Dinner.

From all points of view Saturday's gathering at the Holborn Restaurant marked another red-letter day in the history of this flourishing Association. The large attendance—numbering close upon 190 ladies and gentlemen—the excellent arrangements made, combined with the thorough good comradeship that prevailed, left nothing to be desired. Mr. A. W. Hunt (president) was in the chair, and was supported by Mr. H. G. Milton (vice-president). Amongst those present were Mrs. Hunt and Mrs. Milton and her two daughters; Mr. E. W. Whittle (general secretary, P. M. and O. A.) and Mrs. Whittle; Mr. W. Bullett and Mr. W. H. Longley, representing the Electrotypers and Stereotypers Overseers' Association; W. Alleston, J. Walker, J. Dixon, Geo. Eden (general secretary), etc.

Justice having been done to the good things provided, a first-rate concert programme was submitted, the musical items being interspersed with some well-rendered toasts.

Following that of "The King" the president proposed the toast of

### "The Association."

Mr. Hunt said he felt it a great privilege to preside over such a splendid gathering. He took them back to 1904, and mentioned that in that year a small body met together to consider the position with regard to formulating an association for the benefit of the overseer and also for the benefit generally of those connected with the various branches of the printing and allied trades. Some took shelter under the roof of the Parent Association (the P. M. and O. A.), while others, like the elder brother, struck out a line for themselves. Prosperous as the Association had been, it had not reached its summit yet. This was one of the record nights of the Association, and its success was due largely to his friend, their indefatigable secretary. Mr. Eden's duties in an Association like theirs was no child's play. He was pleased to welcome there that night the secretaries of two kindred associations, Mr. Whittle and Mr. Bullett. Speaking of the future, Mr. Hunt said they would not be satisfied until they saw the Association reach a position second to none in the printing industry, not only in the City of London, but in the provinces as well. He appealed to overseers outside their ranks to join them in extending the usefulness of the Association. They would find that the principle of brotherhood was running through all their activities, social and beneficent, just in the same way as it had done among the men in the trenches in times gone by. (Cheers.)

### "President and Vice-President."

Mr. A. J. Daines, in proposing the toast of their worthy president and vice-president, said that Mr. Hunt had been one of the old

fighters of the Association; no task had been too menial and none too great. Mr. Hunt had spoken of the potentialities of the Association, and Mr. Daines thought there was no man more fitted to push them to the full than their present chairman. As regards Mr. Milton, he was a younger man who had worked assiduously for the Association, and he felt sure he would advance by stepping stones to an ideal president, and when his turn comes would fill the post with honour.

The toast was accorded musical honours, the president and vice-president briefly responding.

### "The Visitors."

The toast of "The Visitors—especially the ladies" was entrusted to Mr. A. W. Sandilands, who said they were all pleased to see present Mr. Whittle and Mr. Bullett as representing the P. M. and O. A. and E. S. M. O. A. The three organisations were working for the same goal, and he was quite sure there were many among those present who would like to see them quite united in a common aim. He was delighted to see so many ladies present, and he was sure their influence was conducive to happiness on an occasion like the present.

Mr. Whittle, in reply, returned thanks to Mr. Sandilands and to the company for the hearty manner in which they had received the toast. Referring to Mr. Hunt's reference to the Parent Association, Mr. Whittle said his Association did not claim to be the parent of the P. B. K. T. O. A. or the E. S. M. O. A., although he agreed with the proposer of the toast that although not formally united, brotherhood and federation would take them along the right line. Referring to Mr. Hunt's hint of their Association starting provincial centres, he was sure if they did they would treble their membership in twelve months, and he was also sure the E. S. M. O. A. would help them to attain to that consummation of federation and bond of brotherhood in the trade.

Mr. Bullett, on behalf of the E. S. M. O. A., returned thanks for the hearty manner in which his name had been associated with the toast, and said that Mr. Hunt had referred to his Association as the junior one. If Mr. Hunt meant junior in point of membership, his definition was correct, but as regards age his organisation was founded in 1899. They had practically every overseer in their branch of the trade a member of their organisation.

The musical portion of the evening's enjoyment was contributed to by a number of leading artistes who were frequently called upon for a second appearance. Miss Dorothy Eales received a hearty reception for the manner in which she rendered her comedy songs; Mr. Robert Carr made a strong appeal with a fine bass which he put to full advantage in his various songs; Messrs. Edward Castle, John Nester and Fred Wildon—(humorists)—succeeded in sustaining the attention of the company by their cleverness, the latter gentleman being especially successful; Mr. Harry Jackson (tenor) also received well-merited applause; Mr. Gilbert Chester (accompanist).

performed his duties in his usual commendable manner.

The stewards were Messrs. Geo. Eden, A. G. Aves and J. Flemming, who carried out their duties to the entire satisfaction of those present.

## Binders and Rulers' Pensions.

### Annual Meeting.

The seventy-eighth annual meeting of this society was held at the St. Bride Institute on March 3rd, Lieut.-Colonel James R. Truscott (Messrs. Jas. Truscott and Son, Ltd.), presiding.

The secretary (Mr. F. C. Peacock) said their chairman that evening required no introduction to the majority of those present; the house of Jas. Truscott and Son, Ltd., had been identified with the society since its formation in 1842, Sir Francis Truscott, Sir George Wyatt Truscott and their present chairman having presided at its annual meetings, the latter some fourteen years ago.

Minutes of the last annual meeting were read and confirmed. Letters of apology were read from Mr. Frank Garrett, hon. treasurer, Mr. T. J. Hunt and others who were unable to attend through illness and other causes.

The first business of the evening was the appointment of three scrutineers of the ballot for a pensioner, and Messrs. J. F. Walker, Walter and F. C. Price were duly nominated and elected.

The chairman upon rising to propose the adoption of the seventy-eighth annual report and balance-sheet, was very cordially received, and said it gave him much pleasure to be with them again. They had heard that he had presided some fourteen years since, and he had been comparing the report and balance-sheet of that occasion with the present one, and it was gratifying to see that much progress had been made, notwithstanding the great drawback of the terrible times the country had been through during that period, and which particularly affected societies like this, dependent as they were upon the support of men in the prime of life. The financial position had materially improved, the assets of the society were greater, the membership had, he was very pleased to hear, largely increased during the last two years, particularly amongst the females of the trade, which was very encouraging, and what was very important to their aged members, there were more pensioners being supported than at any time previously. It was also, he thought, a good sign that the expenses of management had shown but very little increase, notwithstanding the heavier cost of printing, postage, rent, etc. The only paid officer (the secretary) still received the same princely income of £10 per annum, which proved there were still men willing to work hard on behalf of their fellow-men without thought of the remuneration, so that it was with confidence he recommended the claims of the society to both the employers and employees in the trade. It

deserved much greater support than it was receiving, and he had very great pleasure in proposing the adoption of the seventy-eighth annual report and balance-sheet.

### A Penalty on Thrift.

Mr. C. Atkins, who seconded the adoption said he was particularly pleased to do so, as it gave him the opportunity to air a very great grievance. This society in common with all kindred societies, was being penalised by the State because they were thrifty; if a man or woman had endeavoured to make some provision for their old age, they were rewarded by an intelligent Government, in having the results of their thrift deducted from their State old age pensions. If a man had by his forethought and thrift provided, say, 9s. per week from this, 7s. per week from, say, the Stationers' Mutual, and 8s. per week from his trade union, his State pension was reduced to the insignificant amount of 3s. per week, and the thrifless man was equally as well off as he; this was a glaring injustice, and he hoped all would work to have this state of affairs altered.

After some further discussion the adoption of the report and balance-sheet was unanimously carried. A cordial vote of thanks was accorded Mr. Frank Garrett, hon. treasurer, for his services during the year, also to the trustees and auditors, to which Mr. Harold V. Gibbs (elected trustee during the year), responded.

The committees were the recipients of a hearty vote of thanks for the manner they had conducted the affairs of the society, and a response was made by Mr. W. T. Higgins, who said they wanted more donors, more subscribers and more members (male and female) from every house in the trade, with more work for the committee, who were quite willing to do it.

Mr. F. C. Peacock was unanimously re-elected secretary after some complimentary remarks by the proposer, Mr. C. W. Atkins, and seconder, Mr. J. J. Harward.

The scrutineers having completed their labours, the chairman announced the result of the voting as follows: Mr. W. A. Carter brought forward 97, received 107-204; Miss S. A. Johnson, 267, received 124-391; Miss J. Marr, 19, 111-130; Mr. T. S. Sharp, 127-127. He had therefore to declare Mr. W. A. Carter duly elected.

Mr. P. R. Aves briefly thanked the meeting on behalf of Mr. Carter, who was too unwell to be present.

Mr. H. R. Danford (H. R. Danford's, Ltd.), proposed that the best thanks of the meeting be given to Colonel Truscott for the genial and able manner in which he had conducted the business of the evening. This was supported by the secretary, who said it was always a pleasure to interview any member of that firm, one of the oldest landmarks of the printing trade in the City, and also a pleasure to have received a handsome personal donation from the chairman, Lieut.-Colonel Truscott.

The resolution was carried with acclamation, bringing a very successful meeting to a close.

## Notes and News for The Bookbinder.

### The State of Trade.

The bookbinding section of the trade appears to be relatively better off than the printing side; but the work seems to be very unevenly distributed, for while some houses are maintaining their staffs on full time, others are finding it difficult to maintain even a reduced staff on short time. There are some fairly large orders about, but prices are cut very low, and the bookbinder to-day is facing a very difficult period. At a time when his relative oncost expenses are at the maximum, he is being forced to quote almost unprofitable prices in order to secure orders which formerly came round without inquiry. The cost of labour is increased by a less number of productive hours worked, and although the price of materials has gone down, there are many houses in the unfortunate position of holding stocks bought in at a time when prices were at their highest. Thus the binder is called upon to sacrifice at both ends, first by adhering to hourly rates for labour, which under prevailing conditions do not cover cost, and secondly by cutting his losses on stock bought at an unfavourable price. And in many instances he does not even secure such help from the workers as will enable him to be safe on the point of time consumption.

### Binders and Time Dockets.

The position in regard to the use of the time docket in the bookbinding industry is this. The Binders' Executive has no objection to the introduction of time dockets in any establishment as part of the cost-finding system. In Liverpool, London, Sheffield, Oldham, and other towns, and in practically all Scotland the time docket is recognised by the unions and is helping employers to make the trade safe. In a few English towns the local union officials bar the way to the introduction of dockets, yet in every town there are some houses actually using time dockets. The local union officials are of course guided by the men, and there is no doubt that in their own minds the officials quite appreciate the necessity of selling bookbinding on the basis of the time consumed. Even in the barred towns the demand for time dockets is sympathetically received by the officials, who are on the whole quite as conversant with costing principles as the masters themselves. This being the case, it remains with the officials to impart some of their own feeling to the men who stand in the way of putting the trade on a sounder and more scientific basis of accuracy.

Nothing but good has come from the introduction of modern cost-finding principles on the letterpress side of the industry, and on inspection it will be found that the firms which devote the greatest attention to the welfare and interests of the men are those in which the Federation Costing System has made such a policy possible.

### The Cost of Production.

Stationery books are too expensive under present conditions, and almost every book-binding establishment is having to meet and deal with complaints each day. It is not so much a matter of wage as oncost, low production (due to lack of machinery and organisation) and the cost of materials. On most books to-day the clothing of the book costs more than the labour in binding. This is a serious matter, and is depriving the trade of a big amount of work. More and more attention is being diverted to loose leaf systems, pads and filing methods. The development may find work for other trades but it is taking work away from the binding craft. Loose leaf ledgers, binders and transfer cases rob the bookbinder of forwarding processes and divert work to specialists, who do not always rely upon trade union labour and in some cases even prefer female labour. This new trend is already becoming a serious matter for the binding craft, and the sole remedy is a decrease in the cost of producing books. Some relief may be anticipated from materials which even to-day stand at nearly four times their pre-war cost. Economy of production must be aimed at in the factory by installing up-to-date plant and appliances, improving the works organisation and eliminating waste effort, the wrongful application of labour and dead time.

### Bookbinding Materials.

**STRAWBOARDS.**—The market for bookbinding materials has undergone no drastic development during the last four weeks, except in the case of strawboards. Within a few days the price of this commodity has dropped from £15 per ton to £9 per ton. For large orders £8 8s. per ton has been quoted, but there is no difficulty in securing lots at about £10 per ton (8/16 oz. unlined) for fairly prompt cash. This is not so much a market price as a special offer for it is cash and clearance that is wanted by the agent. Ultimately prices will harden, but not until the stocks in port have declined. At present the quantity of Dutch board in the country is far in excess of the requirement.

**LEATHERS** have gradually declined in price.

through lack of demand and the stagnancy in the boot and other leather using trades. There are now ample supplies of every kind of leather, and manufacturers are once more able to fill many orders from stocks. Summarising the values of picked skins, coloured basils are quoted 1s. per square foot, roller basils 10d., skivers 8d., embossed skivers 8½d. to 10d., rough sheep 11d., rough morocco 1s. 3d. to 1s. 6d., rough calfs 1s. 9d., fair calfs 2s. 3d. to 2s. 6d., pigskins 2s. 6d., anglos 2s. to 2s. 6d., moroccos 3s. to 3s. 6d. These figures show a considerable reduction on those last quoted in these pages.

**MISCELLANEOUS MATERIALS.**—Threads have gone down a little, but along with bookcloths and buckrams there is room for a further considerable reduction in price. American bookcloths and buckrams are on offer at lower prices than we are paying for English makes. As a matter of fact, there are some grades of buckram standing at a higher price to-day than has been reached hitherto. Glue has gone down to 95s. per cwt. for pale Scotch, but further reductions must take place before stability can be said to have been attained. Goldleaf is as cheap as it is likely to be for some time, and quotations are based on 58s. per 1,000 3½in. by 3½in. for 22 carat deep. Calico for pasting, good quality is offered at 8½d. per yard less discount, a high figure considering the drop in cotton. Millboards of low grade are cheaper, and can be secured at £25 to £30 per ton, foreign make. The better-class English boards are stable at £45 per ton, while the best black boards are also firm at £52 per ton.

## New British Binding Material.

During the year 1920 the difficulties of publishers were unprecedented. Indeed, many editions of valuable books called for could not be published owing to the high cost. Not only were costs high, but certain materials could only be got with great difficulty. Bookbinders and publishers were constantly on the look out for new processes and materials that would, if only in a small degree, bring down the cost of publishing.

It was at this psychological moment that the new product, which is called "Duxeen" appeared. Towards the middle of the year the inventors discovered that their fabric was eminently suitable for bookbinding, especially in climates where heat, damp, and insects are prevalent. This happy discovery came at the moment when book cloth was at its maximum price, and the new material found almost instant favour. Its special properties, reasonable price, and artistic appearance enabled it at once to take a leading place among other covering fabrics.

This new material is a fibrous product chemically treated to render it tough, hardwearing and flexible, at the same time being waterproof, mildew proof and insect proof. The surface does not wear off, and not being

a coated paper, cannot scratch up and show white underneath.

In its chief use, bookbinding, "Duxeen" has many advantages. Books covered in "Duxeen" have all the qualities demanded in a strongly bound book, and, in addition, handling with hot hands or in the rain, does not soil it or stain anything in contact.

Other uses to which "Duxeen" may be put are to be found in all trades where leather and bookcloths are used, such as box covering, the making of boxes, attaché cases, files, etc., and for all decorative coverings.

THE Recorder of Dublin has awarded £2,987 compensation to the *Freeman's Journal* Company for the damage to their premises when set on fire last December.

AT Darlington, last week, John George Chipchase (50), master printer, and his son, John George McKenzie Chipchase (20), were committed for trial on a charge of having conspired together to obtain a passport by false pretences.

MESSRS. VICK ASHWORTH AND CO., of Dean-street, Salford, have acquired the very highly-respected and old-established business of Messrs. Palmer and Howe, Ltd., of Princess-street, Manchester, printers, stationers, and bookbinders. The new acquisition will continue to be run under its old name, but the business will be re-organised to meet the standard of efficiency associated with the Vicash productions. In addition to its well-known character of trade, the retail shop in Princess-street will carry systems goods of every description made by the parent company. The printing and manufacturing operations will be carried on at Messrs. Vick Ashworth's model factory in Salford.

MESSRS. NICKERSON BROTHERS, bookbinders' leather manufacturers, of 99 and 101, Worship-street, London, E.C.2, writes to us on the subject of binding material resistant to insects. They point out that they have marketed a binding material that is guaranteed free from any material attractive to insects for several years now, which material is largely used in tropical climates. This same material is also guaranteed free from aniline dye and absolutely sunfast. The bookcloth to which they refer, Legal Buckram, is made in accordance with the strict specifications of the Bureau of Standards of the United States, of which the insect resistance clause is one of the chief points.

## “Screenless” Processes.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

From time to time one hears or reads of inventors in photo-mechanical work claiming a “screenless” process, and at first it is difficult to know what they mean, especially if one applies a magnifying glass to the prints they produce and finds an unmistakable screen grain. In such a case which recently came under our notice it appeared that the inventor claimed his process was screenless because there was no screen dot effect visible on the white portions. This reduces the term to an absurdity, for “screenless” if it means anything at all must imply that no screen was used in the process.

Now anyone who claims that he can reproduce the tones of a photograph in printing ink without screening of some sort is “talking through his hat” as our Yankee friends say. There is only one process we have known as coming near doing it, and that was Woodburytype; but that was printing from a gelatine relief; it was not done with printing ink and it had to be printed in a special press in a special way, which puts it out of court.

### Screen Substitutes.

We are well aware that collotype and some lithographic transfer processes, such as Sprague's Ink Photo, do not require a screen, but the equivalent has to be provided in a chemically produced grain, which might properly be called screening, because it has the same object as using a screen, viz., that of breaking up the tones into a discriminating

grain which reproduces the light and shade by means of the varying size of the grain elements.

There was also the Frey process, and so much as we know about it reveals the fact that it was a bitumen process in which the bitumen was mixed with solvents which caused it to split into a grain as they evaporated during the drying of the film.

It may be taken as an axiom that you cannot reproduce tone gradation in printing ink without using a screen or grain of some sort, and no one minds this being there so long as it is not too visible to the naked eye.

### High Light Processes.

The removal of the screen or grain from the high lights, or better still preventing it getting there, is another matter, and this is where high light processes come in. I think it was the late Mr. Frederick Sears who brought into use the term “high light process” over here, though I recollect that some such term had been used in America a long time before. Most process workers who have been long in the business have no doubt tried their hand at removing the high lights without having to scrape or cut them out, and they generally came to the conclusion that the result was not good enough to be worth the trouble.

I remember getting some pretty good results over 30 years ago by putting a silk gauze screen between a continuous tone negative

and a sensitised zinc plate, and a further improvement was to make a ruled screen copy on celluloid film. This yielded good high light effects so long as the work was not carried further than rolling-up and printing lithographically, but any attempt at etching the plates resulted in failure, because of the hard edges to the high lights.

There was a sanguine inventor who patented a process of blocking out or scraping on the half-tone negative, but when the blocks were etched and printed he was disillusioned—at least his financial backer was.

### The Sears Method.

Sears' way of getting high light lithographs was to take first a continuous tone negative of a quality specially suited to the effect he wanted to produce, then making a half-tone screen positive from it, and finally a negative from this by contact on a dry plate. The result of this apparently roundabout procedure was that no dots showed up in the high lights of the positive, or if they did they were easily cleared away by chemical treatment, and consequently these parts were opaque on the final negative, so that they prevented anything being printed there on the plate.

There are more direct ways of attaining the same end, but I am not sure they are as good. For instance, when making the half-tone negative you can rack the screen away from the plate after a part exposure has been given with it at its proper distance. In the second part of the exposure no screen effect is produced, and consequently the high lights are, as it is termed, "bunged up," i.e., rendered opaque so that nothing prints through them. The same effect is produced by removing the screen after a part exposure and replacing it with a piece of plain glass of the same size and thickness. This is perhaps better, as it does not obstruct so much light. The method has been used with success with the Metzograph Grain Screen.

### Further Alternatives.

Another way is to open out the diaphragm after a part exposure. This has the same effect of "bunding up" the high lights. Perhaps some operators use this method in conjunction with those previously described, and, of course, one may use the plan of replacing the original with a sheet of white paper during part of the exposure, at the same time using a large stop.

There is a risk with some of these processes of flattening the picture, but the skilful operator will know how to guard against that. Properly worked, these high light processes are of great value for the preparation

of lithographic plates, on which nothing in the nature of fine etching, such as is employed in block work, can be done. It is also possible to help matters by retouching and stopping out on the negative.

## Printing Machinery Sales.

At a sale of printing plant and machinery, when the contents of one of the printing offices under the control of H.M. Stationery Office were disposed of recently, there was a good attendance of buyers at the premises in Dugdale-street, Kennington. Among the prices realised were the following:—A nearly new 32-inch diagonal guillotine by Crosland, fitted for power, brought £210; a 42-inch "Diamond" guillotine, by Payne, went for £115, and another 42-inch by the same makers, sold for £117 10s.; a 32-inch "Perfection" guillotine, by Powell, went for £42 10s. A number of "Boston" No. 4 wire stitchers, practically new, brought £65 and £60, and a No. 3 "Boston" £42 10s.; a No. 4A wire stitcher by Brehmer fetched £52 10.

Among the letterpress machines £130 was given for a double-crown "Reliance" wharfedale; a similar machine sold for £145, and others of the same make went for sums varying from £140 to £170. A double-demy wharfedale, by Dawson, was bought for £110, and a double royal, by Payne, for £135. A "Kohinoor" job press, by Waite and Saville, sold for £17 10s., and a demy-folio "Falcon" by the same firm for £130. £70 was the price got for a 50-b.h.p. "Stockport" gas engine, and a buyer got a bargain in a double-crown stop-cylinder machine, by Hamm, at £27 10s. A quad-crown flat-bed lithographic machine, by Furnival, brought £32 10s.; a quad-crown "Reliable," by Ratcliffe and Sons, £27, and a demy "Reliable" went for £75.

At another sale—in Dean street, Soho—a model 4 triplex double-letter Linotype was sold for £860, and a new model 8 triplex double-letter Linotype went at £650. The type at this sale was in excellent condition and brought fair prices; an extensive range of Greek founts was sold in one lot and brought 3s. 8d. per lb. An "Express" 32-inch guillotine, by Furnival, went for £135; a quad-royal "Favorit," two-revolution printing press, by Albert, was knocked down for £600, and a new double-royal "Perfection" wharfedale, by Payne, sold at £550, while a foolscap-folio "Reddish" platen press, by Furnival, went for £52 10s., and a demy-folio "Caxton" art platen, by Haddon, fetched £92 10s.

Both of the sales referred to were conducted by Mr. R. H. Ruddock, of 71, Fleet-street, E.C.4.

THE paper market in Norway remains lifeless. "News" on reels is quoted at £31 to £32 per ton net f.o.b.

## W. & N.-W. Costing Classes.

### Examination Results.

The results of the examination of the West and North-West Master Printers' Association costing classes were announced last week at a social gathering at the Westbourne Park Institute. Mr. A. Williamson congratulated the North-West on attaining the premier position in the new campaign, three students having passed with honours (a result such as had never hitherto been attained), and there being a very high percentage of passes; in fact, there were only three failures out of the 29 students who had presented themselves for examination. These examinations were very helpful to those conducting the classes in ascertaining where the students had failed to grasp an essential feature of the system. He congratulated the winner of the first prize in securing 99 marks, which was a magnificent figure; the second winner on the list, he understood, was not a practical printer, and likewise was to be congratulated upon attaining such a high standard; and the third prize in the list, he was glad to say, had been secured by one of the lady students. Mr. Williamson urged the students to pursue costing in the higher realms. They had a good grasp of the practical side, it was now up to them to follow up the theoretical side. He drew attention to the classes held at St. Bride's for costing and estimating. Speaking as a prophet he felt sure that the Joint Industrial Council for the printing trade would at an early date approve the Federation Costing System, or the hourly rate, as laid down by the Costing Committee, and that in 10 years' time the whole of the printing trade would have adopted the system. This would bring about better times for the printing industry.

Mr. W. J. Pollock, the president, then presented his prizes to the value of £3, £2 and £1 to the three successful candidates, and expressed the gratification of the committee that the students had upheld the high standard set by the West and North-West Association in leading the way for the rest of London.

### Successful Candidates.

The successful candidates were as follows:

Mr. W. G. Pomeroy (King and Hutchings, Uxbridge), 99, 1st class certificate with honours.

Mr. T. F. Murdoch (Welbecson Press, Ltd., Clarendon-road, Notting Hill), 98, 1st class certificate with honours.

Miss Newling (Warren Hall and Lovitt, Camden Town), 95, 1st class certificate with honours.

1st Class.—Mr. F. G. Leveridge, 93; Miss N. Wormald, 90; Mr. A. E. Keen, 86; Mr. J. Lucas, 85; Miss D. C. Hayward, 84; Mr. H. Macro, 83; Miss M. Woods, 83; Mr. A. E. Caller, 82; Miss L. Roberts, 81.

2nd Class.—Mr. H. Leslie Bale, 78; Miss L. Alford, 76; Mr. W. J. Mott, 75; Mr. F. H.

Cowell, 74; Miss J. E. Lumb, 72; Miss E. Ashworth, 70; Miss E. Woolston, 70.

Pass.—Mr. G. C. Leveridge, 69; Mr. H. S. Metcalf, 69; Miss Rosa McCarthy, 66; Mr. C. E. Routley, 66; Miss E. M. Gratton, 63; Mr. E. G. Priddey, 63; Miss D. Woolston, 63.

Mr. Langley, in proposing a vote of thanks to Mr. Williamson and Mr. Medcalf for conducting the classes, also congratulated the students upon the very high average they had attained. They had conferred a tremendous benefit on the W. and N.-W. Association by placing them at the head of the Federation. They had always endeavoured to make the Association a model for other London associations, but they were very proud to think they had at one stride attained such a strong position nationally. Their thanks were due to Mr. Williamson and Mr. Medcalf for so successfully guiding them through to such an excellent result.

Mr. Wormald seconded the proposition, which was carried with acclamation.

Mr. Williamson, in reply, said he was sure Mr. Medcalf was immensely gratified with the result, more particularly as until this campaign he had never addressed a public meeting. He believed a great deal of the success of this class was due to the great interest taken in it by the committee, which had been represented at each session held, and thus had encouraged the students to strive to attain to such excellence.

Refreshments were provided during the evening, and a musical programme, contributed to by Mr. Thomas Brookes, baritone, Miss Euna Macara, guitar and soloist, and Mr. Bossy, pianist, helped to make the function a very pleasant one.

## L.C.C. Finance.

Some amazing figures showing lavish over-payment of ratepayers' money in various directions are given in the District Auditor's report on the London County Council's accounts for 1919-1920. Of some special interest to the trade is the disclosure of the fact that, with a view to encouraging the art of producing lithographic pictures for the purposes of education, which formerly could only be obtained from Germany and Austria, an artist was sent by the Education Committee to make a sketch of Stirling Castle for lithographic production. The fee paid to this gentleman was £40, and with £26 for travelling and maintenance for three weeks, the cost was £66. The auditor comments: "I am not satisfied that the Education Committee was legally justified in undertaking this experiment at the cost of the rates, which might be thought to be more properly the business of a private firm of publishers, nor is it clear as to why it was considered necessary to travel so far afield as Stirling in order to obtain a suitable historical subject for a picture. The cost appeared to exceed the bounds of economy, and I passed the expenditure with some hesitation."

## The Costing Campaign.

### Further News of Successful Efforts.

Following the afternoon session reported in our last issue, the Manchester Council entertained the visitors and the Costing Committee to high tea at the Midland Hotel, during the course of which a very frank interchange of opinion gave pleasure and ultimate benefit all round.

Promptly at 7 o'clock the speakers took the platform before an over-crowded hall. Dispensing with preliminaries, the chairman, Mr. J. C. Coppock, called upon Mr. D. R. King (secretary, Midland Alliance) to address the meeting on the practical aspect of costing.

### Costing in Practice.

By way of introduction, the speaker traced the evolution of business methods from the days of barter to the modern days of super-machinery and ruthless competition. The conditions of present manufacture and business conduct made cost-finding an imperative necessity. Reference was made to the Trust System of U.S.A., with its autocratic, exclusive and compulsory characteristics. As against this, the German Cartel System was democratic in character, and by granting a general guarantee of profits to the component factors of the industry concerned, safeguarded the rights and progress of the individual. The German State Bank had a method of aiding beginners in business if their credentials and prospects were good. In the event of reckless competition between state-aided firms, the Bank would intervene with a threat to recall the loan unless the correct principles of cost-finding were adhered to. At the present time many English printers were indulging in the folly of price-cutting, but such practice was to the detriment of the cutter and all his fellows.

On the subject of the minimum price list Mr. King's experience was that workmen and employers had often very wrong ideas of times spent on operations. When the true facts were known it would be found that the official figures corresponded to average times. Several illustrations from the speaker's practical experience were very humorously given, and the close of the speech was the signal for a remarkable burst of applause. Rarely have Manchester printers had the privilege of hearing such a witty, yet seriously-minded, contribution to the cause of cost-finding.

Mr. A. Williamson (Costing Secretary) followed with a dissertation on the "Chargeable Hour: What it is and How it is Arrived at." The first fact, based on innumerable findings, was that out of 48 hours per week in the composing department only 32 can be charged to the customer. In the machine room the average is 36 hours per machine. The balance of time is spent on non-chargeable operations. The items comprising chargeable and non-chargeable in each case were detailed by the speaker. The first essential thing in fixing

the hourly rate was, therefore, the number of chargeable hours. In regard to the cost of composition in Manchester, on the basis of 32 chargeable hours, the bare wage cost per hour is 3s. 0½d. The cost per man for departmental expense (based on 45 returns) was 30s. per week, which on 32 hours equals 11½d. Added to the bare wage cost, this brings the cost to 3s. 11½d. per hour. On to this a percentage must be added to reserve overhead charges, the average of which is 40 per cent. Taking a lower figure, 33½ per cent., this would bring the hour rate to 5s. 4d., a figure which does not include oversight, reading, etc.

In the machine room a double demy machine costing £300 would be represented by 6 units, and on the basis of 36 chargeable hours the average cost per unit for department and overhead costs was 6d. The bare machine hourly cost would therefore be 3s., to which 2s. 8d. must be added for minder's wage alone. On top of this must be added the feeder's wage and oversight costs.

Chargeable time comprises washing up, making ready and running. The master printer of the country, said the speaker, must get down to the solid rock of "What is Cost?"

### Some Pertinent Facts.

Mr. A. E. Goodwin (secretary to the Federation) was accorded a particularly warm welcome on rising to speak. Reminding the audience of the 1913 conference in Manchester, he commented dryly on the pious resolutions then adopted, and stressed vigorously the necessity for immediate practical action. Dealing in very lucid fashion with the A B C of costing, Mr. Goodwin went over the familiar ground of Form 1, and gave a general résumé of the elements and principles of cost-finding. Some of the pertinent facts in the costing situation as expressed by this speaker may be summarised thus:—The interdependence of printers made a uniform system of costing essential. No printer had ever yet offered serious objection to the Federation Costing System after having installed it. There was now not a single branch or class of printing unrepresented on the list of F.C.S. users. The appearance in *The Times* of 12 articles on costing, contributed by Mr. Howard Hazell, was a sufficient tribute to the efficiency of the printers' costing system. The advantages of the costing system to employees was that only by ensuring an adequate return could the employer treat them fairly. To the customer the F.C.S. ensured a more uniform and fair distribution of charges, for where costs were unknown some customers were undercharged at the expense of others, who bore an overburden. An employer using the F.C.S. could unhesitatingly table his costs and could always rely upon legal support in the event of dispute.

A cordial reception was given to Mr. Hennegin, assistant costing secretary of the Federation, a newcomer to Manchester, but one who has already inspired the printing fraternity there with a confidence which augurs well for his future work in the vicinity. In cool and very deliberate fashion Mr

Hennegin told the meeting what he did when he came to put the system into operation in any office. Since then he has demonstrated in several instances how he does it. Unfortunately Scotland has taken such a liking to Mr. Hennegin that she is finding him work enough to keep him permanently busy there, and his activities in Manchester will be of a temporary nature only. Following up his remarks on costing installations, Mr. Hennegin briefly referred to the costing classes to be held in Manchester after the conference.

Questions, asked and answered, closed a very memorable session and the day's activities ended with thanks for services rendered and efforts undertaken.

#### **The Bradford Gathering.**

At the Bradford gathering, on the 4th inst., Mr. Brocklehurst, Deputy Lord Mayor, presided. Himself a master printer, he told how he had installed the system in 1912, and he urged all those present to do the same.

Mr. A. E. Goodwin, who here also was received with enthusiasm, ably outlined the distinguishing features of the Federation System, and went on to recommend scientific cost-finding as the remedy for price-cutting.

Mr. R. A. Austen-Leigh followed, further emphasising the value of the Costing System in counteracting the evil of price-cutting, still all too prevalent.

Mr. Storey, in an excellent speech, represented the adoption of the System as constituting the first steps in a programme for the advancement of the craft; he said that after this step had been taken individually, further important steps could be taken collectively.

Many points of interest were dealt with at question time, after which the proceedings were brought to an end by a vote of thanks moved, seconded and supported respectively by Mr. E. W. Humphries, Mr. Sunderland and Mr. P. Hartley.

#### **Enthusiasm at Leeds.**

At Leeds on the 11th, Mr. Harry Cooke presided over a well-attended and enthusiastic gathering. As a member of the original Federation Costing Committee, he recalled the early days of the movement and made an effective appeal for the adoption of the system to-day by every employer.

Mr. E. W. Humphries, in his customary vigorous style backed up the appeal, as did also Mr. A. E. Goodwin in a speech which raised many a laugh while the points were being effectively driven home.

Mr. R. A. Austen-Leigh in racy fashion drew attention to the harmfulness of price-cutting and urged that the adoption of the Federation System would mitigate, if it would not entirely prevent, the evil.

Other speakers were Messrs. Wood, Stembridge and Storey.

#### **Birmingham Joins In.**

The subject of costing was also amongst the subjects discussed at the annual dinner of the Birmingham and District Master Printers' Association on the 16th inst. Mr. Reginald Hudson, the retiring president, was in the

chair, supported by Mr. Silk, the president-elect, and by representatives of the Federation.

Mr. E. W. Humphries, in proposing the toast of "The Birmingham M.P.A.," dealt chiefly with the industrial situation, and spoke of the desirability of arranging at an early date a round-table conference of the representatives of employers and workpeople in the industry, when, with all the cards on the table, decisions might be reached which would further the interests of the industry as a whole.

Mr. Reginald Hudson, in replying, referred in eloquent terms to the splendid leadership of the Federation, and mentioned the interesting personal fact that the firm of Hudson and Son would celebrate its centenary this year.

Mr. Fred Jefferson ably proposed the toast of "The Federation and the Midland Alliance," and General Bemrose replied, sketching the development of the Federation's organisation.

Mr. A. E. Goodwin, who also responded, touched upon many matters now engaging the attention of the Federation, including the new classification of railway rates, the rating of machinery, Government and municipal printing, and the efforts being made to deepen the interest in correct costing and the maintenance of proper prices.

The musical programme was an exceptionally fine one, and it was interesting to learn that all the artistes were connected with the printing and allied trades.

#### **Also Sheffield.**

Last Thursday brought the annual dinner of the Sheffield Master Printers' Association, and it proved a very pleasant function.

The toast of "The Federation" was given by Mr. Parker in a delightfully humorous speech, and Mr. E. W. Humphries responded, bespeaking members' continued loyalty to the organisation, and referring to the great activity always noticeable at "24, Holborn."

Mr. A. E. Goodwin, who proposed the toast of "The Sheffield M.P.A.," drew attention to the progress made since the last annual meeting. He spoke of the large number of their members who had been engaged in national work for the industry, mentioning especially Mr. W. Townsend, the present president of the Yorkshire Alliance. To Mr. Hyde was entrusted the toast of "The Ladies and Visitors," and Mr. J. H. King responded.

An excellent musical programme had been arranged by Mr. Edgar Northend.

---

"T.A." EXECUTIVE.—The following members of the Executive Council of the Typographical Association have been re-elected for the ensuing twelve months:—Messrs. W. S. Walker (Birmingham), W. Bottomley (Leeds), J. H. Morgan (Liverpool), J. D. Harvey (Newcastle-on-Tyne), E. Barrett (Bath), E. G. Yates (Watford), and H. T. Whitley (Belfast). Elections will take place for the remaining ten members. A spirited contest is expected in Manchester, where ten nominations have been made for the three places allotted to that city.

## Selection and Use of Types.

### Printing Crafts Guild Lecture.

Mr. Geo. W. Jones (The Sign of the Dolphin, London) delivered an interesting lantern lecture on "Printing Types: Their Selection and Use," before a large audience in the College of Technology, Manchester, on Friday last. Around the room there was a splendid collection of high-class productions showing the types mostly used for modern and artistic display.

The lecturer laid great stress on the true beauty in a type face being its legibility and simplicity. He stated that Caxton could not lay claim to being the first typefounder, seeing that he was not a practical printer. Wynkin de Worde may have cut some of the type faces that Caxton used. Baskerville took six years to produce his first book.

### Caslon Type Faces.

To William Caslon the First belonged the honour of a three-fold achievement, in that he (1) designed a Roman face that was and is popular; (2) he rescued English typography from the degeneracy into which it had sunk; and (3) established so high a reputation for English letter founding that foreign countries, on which English printers had almost wholly depended for type supplies, became eager customers. The Caslon faces were popular until about 1780 when the ever-fickle public turned its attention to faces cut by Giambattista Bodoni and for about 60 years Bodoni held supremacy. In 1843 Caslon Old Face was again placed on the market and in the 'seventies its popularity came once more, and there had not been any other face to surpass it for beauty, legibility and simplicity. The Jenson type cut in 1461 was then declared the finest, because there was nothing perfect in it. The American typefounders based their faces on those of the early Italian, and at one period those foundries sent over to England a great quantity of types.

Among the numerous slides thrown on the screen Mr. Jones explained the difference between the old hand cut types where the eye was allowed to be the sovereign judge, and the modern types which were cut with mathematical precision. He explained the value of margins in the printed book and the reason for the apparent half-margin on the folding side of each page, the use of blacks, such as the Elizabethan and Old English, and the adoption of coloured initials to take away any attempt at heaviness. He thought the printers in Manchester were the most fortunate in the kingdom in having such a college where the craftsmanship was so high. He particularly appealed to the student not to look upon his craft as the daily round or common task, but to make the best of even the smallest opportunity. It was his duty to serve well and faithfully the mother craft.

Mr. R. B. Fishenden, M.Sc.Tech., moved a vote of thanks to the lecturer; Mr. F. Water-

house (Bolton) seconded, and Messrs. Andrews (Ashton) and President John Taylor supported.

### War Widows and Orphans.

Before the close of the meeting the president announced that the concert held on the previous Saturday had realised the sum of £100 which would be sent to the Printers' Pension Corporation War Widows and Orphans' Fund.

WEE MAC.

## Mr. A. Guest Honoured.

### Trade Union Praise for Costing System.

Mr. A. Guest, late secretary of the Oldham branch of the Typographical Association, has, as we announced a few weeks ago, been appointed Labour agent at West Bromwich. To mark appreciation of his trade union services, the Oldham Typographical Society recently arranged a smoking concert in his honour when presentations were made to him before a gathering thoroughly representative of the Oldham printing trade.

Mr. J. D. French (president of the T.A.) was one of the speakers, and in the course of his remarks said he should oppose the reduction of wages because in former days the public had not paid an adequate price for the service rendered. He strongly supported the cost-finding system of the Federation of Master Printers, which should ensure fair dealing all round. He spoke in high terms of praise of the valuable services rendered by Mr. Guest as an active member of the association.

Mr. C. D. Kidd, on behalf of the Oldham Master Printers' Association, congratulated Mr. Guest upon his appointment. He said he had frequently come in contact during the past few years with Mr. Guest, and had always been able to discuss matters with him in a friendly spirit. Mr. Guest had his personal goodwill and best wishes for his future success.

The chairman, Mr. J. R. Horner, on behalf of the members of the Oldham Typographical Society, presented to Mr. Guest a silver rose bowl and ornaments, and to Mrs. Guest a large framed engraving. He expressed the good feelings with which the presentation was being made. Mr. Smith, on behalf of the bookbinders, presented Mr. Guest with an inkstand.

In connection with the recent issue to Liverpool seamen of leaflets urging them to strike, William McNair, secretary and managing-director of the Liverpool Exchange Press, Ltd., Tithebarn street, was last week at the Liverpool City Police Court, fined £50. The charge against McNair was that he printed the leaflets without the name and address of the printer thereon.

An Advertisement is always working.

# Trade Notes.

MR. JAMES ALEXANDER MANSON, of Finchley, N., editor of "Cassell's Encyclopædia," left £1,078.

MR. JOHN HOGG announces that owing to the increased cost of labour and materials, "Printing for Business," previously published at 7s. 6d. net, is to be 10s. 6d. net.

OFFICIAL figures published on Friday showed another fall of 10 points in the cost of living, the percentage for March 1st being 141 as compared with 151 on February 1st.

NO LESS than £4,575 in benevolent fund insurance was compiled during the evening on the occasion of the recent annual festival at the Hotel Cecil of the National Advertising Society.

OWING to disapproval of the editorial policy of the *Daily Express* in connection with the embargo upon the importation of live cattle, the Earl of Denbigh has resigned his trusteeship for the Debenture Holders of the London *Express Newspaper Ltd.*

A BUCHAREST message says the British Government has informed the Rumanian Government that it is proposed to open this year at Bucharest for the benefit of Rumania, the Balkan States, and the whole of South-East Europe a great British fair. Negotiations will commence immediately.

WRITING in the *Norfolk Chronicle* (March 11th), Mr. Geo. A. Stephen, F.L.A., city librarian, Norwich, traces the early history of printing and book production in the county of Norfolk. The earliest Norfolk printer is said to be Anthony de Solempne (or Solen, or Soleme) who set up a printing press at Norwich about the year 1567.

SIR PHILIP WATERLOW, M.P., unveiled on Saturday afternoon a memorial at the pavilion of the sports ground, Walthamstow, to employees of Messrs. Waterlow and Sons, Limited, who were killed in the Great War. It consists of a handsome screen on which are 178 names. A large number of relatives and friends attended, and many wreaths were sent. Several directors of the company were present. The proceedings terminated with the "Last Post" and "The Reveille."

CITY POLICE visited the premises of Kegan Paul, Trench Trubner, and Company, Limited, publishers, Carter-lane, on Wednesday of last week, and seized 239 copies of the book "The Autobiography of a Child," alleged to be obscene. The information was laid by Lord Alfred Douglas, editor of *Plain English*, last Thursday, at the Mansion House. The Lord Mayor granted a summons against the publishers, returnable to day (Thursday), requiring them to show cause why the copies should not be destroyed. For the defence it was said that the book had been withdrawn from circulation, and that the author was not at present in this country.

PARTNERSHIP has been dissolved between Sarah Ada Field and Minnie Stammers, fancy stationers, 5, Stafford-road, Beddington, Surrey.

THE most notable of the purchases at the recent further sale of books from the Britwell Court library was Samuel Nicholson's "Acolastus, his After-Witte," 1600, from the Lamport Hall "find." This fetched £1,450, while Anthony Sherley's "Witts New Dyall," 1600, also from Lamport Hall, brought £1,000, and the same sum was paid for Richard Turner's "Garland of a Greene Witte," c. 1595.

THE recent fire at Woolworth's, Glasgow, in which £80,000 worth of damage was done, was not confined to the fancy goods premises which were the seat of the main outbreak. Among neighbouring buildings damaged by fire and water was No. 70, Union-street, premises shared by a number of business firms, including Messrs. Mackill and Co., printers, and Messrs. Cochrane Bros, printers.

A CAXTON EXAMPLE.—Following the example of Caxton who first set up his press in Westminster Abbey, a suggestion comes from Mr. C. W. Clarke, of the "Jobbing Guild," that the Church should assist the printing craftsmen to develop their art by allowing them the use of the Church premises for instructional purposes. Mr. Clarke writes that he would be glad to hear from any City rector, who, with imagination and a recollection of how Caxton first set up his press, is prepared to associate himself and his church in this movement to raise the standard of craftsmanship in the printing art.

THE Newspaper Press Fund will, it is expected, benefit considerably from the concert which Mr. George Robey will give at the Coliseum on Sunday afternoon, April 10th. Lord Riddell will preside at the concert, and Lord Burnham is amongst the other well-known Press people who are helping. In response to an appeal from Mr. Robey, the fathers of chapels of various newspapers throughout the country are contributing to the funds. A ladies' committee, of which Lady Newnes is the chairman, is being formed, and Lady Newnes herself, with a large band of ladies, will be responsible for the sale of the special souvenir programme, which is being illustrated by the first cartoonists of the day.

AUSTRALIAN REPRESENTATION.—In a communication just to hand from Sydney, N.S.W., Mr. John H. Coghill of that city compliments the *British and Colonial Printer and Stationer*, upon its December special export issue, in which, he says, the situation regarding the Australian printing and paper trade is admirably summed up. By a trade card in this issue it will be seen that Mr. Coghill is offering to act in Australia on behalf of British exporters. Besides having dealt in printers' and bookbinders' accessories and machinery of all kinds, he has apparently managed and controlled class advertising in Australia for a number of years and is personally known to leading printing houses in Sydney and Melbourne.

### FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,  
at 58, Shoe Lane, London, E.C. 4.

Representatives throughout the United Kingdom and also in Australia, India, South Africa, United States (Canada, etc.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—**STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C. 4.**

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., news-agents, 11, St. Bride-street, E.C. 4.

THURSDAY, MARCH 24, 1921.

## Current Topics.

### An Important Council Meeting.

SUBJECTS of great importance to the trade are to be discussed at a meeting of the Council of the Federation of Master Printers to be held on April 5th. One item on the agenda, we understand, is the question of wages which is to be carefully considered, regard being had to the considerable decrease in the cost of living since the last wage settlement and to the movement for the reduction of wages in many other leading industries. News of any conclusions that may be reached will be awaited with keen interest. Other important subjects to be discussed at this meeting are: Railway rates for printed matter; the rating of machinery; the continuance of special depreciation allowances; and the activities of H.M. Stationery Office.

### The Costing Campaign.

VERY gratifying results have been forthcoming in response to the Federation's praiseworthy efforts to extend the application of

scientific costing in the printing industry. We hear, for instance, that success beyond the expectations of the Manchester Costing Committee has followed their recent congress. Several installations are now being made in Manchester, and many inquiries are in hand for attention. Over 100 entrants are sitting at the costing course conducted by Mr. Hennegin, of the Federation staff. Practically all the leading houses in the city can now be said to be working the Federation Costing System, and at last there will be a possibility of tackling the problem of price-cutting with a reasonable degree of success. This should be a great encouragement to other centres, as it points very plainly to the possibilities offered by the Costing System of betterment for the whole industry.

\*\*\*

### Stereotypers' Unemployment Difficulty.

IN endeavouring to mitigate distress due to unemployment there is a danger of doing mischief in another direction. We find that considerable perturbation has been created in the ranks of stereotypers by the understanding recently arrived at that permanent "grass" hands in the foundry should be "stood off" for one day in four weeks in order to make room for unemployed hands. The objection is made to this arrangement, not on the score of finance, but because it interferes seriously with the working of the foundry. The regular men concerned, as also the permanent "grass" hands, are men who understand the machines and the work on which they are engaged. On the contrary, those for whom they are to make way are, as a rule, quite unskilled and unfitted for their particular tasks. It can readily be imagined that in these days of pressure, such an interference with working conditions is irksome to those in responsible positions. Moreover, output is retarded, and the industrial machine is apt to be held up. Another bad feature is the fact that these "unemployed" hands are paid at a higher proportionate rate than the permanent members of the staff, a proposition which is economically unsound. Perhaps a better means of helping the unemployed can be found than this which is being subjected to general criticism.

### A World Wide Dispensation.

STATIONERS and all who deal in papers are still looking for better times which fail to arrive. Prices have been lowered until the bottom has been reached. Indeed, they have gone below the economic level; and instead of profits being earned, they are fortunate

who can cover their costs. The view that prices are the determining factor in the present depression offers little hope for the future, since the buying public are apparently waiting for quotations which are an impossibility. Such is the extent of the slump that mills which have not experienced an idle hour for many years are now feeling its effects and are on short time, while the number of machines which have been forced to close down is on the increase. Even export offers small opportunities of balancing accounts. The big markets for British papers have ceased buying to a large extent, or financial difficulties bar the door. India, Australia and other countries have their own peculiar burdens which prevent a resumption of trading. It is thought, however, that in the case of Australia matters may soon take a turn for the better, and it is much to be hoped that overseas business will become brisk before many weeks are over. Export figures do not disclose quite so gloomy a state of things as people are inclined to imagine. At least it would appear that other paper-making countries are suffering to an extent equal to if not greater than our own. This may be poor consolation, but it indicates the common lot, and it may lead to a more patient acceptance of a world wide dispensation.

"HOW TO TEACH THE YOUNG BINDER," an address recently given before the members of the Printing, Bookbinding and Kindred Trades' Overseers Association, by Mr. B. J. Sansom, has been reprinted, the work being executed by disabled men now being trained at St. Bride Institute.

At the thirty-sixth annual meeting of the North-Eastern District of the Incorporated Institute of Journalists, held on Saturday night in the library of the *Newcastle Chronicle*, Mr. D. Polson was unanimously elected chairman of the district for the ensuing year. Mr. W. G. Easthope and Mr. Harold Taylor were elected vice-chairmen, and Mr. T. Greene was unanimously re-elected hon. secretary for the twelfth successive year.

**PAPERMAKERS' ASSOCIATION.**—The annual dinner of the Papermakers' Association has been postponed to Friday, April 15th, at the Connaught Rooms, and will conclude a big "convention" week for the industry. The previous Wednesday, April 13th, is fixed for the next open conference of the Technical Association; and the intervening day will be devoted to meetings of the executives and committees.

Most of the writing ink imported into Spain last year was supplied by the United Kingdom; in regard to printing inks the United States took the first place.

## Personal.

THE Prime Minister dined on Wednesday with Sir Herbert Morgan, and a number of prominent men connected with the Press were among the guests invited to meet him, including Lord Riddell, Mr. W. E. Berry, and Mr. J. L. Garvin.

AMONG the box-holders for the Fleet-street Revel at the Opera House, Covent-garden, on April 1st, will be Viscount Burnham, Viscount Northcliffe, Lord Beaverbrook and Lord Riddell.

CAPTAIN ROBERT GEE, V.C., the recently elected M.P. for East Woolwich, is the head of the Bromley and West Kent Newspaper Co., who were last month elected members by the South-East District Association of the London Master Printers' Association. Thus the L.M.P.A. can now claim to have three of its own members in the House.

CAPTAIN GEE, who started life in the pits and was later a London bus conductor, served for twenty-nine years in the Army, beginning as a private in the Royal Fusiliers. He was awarded his commission on the field, for gallant services in Gallipoli, was given the M.C., and in November, 1917, gained the V.C. at Cambrai, where, after being taken prisoner, he escaped, organised a defensive flank, and by his heroic conduct saved D.H.Q.

MR. J. R. RIDDELL, the Principal of St. Bride Foundation Printing School, is the energetic secretary of the Livery Committee of the Worshipful Company of Stationers, and he is making great efforts to popularise the meetings of the Liverymen. Besides arranging attractive speakers, Mr. Riddell's activities extend over a wide field.

It is interesting to notice that Mr. Joseph A. Borden, lately general secretary of the United Typothetæ of America, is now "Director of General Service" of the American Writing Paper Co., and announces a programme of service to be undertaken by his new department promising to be of the same constructive value to master printers as that in which he was formerly engaged on behalf of the U.T.A.

MR. J. E. CROMPTON, works manager to Messrs. T. R. Beckett, Ltd., of Eastbourne, has, on relinquishing his position, been presented with a leather attaché case and a pocket wallet to mark the good wishes of the printing staff.

MR. JOSEPH WEINER, who presided at the concert of the Lithographers' Auxiliary on Monday night, at the Cannon-street, Hotel, was successful in raising the sum of £300 towards the funds of the Printers' Pension Corporation.

## DIVIDENDS AND REPORTS.

WINTERBOTTOM BOOK CLOTH.—Final dividend of 16s. per share on ordinary, free of tax, making 20s. per share (10 per cent.) for year; same as previous year; £20,000 to depreciation; £139,366 forward.

GEORGE NEWNES, LTD.—At an extraordinary general meeting of George Newnes, Ltd., held on Thursday last week, the resolution embodying acceptance of the closer working arrangement with C. Arthur Pearson, Ltd., as set out in the circular dated March 8th, 1921, was unanimously carried.

## NEW COMPANIES.

LATIN AMERICAN PUBLICITY SERVICE, LTD.—Capital £1,000 in £1 shares; advertising and publicity agents, newspaper proprietors and publishers, printers, stationers, etc. Private company. Directors: W. H. Koebel and A. P. Boote. Registered office: 2 and 3, Duke-street, St. James', S.W.

JOHN WADDINGTON, LTD.—Capital £100,000 in £1 shares (40,000 original preference); to acquire the undertaking of John Waddington, Ltd. (registered 1905), or any portion thereof, and to carry on the business of printers, sta-

tioners, publishers, manufacturers of and dealers in paper and articles made from paper or pulp, etc. Private company. Subscribers: G. Dixon and G. Spink. Directors to be appointed by the subscribers.

PACKING REQUISITES, LTD.—Capital £500 in £1 shares; Manufacturers of and dealers in materials for use in packing in connection with export, import and home trades, packing case makers, manufacturers of all kinds of boxes, cases and crates; also to carry on the business of manufacturers of and dealers in millboards, strawboards, paper, pulp, cotton and other mill waste, etc. Private company. Subscribers: J. Barnes and H. E. Whiteman (first managing director). Registered office: 47, Oakhurst-grove, East Dulwich, S.E. 22.

BAYNTON-POWER PUBLISHING CO., LTD. (London).—Capital £2,000 in 1,000 preference shares of £1 each and 20,000 ordinary shares of 1s. each; music publishers and sellers, booksellers, stationers, etc. Private company. Subscribers: R. A. Holden and W. H. Cole. Directors to be appointed by subscribers.

MIDLANDS TELEPHONE DIRECTORIES, LTD.—Capital £2,500 in £1 shares; to adopt an agreement with A. Howard and A. R. Tidswell for the acquisition of publishing a "Classified Commercial Telephone Directory." Private Company. Directors: A. R. Tidswell and A. Howard. Registered office: 3, Broad-street-buildings, E.C.

BANK OFFICER, LTD.—Capital £1,000 in £1 shares; proprietors and publishers of newspapers, journals, magazines, books and other literary works, and in particular the "Bank Officer." Private company. Subscribers: F. C. Clegg and J. R. Hannan. Registered office: 3, Arundel-street, Strand, W.C.2.

HANOVER PRESS, LTD.—Capital £5,000 in £1 shares; newspaper proprietors and publishers, printers, etc. Private company. Directors: H. J. Nathan and W. H. Evans. Registered office: 12, George-street, Hanover-square, W.1.

MEDICAL COMPENDIUMS, LTD. (London).—Capital £3,000 in 2,700 preference shares of £1 each and 6,000 ordinary shares of 1s.; printers, publishers, etc. Private company. Subscribers: J. Morgan and G. B. Winsor. Directors: C. F. S. Slight, J. W. Nicolson and J. C. Fairbairn.

HOTEL COMPENDIUMS, LTD. (London).—Capital £3,000 in 2,700 preference shares of £1

and 6,000 ordinary of 1s. each; printers, publishers, etc. Private company. Subscribers: J. Morgan and G. B. Winsor. Directors: C. F. S. Slight and J. C. Fairbairn.

**ARMSTRONG, HORTON AND CO., LTD.**—Capital £1,000 in £1 shares; to take over the business of a printer, publisher, importer and mail order distributor carried on by C. W. Horton at 19-21, Regent-street, as "Armstrong, Horton, and Co." Private company. Subscribers: C. W. Horton (director) and Mrs. Joan W. Horton. Registered office: 19-21, Regent-street, S.W.1.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1918, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

**SUBURBAN ENTERPRISES, LTD.** (newspaper proprietors, etc., Acton) Debenture dated February 16th, 1921, to secure £300, charged on the company's undertaking and property, including uncalled capital. Holder: W. S. Stair, 33, Emanuel-avenue, Acton.

**ROBERT FLETCHER AND SON, LTD.** (paper and vitriol manufacturers).—Mortgage dated March 4th, 1921, to secure £800, charged on 144, Princess-street, Manchester, and yearly rent charges. Holders: Miss D. E. Fletcher, Kearsley Vale House, Stoneclough, Lancs, and Mrs E. M. Winstanley, Overleigh, Whaley-bridge, Derby.

**FISHER BOOKBINDING CO. (1912), LTD.** (London).—Satisfaction to the extent of £3,000 on February 28th, 1913, of debentures dated April 2nd, 1913, securing £10,000.

**WILMOT EARDLEY, LTD.** (printers, Crewe).—Mortgage dated February 17th, 1921, to secure £1,800 charged on certain properties at Crewe. Holders: R. F. W. Eardley, Wistaston House, near Nantwich, and others.

**HERBERT REIACH, LTD.** (publishers, London).—Particulars of £2,000 debentures authorised January 1st, 1921, present issue £1,000, charged on company's property, present and future, including uncalled capital.

**CLOISTER PRESS, LTD.** (Bolton).—Mortgage dated March 2nd, 1921, to secure £12,000, charged on certain land, premises and plant at Heaton Norris, Cheshire. Holder: Miss E. H. Lord, "Beechcroft," Sevenoaks.

**WILFRA, JORDAN AND CO., LTD.** (manufacturers of and dealers in fancy and solid leather goods, stationery, etc., Liverpool).—Particulars of £4,000 debentures authorised January 12th, 1921; present issue £586 18s. 3d., charged on the company's undertaking and property, present and future, including uncalled capital.

**ROCKLEYS MUSICAL SERVICE, LTD.** (Stratford).—Satisfaction in full, on February 1st, 1921, of a debenture and mortgage or charge both dated August 10th, 1917, each securing £1,000 and a share in the profits.

**RICHWOOD BILLPOSTERS, LTD.**—Mortgage dated February 17th, 1921, to secure all

moneys due or to become due from company to Lloyds Bank, Ltd., not exceeding £900, charged on Vale House, Tunbridge Wells.

**"OUR DOGS" PUBLISHING CO., LTD.**—Mortgage dated February 18th, 1921, to secure £2,000 charged on 5, James Leigh-street, Manchester, and perpetual yearly rent charge of £19 3s. od. Holder—Mrs. F. M. Glossop, Church-street, Wilmslow.

**CLEVELAND GUILD EXHIBITION.**—The eleventh annual exhibition of the Cleveland Guild of Printers, Lithographers, Bookbinders, and Kindred Arts and Crafts is to be held on Wednesday, April 20th, in the Cleveland Literary and Philosophical Society's Institute, Corporation-road, Middlesbrough. In designing, letterpress printing, bookbinding, lithography, stereotyping, etc., many prizes are offered to Members or Associates of the Guild enrolled on or before March 16th.

## Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

The usual monthly meeting of the Association was held on the 15th inst. at St. Bride Institute, Mr. A. Chadwell (president) occupying the chair. The attendance was rather smaller than usual, and there being no particular business on the agenda an informal discussion took place on various matters of trade interest.

The minutes of the last monthly meeting were read and confirmed.

The president announced that he had been able to get into touch with Mr. F. W. Bridges and by the kindness of that gentleman they had arranged for the Association to pay a visit to the Printing Exhibition on May 3rd, at which tea would be served. Those wishing to be present were asked to notify the secretary.

### Grass Hands.

Some strong criticism was expressed at the present practice of taking on grass hands, and the inconvenience and unpleasantness resulting from it in various foundries.

A member said his chapel were up in arms against it because he had to put his regular grass men off to make room for so-called unemployed labour. The men usually sent to him were not at all efficient craftsmen. They drew good pay for a night or two's work, and at the same time they practically had to be taught their trade.

Another member expressed it as outrageous that a man could be carrying on a flourishing business outside the trade, come into the foundry for a night or two, or even be fully employed, thus making his total earnings more than the regular hands.

The general opinion of the members was that the overseer should be allowed to retain his charge hands and key men.

Mr. Chadwell said he thought it was very unfortunate that the overseer had to lose them once in a month.

A resolution was carried to the effect that the overseer should be allowed to retain the services of his key men and charge men.

Mr. Huggins said he thought the Society should use a certain amount of discretion when sending men out where intricate machinery was used. The Junior and Senior Autoplates required skilful men to operate them, and he thought some advice should go from the overseers to the officials of the union on the matter.

Mr. Chadwell said he regretted that no apprentices were being admitted to the trade at present as the question of indentures was still in abeyance.

A short discussion next took place on the subject of subscribing to the Printers' Pension Corporation individually by means of an annual subscription or through the auxiliary.

The opinion was in favour of subscribing through the auxiliary.

A vote of thanks to the chairman closed the proceedings.

## Printers' Managers and Overseers ASSOCIATION.

### MANCHESTER CENTRE.

The March meeting of the Printers' Managers and Overseers Association (Manchester), was held on the 12th inst., Mr. Thos. Rignall, president, being in the chair.

After the reading and passing of minutes, the chairman announced that Mr. F. E. Robinson was absent owing to his representing Manchester at the annual dinner of the Liverpool Centre.

Arising out of the correspondence, the secretary was requested to send a letter of sympathy to Mr. J. Chambers, Stockport, who had recently lost his wife.

The letter from the general secretary asking Manchester to assist the Printers' Pension Corporation—War Widows and Orphans' Fund—by investigating local cases, revealed the fact that this work had been done by one of the members for a considerable period.

Mr. F. Scouler agreed to postpone his lecture until the beginning of next session, when members may have an opportunity of learning more about modern tinplate printing.

As regards holding an organised visit to London, the members agreed to make their own arrangements nearer the time, owing to railway facilities being abnormal.

It was agreed that the voting for change of headquarters resulting in seven to one being in favour, the secretary and treasurer be deputed to carry out the wishes of the members.

Owing to the date of the Printing Exhibition in London and the Whitsuntide holidays falling early in May, the monthly meeting was postponed to the 28th.

Discussion on the suggested alterations to the rules occupied the rest of the evening.

WEE MAC.

**EARLIER POSTING.**—The secretary of the London Chamber of Commerce is forwarding a circular signed by the president, the chairman of the Council and himself, to the whole of the members of the Chamber urging them to facilitate speedier, more economical and more convenient Post Office working by the earlier posting of commercial correspondence. The Council's circular suggests that members should endeavour—(1) to post letters as soon as they are ready at intervals during the day; (2) to arrange for the posting of as much matter as possible at lunch time each day; (3) to post, especially, printed matter, statements, invoices, etc. (i.e., matter coming within the 3d. rate), before 3 p.m., wherever possible; (4) to despatch other bulk matter (e.g., imitation typewritten circulars) in the same way; (5) to reserve only for the late afternoon and evening collections those letters which cannot be posted earlier; (6) to avail themselves more largely of the facilities afforded by private posting boxes under arrangement with the postal authorities.

## German Activity on the Continent.

Mr. Glen Steel (London representative of Messrs. T. G. and J. Jubb), who has just returned from a business trip to France and Switzerland, was good enough to give our representative a few impressions of his experiences.

Alluding to the difficulties that British printing metal manufacturers had to face, Mr. Steel said the German material at the price was not at all bad value. In regard to German competition, he said that the Germans were performing miracles in finance and adopting business methods that were not generally known. The German somehow always contrived to maintain stocks in foreign countries, and the Continental customer liked to buy in small lots (duty paid) in the currency where the dealer is situated, and the fact of the existence of these stocks generally determined the order. The Germans had placed large quantities of antimonial lead in the French and Swiss markets which was originally intended for making bullets.

### Printing Machinery.

In regard to printing machinery, Mr. Steel said machines were being offered from Germany in every possible variety, and it came rather as a shock to an Englishman to find that a very curious spirit seems to exist among French and Belgian buyers, who seem to rejoice in the fact that they can get what they want from Germany. British manufacturers must disabuse their minds of the idea that any racial hatred is going to have any influence on business. While in France Mr. Steel found that in many instances the French buyers seem to imagine that the depreciation in the value of the franc is the result of an intrigue on the part of the Anglo-Saxon.

The whole question, thought Mr. Steel, now turned upon the currency and rate of exchange. His experience while travelling through France and other countries was that no foreign buyers could purchase British, American or Canadian machinery unless it be some special patented contrivance like the Linotype or Monotype.

Owing to confiscation of German business in Italy, observed Mr. Steel, German pattern machinery was now being manufactured successfully in Italy at low prices.

### Printing Industry in Germany.

Referring to the printing trade in Germany, Mr. Steel said that at the present time it was one of the worst paid, for the simple reason that it was mainly a home trade. He pointed out many of the hardships which confronted the working classes in that country, and mentioned that the wage of a compositor in Cologne quite recently was 600 marks (600 pennies) per month. The newspapers were being sold at almost pre-war prices, the Socialist newspaper in Cologne still being published at 10 pfennigs, or one-tenth part of an English penny.

Generally speaking, Mr. Steel thought that the outlook for trade in France and Switzerland was very bad except in the case of the most successful printers in each country, who could afford to buy, and meant to buy, any real labour-saving machinery.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### BELGIUM.

A Belgian residing near Liège desires to act as commercial traveller, in Belgium, for United Kingdom firms exporting stationers' supplies, drawing and school material, wholesale, semi-retail and retail. Correspondence in French. (Reference No. 308.)

### MEXICO.

A communication has been received by the Department of Overseas Trade from His Majesty's Consul-General at Mexico City, to the effect that a local firm are desirous of being placed in touch with United Kingdom publishers and exporters of picture post cards.

## The Printing Exhibition.

Preparations are well advanced for the sixth International Printing, Paper, Stationery, Bookbinding, Box-making and Allied Trades' Exhibition, which is to be opened by Dr. Macnamara (Minister of Labour) on April 30th, at the Royal Agricultural Hall. The whole of the buildings have been engaged for the Exhibition, which will be of a specially attractive and important character. Already there are some 230 exhibitors, and every inch of space will be occupied with some feature of interest to the trades represented. The last Printing Exhibition was held in 1914, and since then the craft has moved forward and in some respects has taken on a new aspect. Recent developments will be demonstrated. Visitors from all parts of the world are expected, and one of the many features of the Exhibition will be a World's Printing Trades Congress.

THE members of the Typographical Association, by a vote of 11,569 against 6,298, have rejected a recommendation of the Executive Council to invest £1,000 in the *Daily Herald*.

N.S.O.P.A. AFFAIRS.—The spirit of comradeship shown by the members of the night chapel of Messrs. E. Hulton's machine-room, Manchester, prevented seventeen members of the N.S.O.P.A. from being discharged. The rest of the companionship agreed to lose one night's work per fortnight so that the seventeen could retain their positions.

## British Imports of Millboards.

During February the following consignments of millboards were received at British ports:—

Port of Importation.	Country whence Consigned.	Quantity. Cwts.	Value £
London	Finland	4,671	6,815
"	Sweden	1,550	4,621
"	Norway	1,350	2,555
"	Germany	2,621	3,508
"	Netherlands	260	245
"	United States	1,088	2,208
"	Canada	5,492	11,128
"	France	99	446

Deduct to amend January account.			
Goole	France	5	30
Manchester	Canada	200	400
<b>Total</b>		<b>163,278</b>	<b>156,661</b>

\*To adjust January account.

NORWAY, last year, exported 65,900 cubic metres of box-boards, as against 61,700 in 1919.

LACE paper boxes are added to the "recognised" minor articles under the Australian Customs. The rate of duty is 10 per cent. *ad val.* under the general tariff and *nil* under the British preferential tariff.

With the arresting title of "E(ven) P(aper) D(own)," Messrs. Jas. Spicer and Sons, Ltd., are placing on the market some stock-taking bargains of their well-known papers and boards. This collection places within the reach of the paper, board and wholesale stationery trade a wide choice from which to make a selection of any goods that may be required.

## Lloyd Memorial (Caxton) Home.

The annual meeting of the Lloyd Memorial (Caxton) Seaside Home, Deal, was held at St. Bride Foundation on Saturday, the chair being occupied by Viscount Hambleden, the president. His lordship congratulated the committee on their excellent report, and upon the large number of new subscribers they had enrolled during the year. Great progress had been made, he added, in spite of the increased charges (made to secure efficiency). On the other hand, immense good and satisfaction had resulted from giving free medical specialist advice. Regret was expressed at the death of Mr. John Mabey, who had been one of the trustees of the home since its opening. Funds were urgently needed for the building of the new wing. The whole of the accounts were audited by chartered accountants, and his lordship said he was certain that a better investment could not be found. Inquiries at the offices at 80, Blackfriars-road would meet with immediate attention.

**THREE-COLOUR WORK.**—Mr. Taylor, of Manchester, lectured in the Rochdale Technical School on the 2nd inst., under the auspices of the Rochdale M.P.A. and the Rochdale Education Committee, on "The Practical Side of Three-Colour Work." Mr. Taylor dealt with the respective merits of the Wharfedale and two revolution machines for register on colour work. He maintained that a good Wharfedale, fitted with an efficient delivery or a stop-cylinder machine of the "Summit" type, was equal to any two revolution for this class of work. The subject of mounts for blocks was explained. Perhaps the most helpful part of the lecture was the discussion on overlays. The lecturer spoke of the various types, chalk relief, metallic, hand-cut and one produced by bitumen and art paper. He contended that for three-colour work a mechanical production like the chalk relief overlay was best, as any exaggeration in overlay affected the colour values of the finished print. Packing for cylinder or platen machines received notice, as did an interesting survey of inks and their properties, and other points of practical interest.

**FUTURE BOOK PRICES.**—Speaking at a dinner to inaugurate the recent combination of the firm of Heinemann with Doubleday, Page and Co., of New York, Mr. Arthur Page, member of the firm of Doubleday, Page and Co., and son of the former American Ambassador, said that the principal export of Great Britain was ideas, chiefly in printed form. Every one in America read British books. The British point of view was not foreign to them in the slightest. It was a difficult time. Manufacturing costs were high, and so was the resistance of the public to high prices. During the boom time publishers found what books cost, and charged the public more.

That was over, however, and now it was time for them to show a sporting spirit, find out what the public would pay, and make the books for less.

## Cylinder Printing Machines.

Under a patent by Mr. H. Bonham cylinder machines are so constructed that the cylinders are driven in a substantially continuous manner from the reciprocating motion of the bed, or of the carriage which carries the impression cylinder when the machine is of the travelling-cylinder type, the arrangement being such that the cylinder is driven from the bed, etc., by two sets of gear wheels which each act in one direction only, one set of wheels comprising one more driving pinion than the other. As applied to a machine with a fixed cylinder *c* and a bed *b* reciprocated by crank, rack, and pinion mechanism *m*<sup>1</sup>, *m*<sup>2</sup>, *m*<sup>3</sup>, *m*<sup>4</sup>, *m*<sup>5</sup>, *m*<sup>6</sup>, the bed is provided with two racks *h*, *k*, Fig. 2, of which the rack *h* gears with a pinion *g* which drives a loose wheel *e* at the end of the cylinder. The rack *g* is geared to

a similar loose wheel *f* by means of two wheels *j*, *i*, and between the wheels *e*, *f* is arranged a wheel *l* fixed to the cylinder *c*. The wheel *l* is provided at each side with projections in axial alinement, which are engaged alternately by pivoted catches *e*<sup>1</sup>, Fig. 3, on the wheel *e*, and by a similar catch on the wheel *f*. The wheel *e* drives when moving in a clockwise direction as seen in Fig. 3, and the gears are so timed that the catch on the wheel *f* takes up the drive when the wheel *e* is reversed in motion. The catches *e*<sup>1</sup> are normally pressed outwards by springs *l*<sup>1</sup>, but just before the catches reach the driving position they are moved inwards by wedges on the driving pins, and after passing these wedges they snap into driving posi-

tion. The cylinder is raised during the movement of the bed in one direction by means of lever arms *c*<sup>1</sup> pivoted to the spindle of the gear wheel *i*, and to the frame in alinement therewith, the arm *c*<sup>1</sup> being actuated by links *e*<sup>2</sup> and toggle, etc. mechanism. The sheets are fed from a board *s*, Fig. 1, preferably provided with a pivoted end *s*<sup>1</sup>, and are delivered by endless tapes *o* driven by gearing from cylinder *c*. According to the Provisional Specification, the wheels *e*, *f* may be arranged at opposite ends of the impression cylinder.

## Printing or Embossing.

Mr. F. W. Wood has patented an invention relating to a machine for printing or embossing from engraved plates. It is constructed with an upper die which is arranged face downwards and reciprocates in its own plane, and co-acts with a vertically reciprocating counterpart on to which the sheets are

feeding counterpart on to which the sheets are fed from a board which is normally arranged flush with the upper surface of the counterpart, the inking and wiping arrangements for the plates and all the operative mechanism except the die fittings being arranged below the feed-board. The embossing surface is mounted so as to be adjustable angularly, and is prevented from moving laterally during the impression. The pressure between the counterpart and the die is adjustable, and can be cut off entirely if desired. The inking and wiping arrangements are tripped during the outward movement of the plate carriage.

and the inking-roller is timed to come into action just before the engraved part of the plate reaches it on the return movement of the carriage. The inking and wiping devices may be tripped permanently if desired, and are adjustably carried by a common bracket, and a scraper is arranged between these to return the ink direct to the duct. The wiping-band is actuated by ratchet mechanism, the pawl of which has a perfect throw, but co-operates with a hood which screens the teeth for a portion of the throw which is adjustable by hand, or automatically from the wound-up reel, which is provided with a ratchet wheel and three non-return pawls offset with respect to each other by a space equivalent to the third of a tooth, thereby preventing the wiping-band from becoming slack. As shown the sheets are fed from a board 19, Fig. 2 on to the counterpart 20 attached to a plate 21 removably fitted in the headpiece 22 of a cam casing, operated by a block 23 and toggle mechanism 76 from a shaft 73 geared to a

power shaft 75. Between the ram head 22 and the block 23 is arranged an adjustable wedge 31 operated by a screw 32 which adjusts the distance of the gap between the printing or embossing members, and also the pressure of the printing operations. The pressure is transmitted through two members 24, 25, the upper one of which is normally held by a catch 28 in the position shown, but when this catch is operated by a hand lever, a spring rod 27 pulls the upper member to the right, and the solid portions of the member 25 engage recesses in the upper member 24, and the pressure is not transmitted. The die is mounted in a holder 8 angularly, adjustable in a circular cavity bounded by a flange 7 depending from a carriage 6, which is reciprocated in guides 5 formed in a bracket 4 secured to a stationary cross-head 3. The die is registered in printing position by a spring-depressed block 12, which can be raised out of the path of a die by a cam-actuated lever 18, the block 12 engaging an inclined catch 17 on the flange 7, and thereby preventing rebounding of the die-carriage in a lateral direction. On the outward motion of the

die a bracket 36, in which the inking and wiping mechanisms are mounted is in its lowest position, but on the return motion a cam 51, which is oscillated from the press-actuating mechanism, raises the bracket 36 to operative position. A clutch may be arranged to be hand-operated to prevent the inking, etc., devices from being brought into operation, if desired. The inking-roller 35 is arranged in a duct 45 adjustable vertically, or horizontally by screws 47, 48, and a scraper 49 consisting of a flexible steel blade in a rigid steel mounting, effects a preliminary cleaning of the plate and returns the ink to the duct 45. The cleaning of the plate is completed by a wiping-band 52 which passes from a reel 53 over a pad 34 pivoted at 37 in a head-piece 38 fitted in a box 39 secured to the bracket 36, a sliding wedge 40 serving to adjust the head 38 vertically. The pad 34 is also adjustable vertically by a worm operated screw 42, and is formed with depending sockets for receiving cushioning springs. The band 52 is wound up on a collapsible drum 55, which is rotated intermittently by oscillating pawls on a disc 58 operated by a lever 56, Fig. 8, connected to a connecting-rod 57 which operates the link 70 that reciprocates the die carriage. The pawls are masked for part of their oscillation by a hood connected to a slotted plate 62, which can be operated by hand to control the feed, or automatically from a bell-crank 65 with a roller 64 resting on the wound-up portion of the web. To prevent the wiping-band from becoming slack during the return movement of the pawls, the motion of the shaft of the drum 55 is prevented by moving backwards by a ratchet-wheel fitted with three pawls which are offset from one another to the extent of the third of a tooth, so that the greatest slip allowable is equal to the third of a tooth.

At the annual meeting recently of the Aberdeen Printing and Kindred Trades Employers' Association, the following were appointed officers for the ensuing year: President, Mr. Theodore Watt, Rosemount Press; vice-president, Mr. James A. C. Coutts, *Aberdeen Daily Journal*; secretary and treasurer, Mr. James E. Wilson.

## Mr. W. Howard Hazell, J.P.

**Biography-in-Brief of the Well-known Chairman  
of the Firm of Hazell, Watson and Viney, Ltd.**

A recital of Mr. W. Howard Hazell's life story up-to-date would fill a whole volume with interesting records of multifarious activities, all entered into with that enthusiastic energy which is one of the most salient features of his character. Exigencies of space compel us to make our sketch but little more than a mere list of these activities, though even as such it is interesting as giving in a nut-shell a comprehensive review of a particularly useful career.

The eldest son of the late much-respected Mr. Walter Hazell, J.P. (formerly M.P. for Leicester), Mr. W. Howard Hazell was born on August 23rd, 1869. His education was a wide one, private tuition being followed by some time at Dulwich College, and later by a period of study in Paris. Mr. Hazell married in 1905, his wife's maiden name being Miss Mary L. Inman.

It was in 1891 that he entered the firm of Messrs. Hazell, Watson and Viney, Ltd., of London and Aylesbury, and energy and ability soon made it clear that he was well able to take a share in the management of this important business, and accordingly he was, in 1904, appointed a director, while on the death of Mr. Walter Hazell in 1919 he became

chairman of the company. He serves also as a director of Letts' Diaries Co., Ltd.

It is as an apostle of scientific costing that one most frequently hears Mr. Hazell's name mentioned by printers, and certainly he has given much evidence of his special interest and great capabilities in respect of the important subject of printers' costs. Among his writings on this subject are several books which are regarded as standard works, including "The Federation Printers' Cost Finding System," which has passed through six editions; "Office Organisation for Printers," while he was editor and part author of the well-known manual, "Estimating for Printers." His recent series of articles on Modern Costing in *The Times* (Trade Supplement) are the latest of many contributions, in article or pamphlet form, to the literature of costing and of printing generally. His activities in

**Mr. W. Howard Hazell, J.P.**

the matter of printers' costing is shown also in the various offices to which he has been appointed. Thus he is examiner in costing and estimating to the St. Bride Printing School, of the committee of which he has recently been appointed chairman. He is well known, too, as the chairman of the Cost and

Charges Committee of the Federation of Master Printers, also as a foremost exponent of the Federation Costing System. When the Federation started its costing propaganda in 1912, Mr. Hazell travelled over 5,000 miles, explaining the Costing System to over 5,000 printers. Moreover, the fact that he holds the office of vice-president of the Institute of Cost and Works Accountants indicates that his prowess in the matter of costs is recognised beyond the confines of the printing craft.

It is not, however, in respect only of costing that Mr. Hazell has given, and is still giving, valuable service to the printing and allied trades. Besides holding various other executive or consultative posts, he is a member of the council of the Federation of Master Printers, also of the Council of the London Master Printers' Association. He is chairman of the Diary Publishers' Association, and he was a member of the Royal Commission on Paper during the whole of the period when it controlled this country's supplies.

Mr. Hazell's busy life has not prevented his visiting far distant lands. The year 1886 found him at the Antipodes, and nine years later he was again in Australia and New Zealand. In 1894 he made a comprehensive tour of South Africa, spending some time in the Orange Free State, and travelling also in Basutoland. On other occasions he has visited Canada and the United States to investigate the practices of American printers, particularly as regards their experiences of costing systems. During a visit in 1913 he attended the Typothetae Convention in New Orleans, afterwards travelling on the borders of Mexico to California, and returning *via* the Yosemite Valley and the Grand Canyon.

Mr. Hazell, as is well known, has been a Justice of the Peace for the County of London since 1918, and his interest in social welfare has made him chairman of the Metropolitan Nursing Association, as well as a member of the Committee of the Homes for Little Boys at Farningham and Swanley. Thus his services as industrialist and technician are complemented by more general activities for the public weal, the whole making an outstanding example of well-rounded citizenship.

---

**WORKERS AND THE COSTING SYSTEM.**—The maintenance of fair prices for printing is, of course, a matter of vital importance to both the employers and the workers in the industry. The employers, for their part, acknowledge the Federation Costing System as a satisfactory means of testing the fairness of prices, and for some time trade union leaders in the industry have been giving this subject their consideration. On Tuesday next, April 5th, a full explanation of the System is to be given by Mr. Howard Hazell, Mr. A. E. Goodwin and Mr. A. Williamson to a meeting of the trade union representatives of the Joint Industrial Council.

The first meeting of the Select Committee to inquire into the question of telephone administration and charges, will be held on Wednesday, April 6th.

## The State of Employment.

In the paper, printing and bookbinding trades generally employment during February was slack. In most districts it was reported to be slightly worse than during January and considerably worse than a year ago. With a few exceptions short time was worked in all sections of these trades.

With letterpress printers employment showed a further slackening, especially in London. Although in some offices in London overtime was worked by compositors and readers, in others they were reported to be on short time. In the Provinces short time was worked at most centres. In the lithographic printing trade employment was generally bad and worse than a month ago, short time being prevalent. According to returns received by the Board of Trade relating to over 8,500 workpeople in the letterpress and lithographic printing trades, nearly one-third were working short time, to the average extent of nine hours per week.

Employment during February in the book-binding trade was generally bad, showing a further decline as compared with the previous month. Over 40 per cent. of the workpeople covered by returns received by the Department were working, on an average, 11 hours per week short of full time.

According to the returns received by the *Labour Gazette*, out of 80,794 members of trade unions in the printing industry, the percentage of unemployed at the end of February was 5·2, as against 4·8 at the end of January, and 0·7 at the end of February a year ago, the increase being 0·4 per cent. on the previous month and 4·5 on a year before. In the book-binding section, out of a trade union membership of 14,715, the percentage of unemployed is given as 5·6 at the end of February, as against 4·6 at the end of January, and 1·0 in February, 1920, the increase being 1·0 per cent. on the previous month and 4·6 on a year before.

Returns made by employers for the week ended February 26th show the number of workpeople in the printing offices concerned to be 9,737, a decrease of 1·0 per cent. on the previous month and of 3·7 on a year before. The total wages paid amounted to £36,338, an increase of 1·4 per cent. on the previous month, and of 6·2 on a year before. In the bookbinding trade, employers' returns showed 5,233 workpeople, a decrease of 0·9 per cent. on the previous month, but an increase of 3·1 on a year before. The total of £11,618 paid to workpeople represented an increase of 0·7 on the previous month, and of 4·1 on a year before.

---

STEALING newspapers is very prevalent at Newport, said a newspaper publisher at the Newport Court last week when Herbert T. Morgan was summoned for stealing 10 dozen newspapers from the *South Wales Argus* offices. Defendant, who pleaded guilty, was bound over, and ordered to pay 20s. costs.

## Copyright in Lithographs.

### An Interesting Lawsuit.

Some points of special interest to the trade are involved in an action and subsequent appeal of which the report has just been published in the *Official Journal (Patents)*. The case is that known as *Gunston v. Winox, Ltd.*

The plaintiffs, Messrs. Gunston, Green and Simpson, of Farringdon-avenue, at the request of the advertisement manager of Messrs. Winox, Ltd., the defendants, produced an artistic design or a show card for medicated wine consisting of a cut-out in cardboard surrounding the neck and top of the bottle and a nurse standing by the side holding a tray of medicated wine. This original design was created for the purpose of obtaining orders from the defendants, but the negotiations between the plaintiffs and the defendants fell through, the defendants declining to give an order. Subsequently the defendants' manager arranged to have the plaintiffs' design copied by chromo-lithographers who produced some copies of the design for the defendants. The plaintiffs submitted their design to the Premier Drug Co., who approved the design and gave the plaintiffs an order for copies, conditional, the company contended, on the company having the copyright. The plaintiffs registered the design and brought an action against the defendants for infringement of it, and pending the result of the case, the reproduction for the Premier Drug Co. was suspended and no delivery had been made. At the trial of the action the defendants relied on publication of the design to the Premier Drug Co. prior to registration. The plaintiffs contended that, notwithstanding such disclosure, the validity of the registration was protected by Section 55 of the Patents and Designs Act, 1907.

At the trial, Mr. Justice Astbury held that the negotiations between the plaintiffs and the Premier Drug Co. were throughout subject to the condition or understanding that the design should be subsequently registered, and that the design was disclosed by the plaintiffs to the Premier Drug Co. in such circumstances as would have made it contrary to good faith for that company to publish or use the design before registration, and that Section 55 applied and the registration was not invalidated by such disclosure. An injunction was granted and an order was made for delivery up or destruction of all copies of the design in the defendants' possession, and the defendants were ordered to pay the costs of the action. The defendants appealed.

The appeal was heard on January 28th last, before the Master of the Rolls and Lords Justices Warrington and Younger. In the course of the hearing very severe strictures were passed upon the defendants' conduct in taking the plaintiffs' design and getting it manufactured by somebody else. It was, however, held that the correspondence

between the plaintiffs and the Premier Drug Co. showed that at the time of the disclosure of the design by the plaintiffs to the Premier Drug Co., both parties to the actions were under the impression that there was an existing copyright, and that there was not any obligation laid, or intended to be laid, upon that company not to disclose the design. The appeal was allowed, with costs of the appeal, but, having regard to the defendants' conduct, it was ordered, as to the costs of the action, that the plaintiffs should pay to the defendants the costs of the issue of publication, and that the defendants should pay to the plaintiffs the other costs of the action.

## Joint Industrial Convention.

Arrangements are now practically completed for the first annual convention of the Joint Industrial Council of the printing industry, to be held at Brighton on April 12th. The representatives will be received by the Mayor of Brighton at noon, and it is then, we understand, that the presentation to the Rt. Hon. C. W. Bowerman will be made. At the convention, which will start at 2.30, the following chairmen of important committees will briefly state what is being done by the committees they represent: Mr. J. S. Waterston (unemployment committee), Mr. G. A. Isaacs (health committee), Mr. J. S. Coppock (apprenticeship committee), General W. W. Bemrose (organisation committee), and Mr. E. W. Humphries (conciliation committee). With these various reports under discussion, together with points of importance which will no doubt be forthcoming from the representatives of district committees, a very interesting meeting is anticipated.

**INDIAN PRESS ACT.**—A public meeting, held under the auspices of the Press Association of India, at Bombay, on March 5th, passed the following resolution:—"That this public meeting of the citizens of Bombay held under the auspices of the Press Association of India, once more emphatically condemns the Press Act of 1910 as it violates the natural rights of the Indian people, and is of opinion that no possible modification of the Act can safeguard the liberty of the Press to which it is a standing menace." A further resolution, proposed by the present editor of the *Bombay Chronicle*, and supported by prominent Indian journalists, stated: "That this meeting of the citizens of Bombay, held under the auspices of the Press Association of India, once more places on record its appreciation of the great services of Mr. B. G. Horniman to the cause of the Indian Press in particular, and national progress in general, and reiterates its strongest condemnation of the arbitrary and unjust deportation of Mr. B. G. Horniman and the continuation of the restrictions against his return to India."

## Organisation in the Printing Trade.

### English and American Efforts Compared.

Mr. R. A. Austen-Leigh, the president of the London Master Printers' Association, is a gentleman of resource, and at the monthly lunch of the association recently, he not only acted as chairman, but delivered the address. His subject was "The organisation of the American Printing Industry compared with our own," and his review of the subject indicated a comprehensive grasp of the situation.

Describing the scope of the United Typothetae of America, Mr. Austen-Leigh mentioned that its operations embraced both Canada and Mexico. There were said to be about 33,000 printing establishments in North America, and of these only some 4,827 were represented in the U.T.A. The association was formed with a view to developing a fraternal spirit among employers, improving the industry, and encouraging co-operation, spreading a knowledge of costing, maintaining labour bureaux, credit bureaux for mutual insurance companies, standardising customs, etc. One very important rule, however, laid down "that neither this Association nor any of its divisions should at any time attempt to regulate the entire membership in the matter of labour control or prices of printing." The speaker went on to describe the divisions into which the U.T.A. was divided, namely:—the closed shop division, which existed for the purpose of making contracts with labour unions; the open shop division; the trade composition branch, for houses doing mechanical composition for the trade; and the law printers' division. There was also an Industrial Relations Committee, consisting of the open shop and closed shop divisions, to enable these to co-operate if they so desired in activities of mutual interest. Subscriptions were based on the pay-roll in the composing, press, foundry and binding departments at the rate of half of 1 per cent. or 5 dollars per 1,000 dollars, which was five times as much as was paid by the London Association members. It was noted that there was no intermediate link between the local Associations and the U.T.A., as we had in this country in the alliances, but there existed a standard plant for forming typographical federations embracing either one State or a group of States. From the fact that the U.T.A. did not interfere collectively with labour matters, it followed that its hands and time were largely free for the educational work on which it specialised. It must be remembered that trade union labour was not organised in the same way in the American printing industry as it was over here. Indeed, it had been said that of the 5,000 odd members some 1,500 belonged to the closed shop division, a similar number to the open house division and the rest to neither, thus showing that it

would be quite impracticable for the U.T.A. to negotiate as a whole with organised labour.

### Big Educational Schemes.

The general policy of the U.T.A. might be described as "service and education for members and their employees." The speaker went on to describe the three-year plan which was put into practice in 1918, the principle of which was to teach standard business practices in the industry, which tended to make printers better estimators, better salesmen, better advertisers, and in short, better business men. In carrying out this scheme, 125 cities of the United States and Canada had organised themselves into local Typothetae Associations, all having identical programmes of business education which every member had pledged himself to carry out. Under these contracts every printer agreed that he would not only have installed and would maintain permanently a standard cost-finding system, but that he would furnish one or more students to the three-year period for the study of each one of the educational courses. It had been reported that the standard cost-finding system had been installed in more than 3,000 offices, and that about 7,000 students had been registered for the educational courses. Mr. Austen-Leigh then proceeded to deal in detail with the educational courses established under the scheme which included, in addition to standard cost-finding, standard estimating, standard salesmanship and an advertising course. He proceeded to describe the school which the U.T.A. had established at Indianapolis with local state and federal aid. This school, which last year had 218 students, catered for the man who wanted intensive training for a few weeks to fit him for some particular job, for the ordinary capable journeyman who wanted to improve himself, for young men sent by their fathers to get good technical knowledge as a foundation for executive work or management, and it provided also for the training of printers disabled in the war, and for the training of local apprentices. The American printing trade also had the advantage of being able to use the Department of Printing or Graphic Arts at the Carnegie Institute of Technology, Pittsburg, the object of which was to train young men with little or no actual workaday experience for future executive positions in the printing business, and also to give special courses of intensive study for men of journeyman rank. Then there was the School of Business Administration at Harvard University. With all these opportunities it was clear that the ambitious young man desirous of going into printing had many more chances in America than in England.

### A Many-Sided Organisation.

Mr. Austen-Leigh proceeded to describe the work of the departments of the Headquarters Staff, which consisted of field operations or organisation, research, advertising, industrial relations, trade composition and education. He spoke of the courage required in adopting a scheme of national advertising in big publications, to make known the names and objects of the U.T.A. to buyers of printing

This was the first effort of its kind anywhere, and it only ceased when the money of the U.T.A. ran short. The speaker referred also to the seriousness of the Annual Convention of the U.T.A. which lasted for three days.

Mr. Austen-Leigh said that if one is to compare the U.T.A. with ourselves, one may say that the industry as a whole is far less organised than over here. The proportion 5,000 out of 33,000 compares badly with 5,000 out of 8,000; then there is the great difference of their not negotiating with labour, while here that seems to take up most of our time.

On the other hand, in the ardour of their educational policy they easily out-distance us: take for example the fact that they have 3,000 members who have installed the cost system, and their instructional courses with 7,000 students; or take their comprehensive price-list in existence for five years compared with our slender pamphlet just issued, and not received with unanimous welcome.

Otherwise we are largely working at similar problems. They are doing what they can to standardise paper, but unfortunately not proceeding on quite the same lines as we are. They even make the same complaints that their members will not answer the questionnaires addressed to them.

In conclusion, Mr. Austen-Leigh advised anyone who had the opportunity, to attend one of the Conventions of the U.T.A., as he had the pleasure of doing in 1912.

#### **Sir Cecil Harrison's Remarks.**

Sir Cecil Harrison, in moving a vote of thanks to Mr. Austen-Leigh, both for taking the chair and for his address, agreed with Mr. Austen-Leigh that in some respects British master printers were in advance of their American friends in the matter of organisation. All of them were not perhaps aware of the organisation that had been carried out in this country, and development had been very great during the last 30 years since the Master Printers' Association in London was started. They had eliminated the other associations which had existed prior to that date in various parts of the country, and the London Master Printers' Association had established other associations all over the country until they had built up what they might say was a great federation. It was as good and as great a federation as there was in any trade in Great Britain, and had accomplished very considerable work in a quiet way, more by influencing the tone of business relations and establishing friendly communication between the various branches of the trade than in the more formal work which had, of course, not been neglected. There was still scope for further developments, and the more they joined in these little gatherings from time to time, the more enthusiasm they would feel in carrying out the organisation of the trade which had been so well exemplified in America. In a tribute to the chairman, Sir Cecil described Mr. Austen-Leigh as not only a leading organiser but a man of immense resource and an encyclopædia of knowledge.

Mr. Austen-Leigh, in reply, acknowledged the assistance which Sir Cecil Harrison had

given in the work of organisation since he became a member of the original council quite 30 years ago. He added that the amount of organisation done in the last few years had been very marked, and he hoped it was going to lead to fine results.

---

## **Technical Examining Board**

FOR THE

### **PRINTING AND ALLIED TRADES.**

---

From time to time practical printers have said many pointed things about the technical examination questions set young printers attending technical schools. Frequently suggestions have been made that it would be to the best interest of the industry if these tests of technical knowledge were set and adjudicated by a body representative of the printing and allied trades.

In some quarters, such suggestions were looked upon as "Utopian" but now the dream has been realised. A technical board has recently been constituted, composed of representatives of the various sections of the printing industry, both employers and employees, along with members of the Worshipful Company of Stationers.

It is expected that the first examinations will be held shortly at Stationers' Hall—probably late in April or early in May—when certificates, medals and prizes will be awarded on the results of the examinations. The conditions so far as they apply to the composing, letterpress machine, lithography and book-binding sections are, that candidates must be between the ages of 17 and 21 and must have attended regularly a recognised technical class. To meet the cost of examinations, there is an entrance fee of 1s. 6d. An important point is that candidates in these craft sections must submit an example of work which has to be certified by their instructor as being their own work.

It is anticipated that other sections of the industry will ultimately come within the scope of the new board and that the certificates awarded will be accepted as a guarantee of practical merit and technical ability. These examinations will form a link between the past and the present in so far that it will renew one of the Stationers' Company's earliest functions, i.e., testing the craft efficiency of those engaged in the printing and allied trades.

Every printer will recognise that this is an important step in the right direction and it is hoped that before long it will be looked upon as essential that everyone employed in the printing industry should hold a certificate of efficiency. With Mr. J. R. Riddell as honorary secretary, the new technical board consists of gentlemen whose names stand for progress in printerdom.

An Advertisement is always working.

## Lithographers' Auxiliary Concert.

### Well-Attended and Successful Function.

This alert and enterprising auxiliary held another successful bohemian concert on the 21st inst. at the Cannon-street Hotel, when Mr. Joseph Weiner, of the well-known printing firm of J. Weiner, Ltd., Acton, occupied the chair. Credit is due to the lithographic section of the trade for the manner in which it is supporting these concerts, for the one under notice, as well as its predecessors, have been attended by large and appreciative audiences. Among those present were the following:—Mr. Sydney Cumbers (president), Mr. Laurence Blades (vice-president) and Mrs. Blades, and Messrs. Fredk. Seymour, John Weiner, junr., W. C. Rundle, George Thrale Jell, W. Stevens and Jas. Mynott (general hon. secretary) and a full gathering of members of the committee.

During the interval Mr. Weiner took the opportunity of expressing his pleasure at taking the chair. He said he was only too pleased to do anything he could for the lithographic profession and for everyone connected with it. He did not wish to interrupt any longer than necessary the musical programme so ably arranged by Mr. Hammond, but he desired to congratulate the auxiliary on its growth, it being now, he believed, the second in importance, which success was due to the efforts of the committee, and especially of Mr. Cumbers and Mr. Blades. He understood that money was needily badly for those who had given the best part of their lives faithfully serving their craft, and he appealed to his hearers to help him raise as large a sum as possible. He thought they would think him too ambitious if he appealed for his sum to be brought up to £400, the amount necessary for a pension, although he was satisfied to leave it to their generous support.

Mr. Weiner later announced that he had collected £189 2s. from his business friends and the collection that evening had amounted to £20 5s., so that with his own donation of £90 13s. the total sum realised amounted to £300.

The announcement was received with hearty applause.

Mr. Sidney Cumbers, in moving a vote of thanks, said it was the appeal of the aged printer and the necessity for providing for the future that had influenced Mr. Weiner to take the chair that evening. Mr. Weiner was one of those printers, like Mr. Blades, who ran his own business, in fact, ran all the hands in it as well, with a sort of fatherhood. He congratulated Mr. Weiner on the amount raised and said he had set a hot pace for them for the last concert of the season to be held on April 11th, at which he hoped even for a larger measure of success.

The vote of thanks was heartily seconded, "For he's a jolly good fellow" being enthusiastically sung.

### The Concert Artists.

The programme consisted of quite a galaxy of musical talent, many of the artistes being well-known favourites on the concert platform. Miss Ethel Royston sang her songs with pleasing effect, as did Miss Elsie Redfern, both singers receiving appreciative applause; Mr. Randell Jackson (baritone) an old favourite, in no way disappointed his hearers, his singing being well up to his usual standard of excellence; Mr. Philip Ritte (tenor) well known to South London concert goers, was in perfect form and received many calls for repeated appearances; Mr. A. E. Nickolds (zither-banjo) gave very evident satisfaction with the rendering of "Cavalleria Rusticana," the difficult performance being highly appreciated; Mr. Harry Hearne (humorist) delightfully sustained the humorous element, his patter being quite originally rendered. The entertainment provided by Mr. Wilbey Lunn (living marionettes) assisted by Miss Connie Hart and Miss Gertrude Mayo was greatly enjoyed, their joint performance being generally deemed clever in its inception and highly entertaining; Miss Julia Larkins (accompanist) received well-merited applause for her rendering of several humorous songs at the piano; Mr. N. T. Hammond (musical director) in his usual commendable fashion conducted the arrangements to the general satisfaction of the company.

## National Union of Journalists.

The annual delegate meeting of the National Union of Journalists was opened on Thursday afternoon at Newcastle-on-Tyne, and there was a large attendance of delegates from all parts of the country.

Mr. J. E. Brown (the president) in his presidential address, said the Union was still growing, and the membership was at the present time well over 5,000.

Referring to the question of unemployment in the profession, he expressed the belief that a working scheme could be arranged between the proprietors and the employees which would alleviate the distress caused by unemployment, and the Executive was already considering the draft of such a scheme which had been drawn up by the vice-president (Mr. T. Jay).

On Thursday evening the members spent an enjoyable time at a reception given by the Lord Mayor and Lady Mayoress of Newcastle.

On Friday the meeting sat all day and transacted a considerable amount of business. For the ensuing year, Mr. T. Jay (Bristol) was unanimously elected president, and Mr. T. A. Davies (Cardiff) was appointed vice-president.

A motion to the effect that the N.U.J. should cease to be affiliated with the Trades Union Congress was defeated by a substantial majority.

JOHANNESBURG unemployment in the printing trade has slightly decreased lately, though business is still very slack.

# Trade Notes.

FROM Monday next the price of the *Birmingham Post* will be reduced from twopence to one penny.

C. W. SHORTT AND CO., LTD., have removed from 36-38, Whitefriars-street, Fleet-street, E.C.4, to 8, Fulwood-place, High Holborn, London, W.C.1.

As a memorial to the late Sir Vezey Strong, who was for 20 years chairman of the London Temperance Hospital, it is proposed to form a new isolation ward and nurses' quarters.

MESSRS. H. A. SMITH AND SON have been appointed printers to the Coventry Union for the ensuing six months and the tender of Mr. H. Cave for the printing of agendas has been accepted.

THE late Mr. Alexander Duncan, a director of Duncan and Sons, Ltd., proprietors of the *South Wales News*, *South Wales Echo* and *Cardiff Times*, left estate sworn at £74,089, net personalty £67,301.

ACCORDING to the figures for 1914 the attack rate per 1,000 in the printing trade is the lowest of all the industries in which lead poisoning occurs—0.4. The highest rate is 26 per 1,000 in the white lead industry.

PRINTING IN THE SKIES.—To be known as the *Aerial Mail*, a daily newspaper is to be written, edited, made up and printed on a hand press in an aeroplane while on its way between London and Paris, messages being received by wireless *en route*.

By the death, last month, of Mr. David Drysdale, the well-known proprietor of the *West Coast Recorder*, there passes away one of the most skilful printer-craftsmen of Victoria. Mr. Drysdale, who was born in Edinburgh and taken to Victoria as a boy, was in his 76th year.

CAMBORNE PRINTING.—For the printing of local election matter the Camborne Urban Council invited tenders for the work outside the town and accepted one of these tenders. At a meeting of that Council last week, Mr. J. F. Lee said he was sorry to submit a report showing that work had been taken outside the town, but when they compared the excessive prices of local printers with the prices paid in other parishes, the Finance Committee felt justified in sending out the work.

BEFORE Sir Charles Johnston, at the Mansion House, on Tuesday, John Douglas Phillips, 30, a cashier in the employ of *The Times Publishing Co.*, was charged with stealing £197, the moneys of his employers. In pronouncing sentence, Sir Charles Johnston said: "I believe you have been the victim of temptation arising out of your troubles, and, as the prosecutors have very kindly refrained from pressing the charge, I will pass the moderate sentence of three months in the second division."

THE late Dr. John Cannell Cain, D.Sc., for some years editor of the *Journal* and other publications of the Chemical Society, left £8,528.

THE death occurred suddenly at Bourne-mouth last week of Mr. Thomas W. Twyford, D.L., J.P., of Whitmore Hall, Staffordshire, chairman of Twyford's Ltd., and chairman of the *Staffordshire Sentinel* newspaper, Hanley.

ORDERS authorising the employment of women on two-day shifts have been made in the case of Messrs. Waterlow and Sons, Ltd., Dunstable (for women engaged in envelope making and embossing) and Messrs. Thomas de la Rue and Co., Ltd., London (playing card cutting department).

WITH this week's issue the *Dunoon Observer and Argyllshire Standard* attains its jubilee, and the publishers have issued a four-page illustrated supplement, giving a history of the newspaper and a *résumé* of the leading events in Dunoon during the past 50 years, as well as tributes to the publication from public men.

MESSRS. KEGAN PAUL, TRENCH, TRUBNER AND CO., printers and publishers of a book called "The Autobiography of a Child," were unsuccessful in an application last week for a rule nisi, calling on Lord Alfred Douglas and the publishers and printers of *Plain English*, to show cause why they should not be committed for contempt in respect of an article in that periodical.

PRINTERS' PENSION ELECTION.—The assistance of holders of spare votes is being solicited on behalf of the candidature of Mr. Samuel Thorndycraft, 80 (trustee to the Lithographic Pension Fund from 1898 to 1906). The candidate is recommended by Mr. Woodgate Stevens, and subscribers willing to help in the direction indicated are asked to communicate with Mr. J. Mynott, Falcon Hotel, Gough-square, E.C.4.

MR. WILLIAM GAMBLE's article on "The New Lithography" in our issue of December 9th has evidently been read with interest in the United States. We notice that while the well-known trade monthly, the *Printing Art*, reproduces this article with due acknowledgment to the *British and Colonial Printer and Stationer*, the *Photo Engravers' Bulletin* (official organ of the American Photo-Engravers' Association) similarly reproduces the article *in toto*, but without any indication that the article is lifted from our pages.

THE March number of the *Journal of Industrial Welfare*, the well-produced and informative monthly organ of the Industrial Welfare Society contains abstracts from the speeches delivered by the Duke of York, the Home Secretary, the Minister of Education, Sir William Ellis, Sir Charles Wakefield, and the director of the Industrial Welfare Society, at the Mansion House Conference on March 2nd. Dr. E. Halford Ross—well known to City printers—contributes an article on belt-wearing as an aid to breathing efficiency, while a specially welcome feature is a clever and humorous drawing by W. Heath Robinson.

## FORTY-THIRD YEAR.

Printed and Published EVERY THURSDAY  
by STONHILL & GILLIS.  
at 58, Shoe Lane, London, E.C. 4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE EXTRA).

Charges for Trade Advertisements:  
(Full page 8 by 5½ ins.)

Whole Page ...	£4 10 0		s. d.
Half Page ...	2 10 0	One-eighth Page	17 6
Third Page ...	1 17 6	One-third Column	22 6
Quarter Page ..	1 10 0	One inch in Column	9 0

An Extra Charge for Cover and Special Positions.  
Discounts according to Number of Insertions.  
Representatives throughout the United Kingdom and  
also in Australia, India, South Africa, United States  
Canada, etc.

All communications for the "BRITISH AND COLONIAL  
PRINTER AND STATIONER" should be addressed and  
Cheques and Post Office Orders made payable to—  
STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C. 4

Copies may be purchased at the Offices, as above  
or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.

THURSDAY, MARCH 31, 1921.

# Current Topics.

## Standard Form of Tender.

In view of the many unnecessary difficulties and misunderstandings—often partly to blame for glaring discrepancies in quotations—due to the varying forms of tender now in use, a recent meeting of the London Master Printers Association Council gave consideration to the following resolution, which was submitted by a District Association for the Council's attention:—"That this Council recommends to the Federation that steps be taken to invite and encourage local authorities, public bodies, corporations, etc., to submit their tender forms for printing and stationery to the Federation, so that in future such forms may be issued as approved by the Federation of Master Printers." The Council decided to appoint a sub committee to go into this matter, and the L.M.P.A. is now inviting members to submit suggestions for a *standard form of tender*, and to forward particulars as to any clauses in present tenders which they consider objectionable. The Federation of British Industries

also has now appointed a sub-committee, on which the Federation of Master Printers will be represented, to deal with the matter, so that any information or suggestions forwarded to 24, Holborn, by members of the L.M.P.A. will be of great value as facilitating a further step in the direction of standardisation which should be of benefit to all parties having to do with printing and stationery tenders.

## Mr. Naylor's Return.

THE London Society of Compositors has put an end to the comedy of the brief sojourn of its general secretary and chairman among the out-of-works. The news was made known just too late for inclusion in our last week's issue that the ballot for the election of chairman and secretary of the L.S.C. showed the following results: For chairman, T. Timberlake, 9,027; J. Mortished, 1,757; T. A. C. De Vere Artlett, 222; for general secretary, T. E. Naylor, 9,483; E. Warton, 1,400. Thus our estimate of the situation, as put forward in the *British and Colonial Printer and Stationer* of March 10th, is abundantly borne out, and we now see the expected "overwhelming reversal" of the annual meeting's decision. Probably the reversal would have been even more overwhelming had not a certain percentage of members felt that the issue was so little in doubt that their votes were not needed to make it secure. It is not long since we were writing of the little encouragement often forthcoming from trade union members to enable their leaders to withstand the bidding of those who would fain entice them from their posts. This episode is a case in point. A whisper reaches us that immediately after the annual general meeting which put him temporarily out of office, Mr. T. E. Naylor received notice that a more lucrative appointment was his for the taking, but that he unhesitatingly turned the offer down—as he has done in the case of more than one somewhat similar offer previously. The moral would seem to be that rank and file trade unionists would be wise to keep a very watchful eye upon their "ginger" or "red" minorities.

## A Pensions Anomaly.

AT this time of year the subject of pensions is much to the fore, and in this connection a point that has already been voiced more than once can well bear further emphasis. While the thriftless or careless worker who has made no provision for old age receives the full amount of State assistance under the Old Age Pensions Act, the man who, perhaps

by much self-denial and by playing his part in the work of the benevolent organisations in the printing trade, finds himself provided with a pound or so a week, has his State pension reduced or denied him altogether. Surely a starvation rate of private pension, hardly earned, should not suffice to cause ineligibility. It is very pleasant to find that this matter—of importance, chiefly, to the small-wage employee—has been taken up by an employers' association. The South-West District Association of the L.M.P.A., at a recent meeting, passed the following resolution:—"That this meeting of the South-West Master Printers, having discussed the question of old age pensions, are of opinion that the time has arrived when the restrictions as to income should be removed, and that our Council should be asked to get into communication with the federated unions, and jointly to take action to obtain the removal of the objectionable clauses of the Act." The matter is one of general interest, especially if the printing industry is to become responsible for its own non-wage-earning members, and it is one that might well be vigorously tackled at once.

\* \* \*

### A Model of Organisation.

EVIDENTLY the Board of Trade and the Ministry of Labour think great things of the organisation of the printing industry, as they have during the past month directed to "24, Holborn," several distinguished foreigners visiting these islands in search of the last word in trade organisational efficiency. Among the pilgrims have been representatives from the Federation of Employers of Denmark, also officials from the Japanese Government. We hear that these gentlemen, who were particularly anxious to learn all they could of the English ways of handling labour questions, were keenly interested in the work that is directed from "24, Holborn." Moreover, master printers' organisations in South Africa and India have recently applied for affiliation with the Federation of Master Printers, for the purpose of securing information. The Federation is now in close touch, also, with Australia and New Zealand, and with various employers' organisations on the Continent.

**PRINTING TRADES' ROLL OF HONOUR.**—The Printing Trades' War Memorial Committee having accepted the design for the Roll of Honour to be erected in the Memorial Wing of the Caxton Home, Limpsfield, desire to intimate that the closing date for the receipt of names will be Saturday, April 16th. At present there are 2,400 names on the Roll.

## Personal.

MR. R. A. AUSTEN-LEIGH, president of the London Master Printers' Association and vice-president of the Federation, is spending an interesting holiday in Corsica.

MR. E. W. HUMPHRIES, president of the Federation of Master Printers, was present at the annual meeting of the Scottish Alliance at Glasgow on Thursday.

DR. J. MACLEHOSE, LL.D., vice-president of the Federation, travelled to Italy last week to enjoy a well-earned holiday.

## Mr. R. C. Annand.

The world of printing machinery sustains a noteworthy loss by the death which occurred on Sunday, at his residence at Ealing, of Mr. Robert Cumming Annand (aged 68), formerly managing director of the Northern Press and Engineering Co., South Shields and the inventor of many valuable improvements in newspaper printing machines. A native of Longside, near Peterhead, Mr. Annand, as a boy, worked on his father's farm, but was subsequently apprenticed to a brother, the proprietor of the *Buchan Observer*, at Peterhead. He was afterwards engaged in the mechanical departments of several English newspapers, and became manager of the *Shields Daily Gazette*, of which his brother, the late Mr. James Annand, was at one time editor, but more recently his energies had been devoted to the Annand Press and Trading Co. Having a natural bent for invention, he turned his attention to the machines used in his profession, and his patents have been embodied in printing presses all over the world. One of his earliest devices was for blanket washing in connection with rotary printers, and another was a simplification of the folder, dispensing with complicated tapes, while he had recently been engaged on a folder for flat-bed printing machines.

**PRINTING TRADE WAGES.**—Several Alliances of the Federation of Master Printers are holding meetings this week to consider the subject of wages, in view of the Federation Council meeting arranged for Tuesday next.

MR. ELWIN NEAME, the well-known photographic artist, is to lecture the Publicity Club of London at the Hotel Cecil on Monday, April 4th. Mr. Neame, who is bringing a "live Model" with him, is dealing with the influence of photography on advertising. A cordial invitation to attend is issued to all Publicity Men interested, who should phone Mr. Day, Central 11769, for free invitation tickets.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1918, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**SOUTH EASTERN PRESS, LTD.** (Greenwich).—Satisfaction to the extent of £250, on December 17th, 1920, of mortgage debenture, dated December 1st, 1911, securing £500.

**TOWNLEY AND RUSSELL, LTD.** (fancy stationers, art publishers, etc., London).—Mortgage debenture, dated March 3rd, 1921, to secure £230, charged on company's undertaking and property, present and future. Holder: J. A. Checketts, 103, Lonsdale-road, Barnes, S.W.

**D. WOOD-BOYD AND CO., LTD.** (tinplate decorators, crystalisers, printers, stationers, etc., Deptford).—Particulars of £1,000 debentures, authorised December 15th, 1920, whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**PATEX, LTD.** (Sheffield).—Issue on February 25th, 1921, of £100 debentures, part of a series already registered.

**NEWPORT PRINTING CO., LTD.**—Satisfaction in full on March 15th, 1921, of debentures, dated March 10th, 1914, and February 24th, 1916, securing £200.

**LOWE ASTON, LTD.** (printers).—Legal mortgage, dated March 9th, 1921, to secure all moneys due, or to become due, from company to London Joint City and Midland Bank, Ltd., charged on 293 and 295, Ley-street, Ilford, machinery fixtures, etc.

**GOOD, LTD.** (printers, London).—Debenture dated March 8th, 1921, to secure all moneys due, or to become due, from company to Barclays Bank, Ltd., not exceeding £2,000, charged on the company's undertaking and property, present and future, including uncalled capital.

**MASON AND JACKSON, LTD.** (printers).—Mortgage dated March 11th, 1921, to secure all moneys due, or to become due, from company to National Provincial and Union Bank of England, Ltd., charged on certain land and premises in Hull.

## NEW COMPANIES.

**GRIMSEY AND SONS, LTD.**—Capital £10,000 in £1 shares; to take over the business of machine rulers and writing tablet makers carried on by H. T. Grimsey and H. A. Grimsey, at 67A, Farringdon-street, E.C., as "Grimsey and Sons." Private company. Directors: H. T. Grimsey and H. A. Grimsey. Registered office: 67A, Farringdon-street, E.C.

**OVERSEAS PACKAGES, LTD.** (London).—Capital £6,300 in 6,000 "A" shares of £1 each, and 6,000 "B" shares of 1s. each; box, packing case, chest, crate, keg and drum, trunk and bag makers, cardboard manufacturers, etc., and to adopt an agreement with J. C. Roberts. Private company. Subscribers: A. J. Evans and V. A. Nott. First directors by subscribers.

**TEMPLAR EDUCATIONAL STATIONERY CO., LTD.**—Capital £5,000 in £1 shares; scholastic, legal, commercial and general stationers, school and college outfitters, printers, etc. Private company. First directors: F. Duffield, sen., F. Duffield, jun., W. Stevenson and C. R. R. Stevenson. Registered office: Pearl Chambers, East-parade, Leeds.

**HARRY SMITH AND SON, LTD.**—Capital £5,000 in £1 shares; paper and paper tube

manufacturers, paper machinists, etc. Private company. Subscribers: B. Smith and Mrs. A. M. Wilson. Registered office: Tube Works, Anvil-street, Keighley.

**NASCO, LTD. (London).**—Capital £6,000 in 5,750 participating preference shares of £1 each and 5,000 ordinary shares of 1s. each; advertising contractors and agents, experts and advisers in advertising, etc. Private company. Subscribers: J. E. Bowman and J. Morgan. First directors: J. W. Nicholson, J. C. Fairbairn, H. H. Curnow and C. F. S. Slight.

**FELTHAM'S ADVERTISEMENTS, LTD.**—Capital £2,000 in £1 shares; to take over the business carried on at 6, Temple-row, Birmingham, as "J. R. Feltham," advertising contractor and general agent for trade journals, advertisements, theatre screens, advertising spaces and all public exhibitions. Private company. First directors: J. R. Feltham and W. E. Haworth.

**MAYON AND CO., LTD.**—Capital £5,000 in £1 shares (1,000 12½ per cent. cumulative preference); confectioners, wholesale and retail manufacturers of and dealers in cardboard, paper and other boxes and cases, etc. Private company. Directors: S. N. Metcalf, N. L. Parker and J. H. Leppard. Registered office: Kingsgate House, 115, High Holborn, W.C.

**E. A. AND W. GREENSLADE, LTD.**—Capital £100,000 in £1 shares (40,000 8 per cent. cumulative preference); manufacturers of and dealers in brushes, brooms, besoms, bristles, sponges, mats, rugs, rope, dyes, varnishes, leather, stationery and fancy goods, drugs and chemicals, packing case, box and portmanteau and plane makers, engineers, etc. Private company. First directors: Eliza S. Greenslade, D. A. Greenslade, A. A. Greenslade and F. F. Harris. Registered office: 80, Thomas-street, Bristol.

**GEORGE VICKERS, LTD.**—Capital £35,000 in £1 shares; to take over the business of wholesale and export newsagent, booksellers, publishers and stationers carried on by Lilian Vickers, J. A. E. Hickson and G. L. Vickers at Angel-court, Strand, as "George Vickers." Private Company. First directors: J. A. E. Hickson, G. L. Vickers and W. Morgan. Registered office: Angel-court, 172, Strand, W.C.2.

**SHIPPING TRADES INDEX, LTD.**—Capital £2,500 in £1 shares (1,000 preference); proprietors, publishers and printers of trade and other directories, journals, magazines, etc. Private company. First directors: F. l'Estrange, H. Yates, J. L. Taylor and F. W. Picken. Registered office: 56, Ludgate-hill, E.C.

**J. LOOKER, LTD.**—Capital £7,000 in £1 shares; to take over the business of printers, publishers, booksellers, stationers and dealers in fancy goods, newspaper proprietors, etc., carried on by J. Looker, at Poole, Dorset. Private company. Subscribers: J. Looker and Mrs. M. Looker. Registered office: 82, High-street, Poole.

PRINTING PAPER.—Olive's Paper Mills Co., Bury, Lancs.

**RULES FOR COMPOSITORS AND READERS AT THE UNIVERSITY PRESS, OXFORD** (25th Edition), by Horace Hart, M.A. London: Humphrey Milford, Amen-corner, E.C.; pp. 120, 5½ in. by 3½ in. Price 2s. net.

It should rejoice the heart of many a printer to see issued another edition of this justly famous little book of reference. The new edition, slightly extended in scope and revised up to date, will be regarded by many in the trade as *the* criterion to be referred to in questions of typographic style. Certainly its authority is great. Not only has it behind it the name of Horace Hart, but the weight of the Oxford Dictionary is also on its side, its English spellings having been revised by Sir James Murray and Mr. Henry Bradley. Thus we welcome this twenty-fifth edition as undoubtedly authoritative—though not, let it be said, the only authority. Decisions in nice questions of style are frequently a matter of taste rather than of principle; and even where an authority can point to a principle (as of etymology, orthoepy, or the like), in support of his own particular preference, another authority will often be found appealing on behalf of a different practice to another equally important principle of quite contrary effect. It would seem that the time is hardly ripe yet to claim the final settlement of many such points of dispute. Rightly, therefore, will many printers give these Oxford "Rules" an honoured place on their bookshelves, but will nevertheless reserve liberty, on occasion, to follow a practice other than that here prescribed. To choose at random just one of the points on which exception may well be taken to the Oxford "Rules"—the vexed question of *a* or *an*. Surely the printer can safely follow the sane and simple rule to use *a* before a consonant sound (including such unprinted sounds as that of *y* in *even*), but to use *an* before words beginning with a vowel sound, or with an *h* which, because the syllable is unaccented, approximates to a vowel sound. Yet we find that the Oxford compositor, while he is directed to set *an heraldic*, is nevertheless told to set *a heroic*. On some such points there will doubtless be many

printers who will respectfully "agree to differ" from the Oxford authorities. Such deliberate divergencies from uniformity of style should be thoroughly digested by that most exasperating person, the compositor (or reader) who has become accustomed to one particular "style of the house" and is stubbornly unshakable in the conviction that what is in accordance with that style is "right," and what is not in accordance therewith is "wrong." To such a one we commend also the consideration of a fact mentioned in the last paragraph of the preface of this little book, in which paragraph it is ingenuously admitted that, in successive editions of this book of rules, there sometimes occur complete changes of the authorised methods of spelling words or punctuating sentences, these changes being usually due merely to the fact that "the fashion has altered." The final authority, therefore, in matters of style is not scientific principle—the English language is in many respects hopelessly unprincipled: the final authority is fashion. The difference between "right" and "wrong" in typographical style is often a matter of no more scientific significance than the difference—in the shape of a sleeve or the cut of a skirt—between the Parisian vogue of the moment and the fashion of the season before. Nevertheless, uniformity of typographical style is a consummation devoutly to be wished, and these "Rules for Compositors and Readers" are a contribution to progress in that direction. As regards the plan of this little volume, we feel that there would be a considerable gain in convenience if the contents were arranged alphabetically (a practice successfully followed in the late Mr. F. Howard Collins's admirable "Authors' and Printers' Dictionary"), though an extensive index at the end of the booklet minimises the difficulty of finding one's way among the miscellaneous contents as at present arranged.

**DIRECTORS' LIABILITY.**—In the Mayor's Court, last week, before Mr. J. F. P. Rawlinson, K.C., M.P., Deputy Judge, the Direct Photo Engraving Co., Ltd., of Farringdon-street, sued Mr. E. M. Martin, director and shareholder of My Garden, Ltd., formerly of 148, Fleet-street, for blocks used in connection with *My Garden Illustrated*, owned by the company, of which the defendant was a director and the largest shareholder. It was sought to make the defendant personally liable for the account under section 63 of the Companies Act, and it was stated that orders were given for the goods in question extending from February 5th, 1919, to May, 1920, and nowhere upon the orders given did it appear that it was for a limited company. It was contended that the company was really Mr. Martin, and although he had not signed the orders he had authorised the editor of the paper to do so. The Deputy Judge said the plaintiffs had failed to satisfy him that the defendant had authorised the issue of the order forms without the word "limited" upon them. Judgment was entered for the defendant, with costs.

## New Inventions.

### Rotary Machines.

Mr. G. W. Mascord has patented an invention whereby rotary machines for typographic, lithographic, offset, or intaglio printing, are provided with a printing-couple mounted in a frame rotatable about a vertical axis so that the couple may be reversed for printing on either side of the web or sheet. As shown, the impression cylinder *a* and printing cylinder *b* are in a frame *c* rotatable about a vertical axis which coincides with the driving shaft *f*. Wheels *d* may support the frame *c* on rails *e*, and suitable means may be provided for locking the frame in position when adjusted.

Guide rollers *g* and also the inking apparatus may be mounted in the frame *c*. Upper and lower pivots or trunnions may be provided on which the frame rotates. The driving gear is arranged as shown, to drive from a motor, etc., *k* through a vertical shaft *f* and bevel gears *h*, so that the frame *c* may be rotated without disengaging the gears.

### Curved Stereotype Plates.

In an invention patented by Messrs. Linotype and Machinery Ltd., curved stereotype plates, particularly tubular plates *A* having a narrow longitudinal gap *b*, are formed with

one or more helical ribs *a* on their concave surfaces adapted to act as a screw-thread to eject the plate from the casting-box. The ribs may be formed by casting the plate

between a cylindrical casting-box and a concentric core having one or more helical grooves, and the longitudinal gap is produced by a matrix-bar secured to the casting-box.

### Envelopes.

An invention patented by Mr. A. E. H. Payne relates to means for making string-bearing and like strips such as are described in Specifications 123,678 and 128,174, for opening envelopes, etc., the string or like flexible substance is held in tension and the slip material is folded thereon. Fig. 4 shows an arrangement for dealing with cut lengths

of material *F*, comprising a table *A* having a hinged extension *C* for folding over the projecting edge of the material *F*. The string *H* is stretched adjacent to the hinge before or

after the material is in folding position. The string is drawn from a bobbin L held by a detent pawl P, and is secured at the free end in a clamp R, the intermediate portion passing through eyes or other guides S beyond the ends of the hinged folder C. The material may be fed between belts or tapes, and means may be provided for applying or moistening adhesive. Fig. 6 shows an arrangement for dealing with a continuous ribbon, the lengths of slip being defined by perforations or otherwise. The ribbon F is drawn through a longitudinal folder V, and the string is led into the fold by a guide U. A looping-device L may be provided for drawing out the string at intervals corresponding to the lengths of slip. Both margins of the ribbon may be dealt with at the same time to produce the slips in pairs, as indicated by the duplicate parts shown in dotted lines.

### Type Composing and Casting Machines.

An invention patented by Mr. G. Price and the Solicitors' Law Stationery Society relates to leading devices of the kind having a lead guide at the back of the galley gate, whereby the lead is left at the entrance to the galley when the gate rises. (1) At the back of the vertically movable gate 14, Fig. 4, is a guide or pocket 16 which is separated from the gate by a spacing piece 17, Fig. 3, having a sloping surface 18 which positions the lead correctly with respect to the lines of type. The piece 17 may be adjustable or interchangeable. (2) An automatic feeding device may be used comprising a tray 20 on which the leads are stacked and from which they are released one by one by movable end-plates 30, 60. The plate 30 is carried by rods 31 which are reciprocated by a moving part of the machine, and the plate 60 slides on guides 61 and is con-

nected to the plate 30 by links 62 and levers 63. The outward movement of the plate 30 releases the end lead which has dropped into a notch or shoulder in the end of the tray 20, the following leads being held back by the plate 60. The released lead is directed into the guide 16 by strips 25, 26. The leads may be fed up to the plate 30 by a spring or by a cross-bar 50 which is advanced step by step by ratchet-mechanism.

A PETITION signed by 1,000 Sunday newspaper workers, was presented to the L.C.C., asking for an early morning tram service on Sunday mornings. The petition was referred to Committee.

## Printing as a Trade.

### Interesting Youthful Impressions.

When Mr. W. H. Feltham gave his address to a crowd of boys drawn from the elementary schools at Coventry upon "Printing as a Desirable Trade," he promised two prizes for the best essays upon the subject. A number of enthusiastic competitors have sent in their productions, showing that his address was followed with close attention. A remarkable feature of a perusal of the essays is the general reproduction of the speaker's phrase that "printing is the art preservative of the arts," while the value of pictures for impressing the mind is borne out by the graphic descriptions of the illustrations thrown on the screen. The lay-out of the pages for book work seems to have captured the youthful mind, most of the essayists referring to it, and one writes: "Previous to the lecture I thought that pages in books, etc., were printed separately, but I find that is quite wrong, for sometimes four, six, or eight pages are printed at a time, and when they are folded they drop automatically into their right places." Another writer lays stress upon the fact that "an important section of the printing trade is composing," and says the "composer's" case is "a very interesting affair." He gives a very fair description of the case, and is of opinion that a "composer" must have a good knowledge of grammar and punctuation. On this latter point one boy thinks Mr. Feltham's "joke" of an auctioneer having a notice printed, "a pony, cart and harness for sale" when he only had a pony-cart and harness for disposal, well worth repeating. Another humorous illustration generally remembered was the setting of the line "Oft in danger, Oft in woe," as "6ft in danger, 6ft in woe." Several of the essayists came to the conclusion that to be a printer was worthy of "serious consideration," while in one instance the writer admits: "Previous to the lecture, printing as a trade had not much enchantment (sic) for me, but after the glowing account of the prospects of a boy who takes up the trade, my ideas are much altered, and printing will probably be the trade I shall decide to follow."

AN HISTORIC BOOK.—To a reception at Buckingham Palace recently Mr. W. F. F. Thomson, of York, brought for his Majesty's inspection a war memorial in the form of a book magnificently bound and illuminated, and weighing nearly nine and a-half stones. This volume contains a record of all the men and women of York and district who died during the war, and was presented to the Duke of York on the occasion of his visit to the City some time ago. His Majesty was very much interested, and signed the book on a fly-leaf specially prepared for his signature. The book was subsequently taken back to York and deposited in York Minster.

## L.S.C. and Piece Scales.

Once again, and with more promise of success than hitherto, an approach is being made towards the settlement of the London piece scale problem. A special delegate meeting was held by the London Society of Compositors at the Memorial Hall last week, when the revised piece scale (provisionally agreed upon with the Master Printers' Association), was adopted after a long discussion. Several amendments, however, were put forward, and one was carried fixing the price of monotype composition at 5d. per 1,000 ens (uncorrected) instead of 4½d. In respect of certain other points not quite acceptable to the meeting, plenary powers were given to the Special Committee.

MR. WILLIAM BURY SHAW, of Brighton, stationer and bookseller, left £21,182.

THE death occurred last week of Mr. James S. Millar, proprietor of the *Beith Supplement* and correspondent of the *Scotsman*.

UNDER the title of "The Old Lady of Threadneedle-street," there has just appeared the first number of the staff magazine of the Bank of England.

## Screenless Processes.

By **FREDERIC J. CORKETT, F.R.P.S.**

Writing under the above heading in the *British and Colonial Printer and Stationer* of March 24th, a contributor takes up a lance against screenless processes—in fact, suggests there are no such things possible in the realm of things practical. Yet in the same article it is admitted that there are processes that “do not require a screen.” Evidently, then, the matter is largely a matter of definition. Personally—and I think I might go so far as to express the opinion of all screen users—we should be very happy indeed if no such things as process screens existed. At any rate it would mean a little less money crossing over to “God’s own country” or the “Fatherland.” Screens are expensive necessities, and all process men must be interested to learn of efforts made to dispense with them.

Now we all know that if a printing surface is to yield a print that represents half-tone, *i.e.*, continuous tone, it must be produced by some means that breaks up the image into modulations—but this need by no means be a screen. A screen, everyone understands, is a mechanical cross-grain ruling. The term is well understood and not liable to misconception. For half-tone letterpress or half-tone litho work, a screen consisting of a rectangular ruled plate of glass is used in making the necessary negative or positive.

### **The Sears Process.**

Frederick Sears came over from New Zealand nearly 20 years ago. He called on me, I

believe, almost on arrival. His ideas and methods were excellent. He was a very able process man, skilled alike as process photographer and as printer, his knowledge of practical printing being mainly on the lithographic side. Sears’ method of negative-making has become a standardised method. He first made a straight negative; then in the camera from the negative he produced a positive, interposing between negative and positive a ruled screen, the result being a positive that in the high-lights had no screen effect, yet the screen remained in the half-tones where it was required. A simple enough procedure. From a positive so produced a further negative was made, and so the high-light process came about. All so simple—just as easy as Columbus’s egg—but no one had apparently quite done that before, or, if they had, had not seen its value. The process man to-day who does not know of the value of the high-light negative is away back in the Dark Ages. Sears never had a fair show. There are always so many “fakirs” in the printing trade that a man with something good is generally lost amid so much clamour. It was so with Sears.

### **Screenless Litho Developments.**

Screenless litho is coming, however—that is, the production of a lithographic plate from a continuous-tone negative wherein no mechanical screen has been used. This work has now got well beyond the experimental

stage, and there is a printing concern or two outside Great Britain, as also here, that have made sure steps forward in this direction. All that is required is a straight negative of good quality, and this negative is printed down just in the ordinary way on to a grained litho plate of zinc or aluminium. The granularity necessary to hold the ink the zinc itself will supply, aided by certain reagents best known to the experimenters. Suffice to say, there is no screen used if by "screen" is meant a mechanically ruled grating. The screen is entirely eliminated, and the lithographs of the future will be produced from plates which will be quickly made and which will not only yield the most beautiful prints imaginable, but will produce prints at a high rate of speed, the plates not being marred in their beauty by mechanical gratings. In other words, picture reproduction of the future will be freed from the prison bars of the half-tone screen.

#### The Prints of the Future.

The effect of these new prints will be very like collotype, very like photogravure — though not equal to the latter, as must be obvious. To screen-made half-tone prints the new screenless litho illustrations will be the keenest competitors. All printers should keep a very keen eye upon developments in the direction of screenless litho.

It will be remembered that Mr. Gladstone, speaking into the phonograph for Mr. Edison, exclaimed: "Wonders upon wonders are opening before us." So said the Grand Old Man, and the wonders of the printing trade will not be the least of the achievements of the future.

IN China, says the *Labour Gazette*, the increase in wages has not kept pace with the increased cost of living. Four years ago the unskilled labourer in the printing trades at Shanghai was in receipt of from \$7 to \$10 per month, whereas he now often gets \$15. Even with the present wage he finds it difficult to support a family in face of an ever expanding budget. This has led to strikes, which appear to be fairly frequent. The printing industry at Shanghai gives employment to about 10,000 workers. The wages of the employees may be roughly classified as follows: Foremen, \$20 to \$50 per month; common labourers, \$10 to \$30; apprentices, \$1 to \$10 (dollar = 2s. 1d., pre-war). Women are employed chiefly in the binding departments, and are paid on a piece-work basis. Nine hours form the working day for both men and women, except in times of pressure, when night work is necessary. In such periods the employees must work from one to three hours overtime, for which extra pay is granted.

## Printers' Pension Corporation.

### The Prince Thanked.

More than usual interest attended the annual election for the Printers' Pension, Almshouse, and Orphan Asylum Corporation, which took place on Saturday at the Connaught Rooms, the result being an addition of eighty-one to the number of pensioners, which will thus stand at 735.

In the annual report, referring to last year's festival dinner, at which the Prince of Wales took the chair as president, and the contributions reached the record of £52,502, the council states: "No words can adequately express their gratitude to his Royal Highness for his great kindness in presiding and for the wonderful service thus rendered to the institution." The council further notes with grateful pride and pleasure that his Royal Highness was "accorded a most warm and hearty reception, his charming personality so influencing the gathering that by common consent the festival was considered the most unconventional and enjoyable in the memory of those present."

The income for the year, £49,178, was the highest on record, the total amount distributed being £23,386 to 1,459 recipients. During the year the amount distributed in grants to the children of members of the craft killed in the war was £6,510, the recipients numbering 678.

The results of the election are not to be made public until the annual general meeting of the Corporation, which will be held at St. Bride Foundation on Saturday, April 9th, at two o'clock, under the presidency of Sir G. Rowland Blades, M.P.

## Cardiff Printers' Bowling Club.

The Caxton Bowling Club, Cardiff, which has been formed under the auspices of the Joint Industrial Council of the Printing and Kindred Trades, has every prospect of a successful season. To stimulate interest among printers in Cardiff the proprietors of the *Western Mail* have presented the club with a silver challenge cup for competition between the members annually. In addition to the silver cup two gold medals have been presented to the club, the donor desiring to remain anonymous. The club is composed of employers and employees, and it augurs well for the future of the printing trade that such a happy relationship exists. The hon. secretary is Mr. A. W. Stevens, 75, Cornerswell-road, Penarth.

THE annual report of the Industrial League and Council, which has just been issued, provides a useful résumé of the development and activities of the League in the year ending September 30th, 1920.

## Rotary Photogravure.

### New Machine with Automatic Feed.

Messrs. A. W. Penrose and Co., of 109, Farringdon-road, E.C.1, have been recently demonstrating an entirely new type of sheet-feed machine for rotary photogravure printing, and it is claimed that this machine marks a new epoch in the history of rotary photogravure because it has been shown to be possible by means of this machine to achieve a speed of 2,500 impressions per hour in printing a sheet measuring 44 by 32 in. This speed has been made possible by the use of an

as to enable one man to take it out in a few minutes, there being no necessity to remove the mandrel from the machine. The delivery mechanism is of a novel character and is so arranged as to prolong as much as possible the period between the sheet leaving the impression cylinder and being deposited on the pile. On its way the sheet passes over an electric heater which further facilitates the drying. The machine being built on the two-revolution principle, which necessitates the impression cylinder being twice the diameter of the copper cylinder, it is possible to provide for very accessible and adequate arrangements for putting on or taking off the rubber blanket, as well as for a strong and reliable gripper mechanism. The lay devices are very efficient, and provide for securing perfect

**The New Rotary Photogravure Machine.**

automatic feeder, and we believe it is the first time that this device has been applied to a rotary photogravure machine. It is not, however, essential to employ an automatic feeder on this machine if a speed within the capacity of hand feeding is acceptable.

Among the features which are conspicuous in the new machine are great strength of its component parts, simplicity of design and accessibility of those portions of the machine which need attention, such as the inking and wiping arrangements, and the starting and stopping mechanism. Comparatively thin copper shells are used on an expanding mandrel for the printing cylinder, and the provision for removing the copper shell is such

register should the machine be used for colour work, as undoubtedly it will be. As a test of the accuracy of the machine in this respect, sheets have been fed through the machine three times without any difference in register being observable. This is a most important point, for undoubtedly there are great possibilities for the process in colour work, and it is acknowledged by all practical men in the business that the sheet-feed machine is absolutely essential for this work.

Although it is not possible to show this large machine at the forthcoming Printing Exhibition, this firm will show in operation one of their small size sheet-feed machines which should prove of great interest.

## German Reparation (Recovery) Act.

Under Section 5 of this Act, which takes effect from Thursday, March 31st, the Board of Trade may, by order, take certain action, as indicated below.

(a) Under Section 1 of the Act, importers of German goods are to pay to the Customs a prescribed proportion of the value of the goods, not exceeding 50 per cent. The Board of Trade may reduce the prescribed proportion as respects articles of any class, make or description, or may exempt such articles from all the provisions of the Act.

(b) Section 2 excludes from the provisions of the Act goods partially manufactured or produced in Germany which are not first consigned from that country, and in which 25 per cent. or more of their value is attributable to processes of manufacture undergone since they last left Germany. The Board of Trade may vary this percentage as respects articles of any class, make or description.

(c) Under Section 1, the Act shall not apply to goods imported before April 15th, if it is proved to the satisfaction of the Customs that the goods are imported in pursuance of a contract entered into before March 8th. The Board may, as respects articles of any make, class or description, substitute some later date for April 15th.

(d) Section 4 provides that where any person is liable, under a contract entered into before March 8th, to accept bills of exchange or make advances in connection with the importation of any goods, he may apply to the High Court, and the Court, if satisfied that by reason of the provisions of this Act, the enforcement of the contract would result in serious hardship to him, may suspend or annul, or, with the consent of the parties, amend the contract as from such date as the Court may think fit, or stay any proceedings for the enforcement of the contract or any term thereof, or any rights arising under it, on such conditions (if any) as the Court may think fit. The Board of Trade may extend the classes of contract to which the Section relates.

The Board are not, however, to make any order under any of the above provisions, except on the recommendation of a committee, which has been appointed, viz., Mr. H. A. Trotter, Deputy Governor of the Bank of England (chairman), Mr. H. B. Betterton, M.P., C.B.E., Mr. F. R. Davenport (managing director of Messrs. Willans and Robinson, Ltd., Rugby), Mr. Stanley Machin (president of the London Chamber of Commerce), Mr. D. Withers (manager, foreign branch, London County Westminster and Parr's Bank), and Captain G. W. Duncan (secretary).

Applications to the Board of Trade to make any order under any of the provisions referred to should be addressed to the Secretary, Board of Trade, Great George-street, Westminster, and both the letter and envelope should be marked "German Reparation."

## Counter & Check Book Machines.

After a number of conferences, agreement between the Federation of Master Printers and the Typographical Association has been reached whereby men engaged on printing machines of the Edler type are to receive 6s. per week above the minimum rate of the Branch, on the understanding that any men now receiving over that sum are not to be reduced. This arrangement to take effect as and from pay-day in the week ending March 19th, 1921.

It was also agreed that in future men being transferred from other machines to counter-check book printing machines who have had no previous training in the working of the counter-check book machines may be engaged for a period of two months at the wages they were receiving previous to their transference, and that after such period of two months they shall be paid the 6s. above the minimum rate of the Branch.

## America and 44-Hour Week.

Tension is increasing in the printing trade of the United States as May 1st comes nearer, the date on which, according to agreements made in some sections of the industry, the 44-hour week should be adopted. A great number of employers are strenuously opposing the proposition, on the ground that, if the 44-hour week goes into effect, production will be curbed and the cost to the public must be increased in the face of a popular demand for decreased prices. The trade unionists, however, are pointing out that the Closed Shop Branch of the United Typothetae, the Printers' League of America and the International Association of Employing Electrotypers some two years ago agreed that forty-four hours should be the basic work week. These bodies comprise the employers' group embraced in the International Joint Conference Council, which met in Atlanta, Ga., December 13th and 14th, 1920, and reaffirmed:—

"That this Joint Conference Council considers that all members of its constituent bodies are morally bound to adopt and put into effect the 44-hour week on May 1st, 1921." Thus the position is by no means an easy one, and the dispute is regarded as a matter of the gravest consequence to the whole printing industry of America.

At one time quite 70 per cent. of British paper exports to South Africa comprised printed matter. It is now found that printing work can be effected cheaper locally. Whilst paper has still to be imported, it is not necessarily British paper. The high cost of printing in the United Kingdom is evidently bringing about the greatest economy in the use of printed matter, and the papermaker is naturally a big sufferer.

## Mr. James Gallie, J.P.

**The New President of the Envelope  
Makers' Federation.**

Mr. James Gallie, who has taken over the presidency of the Employers' Federation of Envelope Makers and Manufacturing Stationers in succession to Mr. Henry Godfrey, the first president, comes to the office with a full measure of vigour and a good record of work on behalf of the trade. Under his guidance the Employers' Federation is in no danger of losing any of its influence or usefulness. It came into being when industrial organisation became a matter, not merely of prudence, but of necessity, and Mr. Gallie has been associated with the direction of the institution since it was inaugurated three years ago. His experience in the handling of labour questions, which have been so much more prominent a feature of industry in recent years, has been of great value to the Federation.

Born in Edinburgh in 1875, Mr. Gallie, after pursuing the Law and Arts Course at the Edinburgh University, entered the firm of Macniven and Cameron, Ltd., in 1901, a position in which he continues his very active interest. While he devotes his attention as a director more to the administrative side, Mr. Duncan Cameron, B.L., J.P., a direct representative of the original founders, has charge of the manufacturing side. Mr. Cameron, by the way, has also taken his share in trade affairs, for he was one of the early, if not actually the first, president of the Stationers' Association.

Since Mr. Gallie became identified with the firm, the operations have been greatly extended. The business was established as long ago as 1770 in Edinburgh. From modest beginnings it has grown to world-wide fame, and Macniven and Cameron's products are known throughout the export markets of the two hemispheres. There are now four factories in this country. In Edinburgh and Leith are the works which produce all the account books and stationery. The factory for the manufacture of steel pens is situated in Birmingham, where, curiously enough, all the labour for this branch of industry is located. Shortly before the war the firm entered upon a new development—the manufacture of "Cameron" fountain pens. It is their proud boast that the entire pen is manufactured by themselves in this country, even to the rubber sacs, and it represents a new British industry. The factory for this all-British product is at Cameron House, St. Bride-street, London, where, on the ground floor, are situated new offices and show-rooms.

The export side of the business is extensive, and Messrs. Macniven and Cameron have travelling representatives in all the important markets of the world, and it is good to know that, even in these depressing days, orders are coming forward from overseas. At the present time, Mr. Duncan Cameron, junr., is going over much of the ground.

In trade organisation Mr. Gallie has taken an important part. When the Association of British Steel Pen Makers was set on foot three years ago he became its hon. secretary, a post he still holds. He is a director of the Edinburgh Chamber of Commerce and vice-chairman of the Edinburgh, Forth and Border District of the Federation of British Industries. He has also been a very active member of the Scottish Alliance of Master Printers,

*Photo, W. Crooke, Edinburgh.*

MR. JAMES GALLIE, J.P.

serving on the Executive. It was as the chairman of the Stationery Section of the Scottish Alliance that he attended the meetings of the Employers' Federation of Envelope Makers and Manufacturing Stationers, and his energy and business acumen soon marked him out for service. Thus he became vice-president last year, and is now president of the vigorous and useful Association. In addition to all his other activities, Mr. Gallie is a Justice of the Peace for the City of Edinburgh, where he is widely known and highly respected.

**RIGA EXHIBITION.**—With regard to the International Exhibition of Agricultural Machinery and Products at Riga, the dates for which are given as either July 15th to October 1st or August 1st to October 15th, the Department of Overseas Trade is informed that the Exhibition will be divided into five main sections, of which the Small Goods section will include books, educational matter, works of art, etc., while the Industrial section will include forestry and timber, chemical wood preparation and chemical industry.

## Tensile Paper Tester.

Of late there has been some considerable amount of discussion in printing trade circles on the subject of paper testing, and it is interesting to note that T. J. Marshall and Co., Ltd., the well-known company of dandyroll makers, are manufacturing an instrument which, we are informed, is being sold very extensively. The instrument has proved so sensitive that it has been found necessary to provide means of adjustment for the varying degrees of temperature.

The machine fulfils conditions which are of the greatest assistance in the examination of paper both for manufacturers, buyers and experts. It depends for its action on the compression of the liquid contained in the diaphragm *a* shown in the illustration, the

Every machine is British made in the company's own works. In order to eliminate any possibility of variation from absolute accuracy, each machine is standardised to dead weights, the dial being marked off during this process.

**STATIONERS' SOCIAL SOCIETY.**—The inauguration of a bowling section in connection with the Stationers' Social Society is meeting with strong support, and there is every reason to believe the amenities of the society will be greatly promoted by various meetings to be arranged during the summer months. The presentation of a challenge cup by Mr. A. Woollacott, J.P., is likely to prove an excellent stimulus. The society already has several bowlers with a high reputation; for instance, Mr. Woollacott is an international player, and Messrs. W. Penman, Harry Ling, Tom Hastings, A. E. Fells and M. Relph are

**T. J. Marshall and Co.'s Tensile Paper Tester.**

pressure being produced in the diaphragm by means of tensile force applied through the paper by the hand wheel *b*. This pressure is registered on the dial *c* in terms of the weight applied to the strip of paper under test between the clips *d*.

The tensile strength of the paper tested, therefore, is expressed in the number of pounds pull which the strip of paper supports up to the point it breaks, and an important advantage of the machine is that the tensile strength in both the "machine" and "cross" directions can be determined with equal ease and certainty. Another advantage is that the width and length of the strip may be varied at will, the machine being capable of dealing with strips up to 12 in. long and 2 in. in width.

The stretch of the paper under tension is indicated on a graduated scale, *e*, under the left-hand screw clip, from the reading of which the percentage of stretch may be readily ascertained.

all names to conjure with. Mr. Hastings, for a number of years, has been instrumental in getting representative paper trade men together to play in friendly matches, and naturally the development of a bowling section on the part of the Stationers' Social Society strongly appeals to him. As the scheme progresses, he favours the idea of meeting northern paper trade men in competition from time to time, and with his enthusiasm he sees the possibility of the bowling members of the Stationers' Social Society securing a bowling green of their own.

In 1920 the American production of news-print was 1,511,000 tons and in addition it was necessary to import 689,000 tons, or more than 30 per cent. of the American consumption. Since the year 1909 news-print production has increased a little less than 30 per cent., while the consumption has grown almost 100 per cent.

An Advertisement is always working.

# Trade Notes.

THE death occurred on March 31st of Mr. T. E. Gatehouse, editorial and technical director of the *Electrical Review*.

A BILL is being promoted in the French Chamber of Deputies providing for the non-publication of French newspapers on one day a week.

THE death has occurred of Mr. W. L. Sinclair, a Manchester journalist, well-known for his articles in the *Athletic News* and *Sporting Chronicle*.

MR. WILLIAM DANIEL JENKINS, J.P., of Wallingford, Berks, for more than 60 years proprietor and editor of the *Berks and Oxon Advertiser*, left £4,318.

A YOUNG seaman was, at Liverpool Police Court last week, fined £20 or a month's imprisonment for distributing strike leaflets which bore no imprint.

THE Bureau industriel suisse, Grotte 1, Lausanne, has inquiries for envelope-making machines and automatic paper-cutting machines. Quote Reference No. 726E.

MESSRS. HENRY BOOTH (HULL), LTD., send us descriptive matter and price list of a wide variety of tickets, labels, etc., in which they specialise at Park Avenue Printing Works, Hull.

THERE is talk in photo-engraving circles of a united endeavour of employers and employed in the trade to come to an arrangement whereby some reductions of price shall be possible.

THE Council of the Federation of Master Process Engravers is keeping a watchful eye on the importation of process blocks from abroad, but reports that the volume of such importation is not nearly so great as is popularly supposed.

RAILWAY ADVERTISING. — In future the advertising spaces on the stations, buildings and other property of the Great Northern Railway, will be let to advertisers by the company. For many years the arrangements have been in the hands of Messrs. W. H. Smith and Son.

As A slight expression of her admiration of the British Press, Madame Sarah Bernhardt has consented to appear at Mr. George Robey's concert in aid of the Newspaper Press Fund, which takes place at the London Coliseum, by permission of Sir Oswald Stoll, on Sunday afternoon next, April 10th.

SECRET COMMISSIONS. — It is interesting to note that in the Annual Report for the year 1920 of the Bribery and Secret Commissions Prevention League the industry showing the largest number of new members of the League is the printing, publishing, and stationery trades. This notable record is no doubt due in a large measure to the active interest taken in the League by Mr. W. Howard Hazell.

MR. B. B. MADEN, Church-street, South Shore, Blackpool, retired stationer, left £1,524.

THE Fleet-street Revel of April 1st was as delightful a carnival as the Press Club has yet organised.

SWITZERLAND. — The list of goods in respect of which import licences are now necessary include paper and paper wares.

ITALY. — The export of news-print is still conditional on the cession to the National Institute of Exchange of the foreign currency obtained.

THE death has taken place of Mr. John Hetherington, of Edinburgh, for nearly 35 years with Messrs. George Stewart and Co., printers and stationers.

A WELL - PRODUCED booklet, strikingly ornamented with multi-colour rulings, is sent us by Messrs. J. E. Foster and Son, of Portland, Maine, advertising the "Jefson" ruling colours and other printers' materials.

MR. JOHN LINNEY, of Sherwood House, Mansfield, Nottingham, a director of W. and J. Linney, Ltd., printers and stationers, and proprietors of the Mansfield and North Notts *Advertiser*, who died on December 3rd, aged 72, left £10,005 gross and £11,058 net.

A CONVENTION in Springfield, U.S.A., recently devoted an entire day to discussing a book. The volume was a grammar of colour arrangements in which were pictured colour combinations in accord with the Munsell systems and it was issued by the Strathmore Paper Co.

FINNISH IMPORTS AND EXPORT RESTRICTION WITHDRAWN. — Certain export restrictions which existed in Finland since February 12th, also certain import restrictions have by the Resolution of the Diet been all withdrawn and the import and export trades are now free.

THE *Times of Ceylon* has made a notable addition to its list of publications by issuing the "*Times of Ceylon Year Book and Directory*," an important guide to all companies in Ceylon and all mercantile and commercial firms including small traders. This directory contains also a comprehensive list of present and ex-Ceylon residents.

THE death is announced of Mr. George Neves, aged 67 years, managing director and editor of *Chatham, Rochester and Gillingham News*, and proprietor of the *Kentish Independent*, Woolwich. He was a prodigious worker, and was ever alive to the interests of journalism, being a Fellow of the Institute of Journalists and a past president of the Kent district.

PRINTERS in this country will sympathise with the feelings that inspired the *American Printer* to the following paragraph:—"Many printers are receiving from Uncle Sam requests for the making of author's corrections in last year's income-tax returns. Deductions should be allowed for the days and nights spent in making out these returns and in revising them a year later."

FORTY-THIRD YEAR.

agents, 11, St. Bride-street, E.C. 4.

THURSDAY, APRIL 7, 1921.

## Current Topics.

### Wages in the Printing Trade.

THE important meeting of the Council of the Federation of Master Printers, arranged for Tuesday last, was duly held in the Caledonian Hall of the Holborn Restaurant, and the deliberations lasted from the morning until 4.30 in the afternoon. The most important item on the agenda was the question of wages, which was to be considered with due regard to the decrease in the cost of living since the last wage settlement and to the movement for the reduction of wages in other leading industries. No particulars are at present available for the Press, the proceedings being regarded as of a private nature. The question of the future of wages in the smaller trades is doubtless linked with the wage movement in the big industries of the country, such as the coal industry, in which a great and ominous struggle is now proceeding, the effects of which no one can foresee. The burning coal mines serve as a striking object lesson of the suicidal nature

of the appeal to force, and point to the imperative necessity that industrial disputes, however difficult, must be submitted to negotiation if justice is to be done and industry saved from fruitless and perhaps irreparable damage.

### The State of Trade.

THERE would seem to be some slight ground for increased optimism as to the possibility that the near future holds a brighter state of affairs for the printing and allied trades. It is good that the London Society of Compositors is able to report that employment picked up a little during March, about a hundred L.S.C. members being taken off the books for a brief spell—though at the end of the month the Easter holidays were followed by a retrograde movement, about 900 members being then on the books. We have been informed of a recent improvement in the number of printing orders obtained, but we gather that this experience is not very general. Probably no widespread enlivenment of trade can be expected before the national—indeed, also the international—situation shall have taken on a more healthy tone; and with the air full of strikes and rumours of strikes it is not easy to be optimistic. However, it is well to regard even temporary and local amelioration of the trade depression as giving promise of that general revival of business which must take place as costs, which have doubtless now passed their highest peak, proceed to an appreciable decline.

### World's Printing Trade Congress.

ARRANGEMENTS are well advanced for the World's Printing Trade Congress to be held when the Printing Exhibition is attracting printers from every land to the Royal Agricultural Hall, Islington. The Exhibition is to be opened on April 30th by Dr. Macnamara, Minister of Labour, who will be received by Mr. E. W. Humphries, president of the Federation of Master Printers, who is also president of the Exhibition. The Congress opens on May 10th and resumes on May 12th, and the following topics are to be discussed: (1) recent developments in litho and colour work, and future outlook; (2) how to secure healthy printing works; (3) salesmanship in printing; (4) methods for adjusting wages and working conditions in various lands; (5) methods for selecting and training apprentices in different countries; (6) standardisation of paper and printing in sizes to suit world-wide conditions; (7) progress in typefounding and the production of type faces; (8) rotary photo-

gravure; (9) technical education in all lands; (10) process, zincograph and plate work; (11) the welfare movement in printerdom; (12) costing in various lands; (13) bookbinding as a craft and industry.

### Reconstruction—on Paper.

BUREAUCRATIC activity has one advantage for the printer. It means a big consumption of his product. The coming Census, for instance, will involve the use of some ten million forms. Now we have the International Labour Commission of the League of Nations undertaking an inquiry into "the industrial production of the world and the various factors which may affect it." As the war was won on paper, so the reconstruction of the world is to be achieved by the same means. From the London office of the Commission there has been sent to the various industrial organisations in this country, including those in the printing trade, a huge document containing 91 questions which only encyclopædic knowledge and a vast expenditure of time can answer, and then by the time the information has been digested, it will probably be out of date. Some idea of the inquiry which is being made may be gathered from a few of the questions. One, for instance, asks, "Do you think that certain psychological or moral elements have played a part in the economic crisis? If so, state which." The brevity and simplicity of the last instruction are delightful. Sub-sections of the questions are a little lacking in ingenuity: "Do you think there has been a wave of slackness?" "Do you think such a thing as war weariness exists or has existed?" "Is there in your opinion a weakening in the spirit of enterprise among employers? If so, to what cause should it be attributed?" The answers to the last query, as they come from employers or employees' organisations, would form an interesting study in comparative views. What would be more useful to the community, however, would be the wider employment of print as the result of industrial and commercial activity.

SIR (JAMES) EDWARD PARROTT, who died suddenly at Edinburgh on Tuesday in his 58th year, had been editor to the publishing house of Thomas Nelson and Sons since 1898.

MR. A. W. SANDILANDE (Shurey's Publications) gave a short talk on "Stereos" at the monthly meeting of the Printing, Bookbinding and Kindred Trades' Overseers Association on Tuesday evening. A report of the proceedings will appear in next week's issue.

An Advertisement is always working

## Personal.

VISCOUNT BURNHAM will preside at the 82nd annual general meeting of the Newsvendors' Benevolent and Provident Institution at the Memorial Hall, Farringdon-street, on Tuesday, April 26th, at 6.30 p.m.

AT Aberdeen University Spring Graduation last week the honorary degree of LL.D. was conferred upon Mr. J. M. Bulloch, editor-in-chief of the *Graphic*.

MR. J. R. RIDDELL principal of St. Bride Printing School, recently visited Gosport and delivered one of his characteristic addresses to the members of the Rotary Club in that town. His subject, "Pride of Craft," gave every opportunity to the lecturer to express his optimistic views on the value of training.

At the meeting of the Printers' Managers and Overseers (Parent) Association, held on Tuesday evening, a resolution was passed expressing sympathy and good wishes for a speedy recovery to Mr. A. E. Jarvis, the president who is laid aside with pneumonia. The meeting, which was wholly occupied with business matters, will be reported next week.

MR. A. HEWITT, of the well-known firm of printers' engineers, of Field-street, King's Cross, of which he is a partner, contested the election for the Wembley Urban District Council on the platform of efficiency and economy, and, together with three other candidates, was elected by an overwhelming majority.

MISS G. E. ETHERINGTON, chief of the costing department of Odhams, Press, Ltd., and the popular and successful teacher of costing at St. Bride Institute, was married on April 4th, to Mr. Roy Collard, a member of the firm of Joseph Collard, printers, Charing Cross-road, W.C.

LITHOGRAPHERS' AUXILIARY.—The last concert of the season is to be held on Monday, April 11th, at the Cannon-street Hotel, when the chair will be occupied by Mr. Laurence H. Blades (Blades, East and Blades), and Mr. Sydney Cumbers (Johnson and Cumbers). Among the long list of talented musical artistes the name of Mrs. Laurence Blades figures as a contralto, and more than ordinary success is anticipated for the event.

EMPIRE PRESS UNION.—At a special general meeting of the Empire Press Union, at which Viscount Burnham presided, on Tuesday, it was unanimously resolved to amend the union's articles of association so as to extend membership in the United Kingdom to weekly newspapers and other periodicals, including trade and technical journals, and to news agencies and associations of newspaper and periodical proprietors.

## DIVIDENDS AND REPORTS.

**INTERNATIONAL LINOTYPE**.—Final dividend of 4 per cent. for the year ended March 31st, 1921, making 6½ per cent. for the year, being at the same rate as for the preceding year. Warrants to be posted on April 30th.

**PRINTING MACHINERY**.—Interim dividend at rate of 7½ per cent. per annum (9d. per share), less tax, on ordinary for half-year, payable April 1st. Last year, dividend same.

## NEW COMPANIES.

**CHEMICAL NEWS, LTD.**—Capital, £3,000, in £1 shares, to adopt an agreement with W. S. Crookes, Lilian F. Heather and Olive M. Willis, to develop and turn to account the business referred to therein, and to carry on the business of newspaper proprietors, printers, publishers, etc. Private company. First directors: W. S. Crookes, Miss L. F. Heather, and Miss O. M. Willis. Registered office: 97, Shoe-lane, E.C.

**EXCURSION A.B.C., LTD.**—Capital, £500, in £1 shares, to acquire the copyright, and carry on the business of the Excursion A.B.C. belonging to S. D. Greenwood, of 36a, Great Sutton-street, E.C.1. Private company. First

directors: S. D. Greenwood and F. J. Prentice. Registered office: 36a, Great Sutton-street, E.C.1.

**WALTER COULDREY, LTD.**—Capital, £15,000, in £1 shares, to take over the business of a wholesale stationer, paper merchant, manufacturer of paper bags and printer carried on at 214, Old Kent-road, London, as "Walter Couldrey." Private company. Subscribers: W. T. Couldrey and W. A. Couldrey.

**FLEET JOURNALS, LTD.**—Capital, £1,000; printers, publishers, etc., and to adopt an agreement with F. D. Fawcett, W. G. Lee and F. Fawcett. Private company. Subscribers: J. B. Brown and J. Irvin (?). First directors: W. G. Lee, F. D. Fawcett and F. Fawcett. Registered office: 3, Pemberton-row, E.C.4.

**TREDAGH PRESS, LTD.**—Capital, £10, in £1 shares; publishers and printers. Private company. Subscribers: J. H. McClean, R. H. Dodd, and A. E. Goodbody. First directors: J. H. McClean and R. H. Dodd. Registered office: Kildare House, Westmoreland-street, Dublin.

**ST. ELMO, LTD.**—Capital, £2,000, in £1 shares, to take over the business of advertising contractors and agents carried on by J. W. Glenn, of 7, Warwick-row, Coventry, as the "St. Elmo Studios." Private company. First directors: J. W. Glenn and R. Utton. Registered office: 7, Warwick-row, Coventry.

**IBACH, LTD.**—Capital, £10,000, in £1 shares; business of pianoforte, etc., merchants and agents, music publishers and printers, etc. Private company. First directors: Rudolf Ibach, W. K. Ritterhaus, A. E. Robinson and T. Hollens.

**DAILY GAZETTE, LTD.**—Capital, £25,000, in £1 shares, to take over the newspapers and publications known as *The Daily Gazette*, *The Islington Daily Gazette* and "Boyle's Court Guide" and to carry on the business of newspaper proprietors, printers, publishers, etc. Private company. First directors: J. B. Morrell and C. W. Starmer. Registered office: 10, Gough-square, Fleet-street, E.C.

**HENRY AND LEIGH SLATER, LTD.**—Capital, £100, in £1 shares, to acquire the business of a company of the same name (incorporated March 16th, 1896, and now in liquidation), to carry on the business of paper stainers, paper merchants, embossers, tinfoil and cardboard

manufacturers at Lower Bollington Mill, Bollington, near Macclesfield, Cheshire, and at Manchester and elsewhere, and to adopt two agreements with the Associated Paper Mills, Ltd. Private company. Permanent directors: A. W. Allan, H. S. L. Slater and C. F. L. Slater.

**RELIABLE PAPER BAG MANUFACTURING CO., LTD.**—Capital, £600, in £1 shares; manufacturers, importers and exporters of and dealers in paper bags, toilet requisites, stationery, table decorations, etc. Private company. Permanent directors: M. Stone (managing director and chairman), Z. Bochenek and M. Bretman. Registered office: 22-4, Scrutton-street, Finsbury, E.C.2.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**ELLIOTT AND MCFARLANE, LTD.** (newspaper proprietors, Southend-on-Sea).—Debenture dated March 8th, 1921, to secure £250, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. M. A. S. McFarlane, 11, Palmeira-avenue, Westcliff-on-Sea.

**LONDON AND PARIS ALLIANCE TRADING CO., LTD.**—Particulars of £10,000 debentures, authorised March 8th, 1921, present issue £2,000; charged on the company's undertaking and property, present and future, including uncalled capital.

**M. STEINART, LTD.** (paper and twine manufacturers, Manchester).—Debenture dated March 7th, 1921, to secure £1,500, charged on company's property, present and future, including uncalled capital. Holder: S. H. Steinart, 88, Northumberland-street, Higher Broughton, Manchester.

**BAYSWATER PRINTING CO., LTD.**—Satisfaction in full on March 22nd, 1921, of debentures dated May 1st, 1909, securing £250.

**TAPP AND TOOTHILL, LTD.** (printers, Bramley, Leeds).—Particulars of £6,000 debentures, authorised February 14th and covered by trust deed dated March 1st, 1921, whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**VICKERY, KYRLE AND CO., LTD.** (printers, etc., London).—Particulars of £2,500 debentures, authorised March 11th, 1921, present issue £625; charged on the company's undertaking and property, present and future, including uncalled capital.

**C. CAMERON AND CO. (PAPER), LTD.** (Luton).—Deposit on March 17th, 1921, of deeds of Mount Pleasant-road, Leagrave, near Luton, to secure all moneys due or to become due from company to Barclay's Bank, Ltd.

**SUNDAY PUBLICATIONS, LTD.** (London).—Particulars of £200,000 debentures, authorised

February 18th, 1921, present issue £88,200; charged on the company's undertaking and property, present and future, including uncalled capital.

**ARMSTRONG, HORTON AND CO., LTD.** (printers, etc., London).—Particulars of £500 debentures, authorised March 17th, 1921, present issue £200; charged on the company's undertaking and property, present and future, including uncalled capital.

**ACME PRINTING CO., LTD.**—Satisfaction to the extent of £70 on March 1st, 1921, of debentures, dated May 29th, 1905, securing £500.

**STANLEY CLARKE AND CO., LTD.** (paper bag manufacturers, etc., London).—Particulars of £1,000 debentures, authorised March 10th, 1921, whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**J. ROBERTSON AND CO., LTD.** (printers).—Further charge on certain land and buildings in St. Anne's-on-the-Sea, dated March 16th, 1921, to secure £1,500. Holders: Halifax Permanent Benefit Building Society.

**W. H. AND A. RICHARDSON, LTD.** (paper manufacturers, etc., Jarrow-on-Tyne).—Particulars of £30,000 debentures, authorised March 15th, 1921, whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**GEORGE WILMOT, LTD.** (paper manufacturers and merchants, etc., London).—Issue on March 1st, 1921, of £800 debentures, part of a series already registered.

**WINTON CAVEN CO., LTD.** (Leicestershire).—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated March 2nd, 1921, to secure all moneys due or to become due from company to Barclay's Bank, Ltd.

**COOPER, DENNISON AND WALKDEN, LTD.**—Mortgage on Walkden Works, Verney-road, Peckham, dated March 11th, 1921, to secure all moneys due or to become due from company to Barclay's Bank, Ltd.

**J. E. BEALE, LTD.** (stationers, Bournemouth).—Mortgage on 2-5, Church-terrace, Bournemouth, dated March 24th, 1921, to secure all moneys due or to become due from company to Lloyds Bank, Ltd., not exceeding £20,000.

**MESSRS. TAYLOR BROS.,** Sovereign-street, Leeds, colour printers to the trade, send us an illustrated circular indicating their big resources for colour printing work in the way of lithographed posters, fruit and provision labels, coloured insets for magazines, etc.

**BOOK ON PAPER BOX-MAKING.**—What is probably the first book ever published in the English language on the subject, is one on "How Paper Boxes are Made," just issued by the Shears Publishing Co., of Lafayette, Ind., U.S.A., the author being Mr. Robert F. Salade. The book contains 225 pages and is illustrated throughout.

## Printers' Errors due to Illusions.

### Tests for Proof Readers.

"Errors by careful and experienced proof readers are due to one or another of several optical illusions," says Dr. H. R. Crosland of the department of psychology of the University of Oregon. "A proof reader, for instance, may think he sees letters where nothing but white space exists; or he may fail to see transposed letters in a word; or he may fail to observe an incorrect letter substituted for the correct one." In accordance with this opinion, Dr. Crosland has prepared various tests to determine the kind and frequency of optical illusions which affect proof readers.

"The subject matter for the tests," says *Editor and Publisher* (N.Y.), "will contain certain typographical errors, placed in certain positions on the page. The first test will be set in 9-point; later 8, 10 and 12-point type will be used. The width of the columns will be varied from 13 ems, the approximate width of a newspaper column, to 17 and 25 ems. At one time the groups of people who take the tests will be instructed to work slowly and carefully; again they will be told to work as rapidly as possible and the time of each person will be taken with stop watch; the third variation will be to allow a limited time to the group, all stopping at the signal whether the work is completed or not.

"The tests are to be given to four groups of five persons each, the groups consisting of teachers and students of journalism, students of psychology and actual newspaper employees."

## "Bridge" Paper Mills.

### Creditors' Winding-up Petition Presented.

A petition has been presented by the Salisbury Supply Co., of 5, Creed-lane, E.C., for the winding-up of the "Bridge" Paper Mills, and is set down for hearing in the High Court on 12th April.

The "Bridge" Paper Mills was formed in August, 1920, with a capital of £25,000, to acquire the "Bridge" Paper Mill, Staffordshire. Of the capital £23,000 is in participating preference shares of £1 each, and they were offered for subscription at par in October, 1920.

MR. JAMES CULLEN, papermakers' agent, London and Manchester, has established an office at Red Lion House, Red Lion-court, Fleet-street, London, E.C.4. The firm are selling agents in the United Kingdom for "Ostre-mer-Francais," Papeteries de Berentin, for all grades of glazed sulphite wrappings, boards, etc.

## Australian Paper-Box Making.

The directors of J. Fielding and Co., Ltd. (cardboard box makers, etc.), Sydney, Australia, having re-valued the assets deemed it expedient to reorganise the capital in order that the increment in value might be converted into capital. A new company is, accordingly, being formed with an authorised capital of £200,000. It is proposed to issue 20,000 £1 7 per cent. preference shares, fully paid, to the holders of 20,000 £1 7 per cent. preference shares in the present company, carrying the same rights as heretofore; 110,000 £1 ordinary shares, fully paid, to be issued to the holders of 55,000 £1 ordinary shares in the present company, in the proportion of two new shares for one old share.

This reconstruction will absorb the whole of the disclosed reserves of £41,900, and about £25,000 created by the revaluation. The balance of £12,750, after capitalising £55,000, as above, is to be applied—£7,750 for taxation reserves, and £5,000 to write off the goodwill. The old company has been making good profits, and the new one should be able to pay satisfactory dividends on the new total of ordinary capital.

## Gazette.

### A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

### ENGLAND AND WALES.

#### PARTNERSHIP DISSOLVED.

Arthur Sutton and William James Sloan, paper agents, Northumberland-street, Newcastle-upon-Tyne.

#### THE BANKRUPTCY ACT, 1914.

##### RECEIVING ORDER.

Polack, Henry, and Cull, Frederick Theodore (trading as Polack and Cull), 12, Basinghall-street, waste paper merchants, March 31st. Public examination, May 31st, at Bankruptcy-buildings, Carey-street.

CHEAP stationery is among the articles needed in the Bahrain Islands. Bahrain is the chief distributing centre for middle Arabia, Qatar and Hassa, and also for the province of Qatif.

BANKRUPTCY proceedings have been instituted against the Leslie Judge Co., publishers, New York. The liabilities are stated to amount to \$2,210,000 (£552,000), and the assets to \$420,000 (£105,000).

## Australian Notes.

(From Our Sydney Correspondent.)

THE *Sydney Morning Herald* is about to celebrate the 90th anniversary of its establishment and has just celebrated the 80th anniversary of its acquisition by its present proprietors, Messrs. John Fairfax and Sons. The *Herald* is the oldest extant newspaper in Australia, having been founded in April, 1831.

THESE anniversaries recall the early days of the newspaper, and the primitive methods of production then in vogue. It was Mr. George Thornton, afterwards to become famous as a member of Parliament, and Mayor of Sydney, who held a couple of candles while the printer got the form ready for a hand-press, invented in America about the time of Waterloo; and at the rate of 250 copies an hour (when they hurried) they turned out the first batch of *Sydney Herald*s—to be sold on the morning of April 18th, 1831, at 7d. per copy. This is in striking contrast to the *Herald*'s plant of today, which comprises three Hoe sextuple machines, a Goss sextuple, and two double Webb (with supplement) presses, while further presses of the most modern type are now on order.

MR. CHARLES ELLIS DAVIES, M.L.C., managing proprietor of the *Hobart Mercury*, died suddenly in Hobart early in February. Deceased was Grand Master of the Tasmanian Masonic Grand Lodge from 1896 to 1914. He was representative of the Tasmanian Press at the Imperial Press Conference in London in 1909, and at the conference in Canada last year.

SETTLEMENT was recently made of a dispute, which lasted eight weeks, between the *Barrier Miner* and the Barrier sub-branch of the Printing Industry Union, the settlement being brought about as a result of the printing employees disclaiming all rights to consor matter for publication.

PERTH job printers received an award by private arbitration at the end of January, whereby the hours remain at 44 a week for day work, and 40 hours a week for night work, but four hours extra may be worked at ordinary rates. Piecework is abolished. The pay for a 44-hour week is: linotypers, £6 2s. 6d.; compositors, £4 19s.; night work, 10s. extra.

THE high cost of paper continues to focus attention on the question of local manufacture, and the big figures furnished by Canada's undertakings are quoted to "whet the appetite," although it is recognised that the Dominion has special advantages in the way of natural resources.

"STILL," says a writer in the *Adelaide Observer*, "with prices mounting, as they

are doing, it ought to be possible for Australia to supply her own needs—at least in time. Our Governments ought to have experts experimenting on the planting of the right kind of trees to supply the right kind of pulp. So far as we know, they are doing almost nothing, and not doing it particularly well. It looks as if in 20 or 30 years paper will have reached such a price that Australia will find it worth while to make all she needs for herself. Should there not be some definite attempt to prepare for that future?"

A VALUABLE binding plant and a large quantity of paper have been damaged by fire at the premises of Sharples Bros., printers and stationers, Adelaide. The loss was estimated at £1,250. Amongst the stock consumed was ledger and gum paper, which is hard to replace.

DETAILS giving the imports for five months (1920-21) have been published, and among the principal items in the list printing paper is given as having reached the value for the period dealt with of £1,401,615, compared with £536,253 for the corresponding months of 1919-20. Writing and typewriting paper amounted in value to £319,570 for the five months of 1920-21, as against £214,511 for the corresponding period.

WITH satisfactory results a number of experiments have been conducted in the manufacture of paper from Australian hardwoods. These have been undertaken with a miniature plant set up at the Institute of Science and Industry's laboratory at Perth. Among the results that have so far been obtained has been the production of a strong  $4\frac{1}{2}$  per cent. paper from 100 per cent. wood fibre (Queensland silky wood).

AN interim dividend of 1s. per share has been paid out of the profits by the Australasian Paper Co.

THE annual report, presented to the Queensland Master Printers and Allied Trades' Association, in reviewing the past year's trading, says that there has been enough trade to keep the majority of the employees in constant work.

SATISFACTION was expressed at the increase of membership and the progress that had been made with the Association's uniform costing system. The Technical College authorities have promised to put the subject of costing on their curriculum of all skilled trade classes.

NEGOTIATIONS are in progress for the formation of one printing trade union for the whole of the industry in Australia. The Council of the Printing Industry Employees' Union are shortly to meet in Melbourne, when it is expected that the negotiations will have reached a definite shape.

# New Inventions.

## Loose-Leaf Binders.

A loose-leaf binder, patented by Mr. W. J. McCarthy, is provided with means for outwardly projecting the central sheets to facilitate fingering, the sheets at the same time being lifted clear of the filing-posts. The covers A, B are movably connected by telescopic posts 10 and have slotted plates E, F hinged to them at 16 by links 14. The plates have hooked edges 17, 18 adapted to engage one another in the fully projected position.

The plates are held in the closed position by springs, elevated by means such as cranks 22 provided with rollers 21 bearing under the plates. Telescopic posts 30 may be provided to support the plates E, F when the binder is closed. A V-shaped piece with bifurcated ends is fitted on the edges of the covers as an extension of the plates to support the sheets that may have been displaced to one side. Specification 144,433 is referred to.

## Ornamental Paper.

Under this heading a patent application has been made in this country by Mr. C. L. Thunert and Mr. K. Heinig. It concerns an ornamental paper or fabric suitable for book-binding, wall covering, note-case covers, and as an imitation of parchment, pigskin, wood and cloth graining, and other materials, is produced by applying a layer of tissue or like paper or fabric to a paper backing, the layer being coloured by a wet process, the colours being rubbed on to produce different shades. A transparent layer is applied on the coloured layer and brushed and coated with a varnish-like mass. Irregular raised veining and graining is produced by applying the tissue or like in a more or less crinkled state.

## Folding Cardboard Boxes.

Mr. E. Downer and Messrs. Millington and Sons have patented an invention by which a folding box is made from a rectangular blank, Fig. 1, creased along the dotted lines and cut to form, at all the corners, curved hooked

tongues  $g^1$   $f^1$ , the ends of which, when the box is formed, project vertically through horizontal slits  $e^1$ ,  $d^1$  in the side members E, D, of the lid and body respectively, and lie wholly inside the walls of the box. The back C is also formed with curved hooked tongues  $c^1$ , which engage slits  $f^3$  in the ends F.

## Slitting and Rewinding Paper.

In an invention by the Cameron Machine Co., in order to neutralise the longitudinal irregularities or wrinkles caused by the pull on paper or fabric while being fed through machines, temporary longitudinal minute undulations are formed in the web by means of a grooved roller or a grooved fixed plate which in the case of cutting machines, is preferably placed immediately after the cutters. A slight narrowing of the web results and hence there is no tendency for the adjacent coils, in rewinding, to interlock. The grooved roller may be, itself, a cutting roller or the front or back rewinding drum or the top winding drum or may be in the form of a spring dandy roller. The grooves in the roller or plate may be straight or undulating as seen developed in Figs. 26, 25, and 24, but

are always non-helical. Figs. 4 and 5 show a grooved roller 18 which acts also as the roller against which the score cutters 23 cut, smooth spaces 33 being left for this purpose. Fig. 7 shows a similar roller which acts as a shear cutter. Fig. 12 shows the drum 18 as a top pressure roller. Fig. 14 shows a grooved

plate 18 which may be used instead of the roller. In each Figure the rewinding shaft is shown at 22, and the cutter at 23.

### Relief Printing Surfaces.

Under an invention patented by Namlooze Vennootschap Werktuigenfabriek Rotator a relief printing surface is embossed on a thin flexible sheet of metal or other material by means of profile hammers or a typewriter, the sheet being placed upon a soft or resilient layer which is supported by a hard surface. If a typewriter is employed, the platen roller is coated with soft or resilient material such as rubber. The sheet may consist of brass, zinc, paper, soft board or asbestos-cement. The printing surface can be duplicated by casting or electro-deposition.

**HIGH COSTS AND LOST ORDERS.**—In connection with the negotiations now in progress on the reduction of wages in the industry, the Engineering and National Employers' Federations have prepared a statement dealing with the present trade situation, in which every cause is explained and weighed, and, finally, the statement, which is a book of 40 pages, winds up with a collection of examples of orders lost through the present high cost of production in this country. The complications of the foreign exchange situation are dealt with at considerable length, and it is shown that the depreciation of the European exchange is due both to inflation of currency and to inability to export on account of low production. The lost orders mentioned have gone to Germany in the main.

## New British Patents.

In June Messrs. Sotheby will disperse the library and valuable collection of engravings formed by Mr. Henry William Bruton, J.P., F.S.I., of Gloucester, who died in December last.

THERE will, of course, be many things of interest to printers, especially such as have much to do with illustration work, at the Photographic Fair which opens at the Horticultural Hall, Westminster, on Friday, April 15th, and closes Saturday, April 23rd.

THERE has reached us an excellent example of the varied high-class reproduction work carried out by Messrs. John Swain and Son, Ltd. On a background in which black-and-white etchings are effectively reproduced by "Swaingravure," there is mounted a multi-colour portrait illustration in which delicate tints and gradations are exquisitely brought out by photo offset. This example, a calendar, provides ample evidence of the equipment and skill of the producers.

# The Bookbinder and His Costs.

## Some Considerations upon the Application of the Federation Costing System to the Bookbinding Dept.

While letterpress has gone ahead and widely adopted the Costing System to control cost, production and profit, binding has stood where it was before the war. In fact, it has gone back—because, relatively, bound books are too dear. Now more than ever it is imperative that the true cost of binding should be known in order to improve output, ascertain cost and sell at a profit. Cheapening must come through elimination of waste effort, misdirected energy and lack of machinery and appliances.

But to discover weaknesses and introduce right machinery a control over the data of production is absolutely essential. If you don't know exactly what is being done it is impossible to introduce methods of improvement. It is not so much a matter of getting at workers' times and speeds as of broad principles of production. Without record every thing is guesswork, and exact values are never known. Some work is produced and sacrificed; other work is overcharged. Annoyance and loss of orders follows, and the general status of the trade is lowered. The true cost of bookbinding is an unknown quantity where guessing at costs takes the place of hard facts and systematic cost-recording.

### Printing and Binding: Conditions Differ.

In many ways bookbinding differs from printing, and a correct appreciation of cost is more difficult to obtain except by synthetic measures. In printing, there is the composition on one hand, in which several men are performing a similar series of operation without the aid of machinery and at a similar

wage rate. In machining there is a series of machines working under closely similar conditions, the costs of which can be assessed on a set principle.

With bookbinding, hand work and machine work have to be contended with, the same individual turning his attention to one or the other at different times, maybe for short spaces of time. Various orders may be carried through simultaneously, comprising books of different size and character. On the other hand, large work permits of mass production methods and the sub-division or classification of operations. Again, the bookbinding establishment may comprise a sewing-room, with girls on hand work, girls on expensive machinery and others on small machines such as pagers and wire-stitchers. A warehouse or miscellaneous department may also be included, with girls on a variety of hand and machine operations, or even on piecework.

On careful consideration of these facts it becomes manifest that no business can be soundly carried on unless some attempt is made to control the cost of production. Flat rates are futile, for the reason that by their adoption handwork is overcharged and machine work undercharged. As the binder turns more and more to machinery, which he must do if he is to keep track with modern progress, he runs the risk of dissipating his capital without adequate return. The customer gains the advantage, and the binder does an injustice to his fellow-craftsmen, which in time leads to price cutting, and at the end of this vicious circle stands the binder who commenced it. There is no ter-

mination to price cutting once begun, and the initiator of it finds the practice come home to roost every time.

### The Place of the Time Docket.

The aim of the binder should be to ascertain the hourly cost of every machine, operation and process. The foundation of this cost is the number of chargeable hours worked, and the basis of the chargeable hour is the time docket. The Federation Costing System enables the binder to collect and analyse the hours spent on the various machines and processes. The Statement of Expense Form dissects and compiles his departmental costs, and permits accurate allocation to be made to each separate department. The Value of Production Form enables the cost clerk to calculate each week the exact value of work turned out of each department, and by comparison against the cost of each department a balance sheet is presented to the management each week showing the standing of the respective departments. Thus the control of a modern bindery establishment, working on the Federation Costing System, becomes a matter of prepared data, the figures of which are the levers by which policy can be guided.

But the Costing System goes further than this. It helps the binder to improve his organisation by revealing weaknesses and defects. Little-used machinery is shown up in its true light. Over-worked machinery is indicated by waste time involved in waiting, and the way to sound investment is pointed out. Time-wasting methods can be detected, and improvements effected. The value of machinery against hand labour in certain directions may be emphasised, giving the cue to greater output and better paid labour. In a thousand and one ways the binder finds the means put into his hand for developing the productive end of his business.

### Advantage to the Employee.

A sound business, progressive methods and an assured profit, all lead to greater ability to give adequate reward to labour. It is as much to the interest of employee as employer that the craft should be on an assured basis and capable of securing sound profit. Cut prices and ignorance of costs means a low status, insecurity, and a reluctance to give fair consideration to the workers.

The aim of every worker should be to help in establishing his craft on a high level of efficiency, and this aim can be achieved by an appreciation of the principles of scientific costing and the necessity of fixing prices on the basis of time value through the agency of the time docket.

The object of every employer should be to bring his business into line with modern progress by introducing sound and reliable methods of cost-finding and recording. In the interests of uniformity, efficiency and scientific accuracy the Federation Costing System is indispensable.

ONE fatal accident is officially reported as having taken place in the paper, printing, etc., group of trades during February.

## North London Printers.

### Annual Meeting.

The annual meeting of the North London Association of the Master Printers' Association was held at Finsbury Park on Monday of last week, when there was a good attendance of members.

In the absence of Mr. D. A. Whitehead, of Muswell Hill, who is away after a serious illness, Mr. L. F. Hunt was voted to the chair.

Three new members were elected, and important discussions took place resulting in the branch accepting the recommendation of standard forms of tender for local authorities, public bodies, corporations, etc., to be approved by the Federation of Master Printers before being issued.

The branch also supported the need for calling a conference at an early date for a revision of the high wages now being paid, as a means of increasing work and decreasing unemployment. The members also agreed to the suggested alterations and additions to rules as submitted by Council of the London M.P.A., together with the recommendations of the Organisation and Finance Committee respecting the income of the Benevolent Fund.

In presenting the annual report, Mr. W. J. Mizen, the hon. secretary, said that the branch was able to report steady progress. A résumé of meetings held was given, and reference made to the costing classes conducted by Mr. Medcalf, when 17 members attended. Mr. Mizen, in conclusion, said that the future would hold many problems which only unity, watchfulness and energy could overcome.

The following officers were elected for the ensuing year:—President, Mr. D. A. Whitehead; vice-president, Mr. L. F. Hunt; financial and publicity secretary, Mr. W. R. Cummins; branch secretary, Mr. W. J. Mizen. Council: Messrs. W. Curtis, G. Hammond, R. Hayllar, J. Orchard, W. Williams and T. Woolridge. Representatives to L.M.P.A.: Messrs. H. C. Hill and W. J. Mizen.

"THE DIRECTORY OF PAPERMAKERS" for 1921 is now published by Messrs. Marchant, Singer and Co., 47, St. Mary-axe, London, E.C.4 (price 2s. 6d. net.). The work has been authentically revised and thoroughly brought up to date. A special importance attaches to this feature in these days in view of the various changes that have taken place of late. To all who are interested in paper the Directory must be a necessity, containing as it does lists of papermakers, etc., of the United Kingdom, their representatives in London and chief provincial towns, London wholesale stationers, and so on. Especially useful are the alphabetical indexes of firms and mills. The classification of makes is a large and valuable section of the volume, and the actual watermarks and trade names used for papers, stationery, cards, etc., are helpful to printers, stationers, publishers, and all buyers of papers.

## Printers' Managers and Overseers ASSOCIATION.

### Arrangements for Forthcoming Delegate Meeting.

Matters of business occupied the whole time of the members at the April meeting of the P. M. and O. A., held at the "Old Bell," Holborn, on Tuesday of last week, the forthcoming delegate meeting looming large on the agenda. In the regretted absence of Mr. A. E. Jarvis, Mr. S. M. Bateman, vice-president, occupied the chair.

Mr. Bateman having made sympathetic reference to Mr. Jarvis's illness.

The general secretary read a letter from Mr. Jarvis's son thanking the council for their expressions of sympathy and good wishes. Mr. Whittle reported that though Mr. Jarvis had been very seriously ill with pneumonia and pleurisy he was now making satisfactory progress.

At the suggestion of the chairman it was agreed to ask the general secretary to write a letter to Mr. Jarvis expressing the meeting's sympathy and hopes of his speedy recovery.

Two new members were elected, and were personally welcomed by the vice-president, while Mr. F. L. Hills, who was absent at the last meeting, when he was elected, also received a personal welcome. The two new members were: Mr. T. G. Carne (Caledonian Press, 74, Swinton-street, W.C.2. Works Manager), and Mr. F. C. Ford (National Labour Press, Ltd., 8-10, Johnson's-court, Fleet-street, E.C.4. Overseer—Machine-room: Letterpress).

### Various Elections.

The next business was the election of an auditor. The chairman explained that, Mr. H. R. Whipps having been elected to the council, someone must be chosen as auditor in his place. Mr. W. H. Mann was then unanimously elected.

Next, two delegates had to be elected to represent the Parent Association at the delegate meeting to be held at the Royal Agricultural Hall, London, on May 7th. The chairman explained that if Mr. Jarvis were not well enough to act as delegate, it would fall to the vice-president to act in his stead.

Some discussion ensued, and as it was the wish of the meeting that Mr. Bateman should in any case be one of the Parent Association's representatives at the delegate meeting, it was decided to elect him and two other members, one of whom was to retire in case of Mr. Jarvis being able to attend. The two other members chosen were Mr. J. C. Pugh, and Mr. E. H. Berryman.

In introducing the election of committee and stewards for the united gathering, the general secretary said that at a special council meeting the week before, a preliminary committee of six had been elected and these had paid a visit of inspection to the Agricultural

Hall. Mr. Whittle went on to detail the arrangements at the exhibition for conference, luncheon, tea and concert for members and their ladies, and then suggested on behalf of the council that six additional committeemen should be elected, also three stewards for the concert. He further mentioned that Mr. Bridges had written to him with regard to the semi-official visit to the exhibition of twelve Czecho-Slovak Government delegates with an interpreter. These, he said, were all members of a printers' managers and overseers association, and were prominent experts. He was sure members would wish to entertain these printers' managers and overseers coming to a foreign land; he therefore invited some expression of opinion on the matter.

Mr. S. A. Dawson proposed, and it was duly seconded and unanimously carried, that these Czecho-Slovakian confrères be invited to the luncheon, tea and concert at the exhibition.

The secretary then read the names of the members of the executive who had constituted the preliminary committee. They were: Messrs. E. Hutchins, H. Blackwell, T. B. Lapworth, W. Scott, W. H. Gill, E. H. Campling, and E. W. Whittle.

Further nominations being invited, the following members were proposed and were elected *en bloc*: Messrs. W. Holt, C. W. Brown, J. A. B. Reed, S. A. Dawson, G. Waller, W. W. Curtis and H. Summerfield.

The three stewards elected for the concert were: Messrs. H. Roberts, W. Condliff, and A. W. Hart.

### Instructions to Delegates.

The meeting then resolved itself into a special general meeting to discuss, for the guidance of delegates, the business to be submitted to the delegate meeting. Consideration was given to numerous debatable points in a long printed agenda, most of the items of which consisted of suggestions made by the Parent Association and by the provincial centres with regard to alterations of the Association's rules. All important points of difference between the suggestions of London and the provinces were fully discussed, in order that the Parent Association's delegates might go to the conference with a sound knowledge of the opinions of the members they represent.

Before the close of the meeting, the general secretary brought up the subject of further correspondence that had occurred between the P. M. and O. A. and the Typographical Association in regard to the notice question. He said it was not thought advisable to publish the series of letters, but he intimated that the T.A. was pressing for more stringent restrictions upon P. M. and O. A. members in respect of the use of their services in the case of a dispute. Mr. Whittle explained that this was a matter which directly affected the provincial centres only, and it was therefore felt that the question should be discussed at the delegate meeting, which would be fully representative.

The meeting concurred in this view, and left the delegates a free hand to be guided in their voting by the trend of the discussion at the delegate meeting.

## Printers' Pension Corporation.

The annual general meeting of the Printers' Pension, Almshouse and Orphan Asylum Corporation was held on Saturday afternoon at St. Bride Institute, at which there was a large gathering representative of the printing and allied trades. The chair was occupied by Sir George Rowland Blades, M.P. There were 100 candidates for the election this year, and of this number 94 were elected to pensions.

Sir G. R. Blades, speaking of the work of the Corporation during the past year, said it was one of "record" progress, and the total amount paid in respect of benefits had risen to £23,386, for 1,459 recipients. The pensioners, including men and women, now numbered 735, amongst whom £16,000 a year was distributed in pensions.

During the past year, said the chairman, the deaths had been recorded of 10 pensioners who, during their working days subscribed £97, and who lived to receive in pensions no less than £4,293, or an average receipt of £429 for a payment of £9. The fund for granting relief to children of printers killed in the war established in 1918 was now helping over 1,000 war orphans at a present cost of £9,100 per annum. The outstanding feature of the year, added Sir G. R. Blades, was the festival under the presidency of the Prince of Wales, at which the amount of subscriptions announced was 52,000 guineas.

Speaking of the relations of employers and employees in the printing trade, Sir George said as far as troubles were concerned they were discussed and settled in a most amicable and friendly way. There was a mistaken idea, he said, brought about, he felt sure, by the mistakes of a few extremist employers, that there is a general wish to bring down wages. There is no real wish on the part of employers, whether they are mine owners, railway companies, or anything else, to reduce wages. From his own knowledge there was a strong desire on the part of the employers throughout the country to bring about a proper and reasonable settlement of the terrible industrial conflict with which we are threatened.

The following is the result of the election upon the Pension Fund:—

**MEN.**—Beaden, Francis J., 1,155; Blackall, John R., 1,209; Blake, Frederick, 1,451; Bookless, Henry J., 1,212; Campbell, James A., 1,552; Cheese, Joseph, 1,170; Connor, Edward, 4,614; Cooper, William, 1,069; Copeman, Henry, 1,146; Cunningham, Andrew (deceased), 583; Dear, Albert, 1,291; Deeks, Robert, 1,150; Ebdon, William, 1,265; Evans, Charles, 2,103; French, William F., 1,667; Friend, William G., 2,103; Gibbons, Henry, 452; Giles, Bryant, 2,664; Glumart, James, 1,835; Goodwin, Henry, 1,572; Hayward, John, 1,236; Hewson, Thomas, H., 2,876; Hill, Henry T., 1,811; Hillman, James, 699; Johnson, David, 1,387; Jones, Evan H., 910; Kemp, Joseph, 1,575; King, Silas R., 1,397;

J., 1,683; Hayward, Susannah C., 1,601; Head, Jane L., 706; Jones, Ellen L., 106; Langridge, Caroline, 1,384; Mayall, Sara J., 1,581; Merrett, Emma R., 1,820; Moreton, Helena, 588; Pardey, Ada J., 192; Partridge, Matilda, 327; Perkin, Harriett A., 1,146; Phillips, Mary A., 1,871; Price, Elizabeth H., 1,666; Puddefoot, Mary E., 1,586; Rhodes, Harriett, 78; Smith, Sabina, 222; Symmons, Jane M., 987; Tarran, Annie E., 778; Tout, Caroline A., 447; Triggs, Alice A., 1,174; While, Sarah J., 1,576; White, Eliza, 1,294.

**UNMARRIED DAUGHTERS OF PRINTERS.**—Knott, Edith M., 78; Russell, Esther M. A., 317.

## Warehousemen's Auxiliary Concert.

A successful concert under the auspices of the Printers' Warehousemen's Pension Fund Auxiliary was held on Monday of last week at the "Old Bell," Holborn. The chair was occupied by Mr. J. J. Rawlings (Messrs. Odhams) who was supported by Messrs. J. Dixon, J. Fleming and W. H. Hillman. An excellent programme of music was gone through, contributed to by many prominent artistes. The array of talent, combined with the sum of over £60 that was realised by the plate, gave every satisfaction.

ABOUT 165,000 tons of news-print paper were manufactured in Sweden during 1920. The output during 1921 is expected to reach 175,000 tons.

# Printing, Bookbinding & Kindred

## TRADES OVERSEERS' ASSOCIATION.

### Monthly Meeting.

There was a large muster of members at the monthly meeting of the Association held on Tuesday of last week at St. Bride Institute, the president, Mr. A. W. Hunt, occupying the chair, and the vice-president, Mr. H. Milton, ably supporting. During the evening Mr. A. W. Sandilands gave a short talk on "Stereos."

The minutes of the previous meeting having been confirmed, several items of correspondence were brought to the notice of the meeting. Among these was a letter from Mr. Henry Ward, a member in Hull, saying he would be in London for the Exhibition and that he would be glad to take the opportunity of discussing with the executive matters concerning the welfare and development of the Association in the provinces and of the possibility of founding a provincial centre.

The secretary was instructed to send to Mr. Ward a personal letter from the Association welcoming the idea.

### Report of the Annual Dinner.

The report of the annual dinner, which showed a balance in hand of £5 4s. was next submitted.

Votes of thanks were accorded from the chair to Messrs. J. Fleming and W. Alleston, the former gentleman for providing the programmes and the latter for bearing the cost of one of the prominent artistes, and also to Messrs. T. Hill and J. J. Rawlings for their contributions to the success of the evening.

A question arose as to the enforcing of payment of unused dinner tickets, and it was proposed and seconded that those members who had not returned the unused tickets should be released from payment, but be notified of their slackness in the matter.

The balance-sheet of the annual dinner was, on the proposition of Mr. Milton seconded by Mr. J. F. Stroud, adopted as printed.

### Printing Exhibition.

The official visit of the Association on April 30th was next discussed, and it was the unanimous desire of the members that the occasion should be followed by a tea and concert, the latter to be provided by artistes secured from the musical talent selected from the members, excepting in the case of the pianist, it being agreed that a professional be engaged for the occasion. Information regarding further arrangements to be posted to members in due course.

### "Stereos."

Mr. Sandilands said he did not wish to appear before them as a lecturer on the subject of stereotyping but rather was it his desire to put before them as binders some of the mysteries relating to the foundry. Stereotyping was rather a new branch of the trade

as compared with the antiquity of printing and he believed the credit for its invention was given to a banker, Mr. William Ged, a Scotsman, who conceived an idea of making a cast of a form, so as to prevent the necessity of having to keep forms standing, with the possibility of type falling out. To help on the invention Mr. Ged apprenticed his son as a compositor, and their combined efforts met with a certain amount of success.

Mr. Sandilands dealt with a later method, that of casting a mould with plaster of paris, which was held down by cramping screws. This method was in use until quite recently in the casting of music, where there were fine lines and where it was necessary for the corners to join up. In course of time that method was superseded and some one thought of getting a soft paper and pressing it into the type. In this connection Mr. Sandilands mentioned the name of Dellagana. The ordinary wet flog, the plaster mould and the up-to-date dry flog processes and their characteristics for various classes of work were explained, and then Mr. Sandilands referred briefly to the composition of stereotype metal. The ingredients of lead, tin and antimony were dealt with, specimens of each being passed round the room for inspection.

Mr. Sandilands next referred to the different facings that were applied to the stereo to give it strength, and an interesting picture plate was shown, the face of which was partly nickel, partly copper, and a portion of it without any facing at all.

### Discussion.

A member raised the question of the possibility of the mould shrinking; a serious matter to contend with in getting good register when doing colour work.

Mr. G. A. Rutherford suggested that certain colours may deteriorate when working with nickel plates.

Mr. Sandilands, in reply, said he was sure moulds produced by the dry flog method would give absolute register, even with three-colour work. When shrinking took place it was with the metal. With regard to ink attacking the nickel he said that it resisted the ink, but copper was affected by certain inks. Red inks contain vermilion, and if an electro is examined after working it will be found to be white with mercury. It might also occur in the case of chemical inks used for bank cheques, etc., that were used for preventing forgery.

In answer to a question dealing with binders' stereos, by Mr. T. Hunt, Mr. Sandilands expressed sympathy with the man who was expected to get good work from a stereo that was not nickel faced. It could not be done, especially if a stereo was to be used repeatedly.

Mr. Hunt was glad to get that assurance from a stereotyper, because they were often expected to get good work from an ordinary stereo.

Contributions were also made to the discussion by Messrs. T. J. Ibbott, A. J. Aves and J. Lee.

A vote of thanks to the chairman closed the proceedings.

## The Printing Crafts Guild.

The great North of England firm of Messrs Norbury, Natzio and Co., Ltd., Manchester, threw open their works on Saturday last so that the large crowd of Guild members could see the modern plant in the letterpress and lithographic departments. Colour work of all descriptions was in progress, many of the illustrations being greatly admired by the visitors. In the extension bays the new Potter Offset Rotary Presses were giving every satisfaction. A two-revolution Miehle letterpress machine was specially run having a self-feeder attached to it. The sheets gracefully travelled down the incline to the lay edge, were then gripped, printed and delivered in such a becoming manner that many lingered at its side for quite a long time.

Mr. H. L. Birdsall, director, kindly gave up his afternoon's leisure to act as chief guide, and he conveyed the company through the various departments—lithographic, bronzing, transferring, bookbinding, letterpress, packing, photographic artists, composing, gold blocking and box-making; also power house, store room, gumming, varnishing, paper warehouse, fire-proof room for originals, etc. From 3 to 5.30 the visitors were gathering knowledge how to run a printing business successfully by continually purchasing the latest labour-saving devices and machinery.

A vote of thanks was moved by President John Taylor and Mr. R. B. Fishenden, M.Sc. Tech., Mr. Birdsall replying.

WEE MAC.

## Stationers' Co. & Printing Industry EXAMINATION.

Under the auspices of the new technical examining board for the printing and allied trades, the following examinations will take place at Stationers' Hall: Wednesday, April 27th—Costing and Estimating, 6 to 8.30 p.m.; Monday, May 2nd—Order Clerks and Machine, 6.30 to 8.30 p.m.; Tuesday, May 3rd—Composing and Litho., 6.30 to 8.30 p.m.; Thursday, May 5th—Paper, and Bookbinding and Warehouse, 6.30 to 8.30 p.m.

In the craft sections, i.e., composing, machine, lithography and bookbinding, candidates must have regularly attended a technical class, must be between the ages of 17 and 21, and must submit at time of examination a certified example of their practical work.

Certificates, medals and prizes will be awarded on the results of these examinations.

There is an entrance fee of 1s. 6d.

Applications must be lodged at Stationers' Hall not later than Saturday, April 23rd.

An Advertisement is always working

## Concert at the Printers' Almshouses.

On Saturday evening the inmates of the Printers' Almshouses at Wood Green were entertained to a very pleasant concert by the Chequers Pierrot Troupe from St. Luke's, Harringay, under the management of Mr. Leonard Chandler. The programme was a varied one, and the several members of the troupe all did their best to delight the inmates, and were very successful in their efforts. During an interval the old people were provided with light refreshments, kindly supplied by Mr. J. A. Goodall (head reader, *Evening News*), whose accomplished daughter is a member of the troupe and acted as accompanist throughout the entertainment. The arrangements for the evening were made by Mr. W. A. Perkins (member of the Council of the Printers' Pension Corporation) in conjunction with Mr. W. Vandy (chairman of the Almshouse Committee). The latter presided in his usual genial way.

At the close, on the motion of the chairman, seconded by the Rt. Hon. C. W. Bowerman, M.P., a hearty vote of thanks was passed to the troupe and to Mr. Goodall for their kindness in providing such a pleasant evening.

On the suggestion of Mr. Joseph Mortimer, O.B.E. (secretary of the Printers' Pension Corporation) the chairman was also heartily thanked.

## Alex. Pirie and Sons, Ltd.

The following developments in connection with the working of the company have taken place during last year. The Paris warehouse has been given up, the company's interests in France having been joined with a Paris house, in which Messrs. Pirie hold shares to the value of £10,000. It has been decided to build a new warehouse in Melbourne, Australia, the lease of the previous warehouse having terminated.

The Government have vacated the company's New North-street factory in London, and this building has been leased to Messrs. Pirie, Appleton and Co., Ltd. The old envelope factory at No. 96, Farringdon-street, has been vacated and the premises leased. The power plant at Stoneywood, which has been in course of reconstruction for a considerable time, will shortly be completed and should show economies.

The capital of Pirie's Photographic Paper Co., Ltd., has been increased by the issue of 50,000 £1 shares to Messrs. Alex. Pirie and Sons, Ltd., against which the latter company has handed over the leasehold of the site and the goodwill in photographic and special process papers.

The balance of capital authorised was issued and subscribed during the year in the form of 100,000 7 per cent. cumulative second preference shares.

# Trade Notes.

MR. GEORGE ROBEBY'S concert for the Newspaper Press Fund, at the Coliseum on Sunday afternoon, was both an artistic and financial success. The gross amount realised was £2,410.

THE Morland Press will publish early in May a new work entitled "Ex-libris and Marks, by Ludovic Rodo," illustrated by thirty-two woodcuts. Introduction by Frank Brangwyn, R.A. Price 3s. 9d. net.

THE death is announced of Herr Albert Brockhaus, head of the well-known firm of F. A. Brockhaus, of Leipzig, who for many years was the leading German representative at international congresses of publishers.

MR. SAMUEL SCHOFIELD LORD, a well-known North Country journalist, died at Grange-over-Sands on Friday at the age of 73. He was formerly editor of the *Barrow News and Mail*, and latterly of the *Barrow Guardian*.

THE Association of Master Printers of the London Central Districts is holding its annual general meeting at Stationers' Hall, Stationers' court, Ludgate-hill, E.C., on Monday evening, April 18th, 1921, at 6.15 p.m. After the formal statutory business an open meeting will be held when Mr. W. H. Burchell will open a discussion on "London Costing and Country Competition."

OWING, it is stated, to the increased cost of production, the proprietors of the Halifax newspapers announce the amalgamation of the *Halifax Guardian* (daily and weekly) and the *Halifax Courier* (daily and weekly). The associated papers will bear the titles of the *Halifax Courier and Guardian* (weekly), and the *Halifax Daily Courier and Guardian*, and will be issued from the *Courier Buildings*.

BURNING OF THE "STAR."—Mr. Clynes, in the House of Commons, has called attention to the action of the military authorities in Kensington Gardens in burning copies of the *Star* newspaper in the camp because it contained an advertisement of the Triple Alliance. Sir L. Worthington-Evans said the matter had been brought to the notice of the General Officer Commanding-in-Chief, Metropolitan area, who has been asked for a full report on the matter.

AT Coventry last Thursday Henry Stockley and George Norbury were fined £5 each for printing leaflets which did not bear their names and addresses. Redvers H. Glover was fined £1 for publishing the leaflets. Five-hundred of the leaflets consisted of Karl Marx's definitions, and there were also 2,000 copies of a statement issued by the unemployed committee of which Glover is the secretary. Glover, who is only 20, conducted his own case. He denied publishing the definitions, which he said were for use at classes in Marxian economics, and explained that the other pamphlets contained both his name and address.

MR. WILLIAM FARROW TAYLOR, of Cambridge, farmer and governing director, *Cambridge Daily News*, aged 65, left £9,323.

PAPER and printing are included among the sections of the International Sample Fair to be held at Milan from April 12th to 27th.

ROBERT STEWART AND Co., papermakers' agents, Glasgow, have established a London office at Red Lion House, Red Lion-court, Fleet-street, E.C.4.

At the Printing Trades Exhibition the Marshall Engraving Co., Ltd., will show what they term a new and inexpensive method of making dies for embossing.

ITALIAN newspapers have been authorised to appear with six pages, pending the complete abolition of restrictions recommended by the Central Paper Commission.

MESSRS. RELPH, DARWEN AND PEARCE have been appointed selling agents for the United Kingdom for flint and enamel papers by Messrs Meses - Goris and Fils, Turnhout, Belgium.

THE *Kentish Mercury*, for its issue of April 8th, contained 20 pages, a sure sign of continued progress. The issue also carried a large number of advertisements, these amounting to no fewer than 1,233.

THE annual meeting of the Home Counties Master Printers Alliance will be held on Wednesday, May 4th, 1921, at the Stationers Hall, London, E.C., when there will be a morning session at 11.30, followed by a luncheon with distinguished visitors, and then an afternoon session.

MESSRS. S. E. CULLUM AND Co., paper mill agents, are relinquishing their offices at 73a, Queen Victoria-street, having acquired more extensive and commodious premises, with excellent warehouse accommodation, at 237a, Upper Thames-street, London, E.C., where all communications in future should be addressed.

At the resumed hearing at the Mansion House on Monday of a summons against Messrs. Kegan, Paul, Trench, Trubner, and Co., Ltd., re an alleged obscene book "The Autobiography of a Child," the Lord Mayor ordered the copies seized to be destroyed, saying that he was satisfied the book came within the terms of the Obscene Publications Act, 1857. He said he would give every facility for an appeal.

AT Bow-street Police Court last week, before Mr. Graham Campbell, Henry Allen Ashton appeared to an adjourned summons charging him with having on September 17th, 1920, forged a letter, and the prosecution intimated that the defendant would be further charged with having converted to his own use £160 and twelve reams of paper belonging to the Exchange Press, Ltd., the company that formerly owned the *Stock Exchange Review*, and at a later period took over the *Islington Chronicle*. The hearing was again adjourned.

 or from Messrs. W. H. Everett and Son, Ltd., news-  
 agents, 11, St. Bride-street, E.C.4.

THURSDAY, APRIL 14, 1921.

## Current Topics.

### The Industrial Crisis.

AT the time of going to press the position created by the coal stoppage and by the threat of the extension of the trouble to other national services remains as critical as ever. The ultimate effects of the dispute upon trade in general, including the printing industry, are incalculable. The most immediate outcome as regards our own trade is the Government order restricting the use of coal or motive power. At last week's meeting of the Joint Industrial Council of the Printing and Allied Trades the employers' representatives brought this matter forward for discussion, and the following resolution was adopted by the Council:—"This Council recognises that the Workers' Panel has no power to agree to any definite attitude upon the question of losing time owing to the present dispute. They recognise the urgency of the position, and suggest that steps be taken by the employers to make arrangements with their employees as to losing time in accord-

ance with the restricted supply of motive power and transport difficulties, such arrangements to be referred to the local trade union branch committees."

### The Crisis Postpones Conventions.

TUESDAY of this week had, as we have previously announced, been fixed as the date of the annual convention of the Joint Industrial Council, to be held at Brighton. One result of the national crisis has been that this convention has been temporarily postponed. It was felt that the position just before the week-end was so critical that it would be unwise to bring delegates from long distances with the possibility of their finding themselves unable to return. Similarly, it has had to be arranged to postpone the annual administrative conference of the Printing and Kindred Trades Federation of the United Kingdom, which was to be held—also at Brighton—from the 13th to 15th inst.

### Paper Prices.

THERE has been no appreciable change in the market price of paper during the last few weeks and users appreciate the fact that rock bottom has been reached. So far they have not shown their appreciation in concrete fashion, but that will come in due course. There are still some exceptional offers being made, generally for prompt cash. Kraft has been offered at from £40 to £50 per ton and M.G. sulphite at £39 per ton. We have also seen E.S. writings offered for clearance at 5d. per lb., but these figures do not by any means represent average market values. Strawboards are in a worse plight than ever, and stocks which cost little short of £20 per ton are being cleared at half the price. Box-makers all over the country are desperately short of work and in most cases they are already carrying large stocks of boards. It will take many months to put the board trade in a normal condition whichever way business turns. There has been no spring trade and there is no prospect of a summer season. It will be at least July or August before the demand for boards and wrapping papers arises, according to trade opinion.

### Standards in Paper.

THE upheavals of the last few years have left their mark on paper stocks in other ways than that of actual value. We had reached a stage in 1914 when every requirement of the customer, however faddy or fantastic, had to be met. As a result, merchants were practi-

cally compelled to carry an extraordinary variety of lines, involving much idle stock. On his part the printer was perforce compelled to oblige his customer to an illimitable extent, with the result that his stock-room ultimately held an infinite multiplicity of oddments. Out of this the broken ream custom began to grow, and some merchants prepared themselves to sell by the sheet or quire at an extra charge. The policy may have had its good points, but a conglomeration of remnants was good for neither the merchant nor the printer. The lessons of the last few years have gone home and customers to-day are more broadminded in their attitude to paper. There is a danger that old methods may creep back; but if they do, it will be to the distinct disadvantage of those who incur extra expense by carrying idle stocks. Already there is evidence of manufacturing wholesalers issuing duplications of set grades bearing new brandings. We fail to appreciate the purpose embodied in this policy.

---

## Personal.

---

H.M. THE KING has consented to become patron of the Newspaper Press Fund, the annual dinner of which will take place at the Hotel Victoria on the 28th inst.

THE RIGHT HON. SIR L. WOTHINGTON-EVANS, BART., M.P. (Minister for War), has kindly consented to open the Printing Trades' War Memorial Wing to the Caxton Home, Limpsfield, on Saturday, June 18th. Lady Worthington-Evans will at the same time unveil the Honours Roll.

MR. E. R. MORRIS, C.B.E., one of the directors of Messrs. Whitehead, Morris and Co., Ltd., London, has been paying a flying visit to South Africa by way of taking a post-war holiday. The *South African Printer and Stationer*, in its March issue recalls that during the year 1893 Mr. Morris first founded the South African branch of Whitehead, Morris and Co., at Capetown, and it proceeds to review his distinguished humanitarian services during the war and after.

MR. LAWRENCE H. BLADES was presented by the Rt. Hon. C. W. Bowerman, M.P., in the name of the Lithographers' Auxiliary with a framed illuminated address on the occasion of the last concert of the season at the Cannon-street Hotel on Monday evening. A report of the concert will appear in next week's issue.

PROFESSOR B. MOUAT JONES has been appointed principal of the Manchester College of Technology in succession to Principal

Garnett at a commencing salary of £1,500 per annum. He was professor of chemistry and director of the Edward Davies chemical laboratories, Aberystwyth.

MR. W. R. CUMMINS, the treasurer of the North London Association of the L.M.P.A., holds the record for collecting for Salvation Army Self-Denial Fund. This year he raised £176, making a grand total of £2,353 paid into this fund as a result of his own personal efforts.

MR. F. C. PORT, chairman of Messrs. Chas. J. Forward and Son, Ltd., wholesale book-binders to the printing and publishing trade, London, has been elected on the Huddersdon District Council.

MR. EDWIN BARNETT, J.P., of Bath, has been elected president of the South-western Group of the Typographical Association.

AT a dinner held recently to mark the inauguration of a branch of the Typographical Association for the town of Carmarthen, congratulations were extended to the oldest printer in the borough, Mr. Dan Jones, who has served sixty years all but six months in the trade.

MR. CHAS. T. WILKINS who commenced his career as a journalist on the *Peterborough Express* and subsequently joined the staff of the *Peterborough Evening News* and the *Peterborough Standard*, has just joined the board of the *Cambridge Chronicle*, Ltd., and has been appointed managing director. It is over eight years since Mr. Wilkins took over the duties of director manager of the *Cambridge Chronicle* which is one of the oldest newspapers in the country.

MR. WILLIAM MEADS, a London journalist, has just entered on his fortieth year of newspaper work, having commenced his career on the staff of the *Reading Mercury* in April, 1881. He has successfully held positions on several London papers and now edits the *City Illustrated*.

His Majesty's Consul-General at Philadelphia reports that he has been approached by a local wholesale and retail dealer in general sporting goods, who is desirous of being placed in touch with United Kingdom manufacturers of photograph albums and photographic supplies.

THE name and address of the firm referred to, with particulars as to their standing, terms of business, etc., may be obtained by United Kingdom firms interested, on application to the Department of Overseas Trade, London, quoting Reference No. 8511, FW/SC (2).

Books are now exempted from duty when imported into Latvia, but printed music is subject to a duty of 2 per cent. *ad val.*

## DIVIDENDS AND REPORTS.

**AMALGAMATED PRESS.**—The Amalgamated Press announces dividend of 30 per cent. per annum, less tax, on ordinary shares for half-year, payable 2nd May.

**FINANCIAL NEWS.**—The accounts for 1920 show a profit of £57,475, the largest ever obtained by the company. Including £17,370 brought in, an available total is shown of £74,845. Out of this amount the directors have paid off certificates for indebtedness amounting to £11,376, five years' dividend to June 30th, 1920, on the five per cent. pref. and six per cent. second pref. shares (less tax), absorbing £36,884. After writing off loss on realisation of investments (£2,415), and premiums on debentures redeemed (£327), there remains £23,842. The directors now propose to pay a dividend on the ordinary shares at the rate of 20 per cent. (less tax), which will absorb £7,000 and leave a balance of £16,842 to be carried forward.

**JOHN DICKINSON AND Co., LTD.**—The net profit of John Dickinson and Co. for 1920, after providing for depreciation, income and corporation tax, excess profits duty and interest on debenture stock, was £287,422, plus £38,788 brought in, making £326,210. Directors recommend further dividend of 5 per cent. and bonus of 5 per cent., less tax, on ordinary shares, carrying forward £150,576 after applying £8,475 to debenture stock re-

demption. The directors express their appreciation of the services of all the employees of the company, the loyal co-operation displayed under the difficult conditions which existed during the latter part of the year being a most gratifying feature.

## NEW COMPANIES.

**LESLIE, BROWNLIE AND Co., LTD.**—Capital £1,500, in £1 shares; to take over the business carried on at 11, Argyll place, W.1, by L. M. Caldwell as the "Regent Typewriting Co." and to carry on the business of law stationers, typists, shorthand writers, printers, manufacturers of and dealers in typewriters, etc. Private company. First directors: L. M. Caldwell and W. R. B. Tarbet. Registered office: 11, Argyll-place, W.1.

**SCHIEFF PUBLICITY ORGANISATION, LTD.**—Capital £4,000; to take over the business of the Scheff Publicity Organisation, advertising agents and contractors, advertisement novelty designers, publishers, stationers, etc. Private company. First directors: L. Scheff and H. H. Elliott. Registered office: 125, Pall Mall, S.W.1.

**BARKING PRESS, LTD.**—Capital £750, in £1 shares; printers, stationers, etc. Private company. First directors: W. C. Petty and E. W. Sudlow.

**BOUCH'S PRINTING WORKS, LTD.**—Capital £3,000, in £1 shares. Private company. First directors: F. W. Bouch (permanent managing director), T. A. E. Bouch and A. E. Bouch. Registered office: 98, Markhouse-road, Walthamstow, E.

**P. G. O'CALLAGHAN, LTD.**—Capital £10,000, in £1 shares; to take over the business of a publisher, printer and bookseller carried on by P. J. O'Callaghan at 132 and 131, West Nile-street, Glasgow. First directors: P. J. O'Callaghan, J. McMullan, T. Campbell and J. Manuel. Registered office: 132, West Nile-street, Glasgow.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**BROWN AND BRINNAND, LTD.** (printers, Shrewsbury).—Particulars of £1,500 debenture

tures, authorised March 24th, 1921; whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**BURNETTS (GRIMSBY), LTD.** (printers, etc.).—Mortgage on certain freehold premises in Strand-street, Great Grimsby, dated March 23rd, 1921, to secure all moneys due or to become due from company to National Provincial and Union Bank of England, Ltd.

**S. AND J. H. SWINNERTON, LTD.** (rag and paper stock merchants, marine store dealers, etc., Bury).—Satisfaction in full on March 11th, 1921, of charge dated November 30th, 1920, securing moneys for the time being due.

**BRITISH BUILDING BOARD CO., LTD.**—Mortgage dated March 31st, 1921, to secure £3,000, charged on the Hythe End Paper Mills, Wraysbury, Bucks, and land adjoining. Holder: Miss E. O. Digby, 1, Cannon-street, Worcester.

**MANSSELL, HUNT, CATTY AND CO., LTD.**—Charge, and land registry charge on certain property in Hampstead, both dated March 23rd, 1921, to secure £7,000 and all other moneys due or to become due from company to London County Westminster and Parrs Bank, Ltd.

**CHANCERY LANE PRINTING WORKS, LTD.**—Particulars of £2,000 second debentures, authorised March 8th, 1921; whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**COWLEY AND CO., LTD.** (advertising agents, Moss Side, Manchester).—Debenture, dated March 14th, 1920, to secure £2,000 and further advances not exceeding in all £3,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: J. Mitchell, Linden Lea, Brooklands, Cheshire.

**WYMAN AND SONS, LTD.**—Mortgage dated March 31st, 1921, to secure £5,000, charged on 29 and 31, Breams-buildings, E.C. Holders: Phoenix Assurance Co.

**MORRIS WALL-PAPER CO., LTD.**—Mortgage on 16, Angel-row, Nottingham, dated March 11th, 1921, to secure all moneys due or to become due from company to National Provincial and Union Bank, Ltd.

### BANKRUPTCIES, etc.

*Re* **HENRY GRIFFITHS NEWTON**, 13, Southampton-street, Bloomsbury-square, W.C., formerly colour printer.—An application for an order of discharge was made to Mr. Registrar Francke at the London Bankruptcy Court, on April 8th, by this bankrupt, who failed in September last, with unsecured liabilities £7,310. The official receiver reported that the assets, valued at £513, had so far produced £150, but there were certain claims against bookmakers for the return of moneys paid to them by cheque for betting losses, which claims were subject to a pending appeal in

the House of Lords. The failure was attributed to loss of employment during a period of internment in Germany, heavy interest charges, law costs and losses by betting and gambling. As offences the official receiver reported—(1) insufficiency of assets to equal 10s. in the £ on the amount of the liabilities; (2) contributing to the bankruptcy by gambling; and (3) a previous failure. After hearing Mr. Comyns Carr for the bankrupt, his honour granted a discharge subject to a judgment for £1,000, to be satisfied by the payment of £500 at once, and the balance by six quarterly instalments, guaranteed to the satisfaction of the Court.

*Re* **LANGHALL AND WADE**, Printers' Designers and Manufacturing Stationers, 10, South-street, Finsbury, E.C.—The first meeting of creditors was held at the London Bankruptcy Court, on April 11th, before Mr. F. T. Garton, official receiver, under the failure of Ernest Langrash, Cuthbert Collingwood, and Harold M. Langrash, who traded as above. The receiving order was made on March 23rd, upon the petition of James Spicer and Sons, Ltd., the act of bankruptcy cited being notice of suspension of payment. The debtor Ernest Langrash has stated that he and his brother joined the firm in August, 1919. In May last they purchased another business at Haydon's road, Wimbledon, for £2,100, on account of which they paid £1,150. They had kept going by loans from moneylenders, and now owed £4,000, against assets valued at £2,400. The failure was attributed to lack of capital, heavy interest charges, and depreciation in the value of stock owing to the slump. A resolution was passed for Mr. Albert Willmott, C.A., 14, Old Jewry-chambers, E.C., to act as trustee, and wind up the estate in bankruptcy.

## Gazette.

### A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

Notes and News for

# The Bookbinder.

## Ignorance and Price-Cutting.

The price of binding books to-day is an item of considerable importance. Despite the lowered costs of material it is very seldom that binding can be performed at less than three times the pre-war figure. There is no justification, however, for some of the under-cutting that is going on in commercial work. Very evidently there are quite a lot of binders who do not know their costs and do not intend making any effort to become acquainted with them. By its nature bookbinding should be a very profitable industry. In the printing departments the costing experts reckon on a 32-hour week for compositors and 36 hours for machines. That is to say, there are only this number of hours which can be sold to customers. The balance of time is spent on dressing, clearing, reading, cleaning and washing up, standing to, and all the other non-productive operations common to every printing office. But in the binding-room the expert can reckon on little short of 48 hours of work for sale each week. The cost to the customer of an hour of printing is anything from 50 per cent. and upwards greater than the cost of an hour of binding. Yet the printer can realise a better and bigger profit than the binder. With its low costs and facility for uninterrupted production, the binding industry offers an opportunity for safe and sound return on investment, but in the eagerness to oust a neighbour and in face of the ignorance of both production and cost, the opportunity passes unnoticed.

## Present Level of Prices.

The market for binding materials has fallen to a fairly low level, and the average over all materials is now about three times the pre-war cost. Obviously there is still room for improvement, particularly as regards fabric goods, threads and tapes, glue, etc. The manufacturers and merchants are fully alive to the position of affairs, and they quite appreciate the fact that there will be no normal business until there are something like normal prices. Naturally no one expects the level of pre-war price to be obtained, but the difference between pre-war cost and some of the prevailing prices cannot altogether be explained away by reference to the wage bill.

## Market for Leathers.

Leathers are fairly steady now, and there is reason to believe that prices are as low as they are likely to go until wages are affected. The prices named last month still rule, and

the revival of a request for boot leathers will help manufacturers to avoid unduly heavy sacrifice. Most of the tanners have some good clearance parcels to offer, and we have this week seen basils at 9d., grained skivers at 6½d., pigskins at 2s. 3d. and rough calf at 2s. per square foot. These special lines do not reflect the real market price for standard grades, and they do not in all cases represent the standard quality. For the medium and lower classes of work they are eminently satisfactory, but only when they emanate from reputable sources.

## Casing Materials.

Bookcloths have dropped to just below 1s. 6d. per yard, a reduction closely approaching 25 per cent. on the former price. It was quite due, however, and even now the price of bookcloth is about four times pre-war cost. There is, of course, a lower grade on the market which comes to about 1s. 3d. per yard. Imported American bookcloths are also offered at a low figure. English buckrams are now listed at 4s. 6d. per yard, but the greater volume of business is being done in union buckram at a much lower figure; the last few days having seen a drop from 4s. to 3s. 5d. per yard. Calicoes range from 5d. to 8½d. per yard in the usual width, the latter a very fine tacking quality. Imitation leathers were reduced in price a few weeks ago, but it may be anticipated that the makers will put forward every effort to help the trade by reaching the lowest level as soon as ever possible.

## Gold Leaf and Germany.

Gold leaf is in danger of an advance in price. The cheapest grade on the market was the German product, and other imports were influenced thereby. The impost on German goods has compelled the merchants to advise a 50 per cent. surcharge on gold leaf from that country. It may be expected that with the most formidable competitor effectively gagged, other exporters will reap the benefit by raising their prices. The binder will pay the piper once more.

## Glues.

Glue is quoted 75s. per cwt. for pale Scotch of fine quality. Some agents are asking higher prices, but there is very little business to be done. The binder should take the precaution of roughly testing his glues before purchase. Equal weights of glue should be placed in equal volumes of water and left to soak. The amount of water absorbed will indicate the strength of the glue. Some inferior qualities

contain a very large percentage of moisture in their constitution, and the cheapness in price is more apparent than real.

#### Slump in Strawboards.

Strawboards are a trouble to their owners and are likely to prove more troublesome still before the turn of the tide sets in. The demand is next to *nil* so far as bookbinders are concerned, and stocks in the country are simply tremendous. Boards which cost nearly £20 per ton to import are being offered at little over half the price. We have even heard of strawboards changing hands for ready money at £7 per ton. The market value is actually at about £15 per ton, but the average selling figure is nearer £10 per ton.

## New British Patents.

MESSRS. M. RELPH, LTD., of 212, Upper Thames street, E.C., have been appointed sole agents in the United Kingdom for the N. V. Nederlandsche Papierhandel, of Amsterdam, exporters of an extensive range of papers, boards, etc.

## Five Cent Canadian News.

#### Mr. J. R. Booth's Announcement.

The question of the price of news-print is still being discussed and it is reported from Montreal that it is a subject of much speculation, especially among those who are interested in the paper stocks. Quite a little sensation has been sprung by the news from Ottawa that Mr. J. R. Booth has notified his customers that the price of his news-print from April 1st to December 31st, this year, will be five cents per pound. The capacity of his mill is 260,000 pounds of news-print and hanging paper every 24 hours. This is a reduction of half a cent per pound on the price announced by the Canadian Export Paper Co. and the International Paper Co. for the first quarter of this year. A recent issue of a new paper, called *Circulation*, published by the King Feature Syndicate, New York City, has come into most of the newspaper offices in Canada, and much interest has been aroused by an article in it by United States Senator William Harris, headed "The Next News-Print Investigation." In this article Senator Harris says it appears to him that there is ample cause for a complete Government investigation of the paper situation during the last twelve months. He further remarks: "It may develop things of interest to the Department of Justice and the Bureau of Internal Revenue charged with the investigation of the Federal Tax Laws. I am informed that paper companies have made enormous profits, and an inquiry might prove interesting if it is shown what the full toll of taxes mean to the Government. The Canadian companies could be brought into investigation as they demand payment in New York funds, at Chicago and New York offices."

CHARLES MORGAN AND CO., LTD. — This company, which was formed in August, 1919, has issued its report and accounts for its first full year of working, viz., 1920. The trading profit for the twelve months amounts to £25,180. It is proposed to pay a balance dividend at the rate of  $7\frac{1}{2}$  per cent., making 15 per cent. for the year on 110,000 fully paid £1 shares; also a dividend at the rate of 15 per cent. per annum for the three months to December 31st, 1920, on the amount of 5s. per share called up on 190,000 new £1 shares. A balance of £9,493 will remain to be carried forward, against £4,106 brought in. The report states that during the latter part of the year under review the paper trade experienced general depression accompanied by a rapid fall in prices, but the directors consider that adequate provision has been made in the accounts to provide for the slump in stock values and for any losses which have been incurred in the export department through depreciated exchanges.

A FIRE at a cardboard factory at Winschoten, Holland, has done damage to the value of half-a-million florins.

# New Inventions.

## Removable Book Covers.

This invention relates to removable covers for books, and is patented by Mr. W. H. Middle. Each side of the cover is independent of the other and has riveted to it a plate with slots A, Fig. 4, and a plate hinged at D and carrying loops C. The book is bound in the usual way up to the stage of having the

covers put on but has the leather back applied and is provided with perforations G, Fig. 5, in the stiff card pieces F. The piece F is inserted between the plates fixed to the cover. The hinged plate is closed down so that the loops pass through perforations G and is secured by passing a metal pin through the loops C.

## Feeding Sheets.

An invention by the Leipziger Schnellpressenfabrik Act. Ges. vorms Schmiere, Werner and Stein relating to a laying-on device for

feeding sheets to a rotary printing machine of the kind in which an oscillating arm carrying grippers takes the sheet from a feed-table

and feeds it to the grippers of the impression cylinder, is so constructed that the grippers are carried in spring-pressed bearings which can yield in a radial direction on the arm which carries them. As shown, the sheets are fed over a table *a* to registering devices *m* on bearings *h* in which the shaft *g* of the feeding-grippers *b* is mounted. The bearings *h* are carried by arms *c* on which they can slide against the action of springs *l* which normally press the grippers in an outward direction to an extent controlled by adjustable stops *k*. In the event of a double feed or other disturbance, the grippers *g* can yield without liability of being broken, and mechanism may be provided for automatically withdrawing the grippers *g* away from the impression cylinder on the return of the arm *c* to the feed-table *a*.

## Cardboard Boxes.

Under a patent by Mr. H. B. Smith a covered paper box is formed from a shell-blank and cover-blank, in which the cover-

blank is folded double over the marginal side edges of the box and these are turned inwards to form cover stays for the ends of the box, the whole being covered by the remaining portion of the cover-blank. The box may be of the "loose-wrapped" or "tight-wrapped" type. Fig. 3 shows the box in course of con-

struction before overlapping portions *b*<sup>1</sup> have been turned inwards. Fig. 4 shows the box with the ends turned inwards. The box is completed by turning the portion *b*<sup>1</sup> of the cover-blank upwards and over the edges of the end faces. Mr. Smith has also patented an invention whereby a paper box is formed from a box blank and a covering blank suitably cut and supplied with adhesive. The cover-blank is split transversely, approxi-

mately at a distance equal to the side wing length of the box, and is then folded over as shown in Fig. 3, leaving small portions  $b^2$  for overlapping the end wings of the box-blank, as shown in Fig. 4. The box is completed by folding the ends  $b^2$  over the partially completed end wall of the box.

**"EVER READY" SHEET FEEDER.**—The Kymor Automatic Press Co., Inc., of 280, Broadway, New York, U.S.A., send us descriptive matter relating to the "Ever Ready" automatic sheet feeder, of which they are the manufacturers. The "Ever Ready" is an automatic feeder adaptable to 8 by 12, 10 by 15 and 12 by 18 C. and P. Gordon presses, either Old or New Series. The makers claim that this machine is a perfect combination of a mechanical and suction feeder, accomplishing more than any other platen press feeder ever invented: it separates and feeds the sheets into the press, registers them perfectly side and bottom, delivering them into automatic jogger, printed side up, in plain view of the operator. The Kymor Co. say they are cultivating overseas business, and are able to make prompt shipment of all orders up to 200 per month. They back up their claim for the accuracy, speed, labour-saving and money-saving qualities of the "Ever Ready" feeder by offering that "you can try it out in your own plant under our positive guarantee to feed any stock from folio to box-board at 200 an hour, or no sale."

# Grain Processes for Blocks and Lithography.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

Ever since photo-mechanical methods were thought of, the idea of reproducing the photographic image by breaking it up into a grain has been the dream of many inventors. Fox Talbot, who founded the principle of the photogravure process, produced some excellent work by depositing a resinous grain on a copper plate and then forming the photographic image on it in such a way that the etching was more or less retarded according to the varying tones of the picture, thus opening out or closing up the grain in proportion to the light and shade. He found the best results were obtained by intaglio printing, for letterpress in his day was not so good as it is now.

Pretsch, the inventor of the collotype principle, tried very hard to make successful relief blocks by utilising the collotype grain which reticulates in the gelatine according to the varying action of the light in the different tones of the photograph, and a good deal of money was lost by companies which were formed to work his methods. The difficulty again was that letterpress printing was not good enough at the time for such blocks.

## Early Unsuccessful Efforts.

The firm who worked Sprague's ink photo process for lithography, attempted to popu-

larise a grained relief block on similar lines in more recent times, but met with no success. At a later period a German firm tried to develop a grain process for relief blocks called "Spitzertype." Some very good results were shown, but the process disappeared after a good deal of money had been spent on exploiting it. The method used was probably something akin to the aquatint process used by art etchers, in which the grain is formed by flowing the plate with a solution of resin in alcohol. As the alcohol evaporates the resin is left as a more or less fine grain on the plate. The photographic image was then put down on it by the carbon process or some analogous method which permitted an etching of variable depth.

There have been endless variations of this way of obtaining a grained block. The Goupil process worked in France for colour blocks was perhaps one of the most successful. The grain was deposited on a zinc plate by means of a dusting box which showered finely powdered resin on the surface. Then the grain particles were fixed by heat, and a print was put down on the plate either by transfer or by printing under a negative. This print formed a key for the etcher who proceeded to stop out the portions which were to be held back in the different colour plates. Some very

dainty colour work was done in this way, but it was necessary that the etcher should be a skilled artist.

### **Possible Revival of Discarded Processes.**

Notwithstanding the ill-success of grained block processes in competition with those produced with the screen it is quite possible that if someone were to revive one of the methods on good commercial lines it might now be successful, because present-day letterpress printers would know how to handle such blocks so as to get the best results from them. Good paper and ink and careful make-ready with a hard packing would make all the difference compared with what was possible twenty years or more ago when such blocks were put forward.

Some optimistic inventors have thought that a grained block would be better for common newspaper printing than screened blocks but we have not heard of any case of the idea being tried, and judging by the results from half-tones in newspapers which have not set out to do illustrations properly, as in our pictorial dailies, we should imagine the result would be a hopeless smudge.

The inventor of the Metzograph Screen was very optimistic in believing that grained letterpress blocks produced by its means would eventually supersede the ruled screen half-tone, but although many excellent blocks have been produced in Metzograph grain, both for black and colour, and well printed, this kind of block never "caught on." Some engravers tried to popularise it, but customers who wanted such blocks were so few that the process was not worth working.

On the whole we do not think the grained block at its best can ever be a serious competitor of the regular half-tone which is now done as well as it can be. It is hardly likely that there will be any further improvement in the half-tone screen method, but it serves very well as it stands, and the letterpress printer cannot expect anything better or more adaptable to letterpress printing.

### **Lithography Offers Bigger Possibilities.**

There is much more hope for graining methods in connection with lithography, and although successful results were shown even before the half-tone block was invented, we are only just beginning to realise the possibilities. Sprague's "Ink Photo" process is one of the oldest methods, and we cannot trace how long it has been in use. We remember seeing its results before the eighties and it is still used week by week in one of the architectural journals—a wonderful record of long usage. The secret of the method has been

well preserved but we hazard the guess that it is based on Husband's Papyrotint process which was worked out in one of the Government offices over forty years ago. It consisted in preparing a special transfer paper coated with gelatine in which were incorporated certain chemicals which had the effect of producing a reticulation, much the same as in a collotype plate, but giving a more strongly marked grain. The process was described in early numbers of the now defunct *Photographic News*, and in an early edition of Wilkinson's "Photo-mechanical Processes," both of which may be consulted in the Patent Office library.

There have also been repeated attempts to take transfers from the collotype plates, and though some have done it successfully it is at the best an uncertain process. It is requisite in any case to prepare a special plate with a stronger grain than for collotype printing. We do not think a successful litho grain process lies in that direction. In fact, we do not think transfer processes will ever be good for securing uniform work on commercial lines.

### **Direct Printing.**

Direct printing from the negative to the plate is the more likely road to success. The Frey method was very promising in this direction, but it required too much skill for the average process man or lithographer. It consisted in preparing a solution of bitumen in a mixture of ether and alcohol in such proportions that only a part of the bitumen was actually dissolved. When the solution was spread on the plate the resulting film split up into a grain on drying, the grain particles being probably the undissolved portion of the bitumen. The grain could be made more or less fine according to the proportions of the solvents and their specific gravity. The skill displayed was in knowing how to get the required grain. Bitumen being sensitive to light, the plate was printed under a negative, which had the effect of hardening some portions and leaving others soluble when the plate was developed in turpentine. Thus a picture image was obtained which could be etched and rolled up, but we fancy that a good deal of hand work was done on the plates to produce the beautiful results which were shown.

A much simpler process was patented by the late J. Gaskin Wood, an Edinburgh photolithographer, some time just before the war. He relied on a grained zinc plate, such as is now generally used by lithographers, and found that if coated with bichromated albumen, printed under a crisp continuous-tone negative, and inked up thinly with photo-transfer ink, it could be developed into a grained

image. The ink seemed to attach itself only to the tips of the grain. I have some of Mr. Wood's plates and proofs, which show the process was very promising, but his illness and death put an end to the process.

#### Grained Images on Zinc.

Of course there are many ways of producing grained images on litho-zinc by using a grained screen, either of the Metzograph variety in which the grain points are transparent, or the other kind in which they are opaque. Arthur Hatt, of New York, produced a very good grained screen with which excellent results were obtained, but he did not proceed with putting it on the market. Recently a German screen invented by A. Schulz, has attracted attention for rotary photogravure and might probably be used for litho work. The Metzograph screen has yielded very good results for litho, and is found to be good for colour work. Experimental work carried out at the College of Technology, Manchester, under the direction of Mr. R. B. Fishenden has shown that it is excellent in conjunction with offset printing.

If grained film screens can be produced they could be used between the negative and the sensitive plate, producing high-light effects. Such a method was attempted by a lithographer named Etting, some few years ago, and a business was started in London to work the method, but it was not a commercial success. The screens were evidently prepared on translucent paper, the grain being printed on this from an inked-up grained stone.

The foregoing remarks touch only a few of the methods by which grained images have been obtained. A big volume might be written on the subject if one traced the history of all inventions of this kind. Perhaps some of the old and forgotten methods might be looked up and now made successful with the light of our present knowledge thrown on them.

---

ALL firms tendering for Government contracts after June 1st must, the Cabinet have decided, be members of the King's Roll, except in very special cases. Firms on the King's Roll undertake that 5 per cent. of their employees shall be disabled ex-service men.

**SOCIETY OF ARTS COMPETITION.** — The Council of the Royal Society of Arts are offering six prizes for 1921 for competition in various subjects. Among those offered is a prize in "Book Production and Ornamental Leatherwork," which includes covers and lining papers for bookbinding, title pages, lettering and printing, posters, trade labels and advertisements. Fuller particulars can be had of the director and secretary, Victoria and Albert Museum, South Kensington, S.W.7.

## Central London Master Printers.

### Annual Meeting at Stationers' Hall.

There was a good attendance, including representatives of all the district associations, at the annual general meeting of the Association of Master Printers of the London Central Districts, which was held at Stationers' Hall on Monday evening. Mr. J. D. McAra, F.C.I.S., was in the chair.

After the reading and confirmation of the minutes of the last general meeting, held on June 30th, 1920, the secretary read the annual report. This put on record the difficulties with which the trade has had to contend during the past year, but indicated that the Association's membership had increased, about 500 firms being now on the roll. It recalled the interesting open meetings that had been held, and urged members to put forth still greater organisational and educational efforts in the future, the suggestion being made that although a substantial sum was standing to the credit of the ordinary account even more would be required to meet the cost of the propaganda that it was necessary for the Association to carry on.

The report having been unanimously approved, Mr. C. C. Bliss was asked, in the absence of the treasurer, to read the year's accounts. These showed the financial position to be most satisfactory.

The next business, the election of officers and committee, was conducted expeditiously. Mr. J. D. McAra, F.C.I.S., was unanimously re-elected as president, gratitude being expressed for his work on behalf of the Association during the past year. Mr. R. A. Austen-Leigh having asked to be relieved of the vice-presidency, on account of the very many other calls upon his time, Mr. Oscar Griffith was elected as his successor. As hon. treasurer, Mr. J. Crowle-Smith, J.P., was re-elected, and Mr. W. H. Burchell—whom Mr. McAra described as a "veritable iconoclast," but having that fire and vim which was required for his office—was unanimously re-elected as hon. secretary. The 27 members of the executive committee were re-elected *en bloc* with the addition of three new members, Messrs. H. R. Danford, A. F. Fosh and Colonel J. R. Truscott. Re-election was made also of the hon. solicitors of the Association, Messrs. Hays, Roughton and Dunn, and of the hon. auditor, Mr. C. Clifford Bliss, A.C.A. A suggestion was made that the executive committee should be asked to consider the question of paying Mr. Bliss some consideration for his services as auditor, but this he did not allow to go forward, stating that he preferred that his services, like those of the other officers, should be voluntary.

At the conclusion of the formal business an animated discussion ensued on "London Costing and Country Competition," the subject being introduced with a paper by Mr. W. H. Burchell. A report of this paper and discussion is unavoidably held over.

## S.E. London Master Printers.

### The Sixth Annual Meeting.

#### Timely Topics Discussed.

At the sixth annual general meeting of the Association of Master Printers of South-East London, held on Wednesday the 6th inst., at the Bridge House Hotel, London Bridge, the formal business of the occasion was transacted early and the proceedings then took on a more social tone, some acceptable concert items, light refreshments, with speeches and discussion on questions of moment, combining to provide an agreeable and profitable evening. Among the well-known London printers present were Messrs. J. J. Keliher, W. A. Clowes, H. C. Hill, G. Eaton Hart, W. J. Mizen, W. J. Pollock, and G. Poulton.

The chair was occupied by Mr. W. A. Clowes, who in his opening remarks referred to the meeting of the Joint Industrial Council from which he had just come.

The minutes of the last meeting having been read and confirmed,

Mr. F. Mason read the secretary's report. This recorded a successful year's working, a net gain of 22 members having been secured, important meetings held and much educational work accomplished. Stress was laid upon the possibilities of extension of the Association's membership. Regret was expressed at Mr. Cecil Clay's resignation, and thanks rendered to all who had supported the Association, special mention being made of the work of Mr. E. B. Smith. The report was unanimously adopted.

The treasurer's report, by Mr. H. N. Prentice, indicated a satisfactory state of the Association's finances, there being a substantial credit balance. This report also was passed unanimously.

#### Election of Officers.

The next business on the agenda was the election of the various officers and representatives for the ensuing year.

Mr. E. Bostock Smith, previously joint hon. secretary, was unanimously elected as president, much appreciation being expressed of his long and able services to the Association.

The three existing vice-presidents, Messrs. F. J. Winkley, W. A. Clowes and C. A. Bates were cordially re-elected, and Mr. W. H. Truslove was elected as a fourth.

Mr. F. Mason, whose services as joint hon. secretary received high commendation, was unanimously elected hon. secretary.

As treasurer, Mr. H. N. Prentice, who has served the Association well in the past in that capacity, was unanimously re-elected.

The existing committee of thirteen was re-elected *en bloc*, and three new names added, the committee now to consist of the following: Messrs. W. R. Dingle, F. Hodge, A. Willans, G. Neves, A. Ash, J. Dawe, W. W. Russell, W. H. Truslove, J. Wright, Walter Bargery,

G. Poulton, J. W. Carley, G. Brigenshaw, W. A. Northam, Norman and R. H. Starkie.

Messrs. G. Poulton, J. R. Brigenshaw and F. Mason were nominated to the L.M.P.A. Council.

#### A Social Interlude.

Mr. Clowes having to leave the meeting at the close of the business agenda, Mr. J. J. Keliher was, at the suggestion of Mr. E. B. Smith, installed in the chair.

There then ensued some general discussion—over the refreshments—the main subject being the question of the most suitable hour at which the monthly meetings should be held. In the course of this discussion, Mr. W. J. Pollock, chairman of the West and North-West Association, told of the experience of his own association in the matter, introducing his remarks by conveying very hearty fraternal greetings from the W. and N.-W. Association. The outcome of the discussion was a decision to take a referendum of the members on the subject.

The proceedings were enlivened by the introduction of a series of concert items. Some humorous songs were given at the piano by Miss Ethel Bucknell, who also acted as accompanist, and songs were contributed by Miss Susie Welch, both ladies gaining hearty applause for their singing, which was ably done and marked by quite an exceptional degree of vitality. A cordial reception was given also to Mr. Wilson Martell's selections from his original repertoire, his novel and clever expositions of Euclid up to date being specially amusing.

#### Wages in the Printing Trade.

Called upon by Mr. Keliher, Mr. H. C. Hill made one of his characteristically able and lucid speeches upon current topics in the trade. He remarked that printing trade employees would not be satisfied to return to the same status as they had before the war—and he did not think any master printer would wish them to do so. Even apart from the increase in the cost of living, some considerable allowance upon pre-war rates must be made for improved status. But what was wanted now was more business. There was an atmosphere of lower prices everywhere, and he thought that the trade unions, especially in view of the prevailing unemployment, would recognise the need for reducing costs in the printing industry. Mr. Hill uttered an emphatic warning against cutting prices before a proper basis of lower prices had been found, and he concluded by congratulating the S.E. Association upon the great progress it had made.

#### Projected Visit to America.

In asking Mr. George Eaton Hart to address the gathering, the chairman referred to the intended visit to be made to the United States by a group of London master printers under Mr. Hart's direction. He suggested that Mr. Hart might that evening give them a prologue, and might be got to promise that, after his return from America he would give the whole play. (Applause.)

Mr. Hart replied that so far as the "prologue" was concerned, he had none, his arrangements being incomplete — indeed, strikes and threatened strikes made one wonder whether to dare to leave the country. However, he would promise that when he came back he would give them the "whole play." He mentioned that he had already promised to give the London Society of Compositors the benefit of his experiences in regard to the composing side of the trade. He referred to the very unsatisfactory state of the trade in 1913-14, and congratulated master printers upon the great advances they had made since then in mutual confidence and in the improved status of the industry. He urged members to stand firmly together, and stressed the importance of supporting the imprint resolution and maintaining fair prices.

**Rotary Photogravure.**

SIR.—My attention has been called to your article on page 359 of the *British and Colonial Printer and Stationer* of 7th inst., in which mention is made of a claim that the rotary photogravure machine in question marks a new epoch in the history of rotary photogravure because it has been possible by means of this machine to achieve the speed of 2,500 impressions per hour. Allow me to point out that a machine of a similar class has been built by my Continental principals—the Johannesburg Machine Works—for a good many years and I have, during the last few months, taken two representatives of the largest London printing houses over to Leiden in Holland, to show them this class of machine at work on sheets of 44 by 32 in. at a *minimum* speed of 2,500 impressions per hour.

In the second place, you state your belief that this is the first time that an automatic feeder has been applied to a rotary photogravure machine, but the machines which I have shown in Leiden are fitted with these automatic feeders which have been at work for a good many years.

It will also interest you to learn that the Johannesburg Machine Works have supplied a good many of these machines to other famous printing works abroad and that they have a very large number of them on order at present. They are the same factory who installed the first rotary photogravure machine at the *Illustrated London News* about nine years ago.

Yours, etc.,

A. EDLER.

London, April 15th, 1921.

**THE Newspaper Society** is to hold its annual meeting on May 11th.

## 'Phone Charges and the Press.

The Select Committee of the House of Commons inquiring into the administration of the telephone system on Monday, heard evidence from Mr. H. C. Robbins, joint general manager of the Press Association, joint manager of the Press Association and Exchange Telegraph Co.'s telephone services, which operate in the country, and a member of the Newspaper Conference, which represents the Press of the United Kingdom outside London, and has protested against the new charges.

Mr. Robbins said that altogether the Press Association and Exchange Telegraph Co. contributed to the telephone revenue over £25,000 a year, so that the effect of the new tariff would be very serious indeed.

As a temporary alternative to the official scheme, Mr. Robbins put forward a scheme suggested by the Newspaper Conference which in regard to the flat rate would bring in £830,000 per annum.

## Design & Industries Association.

The Design and Industries Association has recently been reorganised, and membership divided into different groups. The printing group of trades is concerning itself not only with increasing its membership but also with the question of increasing the number of the exhibitions held under the auspices of the Association. In connection with this latter desideratum an appeal will shortly be made to the printing industry to submit samples of first-class printing craftsmanship, as the Association has at present only two sets of specimens, one of which has seen good service in South Africa. Mr. Harold Curwen is in charge of the exhibition committee of the Association, which is taking over further premises in Queen-square with a view to maintaining a permanent exhibition of artistic craft productions, of which printing will form an important section.

## Openings for British Trade, etc.

NORWAY.

The Commercial Secretary to His Majesty's Legation at Christiania has received an inquiry for catalogues of United Kingdom firms producing educational and teaching requisites. Particulars can be obtained by United Kingdom firms interested on application to the Department of Overseas Trade, quoting the reference number 2995/FB/SC (2),

**AN Advertisement is always working.**

## Master Printers of W. & N.-W. London

### Annual General Meeting.

The ninth annual general meeting of the Association of Master Printers of West and North-west London was held at Westbourne Park Institute on Wednesday of last week. Overshadowed as it was by the great events of the moment, the attendance suffered in consequence, only about thirty members sitting down to the very excellent refreshments and pleasant social half-hour from 6.30 to 7 p.m., Mr. W. J. Pollock then taking the chair for the business of the evening.

### The Report.

The report of the year's work briefly reviewing the varied activities of the Association was presented by the secretary. The outstanding feature is the fact that in spite of all the great difficulties experienced, the work is maintained in all its vigour and earnestness; and, aided very considerably by the efforts of Mr. Johnson, the membership has increased in numbers.

Very heavy demands have been made on the time and services of the representatives on the Council and Labour Committee; and loyal support has been accorded by all the members to the Federation in the various labour conferences and disputes.

In connection with the new campaign of the Cost and Charges Committee, it is especially gratifying to report that this Association was the first to enlist the services of the special officers, and 34 students attended a series of eight classes, and in the examination subsequently held, 31 students passed, three of that number with honours.

On the social side the monthly luncheons at Pagan's continue successful, many eminent men in the craft having given helpful and instructive addresses; and a notable list of visitors and members supported the annual dinner.

The financial statement showed a loss on the year's work, but as a substantial balance was carried forward from last year, the funds are still in a healthy condition.

### Election of Officers.

From the position of vice-president Mr. E. W. Wormald succeeds Mr. W. J. Pollock to the chair, and in their new president the Association feel confident they have a worthy successor to the line of very distinguished men. Mr. S. Sidders relinquishes the post of treasurer to become vice-president, Mr. F. Scarsbrook taking up the duties of treasurer. The meeting accepted with feelings of profound regret the resignation of Mr. John King, who has ably and devotedly carried out the duties of secretary since the formation of the Association. To his splendid work the success achieved has been largely due, and it is a matter of congratulation that his services will be retained on the committee. Mr. J. R. Burt nobly came to the rescue by taking up the very responsible duties of secretary, thus en-

suring the continuance of the high standard of efficiency now associated with this office. History repeats itself and three veterans who have already done so much for the Association come once again to its aid.

As representatives to the L.M.P.A., Messrs. Burt, A. Langley, F. A. Perry and Wormald were elected; and the committee includes as far as possible one representative from each district of the scattered territory of the Association.

The suggestion of a "North and North-west London Master Printers' Day" at the forthcoming exhibition at the Agricultural Hall was enthusiastically supported, and a small committee was appointed to make the necessary arrangements.

After disposing of other minor business the meeting closed with expressions of very heartfelt thanks to the officers and friends who had served the Association so splendidly in the year just closed.

A. T. P.

"THE MASTER PRINTERS ANNUAL & TYPOGRAPHICAL YEAR BOOK, 1921." Edited by R. A. Austen-Leigh and Gerard T. Meynell. London: Spottiswoode, Ballantyne and Co., Ltd. Demy, 8vo. Price 12s. 6d.

Slight enlargement and improvement mark the second issue of this valuable book of reference, which, on its first appearance last year, received a warm welcome from the trade. The general plan and contents of the volume remain unaltered, save that revision has been made to bring the information up to date, and some extension has resulted from the endeavour to carry the articles nearer to completeness. Of the 500 or so additional pages, most are devoted to extending the section comprising agreements made between the employers and the trade unions. The foreign section has been developed and now includes information as to printing trade organisation in Germany, while other sections also show a little expansion. The full-page portraits this year, admirably printed, are of Mr. E. W. Humphries, the Federation's president, and of Dr. James Maclehose, senior vice-president. The useableness of the volume is greatly enhanced by the introduction of sectional page-headings and by the addition of an index.

"TECHNOLOGY," the journal of the Manchester Municipal College of Technology, has recently published its Volume X., which consists mainly of technical papers forming a record of investigations undertaken by members of the College during 1916.

THE March issue of "Sticks and Stones"—well written and well produced—shows that Messrs. Hill, Siffken and Co.'s neat little house journal is still very much alive.

# Trade Notes.

It is reported that Mr. J. H. Thomas, M.P., has issued a writ for alleged libel against the *Communist*, printed by the National Labour Press, Ltd.

At the Mansion House Police Court, Alfred Walter Barrett, 51, author and publisher of the *Link*, and Geoffrey Bevis Ingmann Smith, 27, clerk, were charged with conspiring with others to corrupt public morals.

The Newspaper Proprietors' Association and the Newspaper Society have been invited to participate with the Empire Press Union in a deputation to Mr. Churchill on the subject of Press cable rates to Canada, states the current issue of the *Circular* of the last-named body.

**L.S.C. PIECE SCALE.**—Subsequently to their recent delegate meeting which considered the revision of the piece scale, the London Society of Compositors has, we understand, submitted proposals to the employers' organisation and these are now awaiting consideration by the L.M.P.A. Council.

A SELECTION from the etched work of William Strang, R.A., whose sudden death occurred at Bournemouth on April 12th, has been arranged in Room 132 of the Victoria and Albert Museum. Further examples can also be seen in the Students' Room of the Department of Engraving, Illustration and Design.

THE latest catalogue issued by Messrs. Maggs Bros., the well-known dealers in fine and rare books, is entitled "Bibliotheca Incunabulorum" and lists an interesting selection of books printed before 1501 by the presses of England, France, Germany, Italy, the Netherlands, Spain and Switzerland. Many illustrations are included.

**ADVERTISING GERMAN GOODS.**—Mr. Gilbert Russell, at a meeting of the Publicity Club on Monday, said that if it was right that German goods should be sold in Great Britain it was better that they should be sold in an efficient manner by means of advertising. By a small majority it was decided that German advertisements should not be accepted.

**MR. W. W. DE LA RUE.**—The death occurred suddenly at Tenby on Friday, in his 74th year, of Mr. Warren William de la Rue, of Trayles, Tenby, and Holland-park, W. Mr. de la Rue entered the family business of Thomas de la Rue and Co. at the age of 22, and a few months later, on the death of his uncle, then senior partner, he became manager. In 20 years he succeeded in increasing the business fivefold, so that at the date of his retirement the firm was making all the stamps used in England, India, the Colonies, and many foreign countries, besides carrying on a very large general trade. One of Mr. de la Rue's inventions was a machine by which manufacturers of playing cards could shuffle 100 packs simultaneously.

THE late Mr. George Hilderley, of Stockport, Chester, paper hanging merchant, aged 64, left £35,358.

A NEW Canadian trade paper, the *Canadian Stationer and Book Trade Journal*, has been launched at Toronto.

**MR. GEORGE ADDY, M.I. MECH.E.,** Sheffield, has issued a useful list of paper trade tables, giving various sizes and equivalent weights of papers.

**CINEMA** films of paper, invented by an Englishman, are said to be cheaper than those at present in use, sufficiently durable, and can be rendered fireproof.

**SIR CHARLES SIMON KING**, who has died at St. Leonards, was the third holder of the baronetcy conferred in 1821 on his grandfather, King's Stationer in Ireland.

FOR stealing an old medical book, valued at £100, Tobias Bernard, 54, of Bruce House, Drury-lane, was, at Bow-street last week, sentenced to three months' imprisonment.

**MR. W. CHANTLER** presided at a meeting of the Bury Branch of the National Union of Paper Workers at Bury last week when Mr. F. H. Edwards gave an address on the question, "Why Trade Unions should support their own Party."

AT the annual meeting of the National Advertising Society and General Benefit and Benevolent Association, held at Anderton's Hotel last week, Viscount Burnham was elected president in place of Lord Riddell, to whom, in a resolution, a great compliment was paid for his activities during the six years in which he had held the position.

**WORSHIPFUL COMPANY OF STATIONERS.**—Owing to the industrial crisis, the livery meeting at which the Right Hon. Lord Askwith, K.C.B., was to speak on "The International Power of Printing," at Stationers' Hall, on Wednesday, April 20th, had to be cancelled. Lord Askwith will, it is expected, give his address on Wednesday, June 15th.

IN a report on the economic situation in Denmark at the close of 1920, issued by the Department of Overseas Trade, it is stated that there was a considerable increase in the imports of wood pulp and of paper and cardboard of various kinds, including some small increase in the imports of wall-paper, in regard to which rather greater interest is being shown for British papers.

**ST. BRIDE AND COSTING.**—St. Bride Summer Term Costing Class commences on May 4th, at 6 p.m., and will be held each Wednesday evening during May and June. The enrolments are rapidly filling up, and those desirous of taking this special course should make early application. The instruction given at St. Bride deals with the principles and working of a scientific costing system suited to the needs of those holding or aspiring to hold responsible positions in a printing business. This course should not be confused with classes formed for junior elementary clerical workers.

### FORTY-THIRD YEAR.

Printed and Published EVERY THURSDAY  
by STONHILL & GILLIS,  
at 58, Shoe Lane, London, E.C.4.  
Tel.: Stonhill, Fleet, London. Phone: 8407 City.

SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE EXTRA).

Charges for Trade Advertisements:  
(Full page 8 by 5½ ins.)

Whole Page ...	24 10 0	s. d.
Half Page ...	2 10 0	17 6

Representatives throughout the United Kingdom and  
also in Australia, India, South Africa, United States  
Canada, etc.

All communications for the "BRITISH AND COLONIAL  
PRINTER AND STATIONER" should be addressed and  
Cheques and Post Office Orders made payable to—  
STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C.4

Copies may be purchased at the Offices, as above  
or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C.4.

THURSDAY, APRIL 21, 1921.

## Current Topics.

### The Coal Stoppage.

ALTHOUGH immense relief was felt at the calling-off of the threatened extension of the industrial conflict, yet the continued stoppage of the mines is causing serious concern to printers as to all other industrial consumers of coal, gas and electricity. The retrenchment and extreme caution imposed on the trade by the fuel shortage is effectively counteracting that brightening-up of business which had just begun to make itself pretty generally felt in the printing and allied trades. While the position is not yet acute, the uncertainty of the future is a most trying factor of the case. The question of meeting the emergency by introducing short time is being tackled by individual houses in accordance with individual conditions and with individual judgment as to future probabilities. It still rests with each employer to make arrangements with his own workpeople in this matter, basing his plans upon the restricted supply of motive power and of trans-

port facilities, such arrangements to be reported to the local trade union branch committees. In regard to the degree of curtailment of consumption enforced, we understand that where there are special circumstances, as in the case of houses that have to execute newspaper work special treatment may be granted in the matter of supplies. All inquiries on this point have to be made to the Local Authority concerned.

• • •

### Entertainment Ticket Printing.

REPRESENTATIONS are being made to the Government with regard to an injustice which is being done to a section of the printing industry, namely to those who have been accustomed to supply tickets for cinemas and other entertainments. Since the introduction of the Entertainment Tax, tickets are being supplied free to the proprietors of places of entertainment. We have here a case even more urgently deserving of attention than was the selling by the Post Office of stamped envelopes at uncommercial rates, as although some charge was made for the envelopes, this ticket-production is being performed entirely gratis, to the detriment of the ticket printer's business.

• • •

### Paper Imports.

A REDUCTION of 50·8 per cent. is shown in the quantity of paper and boards imported into the United Kingdom during the first quarter of the year as compared with the corresponding period of 1920, and the value shows a depreciation of 44·2 per cent. The total imports during the last three months were 1,344,963 cwts. of the value (c.i.f.) of £3,105,614. The principal imports fell under the classification of "printing, not coated, and writing paper in large sheets," the quantity amounting to 441,834 cwts., a decrease of 56,365 compared with the first three months of last year. In view of the correspondence on the subject of paper imports, it is of interest to note the relative position of the countries of supply. So far as printings, etc., are concerned, the lead is taken by Sweden, with 30·6 per cent. of the shipments to her credit, followed by Norway with 12·6 per cent. Supplies from Germany amount to 5·7 per cent., Belgium 4·0 per cent., Canada 1·1 per cent., United States 0·7 per cent., and from other countries 45·1 per cent. There were no arrivals from Newfoundland during last quarter. It is in packings and wrappings (including tissue paper) that the most notable falling away in imports has to be recorded. The quantity received during the last three months was only 277,252 cwts., a decrease of 805,237 cwts. as compared with the

corresponding period of last year. Supplies from Sweden represented 27·8 per cent., Germany 20·9 per cent., Norway 15·7 per cent., Finland 13·7 per cent., Belgium 6·8 per cent., Canada 2·6 per cent., and other countries 12·2 per cent. Over one-fifth of last quarter's imports of packings and wrappings, etc., came from Germany. The latter country holds the leading position in the supply of coated papers to the British market. Of the total receipts during the last three months, amounting to 14,916 cwts. (a decrease of 7,907 cwts. as compared with the corresponding period of last year) Germany was responsible for 35 per cent., Belgium 27 per cent., United States 19·2 per cent., France 8·2 per cent., and other countries 10·4 per cent. The imports during last quarter of mill, leather, card and pasteboard (151,292 cwts.), strawboard (394,202 cwts.), and other sorts (55,977 cwts.), show heavy decreases of 282,169 cwts., 209,228 cwts., and 34,508 cwts. respectively as compared with the first three months of last year.

• • •

### British Paper Exports.

It is interesting to find that the exports of British paper during the last three months show an improvement as compared with the corresponding period a year ago. The total shipments were 461,888 cwts. of the value of £2,920,507, an increase in quantity of 5·5 per cent. and in value 47·8 per cent. Exports of printings amounted to 248,064 cwts., an increase of 84,528 cwts. compared with the first three months of last year. Australia, New Zealand and South Africa took much larger quantities, the only weak market being India. As a matter of fact British Colonies took 198,349 cwts. of printings during the last three months as against 85,836 cwts. during the corresponding period of last year; the demand on the part of foreign countries, however, shows a decline, the quantity being 49,715 cwts. as against 77,700 cwts. The exports of writing paper in large sheets are also well maintained, due to an increased Colonial demand. The total quantity for the last three months was 45,036 cwts., 35,376 cwts. going to British Possessions and only 9,660 cwts. to Foreign Countries; during the corresponding period of last year the total shipments of writings were 43,351 cwts., 24,716 cwts. going to British Possessions and 18,635 cwts. to Foreign Countries. The principal decline in exports appears to be that in packings and wrappings, which fell from 100,732 cwts. for the first three months of last year to 29,762 cwts. during last quarter.

## Personal.

SIR ROBERT HORNE, Chancellor of the Exchequer, and Field-Marshal Sir Henry Wilson, Chief of the Imperial General Staff, have accepted the invitation of the Council of the Newspaper Society to attend the eighty-first annual dinner at the Waldorf Hotel on Wednesday, May 11th.

At the annual dinner of the Newspaper Press Fund at the Edward VII. Rooms, Hotel Victoria, Northumberland-avenue, on Thursday, April 28th. Lord Riddell will preside, while Miss Dily Jones, Miss Megan Foster, and Mr. Ivor Foster will contribute a programme of music, with Mr. Clarence Raybould at the piano.

MR. W. LEONARD TOD was re-elected President of the Papermakers' Association, at their annual meeting on Friday.

MR. E. S. AGNEW, son of Mr. Phillip Agnew, proprietor of *Punch*, has been adopted as prospective Liberal candidate for the Hallam with Boston Division of Lincolnshire.

At the annual meeting of the North-Western Alliance of the Federation of Master Printers—at Penrith on the 20th inst.—Mr. A. E. Goodwin, secretary of the Federation, was to be present.

A COMMEMORATIVE dinner in celebration of the centenary of the *Manchester Guardian*, to be held on May 3rd, will be a double celebration, as Mr. C. P. Scott this year completes 50 years' association with the *Guardian*.

THE Executive Committee of the Manchester Liberal Federation last week entertained at dinner Mr. G. G. Armstrong, since 1909 the northern editor of the *Daily News*, who is about to leave the city for London.

MR. HENRY GODFREY was entertained to dinner last week at Oddenino's Restaurant, Regent-street, London, by his fellow members of the Employers' Federation of Envelope Makers and Manufacturing Stationers in appreciation of the services he rendered during his three years' presidency of that organisation.

INTER-MUNICIPAL trading on a most extensive scale is being considered by the Standing Joint Committee of London Boroughs, printing being among the trades covered by the project.

THE annual meeting of the Linotype Users' Association will be held on May 11th, when members will, as usual, be entertained to luncheon by Messrs. Linotype and Machinery Limited.

## DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE.—The accounts for the year ended March 31st show a net profit of £36,390, against £35,468 for the previous year. A balance dividend of 4 per cent. is proposed, making 6½ per cent. for the year, or the same as for 1919-20, £1,337 being carried forward, against £1,065 brought in. The increase in the value of the United States dollar has enabled the International Co.'s directors to recommend a total distribution of 6½ per cent. for the year, instead of 5 per cent., which the dividends on the Mergenthaler Linotype Co.'s shares would have yielded at the normal rate of exchange. The net profit of the Mergenthaler Linotype Co. for the year ended September 30th, 1920, amounted to \$2,430,731, compared with \$1,663,138 for the preceding year, whilst their surplus amounted to \$8,627,739 on September 30th, 1920.

HAYES (UNIVERSAL) PRINTING MACHINERY.—Mr. F. W. Chambers, presiding at the meeting of Hayes (Universal) Printing Machinery, said that for the twelve months the actual profit on the operations at Ramsbottom was £896. That period included three or four months before trade began to improve after

the war. The administration expenses in London amounted to £2,136, making a net deficit of £1,241. It was decided to appoint a liquidator in Manchester.

## NEW COMPANIES.

UNIVERSAL PAPER PRODUCTIONS, LTD.—Capital, £4,000, in £1 shares (2,000 8 per cent. cumulative preference); manufacturers, printers and sellers of paper bags, paper merchants, etc. Private company. Subscribers: J. C. Edwards, G. Goddard, J. W. Tyler and H. W. Wire. Registered office: 584A, High-road, Leytonstone.

"DAIRYMAN," LTD.—Capital, £1,000, in £1 shares, to take over the business carried on at 43, Great Tower-street, London, as *The Dairyman*, *The Cookkeeper* and *Dairyman's Journal*, and to carry on the business of proprietors and publishers of newspapers, journals, magazines, books and other literary works, etc. Private company. Subscribers: Hilda F. Stanley and E. M. Colsell. First directors: R. F. Easton, E. G. Easton and L. H. Easton. Secretary: G. C. Jones. Registered office: 43, Great Tower-street, E.C.3.

MORISON'S ADVERTISING AGENCY (HULL), LTD.—Capital, £15,000, in £1 shares, to acquire the business of a billposter and distributor, advertising agent, etc., carried on by E. Morison at Hull, as "Morison's Advertising Agency." Private company. First directors: E. Morison, A. Taylor and L. Stephenson. Registered office: 74, Lowgate, Hull.

CHARLES AUSTIN MUSIC PUBLISHING CO., LTD.—Capital, £2,000, in £1 shares, to take over the business of music publishers carried on at 65, Charing-cross-road, W.C., by the Charles Austin Music Publishing Co. Private company. Provisional directors: C. Austin and F. Malcolm. Registered office: 65, Charing-cross-road, W.C.

NORTHERN PAPER CO., LTD.—Capital, £5,000, in £1 shares, to carry on the business of paper agents, merchants and importers, paper manufacturers, manufacturers of and dealers in wood and paper pulp and fibrous substances, etc. Private company. First directors: H. Simpson, C. Rowell and C. E. Smedley. Registered office: 20-21, Queenhithe, E.C.

LONDON LABEL CO. (1921), LTD.—Capital, £1,000, in £1 shares, to carry on the business

of manufacturers of and dealers in celluloid and metallic labels, plates, tickets, signs, novelties and other articles, workers in celluloid, ivory, bone, woods and metals, mechanical engineers, tool-makers, printers and engravers, etc. Private company. Subscribers: N. C. Headland and E. W. Lea. Directors: N. C. Headland and T. H. Green. Registered office: 253, Beckton-road, Plaistow, E.

**SYDNEY P. HAYES, LTD.**—Capital, £2,000, in £1 shares; wholesale and retail postage stamp dealers, importers of British, Colonial and foreign stamps, printers, stationers, etc.; to acquire all or any rights in connection with a stamp-filing cabinet known as "Cistafle." Private company. Directors: C. H. Jones and S. P. Hayes.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' Consolidation Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**BRITISH PERIODICALS, LTD.** (London).—Particulars of £7,000 second debentures, authorised March 9th, 1921. Whole amount issued. Charged on the company's undertaking and property, present and future, including uncalled capital, subject to such debentures of a prior issue as shall be outstanding.

**HILL'S PRESS, LTD.** (Sunderland).—Satisfaction in full on March 29th, 1921, of debentures dated June 15th, 1917, securing £1,900 notified. Debenture dated March 29th, 1921, to secure £1,900, charged on the company's undertaking and property, present and future, including uncalled capital, also registered. Holders: Barclay's Bank, Ltd.

**EELLES, WALKER AND CO., LTD.** (manufacturers of boxes, letter files, etc., Birmingham).—Mortgage on Forward Works, The Crescent, Cambridge-street, Birmingham, dated March 19th, 1921, to secure all moneys due or to become due from company to Lloyds Bank, Ltd., not exceeding £4,000.

**KENT, MILNE AND PARTNERS, LTD.** (paper merchants and agents, manufacturers, paper bags and other wrappings and containers, manufacturing stationers, etc., Westminster).—Particulars of £5,000 debentures, authorised March 11th, 1921. Present issue £1,500, charged on the company's undertaking and property, present and future, including uncalled capital.

**L. UPCOTT GILL AND SONS, LTD.** (printers, London).—Issue on March 17th of £2,760, and on March 30th, 1921, of £2,100 debentures, parts of a series, already registered.

**F. BENDER AND CO., LTD.** (manufacturers of lace and other papers, labels, box tops, etc., London).—Deposit on March 22nd, 1921, of deeds of land in Vale-road, Tottenham, to secure all moneys due or to become due from company to Barclay's Bank, Ltd.

**FRANK C. JENKINS AND CO., LTD.** (printers, Bristol).—Particulars of £2,800 debentures

authorised March 30th, 1921. Whole amount issued. Charged on the company's undertaking and property, present and future, including uncalled capital.

**HOLDEN AND HARDINGHAM, LTD.** (printers, Adelphi, W.C.).—Particulars of £5,000 debentures authorised March 24th, 1921. Whole amount issued. Charged on the company's undertaking and property, present and future, including uncalled capital.

**LABOUR PUBLISHING CO., LTD.** (London).—Issue on March 14th, 1921, of £225 debentures, part of a series already registered.

**NORTHAMPTONSHIRE PRINTING AND PUBLISHING CO., LTD.**—Particulars of £8,000 debentures authorised October 26th, 1920. Present issue £7,000, charged on the company's undertaking and property, present and future, including uncalled capital. Satisfaction in full (a) of debentures dated May 1st and September 18th, 1906, October 29th, 1907, March 3rd, 1908, May 1st, 1910, and January 27th, 1916, securing in all £4,600 and (b) on April 5th, 1921, of debenture dated October 14th, 1901, securing £1,000, also notified.

**ATHENAEUM PUBLISHING CO., LTD.** (formerly *Auckland Times and Herald*, Ltd., London).—Satisfaction in full on various dates from November 28th, 1910, to August 16th, 1917, of debentures dated July 20th, 1903, October 29th, 1904, and February 5th, 1905, securing in all £1,000.

**J. LOOKER, LTD.** (printers, stationers, etc., Poole).—Particulars of £2,500 debentures authorised April 1st, 1921. Whole amount issued. Charged on the company's undertaking and property, present and future, including uncalled capital.

**GEORGE VICKERS, LTD.** (publishers, stationers, etc., London).—Particulars of £10,000 first and £5,000 second debentures, authorised April 5th, 1921. Whole amounts issued. Charged on the company's undertaking and property, present and future, including uncalled capital.

**COMPENDIUMS, LTD.** (compilers of directories, etc., London).—Particulars of £10,000 debentures, authorised February 19th, 1921. Present issue £2,100. Charged on company's undertaking and property, including uncalled capital.

## Lithographers' Auxiliary Concert.

**Presentation to Mr. Laurence H. Blades.**

In spite of disturbed industrial conditions and the lure of a beautiful evening, this concert, the last of the season, was held on Monday of last week, and the large attendance taxed the spacious accommodation of the Grand Hall of the Cannon-street Hotel long before the hour of starting. The committee of the auxiliary and the various gentlemen who have supported it in its endeavours, ought indeed to be congratulated upon the satisfactory work of the past year, close upon £1,644 having been subscribed to obtain pensions for those engaged in the lithographic section of the trade. The chairmen for the evening were Mr. Sydney Cumbers (president), and Mr. Laurence H. Blades (vice-president), and there were also present: the Rt. Hon. C. W. Bowerman, and Messrs. E. W. Whittle, H. Wilson Howes, Fred Hedger, J. Weiner, junr.; Jos. Mortimer, Woodgate Stevens, Rodney R. Gibbs, J. Mynott (general hon. secretary), and a full attendance of committeemen.

During an interval in the programme, Mr. T. Hammond said it was the wish of the committee that they should recognise the services of Mr. Blades to the Auxiliary, and he asked Mr. Bowerman if he would make a presentation on their behalf.

### The Presentation.

Mr. Bowerman said his duty that night had been described as a "stunt turn," and he felt very happy to be present on such a successful occasion. It was not very often that he had the opportunity of coming amongst lithographers, for he was only a common compositor. He always looked upon lithographers as the aristocrats of the printing industry (hear, hear), and when he looked round the company he felt sure this was confirmed. Whatever lithographers touch or handle they always leave a good impression. (Laughter.) He understood that the object of the gathering was to help that magnificent institution, the Printers' Pension Corporation. He knew of no other institution that had such a record, and it could not be done without the aid—the sterling aid—of employers. As most of those present knew, the contribution was only 5s. per year. It was stated at the annual meeting of the Corporation that of pensioners who had passed away one had contributed four guineas, and had received in his old age no less a sum than £400 as a return. Mr. Bowerman appealed to the young men present to take advantage of the aid offered by the Corporation, and said there was something like £23,000 paid out in pensions last year to old men and widows of the trade. Referring to another aspect of the work of the Corporation, he drew attention to the task the Council had undertaken in looking after the orphans of the men who had fallen in the war, irrespective of the parents being

subscribers, and the result had been that over 700 children had been looked after, and he thought he was right in saying that between £7,000 and £8,000 had been paid out to the widows, in order to maintain their children until they reached the age of 14 or 16 years.

Touching the Auxiliary and its early struggles, Mr. Bowerman said it was due to Mr. Blades' enthusiasm, backed up by Mr. Sydney Cumbers, that it had been brought to its present successful position, and it was for this reason that the committee felt it incumbent upon them to mark their respect and appreciation of his efforts.

Mr. Bowerman, in asking Mr. Blades to accept the gift on behalf of the committee, said it did not express to the full the sentiments of appreciation of the services rendered by Mr. Blades.

The presentation took the form of an illuminated address, beautifully executed.

Mr. Blades, in returning thanks, spoke of the pleasure he had always felt in working to obtain support for the lithographic section of the trade through the Auxiliary, and said that it had been his aim to get on a level with the letterpress section in that respect. He thanked Mr. Bowerman for his kind expressions, and in tendering his appreciation to the donors of the presentation, said Mrs. Blades as well would always cherish the gift in the spirit in which it was given. (Cheers.)

Mr. Woodgate Stevens moved a vote of thanks to the chairman and congratulated Mr. Cumbers on his accomplishment of creating a pension in the name of his father, Charles Cumbers, an old lithographer and founder of the firm of Johnson and Cumbers.

Mr. Sydney Cumbers, in reviewing the work of the past year, said he was pleased to see that they had present representatives of all branches of the art of printing. The amount realised from the concert, including £23 in the plate, was close upon £550, and he thought considering the troublous time and the slump that had come over business, they could congratulate themselves on their efforts during the past year. He expressed his thanks to Messrs. J. R. Reeve, R. H. Ruddock, J. Weiner and L. H. Blades for occupying the chair on different occasions, and to Messrs. Mynott, T. Hammond, and to Mr. Stevens for his kind references to himself.

Mr. Cumbers, through Mr. Bowerman, then made a presentation to the committee of a caricature of himself, drawn by a youth ("Tell") of 18 years of age, which he hoped would serve as a memento of his year of presidency.

Mr. Mynott returned thanks on behalf of the committee.

Mr. Jos. Mortimer, who was pressed to say a few words, remarked on the great satisfaction he felt at the success attained by the Auxiliary.

### The Concert Artists.

Full appreciation was given to every one of the long list of talented artists. Mrs. Laurence Blades (contralto), apart from her popularity as a worker in the cause of the Auxiliary, received a very hearty applause

for the fine rendering of her songs; Miss Helen Pavey ('cellist) handled her difficult solos with much ability and received a hearty reception; Mr. David Ellis (tenor) was immensely popular and was called upon for several appearances, and Mr. Basil Brook (baritone), Mr. George Buck (humorous), Mr. Walter Churcher (raconteur) and Miss Ethel Walker, L.R.A.M. (accompanist), with Mr. T. Hammond (musical director), thoroughly earned the warm thanks

received for their admirable contributions to the success of the musical portion of the evening's proceedings.

FROM April 1st, the German trade journal *Papier Zeitung*, is appearing three times weekly, viz., on Tuesday, Thursday and Saturday.

COLOURED STAMPING INKS.—A German invention for the production of stamping inks provides that aqueous solutions of lactates, including lactates of colour bases, are used instead of glycerine in printing and stamping colours. For example, 10 kilos of crystal-violet are dissolved in a mixture of 75 litres of water, 15 litres of methyl alcohol, and 25 kilos of aqueous potassium lactate solution of specific gravity 1.45.

As a "jubilee souvenir" a "History of the Co-operative Printing Society" has been written by Mr. Fred Hall, M.A., B. Com., Adviser of Studies to the Co-operative Union of Great Britain and Ireland. It is an interesting record of 50 years of progress and achievement. The volume is profusely illustrated and contains portraits of all the printers and officials who have taken a leading part in the development of the movement.

## Electrotypers and Stereotypers

### MANAGERS & OVERSEERS' ASSOCIATION

The monthly meeting of the Association was held on Tuesday evening at St. Bride Institute, the president (Mr. A. Chadwell) occupying the chair. There was a good attendance, and in the absence of a lecturer and any other business of importance the time at the disposal of the members was taken advantage of to engage freely in social intercourse and matters of trade interest.

The minutes of the last monthly meeting were confirmed.

In regard to the deputation that was appointed to wait upon the Society officials with a view to securing more suitable workmen when there was a call for them it was stated that the officials of the Society would use all their power to assist the overseer in the matter.

A new hon. member, Mr. Light, was, on the proposition of Mr. George Sharvell, seconded by Mr. W. Bullett, nominated for membership.

The president announced that the Auxiliary concert that was to have been held at the Cannon street Hotel on April 27th, to be arranged by the Association, had been postponed as the Auxiliary Committee thought the times were inopportune for holding such an event.

Under the circumstances the proprietors of the hotel had courteously waived payment for the hire of the hall, and it was agreed that a certain sum be sent to cover any inconvenience that may have been caused by the postponement of the event.

In reference to the visit the Association is making to the Printing Exhibition on May 3rd the secretary stated that a reception would take place at 4.45 and tea would be served at 5 o'clock. Discussion ensued as to the advisability of holding a concert in the evening, and it was agreed that one should not be held, as it was thought members would prefer to make further inspection of the exhibits.

The remainder of the evening was given over to matters privately concerning the Association, during which several members briefly alluded to the precautions that had been taken when it seemed inevitable that there would be a general strike.

The meeting then terminated.

# New Inventions.

## Stereo-Casting Apparatus.

In stereotype-casting apparatus, particularly for tubular plates, as patented by Linotype and Machinery Ltd., in which the plate is ejected axially from the casting-box by the rotation of the core, the casting-box is pivoted so that it can be turned from a vertical casting position to an horizontal plate-ejecting position. The plate passes from the casting-box on to a rotatable drum on which it is held while the tail is severed and the plate cooled. As shown, the casting-box 12 is mounted on trunnions 11 and is held in the

vertical and horizontal positions by a spring latch 17 engaging notches 16 in the frame. The latch is provided with a hand grip 18 by which it can be grasped by the operator simultaneously with the grasping of the handle 19 by which the casting-box is turned. The core 15 is provided with a helical groove 210 which forms a helical rib on the plate by which the plate is ejected axially upon rotation of the core. The edges of the matrix are inserted in grooves in a bar 21, Fig. 5, secured to the box 12 and the bar 21 forms the longitudinal gap in the plate and prevents rotation of the plate during its ejection. The plate is guided by a rib 20 of less thickness than the bar 21 extending between the side of the box 12 and the bearing 14. During the ejection, the helical rib on the plate is shaved by knives

22 fixed to the core. When the casting-box is turned into the horizontal position, the forked extremity 37 of the axle of the core embraces a lug 36 on the end of a shaft 35, Figs. 1 and 4. The shaft 35 is adapted to be driven by gears 34 from a vertical shaft 29 on which is a loose worm-wheel 27 constantly driven by a worm 26 on the belt-driven main driving-shaft 23. The worm-wheel 27 carries a spring pin 30 normally held raised by the engagement of its head with a cam 32 operated by a pedal 33. When a plate is to be ejected, the pedal is depressed to allow the pin 30 to engage a hole 31 in a hub 28 fast on the shaft 29 so that the shaft 35 is rotated. At the end of a revolution, the pin 30 re-engages the cam 32 and is disconnected from the hub. The plate passes over a saddle 38 on to a drum 39 loose on the shaft 35 and provided with a handle 46 by which it may be rotated to carry the plate past a tail cutter 50 which is driven by a chain 48 from the shaft 23. Ribs 51 and 52 on the saddle 38 and drum 39 engage the gap in the plate to guide it and the rib 52 also serves to cause the plate to rotate with the drum. While on the drum the plate is cooled by water passing from a pipe 43 through a valve 44 and pipe 45 to a chamber 41 and escaping on to the plate through perforations 42. The valve 44 is co-axial with the drum 39 so as to rotate with it and the passages in the valve are so arranged as to be closed when the drum is in normal plate-receiving position.

## Photo-Mechanical Printing.

An invention patented by Mr. E. Sauer provides that for the purpose of making an intaglio printing surface a bichromated gelatine film on a thin transparent base is exposed from the front to a screen plate having transparent lines in opaque dots, and a diapositive of the picture is printed through the transparent base from the back. After development, the screen lines printed on the gelatine film will be on the same level and the thickness of the lines will decrease in the depth of the film thereby forming intaglio hollows which are wider in the depth of the film than at the surface and forming a better holding for the ink. Also the lines or walls do not fall together when the plate is washed. To enable the gelatine film to withstand the action of the roller, it is moistened with acetic acid and coated with a film of zapon varnish.

### Collapsible Cardboard Boxes.

A collapsible box of cardboard, etc., patented by Mr. L. C. Avis, is formed from a blank which when folded, comprises a rectangular base with upturned sides having open double upper edges and upturned ends with extensions which turn inwards and downwards and engage between the double edges of the sides. A cover is formed from a

rectangular piece of material, the edges of which are turned down and engage with the double edges of the sides of the box. The double upper edges of the sides of the box are formed by strips *f* having intumed ends *g* which are wire stitched to the sides *b*. The ends *c* may be integral with the box blank or wire stitched to it, as at *k*.

### Printing from Glass Blocks.

Printing or graphic reproduction is effected, in a process patented by Mr. H. Perregaux, by printing in an ink containing glycerine with plates or blocks of glass on which the design is directly applied in the form of a metallic deposit of aluminium or an alloy thereof, preferably by writing or drawing on the moistened smooth glass surface with a stylus of aluminium or aluminium alloy. Impression by hand or machine may be made after inking the plate with the ink containing glycerine. Relief designs may be produced by etching the ground-work between the metallic design by hydrofluoric acid. The design may be erased by washing with an acid such as sulphuric or hydrofluoric, and the plates re-used.

# The Printing Exhibition.

**A Preliminary Survey of the Biggest Event of  
the Year in the Printing and Allied Trades.**

We are now on the eve of what is anticipated to be a "record" display of the capabilities of the present-day printer and his colleagues in the allied trades. Despite the difficulties of the present time, it is anticipated that the sixth International Printing, Paper, Stationery, Bookbinding, Box-making and Allied Trades' Exhibition, to be held at the Royal Agricultural Hall from April 30th to May 14th, 1921 (inclusive), will eclipse even the highly successful exhibition of 1914. The support forthcoming to this year's show has been phenomenal, every foot of available space having been booked, and room having been taken not only by previous exhibitors, but also by some seventy "all-British" exhibitors who have not previously taken space in the Printing Exhibition. The aim of the promoters has been to make the exhibition as far as practicable international, and while British manufacturers will predominate, there will be numerous exhibits from overseas, and many Colonial, American and foreign visitors are expected. This year's exhibition, however, will be marked by the absence of goods of German and kindred origin, 'No Ex-Enemy Goods' having been taken as the password for 1921.

## **SOME OF THE ATTRACTIONS.**

Besides most interesting and informative exhibits of all manner of things in the way of machinery, materials, new processes, fine examples of the work of the printer, the book-binder, the engraver, etc., many other attractions have been arranged. A mention of the various events which, at the time of writing, have found a place on the programme will indicate the great interest that is being taken in the exhibition by all sections of the trade.

The opening ceremony on Saturday the 30th inst., is to be performed by the Rt. Hon. Dr. T. J. Macnamara, Minister of Labour. The same day has been chosen by the Printing, Bookbinding and Kindred Trades Overseers' Association for an official visit to the exhibition, when it is expected that about 200 members will be present. On Monday, May 2nd, official visits are to be paid by the Kent Newspaper Proprietors' Association and the Kent District members of the Institute of Journalists. May 3rd is to be the occasion of an official visit of the Newspaper Proprietors' Association, and on the same day a visit has been arranged by the Electrotypers' and Stereotypers' Managers and Overseers' Association, who will have a reception at 4.45, with tea at 5. Wednesday, the 4th, is distinguished as Stationers' Association day, while the 6th is to be marked by an official visit of the Czecho-Slovak Printing Factors' Delegation, also by the visit, with tea and concert, of pensioners of the Pension Corporation. The Printers' Managers and Overseers Association have chosen the 7th as the day of their official visit, when they will be entertained as at the exhibition of 1914; conference, luncheon, tea and concert are on their day's programme, and they are to share the social items in fraternal fashion with the Czecho-Slovakian Delegation. On Monday, the 9th, besides the official visit of the Newspaper Society, there is to be a special visit of the North London and the West and North-West Master Printers' Associations, whose programme includes a reception at 4.45, tea at 5.0—by invitation of the Exhibition Management—with concert at 6.30. Then there begins on the 10th what should prove a most interesting feature of the exhibition, namely, the World's Printing Trades'

**April 30th to May 14th, 1921.**

Congress, which is to be held under the auspices of the Federation of Master Printers and the Exhibition Management; the dates arranged for this are May 10th and 12th, and among the attractive items on the Congress programme are a number of conferences in which discussions will be introduced by addresses by authorities on many important subjects, such as lithographic developments, paper sizes standardisation, rotary photogravure, and technical education. Wednesday, May 11th, will be regarded as a special invitation day, when the overseas visitors, the members of the Federation of Master Printers, the officials and others connected with the trade societies, etc., will be specially invited to inspect the exhibits. The ordinary admission ticket will not be available on this day, but the price for admission to the public generally will be 10s. Before the end of the exhibition—probably on the 14th—it is expected that another very interesting Printing Guilds Re-Union will be held.

The Exhibition will be open from 11 a.m. to 9 p.m. each day. The ordinary admission will be 1s. 3d., including tax, but special facilities for admission at reduced rates will, as on previous occasions, be afforded to those connected with the various trade organisations, particulars concerning which can be obtained from the respective secretaries.

#### NUMEROUS INTERESTING EXHIBITS.

While the above are some special events of interest, the backbone of the exhibition is, of course, the very numerous collection of exhibits, which will show the visitor what are the latest ideas in the way of machinery, general supplies, improved methods, and fine workmanship in connection with the printing and allied trades. We give this week a preliminary survey of some of the intended exhibits, and our selection will serve to indicate at least that everyone associated in any way with the printing industry will find much to which he can, with interest and advantage, turn his attention. In next week's issue we hope to find room for further notices of exhibits, as well as for some account of the proceedings during the early days of the exhibition.

#### Algraphy, Ltd.

Messrs. Algraphy, Ltd., of Peckham, devote their space, of course, to the exposition of their speciality, "Algraphy printing." At their Stand will be seen their well-known lithographic plates of zinc and aluminium, also sundries such as graining marbles, flints, silicate, glass powders, used in connection with the preparing of lithographic plates. They will show also progressive proofs worked on aluminium, and other specialities will be their rubber blanket for offset work, special offset felts, moleskins, etc.

#### Joseph Bancroft and Sons Co.

This firm of manufacturers and bleachers, of Rockford, Wilmington, Delaware (the sole agents for whom in this country are Messrs. Nickerson Brothers, 99 and 101, Worship-street, London, E.C.2), will be exhibiting the various grades of cotton bookcloths and buckrams which they manufacture, including

the well-known Legal Buckram, which is a bookcloth prepared in accordance with the specifications of the U.S.A. Bureau of Standards. It is guaranteed:—1. Free from any material attractive to insects; 2. Free from aniline dye; 3. Absolutely sun-fast. It is specially recommended for library, law and loose-leaf bindings. The attractive display of art shades at this Stand is certain to prove interesting, as also are the exhibits of bound books in various qualities of the Bancroft book cloths including some bindings from America in contrast to the English bindings.

#### David Carlaw and Sons, Ltd.

The principal features of an interesting exhibit by this well-known Glasgow firm of machinery makers will be three noteworthy machines: 1. "Leader" Envelope Folding and Gumming Machine, for making envelopes complete—gummed and dried on the sealing flaps, ready for use—at a speed of over two a second. The "Leader" is acknowledged to be the foremost in the market, and is the only machine manufactured in this country, which gums and folds, and also gums and dries the closing flaps of the envelopes at one operation. Owing to its superior mechanical construction and excellent workmanship, it can be run at a very high speed, the capacity being 40,000 to 50,000 finished envelopes per day of eight hours. The "Leader" also counts the envelopes into packets of 25's ready for banding by the operator, and there is an appliance whereby any desired amount of bulking can be given to the envelopes. This machine has been designed for the quick production of high-class envelopes, special attention being given to accurate folding and excellence of gumming. 2. Extra heavy pattern Blank Cutting Machine for cutting out the paper blanks ready for gumming and folding into envelopes on the "Leader." 3. Tissue Lining Machine for affixing tissues to envelope blanks. The afore-mentioned machines are entirely of British manufacture, being built in Messrs. Carlaw's works at Glasgow.

#### Mr. Colebrook's Services.

At Stand No. 2, Mr. Frank Colebrook, of 146, Fleet-street, assisted by members of his valuing staff, will be pleased to act as quick guides to those points and features which have particular interest for particular callers. Mr. Colebrook wishes to make it quite clear that everybody at Stand No. 2 will endeavour to be informative and helpful—free of charge, of course—and visiting printers are cordially invited to avail themselves of this service, also of his typewriter (a typist will be on duty during all hours of the Exhibition) also of his telephone, should they have occasion to talk privately over the wire.

#### R. W. Crabtree and Sons, Ltd.

These well-known machinery manufacturers, of Leeds and London, will show, at Stand No. 32, Row C, Main Hall, some new features as applied to "Crabtree" newspaper and magazine presses. One exhibit comprises a portion of a two-page wide perfecting press of the section type, fitted with patented worm drive, and the cylinders and drums mounted

in roller bearings, this combination giving noiseless running, and less power consumption is demonstrated. The worms and wheels, with the bearings, are supplied throughout with a forced oil supply, the oil returning to a sump below the press, and from thence pumped through the system. Another feature of this exhibit is the simple method employed to vibrate the distributing rollers, effected by a revolving scroll cam, with which the collars on the vibrating rollers engage, each roller receiving four or eight different lengths of "wave," giving a more perfect "cutting up" of the ink than with the usual lever type of vibrating mechanism. This vibrating cam entirely eliminates the usual levers, thimbles and all the various wearing parts, from the gears. The fountain blade control is shown in comparison with the usual thumb screw type, and its advantage will be readily perceived. A "Late News" device is also running on this press, being the latest of the well-known "Crabtree" fudge devices. Another exhibit comprises an Adjustable Roller Socket, designed to eliminate the usual "tommy" screw adjustment. A roller carried in this form of socket may be moved forward or backward, to the right or left, through the medium of one operating hand wheel, and securely locked. Various details are also shown as examples of "Crabtree" workmanship and finish. The Automatic Side-lay Adjustment is an important innovation devised to centralise the web of paper should it wander on account of a badly wound reel or other cause. It in no way affects the usual side lay mechanism. A reel brake device is also shown, which can be operated from any distance, and is the most sensitive made. The pressure applied can be "seen" by the operator, gauges being supplied at the operating end. This device can be applied to any make of reel brake, and in no way affects the usual working.

### Fry's Metal Foundry.

At Stand No. 27, Row C, Main Hall, will be seen exhibits covering the whole of the numerous and well-known "Fryotype" products, including printing metals, spacing materials, metal pots, foundry equipment and printers' driers. The whole subject of printing metals will be treated from a scientific and educational standpoint, the production of linotype, monotype, stereotype metals, etc., by the most modern metallurgical methods being illustrated by photographs, lantern slides, and by actual demonstrations at regular intervals, with the various sizes of "Fryotype" melting pots in operation on the stand. Qualified chemists will show how assays are made of the finished products, as well as of the virgin metals used, at a fully-equipped chemical bench. Samples will be shown side by side of high grade printing metals and metals spoilt by impurities, dirt, or inefficient mixing, visitors being invited to inspect these under two powerful microscopes. On a screen erected at one end of the stand for the projection of lantern slides will be shown views of different metals under the microscope, as well as views of foundry opera-

tions and of the "Fryotype" metals in use at several of the largest newspapers in the British Isles. Many examples of stereo plates, monotypes, lino slugs, etc., cast from "Fryotype" metal will be laid out for inspection. Two machines are in continuous operation, casting quads and Fry's "new design" quotations and metal furniture. Samples of burnished leads, brass rule, wood furniture, etc., are also shown. Three sizes of the "Fryotype" melting pots, of 1 cwt., 3 cwts., and 6 cwts. capacity respectively, will be shown in working operation, the low gas consumption and the economy in labour for filling and emptying being specially emphasised. Ingot moulds, mitts for handling hot metal, ladles, skimmers, etc., are other items of interest in this miniature model foundry. A further notable feature will be an electrically operated pyrometer attached to the various pots of molten metal on the stand, showing the correct method of registering and controlling the working temperatures. Of printers' driers specimens will include the "Golden" and other special printers' driers manufactured by Fry's according to a secret recipe. Specimens of the work done by their aid will be shown, and their effectiveness proved in a practical manner. Fry's Metal Foundry have not forgotten the social side, and Mr. John Fry's endeavours on behalf of the Printing and Allied Trades Sports Association are to be exemplified by the exhibition of the cups which he has presented for competition in the trade. Moreover, the London and provincial representatives and other members of the staff of Fry's Metal Foundry will be in constant attendance on the stand, and will welcome the opportunity of demonstrating to all visitors the merits of the "Fryotype" service.

### T. G. and J. Jubb.

This well-known Leeds firm of printers' metals manufacturers and merchants will be found at Stand No. 39, where they are to have an instructive and interesting show of Monotype, Linotype and stereo plates, flat and rotary, also tubular plates, and a good selection of samples of their furniture and spacing material. The most interesting exhibit will be one demonstrating a new method of setting up poster type for bill posters, kindly lent by the *Glasgow Herald* proprietors. Use is made of movable metal type of any design required, and the new method does away with all spacing of wood work. It is claimed to be cleaner and simpler in use than setting up wood blocks, besides saving a great deal of time, while there is no limit to the arrangement of setting up bills.

### John Kidd and Co., Ltd.

This firm is showing an attractive range of specimens of printed work—produced entirely by printers using Kidd's inks. An effort has been made to include exhibits representative of every method of printing at present in use, and with the special purpose of illustrating the wider range of this firm's products. Coloured inks will perhaps attract the most attention and show that continued progress has been made in the direction of producing charming

printed effects by simple combinations of suitable harmonies and contrasts. Specimens shown will include those to which Messrs. Kidd awarded their 1st, 2nd and 3rd prizes of £10, £5 and £2 respectively for printed matter produced with their inks in the ordinary way of business. These should be especially interesting. The exhibitors also make a speciality of roller casting in a special composition prepared under patents of which they are exclusive licensees in Great Britain, the process being designed to secure perfect inking and great durability.

### Lanston Monotype Corporation, Ltd.

At the Lanston stall will be found a comprehensive showing of noteworthy machinery, of which the following are interesting items: Monotype Machine, casting and composing type in perfectly justified lines of 5-ems in any sizes from 5 to 14-point; Monotype Machine, casting and composing type up to 60-ems in any size from 5 to 14-point; Monotype Casting Machine, producing display types in various sizes from 14 to 36-point; Monotype Casting Machines fitted with Automatic Cutting Device, producing leads and rules in various sizes from 2 to 12-point, and in any desired length; Monotype "D" Keyboard, equipped with the Universal Typewriter Layout, composing in various sizes from 5 to 14-point, and in all measures from 3-ems to 60-ems; Monotype "D" Keyboard, equipped with the Universal Typewriter Layout, composing mixed composition, with a two-line initial letter in 5½ and 7-point; Monotype "D" Keyboard, equipped with the Universal Typewriter Layout, composing in 18 point; Monotype "DD" Keyboards, equipped with the Universal Typewriter Layout, composing in various sizes from 5 to 14-point, and of any measure from 3-ems to 120-ems; Harris Offset Lithographic Press, fitted with Automatic Pile Feeder, with jogger delivery, printingsheets 22-in. by 34-in.; Platen Press, fitted with Miller Automatic Feeder, automatically feeding, printing and delivering sheets 12-in. by 18-in.; Platen Press, fitted with Miller Automatic Feeder, automatically feeding, printing, and delivering sheets 10 in. by 15-in.; Platen Press, fitted with Miller Automatic Feeder, automatically feeding, printing, and delivering sheets 8-in. by 12-in.; Miller Saw-Trimmer with Router and Jig complete, for cutting leads and rules, mitring, squaring of blocks, planing for type height, routing, and undercutting; Miller Bench Saw, for cutting, trimming, and mitring; Boston Wire Stitcher, self-adjusting—maximum capacity ¾-in.; Tatum Punching Machine, showing various styles and sizes of round-hole and special shapes for loose-leaf binding; Safe-Guard Cheque Writer, for the insertion of amounts on cheques, and serrating the paper under the payee's name.

### William J. Light and Co., Ltd.

At Stand No. 19, Row D, in the Gilbey Hall, in addition to showing their own specialities—which will include Light's "Everwear" Oil and Ink-proof Press Rubbers and various

qualities of dry flong, including the "Phototone" Fine Art Flong—Messrs. William J. Light and Co., Ltd., of 127, Fenchurch-street, London, E.C.3, will be demonstrating, under the supervision of Mr. W. J. Light, the more important of the mechanical appliances made by Messrs. Winkler, Fallert et Cie., of Berne, among which the following are the most important. An Automatic Stereo Moulding Press having some very advantageous features will be demonstrated in conjunction with Messrs. Light's various qualities of stereo flong. Another important machine which will be working under practical conditions and is expected to create something of a sensation will be the "Winkler" Automatic Casting Apparatus for rotary newspaper plates. In this machine the plates are cast under the full weight of the metal in the pot, perfectly solid plates being therefore assured; another extremely useful machine is the Automatic Router for either flat or rotary plates, and a particularly interesting Plate Shaving Machine will also be seen. A unique Rotary Matrix Drying Drum will be demonstrated, entirely under electric control, a novel feature being that when the door or trap of the drum is opened, the matrix is automatically stopped opposite the operator and ready for handling. A special Flat Casting Box will be in use, the bed of which is heated by electricity, so that no "heaters" or blind plates need be cast for the purpose of warming the box. Other stereotyping appliances which will be shown are an electrically heated Melting Pot in which the temperature is automatically regulated; a patent Circular Saw, which although the plates to be cast need not be moved by hand, cuts at any angle with accuracy and also bevels the plates as desired; a special Flat Routing Machine in which the plate is held in a vertical position so that all chips fall away and do not obscure the work; a Melting Furnace with an adaptation whereby waste heat is utilised for heating and producing steam for other purposes; also an apparatus for regaining Stereo Metal in ingots, which is characterised by the fact that the metal is always taken from the part of the pot where oxidation occurs; nickel plating being by the "Winkler" Patent Hardening Plant; Ink Cleaning Apparatus; a Roller Casting Apparatus, in which the composition enter the "Gunn" or tubes from below and produces rollers of various sizes absolutely free from bubbles; an electrically-heated Linotype Pot provided with an Automatic Temperature Regulator with an adjustable indicator. Perhaps the most important of Messrs. Light's exhibits will be an entirely new type of Flat Bed Printing Machine, which will be worked in a practical manner. This machine has an oscillating cylinder and is so constructed that it is said to assure absolutely perfect register for multi colour work and, with the greatest possible precision obtainable on a stop-cylinder press. In conjunction with the demonstration of the above-mentioned machines and appliances, the "Winkler" Patent Chase and Combined Chase and Galley will be used.

### Linotype and Machinery Ltd.

The exhibits of Messrs. Linotype and Machinery Ltd., of 188, Fleet-street, and branches, stand out prominently in the centre of the Main Hall—Stands Nos. 30, 40 and 47A—under a large reproduction of the company's well-known trade mark. The exhibit includes six Linotype composing machines, three of these are the well-known multiple-magazine machines—Model 4—while the other three each represent a different phase of the Linotype scheme of typography. Special interest is likely to be evoked by a number of improvements that have been made on some earlier types of machines which are again exhibited. A machine which the company is showing for the first time is the L. and M. Two-Colour Offset Litho Rotary, a machine which embraces many of the special features of the company's single-colour press. The press exhibited takes sheets up to quad demy, and a very important feature is the provision of two plate cylinders instead of only one, enabling two damping mechanisms to be employed. Another of its features is the pile delivery which enables the printed sheets to be delivered directly on to a board ready for removal in bulk by truck without disturbing the sheets. In regard to letterpress printing machines, the company have on exhibition their well-known Miehle and Centurette Presses. Among the special advantages claimed for the former is its high-class colour printing in dead register. This machine is built in six sizes, the largest taking a sheet up to 46 in. by 66 in., and the smallest size up to 26 in. by 39½ in. The Centurette Two-revolution Press is a popular machine for book, magazine and general printing, its speed being an attractive feature. It is made in one size only and takes a sheet up to 37 in. by 24 in. One of its good points is the small number of working parts, enabling it to be run with perfect safety at a speed of 3,000 impressions per hour. Visitors will also find at this firm's Stand the L. and M. Automatic Metal Furnace, together with a collection of stereo plates cast by users of the Autoplate. Composition as done on the Model 20 Display Linotype makes possible the production of 18, 24 and 30 point faces direct from the keyboard, the faces including some of the most useful jobbing types employed in up-to-date printing. The L. and M. Litho Rotary—another of the firm's exhibits—is a two-revolution press made in quad demy, ex-quad crown, and double demy. On this machine the sheet is delivered printed side up by a chain delivery which slows down while depositing the sheets on the jogger board. The L. and M. Automatic Metal Furnace shows an efficient means whereby metal is cleaned from impurities in the process of recasting. Owing to the peculiar construction of this furnace, the amount of wastage by oxidation is reduced to a minimum, and the visitor will, on examination, notice several other advantages which the furnace offers. Many other of the firm's well-known specialities are also on exhibition, among them being various special brands of metals.

### George Mann and Co., Ltd.

All interested in printing machinery will be attracted to the working exhibits which will be seen at the Stand of Messrs. George Mann and Co., Ltd., specialists in lithographic machinery, of Henry-street, W.C.1. This firm will be showing a large range of Rotary Offset Machines, both single and two-colour, also the latest machinery for printing on tin plates. Special interest will be attached to two very large Two-colour Rotary Offset Machines which will be running, also to one of Messrs. Mann's Single Colour Machines under actual working conditions.

### Nickerson Brothers.

This old-established firm of tanners and leather manufacturers, of 99 and 101, Worship-street, London, E.C.2, and Alscot-road, Bermondsey, S.E.1, will be exhibiting at their Stand (No. 32 Gallery) all classes of leather as used in the bookbinding, pocket book and fancy leather goods trades. Moroccans, Roans, Skivers, Basils, Calf, Hides and Persians, etc., in various colours will be displayed, of which they are the actual manufacturers. This firm have specialised in leather for bookbinding for nearly a century, and something of interest to every bookbinder should be found at their Stand where they will welcome their many friends.

### T. W. and C. B. Sheridan and Co., Ltd.

Among the Sheridan machinery exhibited will be seen the Sheridan Bookbinders' Embossing Press No. 4 B. This machine is fitted with head 18-in. by 14-in., and is especially designed for all-round bookbinding work. One of its distinct features will be found in the Sheridan Exclusive Triple Toggle Construction, which gives exceptional power and uniformity of pressure. This Press claims many other conveniences which will be appreciated by practical bookbinders. This Press can also be fitted with smashing plate for nipping books, and also with inking detachment if desired. Also on view will be the Sheridan Improved New Model Mechanical Clamp Cutter. This machine is made in nine sizes, ranging from 36-in. to 75-in. The one shown will be a 40-in. machine, that is to say a Cutter that will square 40-in. and will make very narrow cuts down to ⅞-in. The distinctive feature of the Sheridan Cutters lies in the special Clamp arrangement. Another noteworthy exhibit will be the Dexter Standard Folding Machine. The No. 189a Dexter Folder works sheets from 12-in. by 16-in. up to 35-in. by 48-in. In addition to the basic machine, which is composed of four sets of folder rollers placed at right angles to each other, this machine will have a set of folding rollers parallel to the second right angle fold, to fold parallel 16's printed two or more up, and also a set of rollers parallel to the third right angle fold which provides for folding 24 and 32 pages two or more up. Interest will attach also to the Feybusch Auto Gummer, which is an automatic machine with conveyor attached for feeding, gumming and delivering sheets of paper, labels, wrappers, etc. Any size or shape of sheet is fed automatically

from the hopper, and gummed or pasted neatly and evenly, being afterwards delivered automatically to the operator at the desired speed.

The Bunn Package Tying Machine will also be shown on their Stand. This machine, for which Messrs. Sheridan are sole agents, ties each package in the same way, wrapping the string round tightly every time, and fastening with a non-slip knot.

It is hoped also to include in this exhibit a Burton Universal Rotary Peerless Perforator Machine. The Burton is the original rotary perforator, and while there are now other machines built on the same lines as the old model Peerless Rotary Perforator, the distinctive features of the new Universal Peerless Machine are not to be found on any other make of rotary perforator.

### Smyth-Horne, Ltd.

At No. 1 Stand, Gilbey Hall, this firm is exhibiting an up-to-date line of special labour-saving machinery under power, at work, which enables the trade to understand not only the principle of the different machines but also their great saving capacity. Specimens of the work produced by the machines, also illustrations, etc., can be had at the exhibition and a number of expert representatives will be in attendance during the show and a speciality will be made in speaking foreign languages, to take care of all the foreign visitors at the Stand. The following will be notable exhibits: Smyth No. 3 Sewer.—A letterpress book sewing machine, suitable for magazines, novels, school books, Bibles, etc., is equipped with four arms which enables the machine to run at great speed; sews sections from  $2\frac{1}{2}$  in. up to 12 in. length with a depth of from 2 in. up to 9 in. Smyth No. 4 Sewer.—Single arm stationery book sewing machine, sewing ledgers, account, letter-copying books, etc., and takes sections up to  $18\frac{1}{4}$  in. length with a depth of from  $2\frac{1}{2}$  in. up to 9 in. Smyth No. 8 Sewer.—In appearance resembles No. 4 but is equipped with No. 3 Needles, has a range of 2 in. by 2 in. up to 14 in. by 19 in., and will handle sections thicker than the No. 3, and is suitable for music work. Smyth Cloth Cutter.—Designed to take roll bookbinders' cloth and slit and cut same up into rectangular covers, in a fraction of the time taken to do it by hand; covers are delivered perfectly flat without damaging the grain or texture of the cloth in the slightest. Smyth Sheet Gluer.—Designed to place hot or cold film of glue on to plain or grained bookbinders' cloth, plain or printed papers, etc.; machine is equipped with overhead Feeding Device and Travelling Band and takes material up to 22 in. wide and any length. Seybold 44 in. Dayton Cutter.—A feature of this machine is the Clamping Device and also the Split Finger Back Gauge. The Machine runs at the rate of 30 cuts a minute. Seybold Three Knife Trimmer.—It is claimed that this is the greatest labour-saver in book Trimming Machines on the world market for all round work, and the quality of the cutting is of the highest grade; an enormous range in size of

books and type of work can be trimmed on this new cutter. Seybold Power Round Cornering Machine.—The clamp holds the paper absolutely without slip, and the machine is of solid build and is more massive than anything usually offered for this class of work. Chambers Bros. "King" Automatic Feeder.—This is the only continuous Feeder that forwards the sheets directly under the drop-roll of the folding machine; Combing Wheels are independently controlled—adjustable as to position while in operation. 10-Box Juengst Gatherer.—Made by the American Assembling Machine Co. (U.S.A.); takes up to 9 in. by 12 in. (the No. 1 Machine) and extra boxes can be added in units of two. New Juengst Side Stitcher.—Drives 1, 2, 3, or 4 staples without stopping the book; runs at a speed of 60 to 100 per minute; built in two sizes, to take books up to  $\frac{3}{4}$  in. and  $1\frac{1}{4}$  in. thick. Berry No. 4 Pound Round Hole Drilling Machine.—Recently introduced to the European market; original and effective method of cutting the hole. Brackett No. 2 Power Stripping and Binding Machine.—Will handle any kind of stripping, either gummed or ungummed stock, and will practically do all stripping, reinforcing, guarding or hinging with cloth or paper, either gummed or with hot glue, and runs at a fast speed. Marresford End Papering and Plate Pasting Machine.—Designed to automatically bring together and paste the end sections on to the end papers; the whole operation is quite automatic and practically any kind of paste can be used; can be quickly altered and changed over from one section to another; runs at a high speed and is a great labour saver.

### John Swain and Son, Ltd.

This famous firm of photo-engravers and art reproducers by all processes will be showing examples of their various processes including half-tone, line, colour, colour offset Swaingravure and chromo litho; also specimens of art and commercial electrotyping and stereotyping. There will be a special display of reproductions in colour and gravure of showcards, calenders, and advertising designs.

### H. Williams and Co.

At Stand No. 37, Row D, Main Hall, Messrs. H. Williams and Co. are exhibiting the All British "Lion" Electro, Stereo and Photo-Engraving Machinery, and amongst their exhibits of up-to-date machines the following will be conspicuous:—Flat Routing Machines, Casting Boxes, Saw Benches, Rotary Planing Machines, Power Screw Driven Planing Machines, Pedestal Jig Saw, Combined Jig Saw and Drill, Disc Edge Planing Machines, etc. Messrs. Williams are proprietors of Regd. "Stereoline Enamel."

TO CELEBRATE the twenty-fifth anniversary of the establishment of Messrs. Samson Clark and Co., Ltd., advertising agents, a luncheon was given at the Trocadero Restaurant on Tuesday. Messages of congratulation were received from Viscount Northcliffe, Viscount Burnham, and Lord Rothermere.

# Trade Notes.

MR. JAMES JEFFERY, formerly of 12, George-yard, Lombard-street, E.C., stationer, left £4,289.

ALDERMAN ALBERT DRIVER, of The Acacias, Springfield-road, Chelmsford, retired printer and stationer, for many years connected with the *Essex County Chronicle*, left £32,261.

IN the current issue of the "Cambridge Review" an appeal is made for subscribers, to enable the management confidently to embark on the 43rd year of publication.

THERE will be an election for a councillor for the Southwark Borough Council on April 30th. Mr. A. G. Bartlett, of the Printing and Paper Workers' Union, will be the Labour candidate.

DAMAGE to the extent of £500 was caused by an outbreak of fire on Saturday evening at 67, Greendyke-street, East-end, Glasgow. The premises were occupied by Mr. James Boyle, and used as a paper and rag store.

DAMAGE estimated at £10,000 was done by fire at Grimsby, on Thursday last, in a large warehouse, occupied by Messrs. W. H. Smith and Son, newsagents. Thousands of periodicals stored on an upper floor was destroyed.

AMONG new members elected to the Federation of British Industries are: Solicitors' Law Stationery Society, Limited, 104-7, Fetter-lane, E.C.4, and Whitehead Morris, Limited, printers, lithographers and stationers, 9 and 10, Fenchurch-street, E.C.3.

MESSRS. JOHNSTONE AND CUMBERS advise that owing to the ever increasing country business, they have taken larger offices at Manchester, and their new address is: 97, Chapel-street, Salford, Manchester. Telephone No: Central 7763. Telegraphic address: "Cumberemus," Manchester. Mr. Charles H. Rogers, commercial manager—country.

AT a recent L.M.P.A. Council meeting, the following resolution was adopted: "The Council accept with much regret Major Birch's resignation, and desire to put on record their high appreciation of the work he has done since he took over his duties, and the manner in which he has reorganised the internal administration of the Association." Major Birch left 24, Holborn on the 13th inst. to take up his new duties in connection with the National Institute for the Blind.

A COMMUNICATION has been received by the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, from a firm in Bolivia, who are desirous of being placed in touch with United Kingdom firms exporting stationery, office appliances, account book paper and general supplies for bookbinders and printers. The name and address of the inquirers may be obtained by United Kingdom firms interested, on application to the Department.

AS THE result of representations made to the Board of Inland Revenue by the Institute of Journalists, it has been arranged to make certain allowances off the income tax leviable upon journalists.

IN "reprisals" at Tralee last week the offices of the *Kerryman* and *Liberator* newspapers were visited by armed men, who smashed the printing machines and made publication of the papers impossible. The damage in these offices alone is put at £4,000.

ANOTHER writ has been issued by Mr. J. H. Thomas against the National Labour Press, Limited, the printers of the *Communist* and Mr. Francis Meynell, the editor, in respect of the current issue of the paper. An application is being made for an injunction restraining the defendants from further publication of the alleged libels.

GUERNSEY PRESS FIRE.—Considerable damage was done to the Guernsey Press Co.'s building and composing-room plant by fire, originating from an adjoining building, but owing to the united efforts of the staff the paper was produced as usual. Mr. Edwin W. Evans, printers' auctioneer and valuer of 150, Fleet-street, London, acted as assessor for the Guernsey Press Co., Ltd., and succeeded in obtaining for his clients, a highly satisfactory settlement.

AMONG the week's partnerships dissolved are those of: Horace Woodville Powell and Cyril Lennox Wyatt, printing machine agents, 1, Wood-street, Cardiff; Alfred Ewart Cooper and William Branford Middleton, paper bag merchants, 16, Alexandra-street, Farnworth, Lancs; Cecil Palmer and Joseph Hayward, publishers, 14, 16 and 18, Bloomsbury-street, W.C; John William Goodman Tomkin and Robert Dymock Farwig, publicity agents, 12, Bouverie-street, E.C.

EDUCATION IN COSTING.—The costing secretaries of the Master Printers' Federation have during the past twelve months conducted a number of classes in different parts of the country for the training of cost clerks in the detail work of time transference and in the compilation of Weekly Production Statements. The students have had the advantage of a training under specialists and the results cannot be other than beneficial. These classes have been attended by clerical staffs (male and female), foremen of departments, and many master printers have also taken advantage of the courses of study. In almost every case students have submitted to examination, and the questions set had a distinct bearing on the everyday work of a costing and estimating clerk. The marks awarded have been fully deserved, as the examiners have demanded complete answers. The instructions imparted have not been concerned with the purely accountancy side of the Federation Cost-finding System, but have aimed at uniformity in estimating and costing out jobs. It should also be stated that employee-students have attended at employers' expense and usually during working hours.

## FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,

at 58, Shoe Lane, London, E.C. 4.

Tel.: Stonhill, Fleet, London. Phone: 8407 City.

**SUBSCRIPTION:** Per Annum, 8s. 8d. (POSTAGE EXTRA).

### Charges for Trade Advertisements:

(Full page 8 by 5½ ins.)

Whole Page ...	£4 10 0	s. d.
Half Page ...	2 10 0	17 6
Third Page ...	1 17 6	22 6
Quarter Page ...	1 10 0	9 0
		One-eighth Page
		One-third Column
		One inch in Column

An Extra Charge for Cover and Special Positions.  
Discounts according to Number of Insertions.  
Representatives throughout the United Kingdom and  
also in Australia, India, South Africa, United States  
Canada, etc.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—**STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C.4**

Copies may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., news-agents, 11, St. Bride-street, E.C.4.

THURSDAY, APRIL 28, 1921.

# Current Topics.

## The Exhibition.

THE last day of this week should see the opening of what is characterised as the most representative printing trades exhibition ever held. While one could wish that the national industrial trouble had been happily settled before this, instead of remaining to augment the already big enough anxieties which beset the organising of an affair of this magnitude, it is gratifying to see that everybody concerned is going ahead determinedly, intent on making the big show what it ought to be, i.e., a convincing demonstration of the progressive character, the great achievements, and the immense possibilities of the printing and allied trades. Our first-page article this week gives some indication of the many interesting events and exhibits which may be looked for, and we hope to follow this up in the next issue by news of the first few days' proceedings with further mention of exhibits of interest to the trade.

## Joint Industrial Council Convention.

AFTER unavoidable postponement—as previously reported in these columns—arrangements have now been made to hold the First Convention of the Joint Industrial Council of the Printing and Allied Trades in the Congress Hall at the Royal Agricultural Hall, Islington, on Monday, May 9th, and to carry out the programme which was originally arranged for Brighton. An additional feature of interest is thus added to the Printing Exhibition. The convention will be opened by the chairman, the Right Hon. C. W. Bowerman, M.P., at 2.30 p.m., and the chairmen of the following Committees—Unemployment, Health, Apprenticeship, Organisation and Conciliation—will briefly report on the work which has been done and the programme for the future, and there will be an opportunity for discussing the various topics with which these speakers will deal.

## Paper Sampling.

THE sampling of paper is a subject worthy of some discussion among makers and users. Naturally mill methods of sampling constitute a very different thing from the merchants' system, and again the merchant must of necessity adopt a much more elaborate method than the printer or user. Principally what we have in mind is the issue of standard ranges or individual samples from the mill or merchant to the user. Printers, particularly, require an arrangement of samples which will permit them to select their requirements with minimum time loss. To wade through boxes or books containing every grade of paper such as are issued by some houses involves a certain amount of lost time. The method of an orderly printer would be to classify his samples under headings and sub-sections according to the class of paper and not according to the source of origin. If quoting for catalogues on art paper, he would refer to his art paper section, knowing that only art papers would be housed and handled there. The old idea of wading through a series of books, boxes and sets is obsolete, and of so little value that the samples ultimately find their way into the waste bag. There is no reason why a mill or house should not issue its samples under an elaborate loose-leaf or ledger cabinet scheme; but from the point of view of efficiency and sales results, perhaps the best method would be to issue separately a series of classified sets. Real service would be offered if the issuer consulted the user as to his wishes in the matter and thus secured for himself the double advantage of saving expenses and fitting in with the sampling system in vogue with the user.

## Personal.

MR W. T. F. JARROLD, the president, took the chair at the annual meeting, yesterday, of the East Anglian Alliance of the Federation of Master Printers, and entertained the visitors to luncheon at the Bell Hotel.

AMONG the prominent visitors on this occasion were Mr. E. W. Humphries and Mr. A. E. Goodwin, president and secretary of the Federation, and Mr. J. C. Coppock, president of the Lancashire and Cheshire Alliance.

MR. J. MACLEHOSE, LL.D., who has been visiting Italy on holiday, returned to town yesterday.

SPECIAL interest attaches to the engagement just announced between Miss E. M. Sayer and Mr. A. J. Wilson, head of the well-known advertising firm. Miss Sayer, who is a Freeman of the City of London and a councillor for the Borough of Holborn, began her career as a typist in the office of the firm of which she is now a director. In spite of the handicap of total deafness, Mr. A. J. Wilson has, with the assistance of his bride-elect, built up a prosperous business.

## Costing Lecture at Birmingham.

MR. A. Williamson, F.C.W.A., secretary of the Federation Cost and Charges Committee, lectured at the Birmingham School of Art on Thursday, April 21st, on the Federation Cost-Finding System. He took a more popular line in consequence of having an audience comprising clerical and productive workers, as well as several master printers. The synopsis of the lecture was as follows: A definition of cost; the main principles of the system; the necessity and importance of departmentalisation of expenses; the futility of using a flat percentage on wages alone or on wages and materials combined; how the system helps the estimator, the cost clerk, and the management; how the system affects the worker, the employer, and the customer. The audience, numbering about 200, showed very keen interest in the subject, and at the close some critical questions were put. On the chairman (Mr. Basil R. Davies) putting out a feeler as to how many would attend a course of lectures on the subject, the whole audience rose to its feet in reply.

The above lecture was arranged for by Mr. B. J. Fletcher, the principal of the school, whose work at the Leicester School of Art, apart from the work popularly associated with such an institute, has left an indelible impression on the "art preservative" in Leicester as well as on the work produced by the signwriting fraternity.

## The State of Employment.

Employment in the printing, bookbinding and paper trades generally was slack or bad during March, and in most districts rather worse than during the previous month. It was considerably worse on the whole than a year ago. With a few exceptions short time was worked in all sections of these trades. With letterpress printers, the state of employment on the whole remained about the same as in the previous month. In some offices in London a certain amount of overtime was worked by compositors and readers, whilst at others the men were stated to be on short time. Short time was also reported from a number of provincial centres where the state of employment was generally bad, but showed some signs of improvement in a few cases. In the lithographic printing trade employment was bad and short time prevalent. Returns received by the Board of Trade affecting nearly 9,000 workpeople in the letterpress and lithographic printing trades, reported nearly one-third of these workpeople as working on an average eight hours per week short of full time. There was a further sharp decline in the state of employment in the bookbinding trade, and it was described as being bad in almost every instance. Over 40 per cent of the workpeople covered by the returns received were reported to be working short time to the average extent of 14 hours per week.

According to the returns received by the *Labour Gazette*, out of 80,772 members of trade unions in the printing industry, the percentage of unemployed at the end of March was 5.7 as against 5.2 at the end of February, and 0.9 at the end of March a year ago, the increases being 0.5 and 4.8 per cent. respectively. In the bookbinding section, out of a trade union membership of 14,829 the percentage of unemployed is given as 9.4 at the end of March as against 5.6 at the end of February and 0.9 at the end of March last year, the increases being 3.8 per cent. and 8.5 respectively.

Returns made by employers for the week ended March 19th show the number of workpeople in the printing offices concerned to be 10,080, a decrease of 0.4 on the previous month, and of 6.1 on a year before. The wages paid amounted to £37,999, an increase of 0.8 on the previous month and of 3.0 on a year ago. In the bookbinding trade employers' returns showed 5,594 workpeople, a decrease of 3.1 on the previous month and of 1.6 on a year before. The total of £12,172 paid to workpeople represented a decrease of 5.8 on a month ago and of 3.8 on a year before.

A BURNS first edition was sold in Edinburgh on Monday for £505.

FOR the First Folio of Shakespeare's plays, 1623, from the library of Captain Arthur Clifford, of Chestal, Gloucester, the record sum of £4,200 was given at Sotheby's sale.

## London Printers and Country COMPETITION.

### Interesting Discussion of a Difficult Problem.

The timely but very debatable subject of competition between country printers and their colleagues in London was brought to the fore again last week by Mr. W. H. Burchell, the energetic hon. secretary of the Association of Master Printers of the London Central Districts, who, on the conclusion of the annual business meeting of this Association (reported in our last issue) read a paper on the subject of "London Costing and Country Competition."

In the course of his remarks, Mr. Burchell told of severe competition from country printing offices, whose prices often made the London quotation look extortionate. He said that as the official figures for the country hourly rates had not been issued to London printers, he had estimated these for himself in proportion to the wages paid. He read his estimates for the rates of towns in the different grades, representing that costs were much lower than London figures even in towns within easy reach of London. He estimated that about 500 country printing firms had London houses or London representatives, and he referred to advertisements of country printers offering to do work at considerably below London rates. He suggested that there ought to be a flat rate of wages throughout the country, also a flat hourly rate; that there should be a committee appointed for the purpose of gathering detailed information about country competition; that every printer should be compelled to use on his work a cipher indicating the grade of town of origin; that the Costing System should be installed free of charge; that the trade unions should be approached to grade their men according to ability, so that an A1 man should get more than a C3 man. In conclusion, Mr. Burchell appealed for an inquiry into the subject of country competition.

### Some Points of Difficulty.

Mr. Albert Bennett was the next speaker, and while he expressed appreciation of some of the points Mr. Burchell had made, he told how in travelling about the country he found rural printers complaining that the little bits of local work available were being sought after by the representatives of London firms. He pointed out that other large towns, as Manchester, had the same difficulty as London in competition from country neighbours. On the other hand the adoption of a flat rate of wages might have the effect of shutting up entirely some rural houses that had very little original work to fall back on. He stressed the fact that much of the competitive work was being done at astonishingly unremunerative, in fact ruinous, prices, and he suggested

that the extended application of the costing system would ring the death knell of this ridiculous competition.

Mr. W. Whyte (acting-secretary, L.M.P.A.), who said he had listened with very great attention and interest to the paper read by Mr. Burchell, drew attention to the provisions against unfair competition and the assistance given by the London Association in maintaining reasonable prices for both London and country work.

Mr. Day having raised a query as to the piece-work rates for women,

Mr. Whyte replied that no piece scale for women had been agreed to by the L.M.P.A.

Mr. George Eaton Hart, who expressed indebtedness for the able and frank address by their secretary, said he was astonished at some of the figures quoted, and he hoped the matter would be given further consideration. He indicated the difficulty of some of the questions involved in the problem of grading.

Several members quoted cases of actual competitive prices, and the examples not only showed lower country costs but also indicated much price-cutting that was quite unreasonable.

Mr. J. W. Carley spoke of the necessity and healthiness of competition, and laid stress on the Costing System as pointing the way to accurate knowledge of costs and to improved efficiency.

### Mr. Goodwin Surveys the Problem.

Mr. A. E. Goodwin (secretary of the Federation of Master Printers), on rising to speak at the request of the chairman, was very cordially received. He explained some of the difficulties of fixing wages, in view of the opposing opinions, on certain points. The hourly cost rate figures estimated by Mr. Burchell were, he said, incorrect. The Costing Committee did not issue the comparative figures, for obvious reasons. Dipping into the intricacies of wage gradings and hourly rates, he said it was quite impossible to regulate these according to the distance of a town from a centre like London. The varying cost of living in the various districts was a very important factor. They could not accept the wide principle of equal pay for the same work, wherever executed, as local conditions often made this impracticable. Mr. Goodwin went on to show how the Federation had, in negotiating grading, done all it could to avoid unfair disparities. He pointed out also that the differences in wage rates did not indicate correctly the differences in costs, because where wages were lower than in London the percentage necessary to recover overhead and departmental expenses would often be comparatively higher. The chief difficulty in the question of competition was that many printers could not be got to face their actual costs. There was just as much unfair competition going on between one London printer and another as between country printers and London. So far as the Federation and its officials were concerned, they were doing their utmost to handle these questions fairly, in the interests of the industry as a whole.

Some little further discussion having taken place, Mr. Burchell briefly replied. He expressed himself dissatisfied with what had been said, especially as to the withholding of the hourly rates. He wished London printers would come together and discuss these questions further.

Arising out of the Government's restrictions on coal, gas and electric power, a number of questions drawing attention to masterprinters' difficulties in "carrying on" were put, to which Mr. Whyte replied.

The meeting closed with the passing of a hearty vote of thanks to Mr. Burchell, the vote being carried with acclamation.

### Modern Development of an Old Business.

Competition in these days renders it necessary for old-established businesses to adjust themselves to new conditions. Ability to do this gives strength and stability and improves the advantage afforded by a sound foundation. These thoughts arise in a consideration of the unique position held in the paper trade by the house of Charles Morgan and Co., which was founded as long ago as 1760. In the days of our great grandfathers it had established for itself a fine reputation; yet it is to-day as virile and progressive as the strenuous circumstances of post-war times demand. However good may be the reputation of a firm, it cannot afford to stand still. The directors of Chas. Morgan and Co. when they took charge of the business in 1919 on its becoming a limited company realised this important fact and immediately took courageous steps to graft modern and up-to-date methods upon the good old-fashioned stock.

The new policy has led to many administrative changes and extensions. Thus in place of the old factory at Finsbury, a large new mill has been substituted at Chadwell Heath, fitted up with the latest envelope-making machinery. To cope with extending business there have also been opened at Leeds and Newcastle-on-Tyne new warehouses where large stocks are held. Active branches are established at Manchester, Glasgow and Birmingham, and further extensions are now under consideration. In order that the whole concern should move forward together, the directors have arranged that employees shall have a direct interest in the prosperity of the company.

Charles Morgan and Co. stand for reliability, and they are in a position to fill all the requirements of the printer and stationer. While new methods are introduced, the old standards of quality remain. The firm's watermarks, many of which have a world-wide reputation, are retained and new marks are constantly being added. The established line, "Charta Regia Britannica," continues to gather public favour and is stocked in a large variety of sizes and weights in cream and azure, suitable both for private and commercial uses. Among the latest products of Charles Morgan and Co. is the happily named "Jutland Bond," a high class bond paper stocked in cream and a range of delicate tints.

Printers and others who are interested in papers will have a good opportunity of inspecting samples of the firm's goods at the Printing Exhibition at the Agricultural Hall during the next two weeks, Stand No. 22, Row D, Gilbey Hall, being reserved by Charles Morgan and Co.

**An Advertisement is always working.**

## Profit Sharing in the Printing Trade.

The ninth annual bonus meeting of the staff of the Solicitors' Law Stationery Society was held on Tuesday evening, April 19th, at the Memorial Hall. The hall was well filled, and the chair was occupied by the managing director, Mr. H. Basil Cahusac.

The Chairman, in opening the proceedings, remarked that the result of the year's trading had been good, and he thought the staff would also be satisfied with it. In speaking of the events of the year, he mentioned the purchase of a small law stationer's business in the City, which had brought the firm a nice little connection. Then early in the year it was found that the works premises were not large enough to cope with the ever-increasing volume of work, and steps were taken to purchase the adjoining premises. To enable the society to do this an issue of 25,000 shares of £1 each at 30s. per share was made in October, the issue being largely over-subscribed. This gave them about 200 new shareholders; of these 16 were members of the staff, and five of them increased their holdings. Then in October the society purchased the *Solicitors' Journal*, a legal weekly newspaper that had been in existence since 1857. Referring to his speech at last year's meeting, when he mentioned and outlined a scheme for granting pensions to the staff, he was sorry to say that not much progress had been made with the proposal during the year, owing to various causes, but he still hoped that a scheme would be produced, though he was afraid it would not be on such a liberal scale as he outlined last year. The sales during the past year, he said, had amounted to £229,759, an increase of £65,671 over 1919. The profit was £27,582, a decrease of £2,575. This he put down to the bad trade of the last half of the year. He was pleased to announce that at the meeting of shareholders that day a dividend of 20 per cent., less tax, had been passed. This meant that under the articles of association, a bonus of 14 per cent. was payable to the staff on their remuneration of the last year, or about seven weeks' money—(applause)—and he hoped that a part of the sum would be deposited with the society. He next proceeded to deal with the results of each branch, and congratulated each manager on his result.

Mr. Duly, in proposing a vote of thanks to the chairman, expressed his pleasure at the interesting report on last year's proceedings.

Mr. Ben Clark, in seconding, referred to congratulatory remarks made about the house committee, and mentioned a few of the many useful activities it had taken in hand.

The vote of thanks was carried by acclamation, and the Chairman briefly replied.

A musical programme, contributed by members of the staff, was greatly appreciated, a vote of thanks to the artistes and the pianist being carried by acclamation. The evening terminated with the singing of Auld Lang Syne and the National Anthem.

## DIVIDENDS AND REPORTS.

**LAMSON PARAGON SUPPLY CO.**—The profits for the year ended January 31st, 1921, were £83,795 (against £59,587 for the previous year), to which has to be added the balance brought in, £16,340 (against £9,227), making a total of £100,136 (against £68,814). After providing £9,956 (against £7,155) for depreciation reserve and directors' fees, the directors recommend a balance dividend of 10 per cent. on the ordinary shares (making 12½ per cent. for the year). The dividend is at the same rate as the previous year. The directors further recommend the transfer to general reserve of £10,000 (against £5,000), leaving a "carry forward" of £19,784 (against £16,340).

"**FINANCIAL NEWS.**"—At the annual general meeting of the Financial News, Ltd., the report recommended a dividend of 20 per cent. When the directors submitted their accounts for the year 1919, there was a debenture charge on the company of £9,542. That had now been reduced to £600. Another item in the balance-sheet last year was a contingent liability of £17,670, which was due in respect of the certificates of indebtedness which the company issued. No less than £11,376 of these certificates of indebtedness

had been paid off. Dealing with the year's trading results, the chairman said that they were able to report a very large profit, the largest the company had ever obtained. The details which made up the profit showed that in all those respects which testified to the health of a newspaper enterprise, a continuous improvement had taken place.

## NEW COMPANIES.

**EDWARDS AND CO. (PORTHCRAWL), LTD.**—Capital £1,000, in £1 shares; to take over the business of a fancy goods, stationery, etc., dealer, carried on by Martha E. Edwards at Wells-street, Porthcawl, as "Edwards and Co." Private company. First directors: Miss Martha E. Edwards and Miss Martha J. Jenkins. Registered office: Glantivy, Wells-street, Porthcawl, Glam.

**JOHN LANE, THE BODLEY HEAD, LTD.**—Capital £75,000, in £1 shares (25,000 5 per cent. participating preference); to take over the business of a publisher and bookseller, carried on by J. Lane, of The Bodley Head, Vigo-street, W. Private company. First directors: J. Lane, W. C. Carr-Gomm, B. W. Willett, J. H. Crockett and R. H. Boswell.

**NATIONAL VETERINARY MEDICAL ASSOCIATION OF GREAT BRITAIN AND IRELAND, LTD.**—Company limited by guarantee; to take over the property of an Association with a similar title, together with the journal known as the *Veterinary Record*. The management is vested in a Council of which O. C. Bradley is the president, and Sir Stewart Stockman, W. A. Taylor, A. Watson and A. Gofton are vice-presidents. Registered office: 12, Buckingham Palace-road, S.W.

**ASHBY, GIHL AND CO., LTD.**—Capital £5,000, in 4,250 15 per cent. cum. profit participating pref. shares of £1 each and 15,000 ord. shares of 1s. each; wholesale and retail export and import merchants, general buyers and sellers, merchants, agents, dealers in and contractors for chemicals, wood pulp, paper, machinery, fancy and other boxes, etc., and to adopt an agreement with C. T. Ashby and C. D. G. Gihl. Private company. Directors: C. T. Ashby and C. D. G. Gihl. Registered office: 57, Gracechurch-street, E.C.

**JOHN GALLOWAY AND SON, LTD.**—Capital £5,000, in £1 shares; printers, lithographers, stationers, account book manufacturers, etc.,

and to adopt an agreement with W. Galloway. Private company. First directors: W. Galloway and J. Galloway. Registered office: 33, Major-street, Manchester.

**MARTINS (LANCASTER), LTD.**—Capital £1,000, in £1 shares; wholesale stationers, printers, bookbinders and fancy goods dealers, etc. Private company. Subscribers: J. B. Smeddles and J. H. Smeddles. Subscribers appoint directors. Registered office: 12, King-street, Lancaster.

**H. C. LEE, WHITEHEAD AND CO., LTD.**—Capital £20,000, in £1 shares; to take over the business of printers, publishers, bookbinders, account book manufacturers and wholesale and retail stationers, carried on by H. C. Lee and Co., Ltd. Private company. First directors: H. C. Lee, R. T. Whitehead, O. J. Parish, J. H. Shepherd, W. Comley and V. Whitehead. Registered office: 11, King-street, Oldham.

**TAMARLYN, LTD.**—Capital £500, in £1 shares; dealers in fancy goods, manufacturers of and dealers in stationery, etc. Private company. First directors: G. W. Harrison, Mrs. C. F. Harrison, and Miss C. C. Harrison. Registered office: 55, Fowler-street, South Shields.

**LONDON MERCURY, LTD.**—Capital £15,000, in £1 shares (8,000 to per cent. non-cum. participating pref.); to adopt an agreement with J. C. Squire, and to carry on the business of proprietors, printers and publishers of magazines, journals, newspapers, etc. Private company. First directors: J. C. Squire and I. A. Williams. Registered office: Windsor House, Breams-buildings, E.C.4.

**ANGLO-INDIAN TRADING CO., LTD.**—Capital £100, in £1 shares; manufacturers, importers and exporters of and dealers in goods of all kinds. Private company. H. M. Whitehead is a director. Registered office: 88-90, Chancery-lane, W.C.2.

**VICKERY PRESS, LTD.**—Capital, £5,000, in 2,500 non-cumulative participating preferred, and 2,450 non-cumulative participating preferred ordinary shares of £1 each and 100 ordinary shares of 10s. each; to take over the business of printers, publishers, stationers, etc., carried on at 187, Westbourne-grove, W., as the "Bayswater Printing Co., Ltd." Private company. First directors: W. F. H. Pinkham and G. W. O. Huddart. Registered office: 187, Westbourne-grove, W.

**F. R. HALLIDAY AND CO., LTD.**—Capital, £500, in 400 preference shares of £1 each and 2,000 ordinary shares of 1s. each; printers, stationers, etc. Private company. First directors: F. R. Halliday, W. T. Whitehead and W. R. Gaff. Registered office: Capel House, 54, New Broad-street, E.C.2.

**PUBLICATIONS, LTD.**—Capital, £1,000, in £1 shares (five hundred preference); to adopt a verbal agreement for the purchase from the St. Martin's Publishing Co., Ltd., of the goodwill, stock-in-trade and contracts of the *Automotor Journal*, including the profits as from January 1st, 1921 (subject to liabilities), and to carry on the business of printers and publishers of newspapers, journals, magazines,

books and other works, etc. Private company. Subscribers: Stanley Spooner and William Dudley Coles. First directors: S. Spooner and W. D. Coles. Registered office: 36, Great Queen-street, Kingsway, W.C.2.

**CONGOLEUM CO., INC.**—Particulars of the Congoleum Co., Inc., have been filed pursuant to Section 274 of the Companies (Consolidation) Act, 1908. The authorised capital is \$6,000,000 in shares of \$100 each. The capital on which the company was authorised to commence business was \$3,150,000. The company was incorporated in New York on June 21st, 1919, to manufacture paper or yarn and other similar products. The principal place of business is at Manhattan, New York. The British address is at 123, Pall-mall, S.W.1, where H. S. Tiel is authorised to accept service of process and notices. No list of directors has been filed at present. File number 1,956F.

**BRITISH WHOLESALE SUPPLIES, LTD.**—Capital, £15,000, in 12,000 preference shares of £1 each and 12,000 ordinary shares of 5s. each; general merchants, manufacturers, importers and exporters of and dealers, printers, stationers, etc., and to adopt an agreement with R. Mourize. Private company. Subscribers: A. R. N. Powys and J. O. Foster. Subscribers appoint directors. Registered office: 3, Arundel-street, Strand, W.C.

## How the "Slogger" Works.

### Up-to-Date Sheet Feeder Described.

Present-day sheet feeding devices include some pieces of mechanism which are of special interest as being almost human in the intelligent way in which they handle their work. A high place among such mechanism must be allowed to the "Slogger" Automatic Sheet Feeder, which is in use all over the world and has had continuous success on every type of sheet fed press and folding machine. This feeder is not worked by friction, the sheets being separated by a current of air.

The action of the "Slogger" feeder is as follows:—A stack of paper is piled on the loading board and the feeder started. Two holders fall on to the two front corners of the sheet and a box with a long narrow opening through which is directed a strong current of air is then oscillated in front of the top edge of the pile. This has the effect of freeing the paper from all fluff, dust, etc., and by virtue of the oscillating movement the direction of the blast of air is so controlled that each sheet is separated and cleaned some thirty times before it is finally taken away to the press.

When the separation has been accomplished the two holders which have prevented the sheet blowing away are lifted off and two rubber-tipped fingers descend on to the pile to take the sheet by its extreme front edge and gently slide it off the pile on the layer of air which has been left behind by the action of the blowing box. The loading board rises automatically so that the top level of the pile is always maintained in its correct position no matter what thickness of paper is being worked. The sheet is then conveyed by tapes to the front lays. The progress of the sheet is arrested about half-an-inch from the lays and then it is allowed to go gently forward, so preventing the crushing of the lay edge. The sheet is kept gently pressed to the front lays while the sidelay comes into operation and registers the sheet. This sidelay is of special design and is so accurate in its action that better register is obtained than is possible for lengthy periods by hand.

When the sheet is at the front lays, feelers charged with electric current feel whether the sheet is there or not, and if anything is wrong with the register these feelers immediately put the current in circuit through the machine so that in the case of a letterpress the feeder is stopped, the press is stopped, the brake pulled on and the cylinder tripped. In the case of lithos the cylinder is tripped and the feeder is stopped but the press is left running. There is also a piece of mechanism supplied on the feeder to pull the machine up as before described in the event of two or more sheets being passed to the press should any be accidentally gummed or folded together.

As will be seen from the foregoing, this feeder does not mark the sheet in any way, all

its operations as far as possible being performed on the outer margins, with a result that on high class colour work the sheets with their various colours on can be fed over and over again without any danger of marking if the fresh colours are being printed while the previous colours are still damp.

This feeder is at present in use on sheets as large as 78 in. by 54 in. where the paper weighs almost one pound per sheet, and can be speeded to 3,500 sheets per hour, but the speed is controlled by the make of press to which the feeder is attached.

### Mr. John Drew.

The death of Mr. John Drew occurred on Saturday, April 16th, at his residence in Camberley, and the sad news came with startling suddenness to a wide circle of friends.

Mr. Drew was born at Rockley, near Swindon, in 1865, and commenced to earn his own living at the early age of eleven, eventually being apprenticed to a Swindon printer. Thirty-five years ago Mr. Drew was appointed works manager to Mr. James May, of Aldershot, and a few years later embarked in business for himself in Union-street, taking over that of the late Mr. H. Cox. By his integrity, industry and enterprise, he greatly prospered, and within nine years of acquiring the business in Aldershot he had opened branches in Yorktown, Farnborough and Camberley. Not the least interesting fact concerning Mr. Drew's career is that in 1907 he obtained possession of the identical printing works at Swindon where he had served his apprenticeship. Such was the development of the business that six years ago it was converted into a company, and it is interesting to note that a continued development has rendered necessary the erection of commodious printing works in Frederick-street, Aldershot.

As a prominent and active Wesleyan Methodist, Mr. Drew will be greatly missed, not only in the Camberley Circuit where he spent the later years of his life, but also in the Aldershot and the Farnham Circuits.

Every office in Methodism open to a layman Mr. Drew has filled with conspicuous ability, and his activities and generousities in the work of the Church of his adoption were innumerable. His memory will be held in grateful remembrance, and to his widow and family sincere sympathy in their sad bereavement will be extended by a very wide circle of friends.

MR. EDWARD T. WILLIAMSON, late circulation manager of the *Daily Telegraph*, died last week, at Wandsworth, in his seventieth year.

# New Inventions.

## A Platen Label Printing Press.

A platen press for printing on labels, patented by A. Wilden and Vertriebsges Moderner Spezialmaschinen, is fitted with a series of adjustable type-holders which permit each line of the printing to be made with all large types or all small types or a combination of large and small types. As shown, the type-holders 1 are adjustable in a bed 2 which is guided by rods 11, and guides 12, and is raised by a cam 14 and depressed for the printing stroke by springs 16. The types set-up in the holders 1 project through a central aperture 6 in the bed 2, and print a web 15 in conjunction with a fixed platen 36. The printed label is cut off by a knife 37 on the bed at the next descent of the bed. The web 15 is forwarded by rolls 31, 30 actuated from

a shaft 26 which is rotated intermittingly to the desired extent by a pawl 25 and ratchet wheel 27. The pawl is on an arm 24 which is oscillated from a cam 21 on the shaft 13, and the extent of the feed is controlled by an adjustable disk 32 which masks the action of the pawl 25 to an extent controlled by an arm 34 and dial 35. The bars 1 are set individually to the required adjustment by the aid of a spring locking device 5 which can be made to engage one of a series of slots 10 in bars 9, or can be held in raised position by a catch. The types are held in position by a top plate 18 acted on by a screw 17, carried by a pivoted bow-shaped frame 19 which is held in position by a catch 20.

## Cardboard Boxes.

In an invention patented by Mr. A. A. Bolton a hinged lid *d* of a cardboard or other box is held closed, when the box is being carried, by a cord *g* arranged to provide a hand carrying loop *h*. The cord *g* passes

from the inside to the outside of the box by way of holes *e*, the part of the box adjacent to the holes being reinforced by a piece of linen, etc. *i*. A paper flap *j* may be arranged inside the box.

## Paper Finishing Machine.

In a patent by Messrs. F. C. Ladd and F. G. Neal is described a means for imparting to the surface of paper a finish such as has been produced by a "plater," this new machine being designed to take the place of and do the work of the "plater" machine and to have advantages not possessed by the latter. In the accompanying illustration is shown a vertical sectional view through the machine described, A being the main frame of the machine, formed of two spaced side frame members, on which the various parts are mounted. At one end of the frame is supported the roll of paper *a* to be finished, the paper being fed over guide roll 3, between the cloth strips *b* and *c*, the ironing plates 31 and 32 for ironing out wrinkles in the cloth, and the pressure rolls 20 and 30. The paper then goes over the guide roll 15 and to the wind-up roll on rod 16 being drawn through the machine by the slipping drive of the wind-up roll and the positively driven pressure rolls.

The cloth strips *b* and *c* will ordinarily be made of linen, but other cloth may be used.

The strips are joined in such a way that the joint will not show appreciably when the pattern is transferred to the paper. Each cloth strip is arranged to travel over a series

stearine and resin, pressed and "dried." The product may be used for roofing, packing-boxes, partitions, "protecting floors," electric switchboards, and the like.

of suitably arranged guide rolls 21, one roll of each series being adjustable in suitable ways by means of the sliding bearings 4 and 5, for maintaining the desired tension in the cloth.

The pressure roll 20 is preferably made of unyielding material, such as iron or steel. The pressure roll 30 is made of a somewhat different material, which is somewhat yielding, but yet is sufficiently dense to sustain, without excessive deformation, the pressures applied in plating paper. For this purpose the material may be cotton, paper, hard rubber, the composition ordinarily employed in calender rolls, or other substance. By using material of the nature mentioned, the enormous pressure necessary between the pressure rolls, instead of injuring the cloth strips and the paper, will give a kneading effect due to the relative yield of the rolls as they rotate, which aids in transferring the cloth pattern to the paper.

### Cardboard Making.

A British patent has been applied for by Soc. E. Veuve Baron et Cie. by which in the manufacture of impermeable and rigid cardboard, ordinary cardboard is immersed in a boiling bath containing paraffin, ceresene,

## Auspicious Opening of the Exhibition.

**Royal Agricultural Hall now the Centre of  
Interest in the Printing and Allied Trades.**

The opinion was often expressed, when visitors were admitted on Saturday to the Sixth International Printing, Stationery and Allied Trades Exhibition, that no better exhibition of its kind had yet been held, either in this country or any other. Certainly the extent and attractiveness of the very impressive assemblage of exhibits which now fill the Royal Agricultural Hall, together with the big interest which is being shown both by the trade and by the general public, promise that the previous successful achievements of the Printing Exhibition will this year be brilliantly surpassed.

### **DISTINGUISHED VISITORS.**

Dr. T. J. Macnamara, M.P., Minister of Labour, performed the opening ceremony on Saturday, and was present also at a subsequent luncheon, when the following were amongst the principal guests:—Mr. E. W. Humphries (president of the Federation of Master Printers), the Right Hon. C. W. Bowerman, M.P., Mr. Geo. H. Roberts, M.P., Eng. Vice-Admiral Sir George Goodwin, Sir James Allen (High Commissioner for New Zealand), Sir Edgar R. Bowring (High Commissioner for Newfoundland), the Hon. Sir Peter McBride (Agent-General for Victoria), Mr. John Howard (Agent-General for Nova Scotia), Mr. A. H. Ashbolt (Agent-General for Tasmania), the Hon. J. M. Hunter (Agent-General for Queensland), the Hon. Sir James D. Connolly (Agent-General for Western Australia), Mr. José Medina, (director of the Colombian Bureau of Information and Trade Propaganda), M. Henri Martin (First Secretary and Commercial Attaché to the Swiss Legation), Mr. A. Canham (Trade Commissioner of the Government of the Union of South Africa), the Consul-General for America, the Consul-

General for Belgium, the Consul-General for Bolivia, the Consul-General for Brazil, the Consul-General for Finland, M. M. Marchat (Deputy Consul for France), the Consul for Liberia, the Consul-General for Nicaragua, the Consul-General for Norway, the Consul-General for Peru, the Consul-General for Spain, the Consul-General for Sweden, Mr. R. A. Austen-Leigh (president of the London Master Printers' Association), Mr. W. H. Lock (chairman Hon. Advisory Council of the Exhibition), Mr. J. R. Riddell (principal St. Bride Printing School), Mr. A. E. Goodwin (secretary Federation of Master Printers), Mr. W. R. Codling (Controller H.M. Stationery Office), Dr. E. Halford Ross, Mr. R. D. Blumenfeld (the *Daily Express*), Mr. A. G. Green (of Madras), Mr. Norman Dodge (of New York), Mr. A. H. Walker (managing director Linotype and Machinery Ltd.).

Reports of the proceedings and speeches at the official opening and the luncheon will be found on a later page.

### **BRITISH MANUFACTURERS' ACHIEVEMENTS.**

A very satisfactory feature, noticed immediately on entering the exhibition, even on the day of opening, was the comparative completeness of the exhibits. Most of the exhibitors had their stands finished and fully trimmed, and much of the machinery could be seen working. It is evident that an immense advance has been made upon even the fine exhibition of 1914, and it is especially gratifying to remember that this great improvement in respect both of the spacial extent of the exhibits and their comprehensive character, has been accomplished by British and allied manufacturers in spite of the elimination of German and Austrian representatives, whose

Head Office and Works:

LEEDS.

London Office and Works:

7, FARRINGTON ROAD, E.C.1.

NORTH 3920.

Please accept this as a CORDIAL INVITATION to visit our Stand and study our exhibits at the PRINTING EXHIBITION. The above is a plan of the Main Hall, AGRICULTURAL HALL. Bring it with you as a guide to our location.

**N.B.—The Exhibition closes on  
 Saturday, 14th May!**

showings have constituted an important part of previous exhibitions.

The great number of the stalls and the high standard of excellence of the multitudinous items of interest make it impossible that a brief résumé can be complete, but we now extend the survey given last week by adding many further short notices of exhibits of interest, and we intend to print a still further selection next week.

### MAIN HALL.

#### Henry Drysdale and Co.

The most interesting feature of the exhibit of Messrs. Henry Drysdale and Co., of Goswell-road, is a Five-Colour Rotary Multi-Colour Printing machine, manufacturing cartons complete in one operation. This is seen at work, and attracts much attention by reason of its compact construction and ingenious action. In addition there are shown samples of patented cartons.

#### Pickup and Knowles, Ltd.

At this stand is to be seen a new patent Sheet-fed Photogravure Printing Press which will print with etched cylinders of variable sizes, and will also print from the web and reel, or cut into sheets if required, by adding a sheet-cutting attachment. Demonstrations of sheet printing are given during certain hours at this stand.

#### Cropper, Charlton and Co., Ltd.

Among the interesting exhibits of this Nottingham firm may be mentioned a No. 2 Improved Peerless Printing Press, a fast-running little press suitable for Christmas cards, menus, small stationery, etc., also a Fc. Fo. "Franklin" Machine suitable for general commercial work, also special platen machines and guillotines.

#### Slogger Engineering Co., Ltd.

An excellent demonstration of the feeding specialities of this well-known firm is to be seen at Stand 7, Row A, Main Hall, where there is a "Slogger" Feeder attached to a No. 4 Miehle Press (kindly loaned to the Slogger Co. by Linotype and Machinery Ltd.), while on the stand of George Mann and Co. will be found another "Slogger" Feeder attached to one of their latest type of Offset. The "Slogger" Feeder has been fitted with the greatest satisfaction to Two-Revolution, Wharfedales, Intaglio Press and Folding Machines, in fact, every type of sheet-fed machine, feeding sheets up to 78 in. by 54 in. at a speed to realise the full capacity of the press. The present perfected machine is the outcome of 20 years' careful and costly experimenting. The "Slogger" Feeder, as will be noticed, is a Pile Feeder, which need only be loaded when the minder stops for the usual dinner and evening breaks, thus getting full time output from the press at a minimum cost of labour.

#### Autoknockups Co., Ltd.

A novelty which attracts much attention is the "Autoknockup" Patent Jogging Machine,

a labour-saving machine for printers, lithographers, envelope manufacturers, manifold book makers, machine rulers, etc., entirely replacing hand labour for the "knocking-up" of plain or printed paper of every weight or quality, in all sizes up to 44 in. by 64 in.

#### John Greig and Sons.

This Edinburgh firm of iron founders, engineers, and machine makers, display the New Conqueror self-clamp guillotine. Almost noiseless in action and with hardly any vibration it is fitted with fast and loose pulleys for ordinary shaft drive. Among its advantages are rapidity of cutting speed, reliability of holding power and absolute accuracy of cut. Messrs. Greig also manufacture an automatic knife sharpening machine with travelling bed which reduces the costs of knife sharpening. Other requisites supplied are best hard-seasoned beech cutting sticks, best quality steel knives, and special fast-cutting oil stones.

#### Valters, Jackson and Co.

This Clerkenwell firm is showing many interesting items, including blocking presses, book-sewing machines, account book sewing machines, thread and wire stitching machines, bundling presses, loose-leaf and card index punching machinery, round-cornering machines and other machinery for the Printing, Bookbinding and Allied Trades.

#### Grover and Co., Ltd.

At this stand perforating machinery constitutes the major part of a striking exhibit. A Type I., Postage Stamp Perforator, is shown in motion, with latest improvements, the most important being the adjustable "Punch Box," by which (coupled with the facilities in the machine itself) dimensions and register may be varied in all directions. Type VI. is a modified form of gripper-controlled machine on the lines of Type I., with several valuable attachments. Other perforating machines, also Wrapping and Packing machines are seen at work.

#### Garratt and Atkinson.

Some admirable illustration work is seen at this stall where Messrs. Garratt and Atkinson have examples of their work in Process Engraving: Three and Four-colour Halftone, Halftone Black and White, Line and Line-Colour work, and Artists' work for the printer.

#### W. H. Lockett and Co.

On this stand are arranged and demonstrated the Waite and Saville Machines. Advances have been made principally in the direction of making the machines "fully automatic." The exhibits comprise a Crown-Folio Auto-Falcon in actual work; also a Demy-Folio Art Auto-Falcon, and one or two other sizes. Waite Offset Presses and Dawson Wharfedales are among other machines shown.

#### Marshall Engraving Co., Ltd.

This firm, at Stand 21, Row B., Main Hall, are showing a large variety of specimens of

their work from blocks in line, half-tone and colour. In view of the high cost of three-colour half-tone Blocks, they are specialising in Line Colour work in order to give good coloured effects at as low a price as possible. In addition to the making of blocks, they have a considerable Artists' Department for the assistance of their customers, and show on the Stand a wide range of drawings for advertisements, etc., and retouching, also specimens of Commercial Photography; a specially interesting feature is a printing machine demonstrating the "New Method" of Embossing (Ellis Patent).

### John Ratcliff and Sons, Ltd.

In a fine and varied exhibit this Yorkshire firm includes "Reliable" Direct Rotary machine, "Reliable" Flat-bed Lithographic machine, Quad-crown Flat-bed Offset machine, Flat-bed Tintplate Printing machine, Graining machine, Litho Transfer and Copperplate Presses, and several other items.

### John Swain and Son, Ltd.

A miscellaneous and striking collection of items relating to illustrative work is shown by this famous house, to whom we referred last week. The exhibit includes: examples of their various processes, including Half-tone, Line, Colour, Colour Offset, Swain-gravure and Chromo-Litho, Specimens of Art and Commercial Electrotyping and Stereotyping. There is a special display of Reproductions in Colour and Gravure of Showcards, Calendars, and Advertising Designs.

### Frank Horsell and Co., Ltd.

At Stand No. 26, Main Hall, Frank Horsell and Co., Ltd., as in previous exhibitions, have a series of exhibits which will interest the lithographic as well as the typographical side of printing. Printing inks, dry colours, litho and letterpress varnishes are shown, also litho roller skins and Parker printing plates, the two latter of which will be in use on some of the largest machines running in the exhibition. Their further manufactures, including woollen blanketings, moleskins, felts and other litho sundries, are on view. Messrs. Horsell have their patent roller covering machine on show, along with an iron bed for plate printing on flat bed machines. A new idea in the form of a special steel scraper, to take the place of to-day's inferior boxwood scrapers, is shown to the public for the first time. It lasts "for ever" without warping or skellaring.

### Fry's Metal Foundry.

Fry's model foundry constitutes one of the outstanding features of the Exhibition, and is drawing a continuous flow of visitors to Stand No. 27, Row C, Main Hall, the principal points of which were mentioned in last week's issue.

### John Kidd and Co., Ltd.

Brilliant splashes of colour first catch the eye at this stand, to which reference was made last week, and closer examination reveals an attractive range of specimens of

printed work produced entirely by printers using Kidd's Inks.

### Messrs. Dawson, Payne and Elliott, Ltd.

These well-known makers, who have now amalgamated, are to be found jointly exhibiting at stand 29 in the Main Hall. The following machinery is of special interest:—Quad Crown Summit Fine Art Wharfedale Printing Machine for the highest class of work; Double Demy Perfection Wharfedale Printing Machine; Demy Automatic Perfection Wharfedale, complete with the Waite Feeder; Demy High-Speed Wharfedale Printing Machine; A 45 in. by 35 in. Folding Machine giving four folds and two parallel folds; A 52 in. Diamond Self-clamp Guillotine Cutting Machine; A Monitor 1½ in. size Wire Stitching Machine; A Lever Blocking Press; A Lever Round Corner Cutting Machine. A separate motor, made by Electromotors, Ltd., Manchester, drives each machine.

### Linotype and Machinery, Ltd.

A large sign carrying the trade mark L & M logogram, hangs above the magnificent exhibit of Linotype and Machinery Ltd., the items of whose machinery we dealt with at some length last week. There is a continuous flow of lookers on to see the the composing machines in use, the printing machines at work, and the many fine examples of up-to-date engineering as applied to the printers' requirements.

### A. W. Penrose and Co., Ltd.

This stand contains a number of machines and apparatus of practical utility to the printer and the process worker. On the Velogravure Sheet-Feed Printing Machine, with automatic delivery and drying arrangements, the printing is done from copper cylinders etched by the Penrose Velogravure process, which is a simplified and perfected method of rotary photogravure. The machine shown is the smallest size made, and is intended for job printing, but the firm make a double-crown machine on the same principle, whilst other types are made to print sheets 38 in. by 25 in. and 44 in. by 32 in. Working demonstrations are given during the Exhibition. The Offset Litho Hand-Proofing and Reversing Press is of the travelling cylinder type and is intended to either supplement power presses by providing a ready means for proofing, reversing and transferring, or to be used for short runs where no power machine is available, or in cases where it would not pay to put a job on a power press. The Universal Engraving Machines replace hand work in engraving lettering and ornament on copper plates and steel dies. They are based on the Pantograph principle in which the engraving is controlled by a tracer point following the enlarged outlines of the design on a master plate. Demonstrations are given and specimens of work shown. The "Bawtree" Type-Composing Machine seeks to produce "copy" of text and display matter for the photo-engraver, photo-lithographer and photogravure printer without having to set up type and pull trans-

fers. It is based on a stop-and-repeat principle, the alphabets being on a circular glass plate, which is revolved by a ratchet action, which brings the desired letter or character into position for photographing. The machine is the first model and improvements are in progress. Other features of Messrs. Penrose's stand are the Vacuum Printing Frame and Motor Pump, the "Empire Process Camera," the All-Metal Camera Stand, Sun-ray Arc Lamps, Power Rocker for Etching Baths, the Elliptograph Colour Squaring Machine, Electrotypers' Blackleading Machine, Jig Saw and Piercing Machine, the "Empire" Proof Press and the Rotary Trimmer "Bowler" Type.

### R. W. Crabtree and Sons, Ltd.

Further evidence of the skill and enterprise of printers' engineers in this country is provided in the Crabtree stand, the principal points of which we mentioned last week. Attention centres largely on a fine perfecting press of the section type, while the subsidiary items of this notable exhibit also arouse much interest.

### Pictorial Machinery, Ltd.

The "Lithotex" process, which has lately attracted so much attention, is brought prominently to public view at Stand No 36, Row D, Main Hall. For the first time at these Exhibitions is shown the world-renowned Step-and-Repeat Machine, now familiar in the printing trade; the only step-and-repeat machine making duplicated negatives; its distinguishing feature is that it projects images enlarged or reduced and all in absolute focus, *as will be shown* to visitors. It has been said that the synchronising of photographic focussing by mechanical means is an impossibility, yet this ingenious machine does it. The negatives are obtained as sharp as they would be if individually focussed. The instrument, as will be seen, is of solidly built construction and of good engineering design. Other appliances of the Company which constitute "Lithotex" complete standard plant are also displayed. Visitors will be much interested in the range of specimens done by users, and, as no specimens have been specially prepared, but all loaned them by users of the plant, the extraordinary facility of the plant is demonstrated.

### Sun Engraving Co., Ltd.

The Sun Engraving Co., Ltd., have a very interesting exhibit of a two-fold nature. In the Main Hall the "Sun Cottage" is an attractive feature of the Exhibition, and on its walls are shown a big range of examples of process engraving in black and white and in colour. In the Gallery they have another Stall, where there will be a further display of the firm's work, while in the Annexe close by in the "Sun" Hall is an interesting mechanical exhibit. Here is running a very instructive exhibit of intaglio work in all its stages.

### T. G. and J. Jubb.

Still "on their metal" are these well-known specialists in printers' metals, to whose ex-

cellent exhibit we have already referred. The numerous plates, etc., in which Jubb's metals have been used by important newspapers up and down the country are a salient feature, while many visitors come to see Mackey's Patent System of Poster Composition, which dispenses with curved wood letter.

### Lanston Monotype Corporation, Ltd.

We listed last week the principal items of the striking Lanston stand, which forms an impressive demonstration of the specialities which the Corporation supplies. While the Monotype composing machines at work attract much attention, there are numerous other things, both large and small, to hold the printer's interest.

### Hewitt Brothers.

Stereotypers and electrotypers will find much to interest them at the Hewitt stall. The most outstanding feature is a Finishing Machine, on which the whole of the operations necessary for finishing stereotypes and electros can be made, and consisting of a powerful saw bench, a complete edge planing, step and an ordinary bevelling device, a good modern router, capable of fine and accurate work, and a highly efficient jig saw and drill, each unit can be operated independently of the other by means of a specially-designed clutch pulley controlled by a suitable handle; the usual trouble with combined machines is eliminated by this means, as there is no disturbance of the machine necessary to perform any function, each unit being always available for instant service, other items of interest in this exhibit are a back-planing machine of the latest design, smaller sundries required by the printer. An interesting exhibit is a Stereo Forme of a well-known London journal, showing the high excellence to which the art of stereotyping has developed in these times.

### Messrs. John Haddon and Co.

Messrs. John Haddon and Co.'s exhibit consists of a No. 43 (Double Royal) Babcock "Optimus" Two Revolution Press, having a guaranteed speed of 2,500 impressions per hour. This press is worthy of the closest consideration, as the "Optimus" delivery is claimed to be the finest mechanism of this nature fitted to any printing press. The inking is exceptionally heavy and the press is equipped with a large number of labour-saving refinements, all worthy of the closest attention. The No. 6 (Quad Crown) Babcock Standard Drum Cylinder Press is also shown, and the latest pattern will demonstrate that the makers of this press have nothing to learn in this line. A machine which will no doubt excite keen interest on the same Company's Stand is the new British "Victoria" Platen, which is an exact copy of the No. 5 special model German Victoria, and embodies every desirable feature which that press possessed. British "Victoria" is a very fine piece of engineering work, and is made by the well-known house of W. H. Dorman and Co., of Stafford, the originators of the Art Caxton Platen, Caxton Rotary Perforator, Beatrice Blockers, etc. Another machine shown on

this Stand, made by the same firm, is the latest pattern Caxton Rotary Power Perforator, which is now equipped with a number of perforating cutters of different patterns for varied requirements together with a pair of Slitters and a pair of Creasing Dies. The rest of the space is devoted to an exhibit of small machines of up-to-date character, space saving composing room joinery, zinc and copper plate for process engravers, etc.

### Canadian-American Machinery Co., Ltd.

In the way of machinery, these manufacturers have three of their principal productions on exhibition, which, no doubt, will be of particular interest to intending users. The "Cleveland Folder," among its other qualifications only requires two girls to operate it. Recent purchasers of the machine have been some of the largest firms in the kingdom. Another machine shown is a two-revolution press, which, with an automatic feeder, power unit and control attached, forms a complete automatic unit. The machine is capable of printing the simplest leaflet to the most elaborate three and four-colour job. The "Standard Machine," of interest to the bookbinder, completes books from 6 in. to 2 in. long with 1, 2, 3 or 4 stitches in one operation. On this machine various sizes of books can be handled without making any adjustments.

### R. Hoe and Co., Ltd.

At Stand No. 68, Row H, Main Hall, Messrs. Hoe are showing one of the most important improvements in printing machines since the introduction of the triangular former, viz., a method of supplying ink to the distributing drum by means of a patented automatic ink pump. With this inking device, which is the only one in the world, the operator can regulate the flow of ink to the 32-columns on four eight-column plates placed across the plate cylinder from a position outside the frames of the machine. The 32 regulating screws are placed in a small ink reservoir, measuring 12 inches by 15 inches, each cylinder having its own reservoir. The operator sets his colour by manipulating the 32 adjusting screws in the ink reservoir, and all adjustments can be made while the machine is running at full speed. This new device does away with the ink fountain and its numerous thumbscrew adjustments, which can only be reached by the operator passing inside the frames of the press, or by moving to both sides of the machine. It also does away with the ratchet motion for moving the fountain roller as well as the ductor. In the old system when the press is running at slow speed the papers produced show a loss of colour, but by the use of these ink pumps there is no loss of colour; in fact, when running slowly, the printing shows darker. Means are provided by which a whole page can be controlled or entirely shut off from the ink supply by the movement of one small slide. If the colour is too dark or too light, the whole of the eight pumps for that page can be adjusted, or each column of the page can also be adjusted separately. In the old system every eighth

paper receives a fresh supply of ink by the operation of the ductor or lifting roller. In this way the plates on the first revolution received too much ink, while on the eighth revolution they received too little. With the ink pumps a continuous supply of ink is fed to the distributing cylinder, and gives a blacker and more evenly printed paper all the way through. When threading in the paper or when running the press without paper, the pumps can be disconnected. Ink pumps can be fitted to existing Hoe presses.

### C. W. Shortt and Co., Ltd.

A variety of printing machinery and supplies are to be seen at the Stand occupied by Messrs. C. W. Shortt and Co., Ltd. Attention is particularly drawn to the Linograph composing machine, for which simplicity and usefulness are claimed in many important particulars. Slugs are cast up to 30 ems measure, and the present range is from 6 to 14-point inclusive. The magazines, which can be changed in ten seconds, are so constructed that they will handle larger size matrices when produced. The machine can be run to produce six to seven lines per minute, the output being governed by the ability of the operator. Platen presses of three particular types are on view. The Hartford, 14 by 22 in. inside chase, is a perfected printing machine with ink distribution equal to that of a two-revolution cylinder press. It is suited for printing the heaviest type forms, the finest half-tones, colour and tint plates. A feature is the device for separating all the rollers when the press is not running. The Liberty Platen, 17 by 25 in. inside chase, is a four-roller press of the cylinder distribution type. It is designed for turning out the finest printing, embossing and light cutting and creasing jobs of intermediate dimensions. The National Platen Press is made in two sizes—13 by 19 in. and 14 by 22 in. It is designed and built expressly for the better class of work now demanded in commercial printing, including half-tone, colour-plate and light embossing. The Hartford Cutting and Creasing Press is built in three sizes. Though of strong construction in order to give the largest output at the lowest cost, it is simple in design and easily operated. The Hartford Embossing Press is also a feature of the Stand. Messrs. Shortt's exhibit embraces, too, high-grade quality metals, American type of wide range and the Wetter Numbering Machines for printing and numbering at one impression.

### W. Canaling and Co., Ltd.

The exhibit of this firm is located at Stand No. 76, Row "H," Main Hall, where will be found outfits for electrotyping, nickel-facing stereos, pneumatic solution agitators for rapid, heavy deposits, low voltage dynamos and motor generators, depositing vats, special apparatus for coppering printers' rollers, pure crystal sulphate copper, "Sun" brand copper anodes for electrotyping solutions, nickel salts, nickel anodes (flat and curved) for rotary stereos, "Zonax" metal cleaner, type cleaning brushes and material.

## GILBEY HALL. Smyth-Horne, Ltd.

The entire width of the north side of the Gilbey Hall is occupied by Messrs. Smyth-Horne, Ltd., who are thus able to demonstrate in the most effective way the value of their bookbinding machinery. An up-to-date line of special labour-saving machinery under power, and in operation, enables the trade to understand not only the principle of the different machines, but also their great saving capacity. Every phase of bookbinding is illustrated, revealing the capacity of this firm to assist the manufacturer not only to lower his costs, but to extend his output. Various Smyth sewers are on view showing with what speed and ease they can deal with books and magazines or with ledgers and account books. The capacity of any bindery is neither too small nor too large to benefit by the latest devices which ingenuity and understanding have produced. Particulars of the machines comprised in this exhibit were given in last week's issue.

## Bonham, Scott and Co., Ltd.

At Stand No. 2, this Glasgow firm show an entirely new design of machine called the "Bonham Press," claimed to be the smallest two-revolution machine yet made, and embodies numerous new features and advantages. Special attention is drawn to a new electrical equipment and control, supplied by the Igranic Electric Co., Ltd. The neatness and effectiveness of the "Bonham Press" are appealing.

## Chambon, Ltd.

Messrs. Chambon, Ltd., of 106-8, Queen Victoria street, E.C.4, are showing their "Chambon" Multi colour Printing and Punching out Machine, also one of their well-known slitting machines. The former machine is intended to be of great service to manufacturers who are in any way concerned with printing of labels, wrappers or cartons for colour illustration. The slitting machine is the outcome of many years' experience, and up to present over 200 of them have been supplied.

## National Institute for the Blind.

At Stand No. 4 one was pleased to renew acquaintance with Major Fordyce Birch, lately secretary of the London Master Printers' Association and now secretary of this worthy institution. The service which the Institute is performing to blind people in the way of enabling them to read is incalculable; but it does much more, it teaches some of them to cut the printing plates and to work the Braille and Moon type. Specimens of these are on view, and visitors are interested to learn that the Bible in Moon comprises 59 stout volumes weighing 240 lbs.

## J. L. Morrison Co., Ltd.

The J. L. Morrison Co., Ltd., show a full range of their "Perfection" wire stitching machines for boxmakers, bookbinders and printers, as well as automatic box covering machines and combined slotting and corner-

cutting machines for paper boxmakers. The machines are mainly the product of this firm's new British factory, at Bredbury.

## Hobbs Manufacturing Co.

Practical demonstrations are afforded at Stand No. 7 of a great variety of ruling, numbering, perforating, box staying, and cutting and scoring machines. The Hickok "L" pen ruling machine is arranged for feint and down lines on one side at one feeding, and is fed by the Hickok automatic paper feeder. Another feature is the Hickok sheet feint line disc through ruling machine, for ruling on both sides in one direction at one feeding in one or two colour head lines.

## Wilton-James, Ltd.

This firm of manufacturing electrical engineers and power specialists in the printing, textile and allied industries demonstrate all types of equipments for variable speed driving with full automatic or semi-automatic control.

## Oscar Friedheim, Ltd.

Book-sewing, stitching and knotting machines are seen at work at Stand No. 9. For the first time in the history of bookbinding, books can be sewn without needle heads, which have hitherto been a source of trouble. The exhibits of Oscar Friedheim, Ltd., comprise a new and up-to-date book sewing machine in various sizes; also an improved thread stitching and knotting machine in two designs; and for the first time on the market, the new "Murray" signature bundling press. Among the simplified book sewing machines operated by power are the following:—No. I.: Without stitching heads—arranged for every variety of sewing, including over tapes and through tapes of various widths, also plain (French) sewing; capable of sewing four tapes on a book 6 in. in length; maximum size book 13 3/4 in. by 9 13/16 in. wide. No. II.: Without stitching heads—to take books up to 16 1/2 in. by 11 in.; for plain (French) sewing and tape sewing. No. III.: Without stitching heads—for account book work; maximum size of books 22 7/16 in. high by 15 3/4 in. wide; also arranged for over tape stitches 5-16 in., 5 8 in., 15-16 in., and 1/4 in. in length; four different lengths of stitches can be made inside the book, 5 8 in., 15-16 in., 1 in. and 1 1/2 in. Then there is the National book sewing machine No. II. for all varieties of work from account books to pocket diaries. The thread stitching and knotting machines produce 2 to 3 in single stitches and 3 in., 4 in. and 5 in. three-hole double stitches, for exercise books, pamphlets, etc., also corner hanging loops.

## Miehle Printing Press and Manufacturing Co., Ltd.

At their old stand in the Gilbey Hall, the Miehle Printing Press and Manufacturing Co., Ltd., of Blackfriars House, New Bridge street, E.C.4, are showing the following examples of the American Miehle Co's world-renowned two-revolution presses; the two-colour press, for the simultaneous printing in two or more colours of the highest classes of superimposed

and interlaced colour work possible by typographic methods; the ordinary Four Roller Press and the High-Speed "Pony" Press.

### Caslon and Co., Ltd.

The comprehensive exhibit of this famous old firm is worthy of their reputation and record. There is everything for the printer in the way of type, furniture, platen machines and so on. A feature of the Stand are the Intertype composing machines which are being operated. Simplicity in construction is the claim made for them. The Chandler and Price platen machines are described as the strongest, most efficient and useful all-round jobbing platens. Side arms and shafts are made of forged steel. Cam rollers, tool-hardened steel. Fitted to these machines are shown new automatic feeders, such as the Humana, and the Klymak. Items in the Stand, which covers almost the whole of one side of the Gilbey Hall, include guillotines, proof presses, elevating trucks, metals and apparatus for newspaper work. Attention is also directed to the Virkotype machine which gives relief, plate or engraved effects direct from ordinary type, line blocks or stereos. In the way of furniture, printers' joinery and so on, Messrs. Caslon's display is a joy to working printers who too often are limited by the range of their apparatus.

### Williams Engineering Co., Ltd.

The "Nodis" typecaster, which is seen in operation, is designed to obviate the necessity of distribution, the most unprofitable operation in a printing office. It casts a wide range of sizes, from 6-pt. to 72 pt., with spaces, quads, quotations, ornaments, borders, etc., and can, in fact, be classed as a self-contained typefoundry. The simplicity of construction and operation, no skilled operator being required, makes the machine one of the most useful in any composing room, more especially in that of the small printer who is handicapped through lack of space, as it is not necessary to carry such a number of case racks. Moreover, it is not necessary to wait for "sorts" from the typefounder, especially in the suburban districts at a distance from the city.

### Edwardson and Co.

Glues and gums for the bookbinder, the box maker, the envelope manufacturer and others of the allied trades are exposed for examination by Messrs. Edwardson and Co. The effectiveness of the firm's products is seen by practical demonstration of the varied uses to which they are put.

### British Glues and Chemicals, Ltd.

In addition to cake glues for all purposes, this company make a striking show of Croid liquid glue, which, as seen in a photograph, sustained a weight up to 34½ cwt. It was used on areoplanes engaged in the flights across the Atlantic and to Australia.

### Practical Machines Co. (A. T. Gadsby, Ltd.)

A fine display of the various glueing, bronzing and cutting machines, all in operation, is made by this firm in the Gilbey Hall.

The practical demonstration illustrates the efficiency and the scope of the work undertaken. All kinds of coating from 6 in. to 48 in. wide for sheet and reel work can be performed on machines which are simple in construction and fitted with instantaneous coating regulator and cleaning device. The round cornering, relief stamping and hole punching devices are ingenious, as also are the machines for the folding box and carton trade. A very fine example of the well-known "Silverlock" bronzing machine is on view, showing how it will bronze, dust and polish anything from thin paper to thick card. The continuous feed arrangement naturally makes for greater output. Much interest is taken in the rotary cutting machine with its combination for scoring and grooving. Among many other interesting items on the stand is an all-steel paper baler, with its new releasing device.

### Ellis Graber.

The work of producing pictures of postcards on the Graber machines readily arouses the curiosity and interest of visitors. This engineer specialist has devised everything for the purpose.

### Fell and Hill, Ltd.

Stand No. 18A in the Gilbey Hall is full of novelties connected with glueing, gumming and varnishing machines. It also includes the music typewriter, which in itself merits a special visit to the Exhibition.

### John T. Marshall.

A wide range of stitching, paging and cutting machines are shown for the first time by Messrs. John T. Marshall. The Marshall thread-stitching, looping and stringing machine is constructed for stitching books with a two or three hole stitch and tying the knot, also for looping and stringing calendar, showcards, etc. The treadle paging machine, with new and simplified locking device, keeps the figures in perfect alignment and has no interior springs and pins. The index-cutting treadle machine only requires the turn of the screw adjustment when changing from one size book to another. Other features on the stand are a slot-cutting machine, single and multiple treadle and power for cardboard box making, confetti making machine, in which paper is automatically fed through a die plate, when it is punched into rounds, half-moons, stars, etc.; letter-file creasing machine for punching and letter-files, loose-leaf and index card folders; deckle-edge machine, with hand lever for cutting deckle-edge cards, tailors' bunch patterns, etc.; trimming and cutting machine; guard folding machine for folding guards for guard books, end papers, pamphlets, etc., and stabbing machine for stabbing pads with one or more holes.

### Wm. J. Light and Co., Ltd.

A visit to Stand No. 19 reveals the splendid character of the apparatus for printers which this firm handle. In our last issue we gave details of the exhibits, and an inspection substantiates all the claims made. Mr. Light's

(Continued on page 182.)

## THE PAPERMAKERS' OPPORTUNITY.

To secure an increased export trade no opportunity should be lost by Papermakers and Wholesale Stationers in bringing their names and specialties before

## COLONIAL & FOREIGN BUYERS.

To do this effectively, no better medium presents itself than the "British and Colonial Printer and Stationer," Established in 1878. Its contents are keenly studied by Foreign and Colonial purchasers of Paper, Stationery, etc., and firms advertising in its pages may rely upon securing good business.

## GOOD BUSINESS.

From Capetown, MR. A. W. NUTH, Lithographer, writes:—"What pleasure it gives me to read the reports of trade and doings in the Old Country, so well put together, in the "British and Colonial Printer and Stationer," every week."

The head of one of the largest printing and manufacturing stationery businesses in Australia (MR. W. E. SMITH, of Sydney,) says:—"Although my house is an old-established one, I have to assure you that I fully appreciate the notices you have given it from time to time, and which has had the effect of bringing us into touch with manufacturers, etc., in various countries."

From Sydney, N.S.W., MR. WM. BROOKS, Printer and Stationer, writes:—"I read your paper with a great deal of interest, and there is no doubt that it is a paper which should be taken by every printer who wishes to keep himself in touch with developments in our line."

# The Exhibition Opens.

## A Happy Send-Off on Saturday.

In very auspicious fashion, as has been mentioned on a previous page, the opening of the big show at the Royal Agricultural Hall took place on Saturday, when Dr. T. J. Macnamara, M.P., Minister of Labour, declared the Exhibition open, and subsequently he and many other distinguished visitors were entertained to luncheon.

Presiding at the opening ceremony, which took place at about 1.30 p.m. in the Main Hall, Mr. E. W. Humphries, president of the Federation of Master Printers of Great Britain and Ireland, referred to the visit which some British master printers had paid to the Leipzig Exhibition, and said they had felt that it was one of the finest ever held. However, he thought every one, even the Germans, would admit that the present was one of the finest exhibitions of printing machinery that this or any country had seen.

### The Romance of Machinery.

Dr. Macnamara, who said he felt honoured to be asked to declare the Exhibition open, remarked that this exhibition put before them some amazing achievements of inventive and mechanical ingenuity, achievements brought together with never-failing faith and determination during five centuries. He referred to the romance of the development of the printers' art as a fascinating study, this development taking its rise from what was one of the greatest discoveries, indeed one of the greatest revolutions, in the annals of mankind. Speaking of the wonderful printing machinery of the present day, he pictured the bewilderment of "old Father Caxton" if he were able to walk around the present exhibition. We spoke disparagingly and pityingly of our grandfathers as antediluvians, but it might take the edge off our satisfaction if we in our turn could hear what our grandsons would say about us. He threw out the suggestion that the Printing Trades Joint Industrial Council might invite younger members of the craft to compete in writing essays on "The World Without the Printing Press."

Mr. W. H. Lock (chairman of the Hon. Advisory Council of the Exhibition) moved a vote of thanks to Dr. Macnamara and presented him with a gold medal as a souvenir of the opening of the Exhibition.

Mr. W. I. Burch (vice-chairman of the Council) briefly supported the motion, which was carried with acclamation.

### The Luncheon.

Immediately after the opening ceremony the numerous invited guests proceeded for luncheon to the large luncheon hall, which they filled to overflowing, Mr. E. W. Humphries presiding

in very genial fashion. Following upon a generous repast came a rather lengthy toast list, which was cordially honoured.

The toast of "His Majesty" was followed by that of "Success to the Exhibition," which was given (in the absence of the Rt. Hon. Lord Riddell) by the Rt. Hon. G. H. Roberts, M.P., who in his speech emphasised the printing trade's pioneer position in regard to the adoption of the scheme of the Joint Industrial Council. He said that if the spirit and methods of the printing trade were adopted by other industries, the country would be nearer reconstruction and stability, and every class of society would benefit.

Mr. W. H. Lock responded in an able and humorous speech.

The Rt. Hon. C. W. Bowerman, M.P., who was received with great cordiality, proposed "The Opener of the Exhibition." He laid stress on the developments made in the printing world and expressed satisfaction that this was primarily an exhibition of *British* manufactures. British brains and British machinery could not be beaten. They were passing through difficult times at present, but there was no industry in the country that had given less trouble to Dr. Macnamara's department than the printing trade.

### Dr. Macnamara's Speech.

On rising to respond Dr. Macnamara had a rousing reception. Referring again to the achievements of modern times, he stressed the great advances made in regard to the relations of employers and employed. He said there were now in existence 71 Whitley Councils, affecting 3,500,000 workpeople. Just now, and in the very early days of their development, came their real testing time. "We have just emerged from the greatest smash-up in human affairs," he said. "The problem is to straighten things out and rebuild on lines that shall make for permanent prosperity and human happiness. It can be done, but not by further disruption and dislocation. You can't make good the ravages of one earthquake by clamouring for another. You want to start in building up again patiently and with mutual good will, mutual confidence, and mutual forbearance. (Cheers.) And here the Whitley conception is the greatest and most opportune invention of our times." In the Exhibition, he said, were examples of the work which disabled ex-service men had done in the printing trade while still under training. It was fine work, satisfying the artistic sense that was in every true craftsman. Printing was being taught to disabled men at Bristol, Cardiff, Edinburgh, Leeds, Leicester, Manchester and Belfast, as well as at the success-

ful centre in London at the St. Bride Foundation Printing School, where there were now some 80 men in training. There had naturally been some difficulty during recent months in finding vacancies for these men to complete their training as improvers. When the outlook became brighter, he hoped they would be ready to meet him when he asked them to admit some more of those poor fellows. There were some 1,100 firms in the printing and allied trades on the King's Roll of Honour, and they were employing over 9,500 disabled men.

Mr. A. E. Goodwin, as a member of the Hon. Advisory Council of the Exhibition, gave the toast of "The Visitors." He said that at this Exhibition there was as good a show of printing machinery as could be gathered in any building in the world. Emphasising the pre-eminence of British machinery, he told how in 1914 British master printers visiting Germany found, even in printing works controlled by the German Government, machines which they were able to identify as coming from the British Isles. After referring to the business opportunities offered by the Exhibition, he said the Council were delighted with the response with which their invitation to the visitors had been met.

Response was made by Mr. W. R. Codling (Controller, H.M. Stationery Office).

Very hearty applause greeted the chairman's mention of Mr. F. W. Bridges, whose name did not appear on the toast list. To Mr. Bridges, he said, was due the success of the

Exhibition. He asked them to drink to his health, coupling with it their sincere thanks for the handsome hospitality provided.

Mr. Bridges, in reply, thanked his many friends, old and new, for the assistance they had given. The success achieved he attributed to the support of the exhibitors, and he emphasised the fact that in making the necessary arrangements every effort had been made to further the exhibitor's interests. He concluded by drawing attention to the value of the Exhibition in bringing all sections of the trade together, and so facilitating mutual understanding and co-operation throughout the industry.

Mr. Percy Squire, who gave the toast of "The Chairman," contrived to return thanks not only to Mr. Humphries, but also to Mr. W. H. Lock, as the very able chairman of the Hon. Advisory Trades Council.

Mr. Lock, in responding, made further expression of gratitude for the great services rendered by Mr. Humphries to the Exhibition, stressing particularly the evidence that had been forthcoming of the good feeling which Mr. Humphries inspires in Labour circles.

The proceedings closed with a brief response from Mr. Humphries, who received a cordial ovation.

Mr. ROBERT GILROY, director and general manager of A. M. Peebles and Son, Ltd., has been appointed a county magistrate for Lancashire.

## Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

### Official Visit to the Exhibition.

Among the attractions of the opening day was the official visit of this Association, whose members, accompanied by friends, commenced to arrive in large numbers soon after noon. After a few preliminary greetings and handshakes, the members, anxious to make the most of the time at their disposal, quickly started on their peregrination amongst the many features of interest offered by the Exhibition. Printing and allied trades' overseers are by adoption, if not by nature, essentially lovers and critics of their craft, and it was not long before they were to be seen scattered in every part of the building discussing the merits of the various appliances with the gentlemen behind the ropes. Notes were frequently taken—no doubt for future reference—of the many improved methods of production and handling that came under notice.

Soon after five o'clock, on the invitation of Mr. F. W. Bridges, tea was served in the Grand Saloon, the gathering, numbering about 350 ladies and gentlemen, appreciating to the full the brief respite and the invigoration offered by the kindly cup of tea. Among those present were Mr. F. W. Bridges, Mr. A. W. Hunt (president of the Association), Mr. H. Milton (vice), and Messrs W. Alleston, A. G. Aves, F. Peacock, A. J. Daines, J. Walker, J. Fleming, J. Lee and G. A. Eden.

In moving a vote of thanks to Mr. Bridges, Mr. Hunt expressed, on behalf of the Association, his thanks to that gentleman and his colleagues for so amply providing for their physical wants and also expressed his admiration for the wonderful exhibition they had brought together. (Cheers.)

Mr. G. A. Eden, in supporting the vote of thanks, said the interest which this event had called forth from the members was something of which they could feel proud. He regretted that the concert and social that was to have been held in the evening had to be postponed.

Mr. F. W. Bridges, in reply, expressed his delight at seeing so large and representative a gathering, and extended to them a hearty welcome to the Exhibition, and hoped they would thoroughly enjoy it. He congratulated the Association on its evident signs of vitality and hoped that it would not be another seven years before they met again under similar circumstances. He drew attention to the fact that on the last occasion of the Exhibition there were a large number of German machines showing and he appealed to the employer to stand by the Britisher in his attempt to supersede the German.

Before returning for home the members again separated and spent the remainder of the evening in making further inspection of the exhibits.

## Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

### Official Visit to the Exhibition.

This live Association—which made its official visit on Tuesday afternoon—found on arrival that the Exhibition was showing every symptom of vitality. The array of moving machinery and the exhibits generally were in an even more advanced state than on the opening day, and the overseers—who were present at the invitation of Mr. F. W. Bridges—made hurried inspection of the exhibits of the particular side of the industry in which they were mostly interested.

Tea was served soon after five o'clock in one of the side halls, the company numbering about 150 ladies and gentlemen. Among those present were Messrs. F. W. Bridges, W. Bullett, A. Chadwell (secretary and president of the Association), John Fry, T. Jubbs, W. J. Light, W. H. Longley, Glen Steel and H. Williams.

Mr. A. Chadwell later moved a vote of thanks to Mr. Bridges for the kind invitation extended to the Association, and also to the prominent gentlemen who had honoured them by their presence.

Mr. George Sharvell in seconding, on behalf of the executive of the Association, suggested that they should reciprocate the good feeling shown by asking Mr. Bridges and his council to their annual dinner next year.

Mr. Bridges replying, said it gave him great pleasure to entertain them, and he was delighted to say that it was the first Exhibition that was minus German machinery, and he felt certain they were interested in all the many improvements that had taken place that were likely to benefit the trade. He was delighted also to welcome the ladies as they would have an opportunity of seeing for themselves something of the intricacies and the wonderful mechanism of the machinery used in connection with the printing industry.

The company then dispersed with a view to further examination of the many attractions yet to be inspected.

Two cases of lead poisoning are reported to have taken place in the printing industry during March.

ACCORDING to "The Empire Press Union Circular" the Council have approved a scheme for the interchange of Imperial newspaper staffs.

**PAPER BOOTS.**—In view of the law prohibiting the import of goods made from substitutes, the Swedish Customs prevented the import of large quantities of American boots and shoes alleged to be made of paper. American exporters then tried to divert the same consignments to Denmark. To counteract this the Copenhagen Boot and Shoe Makers' Union has applied to the Government to prohibit the import.

## Trade Notes.

THE death is announced of Mr. Charles Henry Jones, for forty-five years traveller for Messrs. Watkins and Co., printers, Swansea.

TO CELEBRATE the 25th anniversary of the establishment of the *Daily Mail*, 6,000 persons sat down to luncheon on Sunday at Olympia. Viscount Northcliffe presided.

MR. RICHARD SHAW BOND, Surbiton, a partner in Messrs. Shaw and Sons, law publishers and stationers, Fetter-lane, E.C., left an estate of the value of £113,753, the net personalty being £83,250.

IN a libel action against Tillotson's Newspapers, Ltd., Bolton, by a person who complained of an article in the *Bolton Evening News* referring to his works and describing the "aroma" therefrom, there was a verdict for defendants.

STRIKES and lock-outs throughout the Canadian printing trade have followed an effort to enforce a 44-hour week and an increase in wages to equal 48 hours. A general strike has been ordered by the international officers of the Typographical Union.

PRINTERS FINED.—At Marylebone Police Court, on Friday, before Mr. d'Eyncourt, Morton and Burt., Ltd., printers, of Porchester-road, Bayswater, were summoned for printing 2,000 pamphlets entitled "The Irish Case Stated," which did not bear their imprint. Fines totalling £50 were imposed.

AT last Tuesday's meeting of the Printers' Managers and Overseers' Association there was a brief business session, in which the principal subject considered was the final arrangements for the P.M. and O.A. day at the Exhibition next Saturday, and the remainder of the evening was devoted to a Members' Concert, the talent for which was selected from the ranks of members and their friends.

AT the Manchester Assizes, last week, the trial was concluded of an action brought by Mr. T. J. Liddall, a printer, living at Altrincham, to recover damages for slander from Mr. J. A. Dawson, of the Broadheath Printing Works, Altrincham. Mr. Dawson was said to have imputed to Mr. Liddall dishonesty in appropriating money and goods. The jury found for the plaintiff, with £250 damages and judgment was given accordingly.

THE Earl of Derby presided at Manchester on Tuesday night, at a dinner held to celebrate the centenary of the *Manchester Guardian*, and to do honour to the fifty years' association with it of its distinguished editor, Mr. C. P. Scott. Fully representative of all shades of national opinion, the gathering included Viscount Burnham, Lord Robert Cecil, Sir John Simon, Mr. John Masefield, Mrs. Philip Snowden, Mrs. M. G. Fawcett, Mr. A. H. Illingworth, M.P., Mr. H. W. Nevinston, Professor J. A. Hobson, Lord Sheffield, Lord Rochdale, and Professor Delepine.

MR. WM. EDWARD HICKS, of Bristol, editor *Western Daily Express*, aged 60, left £3,151.

THE death is announced at the age of 54, of M. Paul Simond, manager of the *Echo de Paris*.

THE late Mr. A. Walter, formerly editor of the Parliamentary Debates in the House of Lords, who died on January 26th, left £8,590.

THE death occurred suddenly last week at Cardiff of Mr. W. J. Jenkins, aged 69, who had for many years carried on extensive business throughout South Wales as a paper merchant. Mr. Jenkins was a prominent Mason.

MR. C. F. HIGHAM, M.P., addressing the Publicity Club in London, recently, on the question of "Seaside Resort Advertising," declared that no poster should exceed ten words. There were far too many posters, and they were placed too close together.

MESSRS. SHUCK MACLEAN AND CO., LTD., printing ink manufacturers, of Gunpowder-alley, London, E.C.4, send us a novel advertising pamphlet which consists of some half-dozen excellent multi-colour prints of specially apposite humorous sketches by well-known artists.

THE slump in the picture post card business, coupled with the increased postage, are held partly responsible for the failure of Charles Fumer, trading as "E. Hoyland," of 20, Bank-street, Sheffield, wholesale post card dealer. His liabilities were returned at £880 6s. 1d. and assets were estimated to produce £636.

MESSRS. WILLIAM PHARAOH AND CO., LTD., 19, Bishopsgate, E.C.2, have been appointed sole agents in the United Kingdom for Messrs. "Austrocarton," of Villach, Czecho Slovakia, which company controls 15 wood pulp and board mills. Messrs. Pharaoh and Co., Ltd., are able to quote for all grades of wood pulp and boards from Czecho Slovakia.

MR. H. VERNON COLES and Mr. E. W. Andrews, who have been for many years close friends and colleagues in the paper trade, have now entered into partnership as E. W. Andrews and Co., paper mill agents, with offices at Bridge House, 181, Queen Victoria-street, E.C.4. Both these gentlemen have been closely connected for over 25 years with the wholesale side of the paper trade, of which they have a wide and extensive knowledge. Mr. Coles' activities have been confined principally to London, where he is well known and popular. Mr. Andrews, in addition to having a large number of friends in London, is well known to the principal newspaper owners and publishers throughout Great Britain and Ireland, having travelled extensively throughout those countries for several years. He also has considerable knowledge of the export trade, having handled this branch for several years. He has also made several business visits to Norway, Sweden, Denmark, Holland and Germany. Mr. Coles' only son, Mr. Vernon R. Coles, who is 19 years of age, and has recently left Dulwich College after a brilliant career there, is also in the business. The partners are gratified with the success already achieved.

# Current Topics.

## The Exhibition.

IMPORTANT happenings are toward in the British printing industry. The Sixth International Exhibition, opened on Saturday, is the beginning of a series of great events. It is itself a feature of first moment, marking as it does the progress that has been made in mechanical devices since 1914. The collection of printing apparatus at the Royal Agricultural Hall is an education, and as an exhibition it is an improvement on many similar affairs inasmuch as the exhibits are not dumb displays, but are seen in actual operation. Interest and instruction thus go hand in hand. To the outsider it must be a revelation to witness all the mechanical ingenuity and skill which go to the making of print, whether of the daily newspaper or of high art. Equally in the bookbinding and allied industries inventiveness is at work, and the elaborate devices for binding books and magazines

ought to induce the general public to esteem more highly the literature they handle. In process work and in the preparation of inks and other materials employed in the art-science again enters to an extraordinary extent. Indeed, the Printing and Allied Trades Exhibition is a revelation also to the master and working printer, and it demonstrates how splendidly British printing engineers are helping them to serve a wide clientele in the best possible way.

\* \* \*

## World's Printing Congress.

IN connection with the Exhibition the World's Printing Congress is to be held on Tuesday and Thursday next, and will afford an opportunity of reviewing the progress of the past few years and of discussing various problems which beset the printing craft not alone of this country but of the world. Gentlemen of first rank in the industry are to give addresses on a wide variety of subjects, which cover almost every phase of the craft, from standardisation of paper to rotary photogravure. The programme is ambitious enough to give the industry food for thought for a long time to come.

\* \* \*

## Joint Industrial Council.

NOT the least important meeting among many arranged for next week is that of the Joint Industrial Council on Monday. The present condition of the industry on the operating side is one of peculiar difficulty, which will give to the convention a special significance. Doubtless under the presidency of the Rt. Hon. C. W. Bowerman the proceedings will be marked by the broad sense of fairness and reasonableness which has characterised this body since its inception. Mr. Bowerman's influence has been of an exceptional kind in preserving harmony; and although a trade union leader, he possesses the confidence of master printers equally with that of the unions. Tribute will, therefore, be paid to his services when the Council assembles on Monday.

\* \* \*

## Federation Annual Meeting.

FOLLOWING hard upon the conferences of these two weeks comes the 21st annual meeting of the Federation of Master Printers at Scarborough from May 28th to June 1st. Not less but even more significance will attach to the annual assembly by reason of the conventions which will have immediately preceded it. Members will attend with broader vision inspired by the views gathered in London. While some of the time at Scar-

borough will be devoted to social amenities—so far as industrial conditions generally will permit—questions of graver import will engage attention. It is appropriate that the meetings should be held this year in “the Queen of Watering Places” at the invitation of the Yorkshire Alliance, since Mr. Meredith T. Whittaker, President of the Linotype Users’ Association, is Mayor of the borough for the time being. Associated with the annual meeting, of course, is the Costing Congress, which enables master printers to discuss the economic side of printing, upon which the welfare of the industry rests.

### Paper Prices.

MARKET values of paper to-day approximate closely to the following figures, for good orders:—Common “news” printing,  $3\frac{1}{2}$ d. per lb.; common printings,  $5\frac{1}{2}$ d. per lb.; seconds printings, 6d. per lb.; fine printings,  $6\frac{1}{2}$ d. to 7d. per lb.; esparto printings,  $7\frac{1}{2}$ d. per lb. Super-calendered printing averages 7d. per lb., for pure, and  $6\frac{1}{2}$ d. for seconds. Imitation art ranges from 7d. to  $8\frac{1}{2}$ d. per lb., according to quality. M.G. poster runs from 6d. (common) to 7d. per lb. (pure). Varnishable litho is listed at  $7\frac{1}{2}$ d. per lb. Glazed and unglazed foreign coloured printings are offered freely at 5d. per lb., for quantities. Coated art paper varies from  $7\frac{1}{2}$ d. to 1s., but below 9d. per lb. there is no great reliability. The market value of good quality process art is 10d. per lb. In the writings section, common E.S. writings are stabilised at  $5\frac{1}{2}$ d. per lb., seconds at  $6\frac{1}{2}$ d., fine at  $7\frac{1}{2}$ d., and esparto at  $7\frac{3}{4}$ d., i.e., for mill orders. Tinted E.S. writings average  $8\frac{1}{2}$ d. to  $8\frac{3}{4}$ d. per lb. Common banks are securable at  $6\frac{1}{2}$ d. per lb., but the popular grade is a crisper product at  $7\frac{1}{2}$ d. to 8d. per lb. Tinted banks are stable at 8d. per lb. for common quality and 10d. per lb. for purer colours and deep shades. T.S. banks and bonds are mill listed at  $9\frac{1}{2}$ d. and 10d. per lb., but the popular proprietary brands still range between 1s. 3d. and 1s. 6d. per lb. Duplicator papers have fallen to 7d. and 8d. per lb. In the wrappings section pure kraft has no market value and can be obtained at from £40 to £60 according to circumstances and the availability of cash. Common unbleached greaseproof is on offer at  $4\frac{1}{2}$ d. and bleached greaseproof has appeared at the same figure, although the general price is nearer 6d. per lb. Vegetable parchment is down to 1s. per lb. Foreign M.G. envelope paper has been quoted £39 per ton and clearance lines have been offered at 3d. per lb. (50 per cent. m.p.w.). Strawboards are selling on a £9 basis in some quarters, a figure far below market value.

## Personal.

LORD RIDDELL presided at the 58th annual dinner of the Newspaper Press Fund held on Friday night at the Hotel Victoria, London, subscriptions of £10,000 being announced.

THE many friends of Mr. Edward Unwin, Master of the Worshipful Company of Stationers, have heard with deep regret of the great bereavement he has sustained by the sudden death of his wife.

MR. R. A. AUSTEN-LEIGH, immediately on his return from Italy, was re-elected on Friday last President of the London Master Printers’ Association.

MR. ALFRED LANGLEY is the Vice-President, and Mr. J. H. Williams continues in the office of hon. treasurer.

THE staff of the *Daily Express*, numbering over 200, gave a congratulatory dinner on Saturday night at the Hotel Victoria to Mr. R. D. Blemenfeld, the chairman of the company, on the occasion of the paper’s 21st birthday. Lord Beaverbrook was in the chair.

MR. AND MRS. W. H. WALBROOK have issued invitations for the marriage of their daughter, Miss Barbara Oakeley Walbrook, to Mr. Archibald Mains, on Wednesday next, at St. Stephen’s, Walbrook, E.C.

MR. ANDREW MEIKLE, editor of the *Express and Star*, Wolverhampton, has been presented at a public meeting with an address contained in an album and a cheque for £225 in recognition of his services during the period of his editorship extending over 36 years. There was also a gift for Mrs. Meikle.

MR. R. BROWN, the proprietor of the *Macclesfield Courier*, on Saturday celebrated his jubilee by entertaining his workpeople and their friends to dinner. Mr. Brown joined the staff of the *Courier* as a reporter in 1871.

MR. F. ARNOTT delivered a lecture on “Leather” at the monthly meeting of the Printing, Bookbinding, and Kindred Trades Overseers’ Association on Tuesday evening at St. Bride Institute. A report of the proceedings will appear in our next issue.

MR. J. H. EAMES, of Messrs. R. T. Tanner and Co., has been admitted to the Freedom and Livery of the Stationers’ Company.

MR. A. L. BERRY has been admitted to the Freedom of the Stationers’ Company.

MR. ARTHUR PLANT, younger son of Mr. Herbert Plant, for over 30 years foreman at Bridge Hall Paper Mills, Bury, has been married to Miss Maude L. Ash, of Bury.

## Printers' Football Charity Cup.

### Final Tie (Senior Division).

A splendid game was seen on Waterlow's Sports Ground on Saturday, April 23rd, when the contestants were teams representing the well-known firms of Waterlow and Sons and St. Clements Press. Both teams had previously held the championship and the magnificent trophy given by the *Sportsman*, the Waterlow's eleven being the last successful club. Fine play on both sides was seen on this occasion, the result being in doubt until the final whistle sounded. The writer has watched every final for many years, but finer football and cleaner play has never been viewed. Waterlow's eventually retained possession of the trophy by one goal (Smith) to nil. Mr. W. R. Masters (Fleetway Press) who kindly attended to present the cup to the winners, congratulated Waterlow's for winning the trophy from such a plucky and fine team as St. Clements Press, a remark that was supported by everyone present.

It is pleasing to know that Harvey Dalziel, Esq. (Dalziel Foundry) and W. R. Masters, Esq. (Fleetway Press) have presented the whole of the 44 medals for the winners and runners-up of the Senior Division and Division II. (an action which will be gratefully remembered by the Printing and Allied Trades Sports Association and the trade generally). Mr. John Fry, the respected president for 1920 (Fry's Metal Foundry) has also kindly given three new trophies for swimming, football and rifle shooting, to be competed for annually by clubs under the management of the Printing and Allied Trades Sports Association. All these gifts are now on view at the Exhibition on Stand 27, Row C, Main Hall. They are to be presented at a grand concert to be held at the Cannon-street Hotel on Tuesday, May 24th, Edgar Waterlow, Esq., in the chair.

Clubs connected with the trade should note that in addition to the Cup Competition a new Football League is to be started by the Printing and Allied Trades Sports Association, so that printing clubs will have no need to join any leagues or competitions outside the trade. Full particulars can be obtained from the hon. secs., Mr. George V. Maddams (Fry's Metal Foundry) and Mr. Herbert J. Parker (Fleetway Press).

Chas. Roud, Esq. (Bank of England) is president of the Association for 1921. The annual athletic meeting is to take place at Stamford Bridge Grounds on Saturday, June 18th, 1921.

MR. F. J. PALMER, late director of Shoobert, Palmer and Co., Ltd., has started business on his own account under the style of Palmer, Son and Co., paper agents, contractors and merchants, at 13, Charterhouse-street, London, E.C.1.

## A "Blades" Concert.

The name of Blades is an honoured one in the printing trade, but it is especially honoured in the circles which are intimately concerned with the work of the Printers' Pension, Almshouse and Orphan Asylum Corporation. No member of the firm is ever asked to do anything to advance the interests of that Institution but he readily responds. The latest act of the kind to record is the fact that on Saturday last Mr. Laurence Blades took a concert party up to Wood Green for the purpose of entertaining the old people at the almshouses. Mr. W. Vandy (chairman of the Almshouse Committee) presided, and among those present were Mr. Joseph Mortimer (secretary of the Corporation), Messrs. P. L. Lewingdon, W. A. Perkins and Hammond (members of the Council), the Rt. Hon. C. W. Bowerman, M.P., and their respective wives. The concert was of a first-class order, but nothing pleased the audience more than the songs artistically rendered by Mrs. Laurence Blades, who possesses a delightful voice. The other performers were Misses C. Ware and Fletcher, and Messrs. Nickolds and A. E. Cox. During an interval refreshments were served to the inmates through the generosity of Mr. Laurence Blades, who also provided cigars for the men and sweets for the women.

In proposing and seconding a hearty vote of thanks to Mr. and Mrs. Blades and their friends, both Mr. Bowerman and Mr. Mortimer noted the esteem in which the House of Blades was held, and the audience showed their endorsement of the sentiments expressed by heartily singing "For they are jolly good fellows."

The chairman, too, associated himself with the remarks of the proposer and seconder, referring especially to the remarkable "gift of song" possessed by Mrs. Laurence Blades.

Mr. and Mrs. Blades both replied, expressing the pleasure it gave them to be of any assistance to the Institution.

**INDIAN CUSTOMS DUTIES.**—Now liable to 2½ per cent. *ad valorem* duty for import into India are: Printing and lithographing material, namely, presses, type, ink, aluminium lithographic plates, brass rules, composing sticks, chases, imposing tables, and lithographic stones, stereo-blocks, roller moulds, roller frames and stocks, roller composition, standing screw and hot presses, perforating machines, gold blocking presses, galley presses, proof presses, arming presses, copper plate printing presses, ruling machines, ruling pen making machines, lead and rule cutters, type casting machines, rule bending machines, rule mitreing machines, bronzing machines, leads, wooden and metal quoins, shooting sticks and galleys, stereotyping apparatus, metal furniture, paper folding machines, and paging and numbering machines but excluding paper.

## DIVIDENDS AND REPORTS.

**ODHAM'S PRESS.**—The first annual report states that the result of the company's operations during 1920 has been satisfactory, the net profit amounting to £150,265. After making provision to cover E.P.D., corporation tax, and income-tax, the board recommend a dividend on the ordinary shares of 8 per cent., less tax, for the year. They also reserve £20,000 in respect of copyrights and investments, and carry forward a balance of £24,819. The directors state that the rebuilding and equipment of the company's works, following the destruction by a German bomb, are now practically completed, and the new and effective modern plant and machinery installed therein. During the year under review the directors have made two important additions to the business of the company. They have purchased the copyright, goodwill, plant, and machinery of the old-established sporting daily newspaper, the *Sporting Life*, and they have also acquired the goodwill, leases of advertising sites, premises, including the extensive working plant, of the Borough Billposting Co. and its subsidiary companies.

**SUNDAY PICTORIAL.**—Profit of *Sunday Pictorial* newspapers from March 16th, 1920, to February 28th, 1921, after deducting all working, office and other expenses, and providing for corporation tax, excess profits

duty, etc., was £122,706. Profit earned prior to incorporation has been capitalised and remains as reserve. Preference dividends have been paid for five months to August 31st, 1920. Ordinary shareholders have been paid interim dividends of 10 per cent., and directors do not propose to pay final dividend on ordinary shares. Preference final dividend absorbs £20,000, leaving £11,040, which it is proposed to carry forward. Considerable interests have been acquired in paper and pulp making companies.

## NEW COMPANIES.

**WALLISS HAMMOND, LTD.**—Capital £1,000 in £1 shares; to acquire the business carried on by H. A. Walliss and W. Hammond, at 13, Bouverie-street, E.C., as the "Walliss-Hammond Service," and to carry on the business of publicity agents and experts, exhibition organisers, advertisement writers and designers, etc. Private company. Subscribers: H. A. Walliss and W. Hammond. First directors: H. A. Walliss, W. Hammond and C. W. Forward. Registered office: 13, Bouverie-street, E.C.4.

**DENNIS AND WEBB, LTD.**—Capital £8,000 in £1 shares; mechanical engineers, machinists, printers, engravers, enamellers, electroplaters, painters, packing case makers, photographic printers and lithographers, etc. Private company. Permanent directors: C. B. Dennis (chairman), P. J. McCoesney, H. S. Webb and H. Sheekleton. Registered office: 42 and 43, Little Britain, E.C.1.

**J. HERITAGE PETERS ADVERTISING SERVICE, LTD.**—Capital £2,000 in £1 shares; advertising agents, contractors and consultants, etc. Private company. First directors: J. H. Peters and Mrs. M. Peters. Registered office: Lloyds Bank Chambers, High-street, Coventry.

**GLOBE ROTARY PRESS, LTD.**—Capital £20,000 in £1 shares; newspaper proprietors and publishers, agents and managers, etc. Private company. Subscribers: F. Carl, O.B.E., and S. W. Woolmer. Registered office: 367, Strand, W.C.

**MARGOT PRINTING CO., LTD.**—Capital £500, in 10s. shares; printers, lithographers, advertising agents and contractors, newspaper proprietors, printers and publishers, etc. Private company. Subscribers: E. A. Merckel and F. L. Olliver.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**NATIONAL PAPER AND PULP CO. (1920), LTD.** (London).—Land Registry Charge on freehold warehouse and premises No. 66, Upper Thames-street, E.C., dated January 31st, 1921, to secure £200,000. Holders: Royal Exchange Assurance.

**SETTEN AND DURWARD, LTD.** (Stationers, etc., Birmingham).—Particulars of £20,000 debentures authorised April 14th, 1921, whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**PORTALS, LTD.** (Manufacturers of and Dealers in Paper, Paste, Mill and cardboard, etc., Whitchurch, Hants).—Particulars of £200,000 debentures authorised February 18th, 1921; present issue £54,000; charged on the company's undertaking and property, present and future, including uncalled capital (if any).

**SUNDAY PUBLICATIONS, LTD.**—Issue on April 8th, 1921, of £47,000 debentures part of a series already registered.

**W. RALSTON AND CO., LTD.** (Waterproof Paper and Cloth Manufacturers, Manchester).—Mortgage on Clough Road Works, Moston-lane, Manchester, dated March 29th, 1921, to secure all moneys due or to become due from company to National Provincial and Union Bank of England, Ltd.

**VITTY AND SEABORNE, LTD.** (Engravers, London).—Particulars of £2,000 debentures authorised March 24th, 1921; present issue £1,350 charged on the company's undertaking and property, present and future, including uncalled capital.

**C. G. ROPER, LTD.** (Printers, London).—Satisfaction to the extent of £2,000 on November 30th, of debentures dated August 25th, 1920, securing £24,000.

**FINSBURY PRESS, LTD.**—Particulars of £5,000 debentures authorised April 12th, 1921, present issue £4,400, charged on property, present and future, including uncalled capital.

**LYNN NEWS AND COUNTY PRESS CO., LTD.**—Satisfaction in full on December 21st, 1920, of mortgage dated October 1st, 1915, securing £600.

## John Dickinson and Co., Ltd.

Presiding at the 36th ordinary general meeting of the shareholders, held on the 18th ult., Mr. Henry Godfrey briefly reviewed the state of trade. The disturbance he mainly attributed to the financial inability of the markets abroad to purchase and finance the requirements absolutely needed. Referring to the

company's trading results, he said the net profits for the year ended December 31st, 1920, amounted to £287,422, the highest figures recorded in the history of the company. The ordinary share capital had been increased by £173,500. The turnover of the company amounted last year to £6,500,000. As regards their overseas trading, they had already eleven well-established branches abroad, and representatives and agencies in nearly every part of the world. The necessity of meeting local views and conditions was fully recognised, and with the object of studying conditions on the spot it had been arranged that he (the chairman) should visit Australia, New Zealand and India, and thus make such arrangements to ensure the maintenance and development of the company's export trade. A further dividend of 5 per cent. and a bonus of 5 per cent. on the ordinary shares was agreed to. Captain Bibby was re-elected a director of the company.

## Lamson Paragon Supply Co., Ltd.

Mr. Alan McLean, the chairman, presided at the eighteenth ordinary general meeting of the Lamson Paragon Supply Co., held in London, on Thursday last week. He said the profits for the year were £83,795, an increase of £24,208 on the previous year's profits. After dealing with the balance-sheet, he mentioned their auxiliary and associated companies were practically world-wide. The principal auxiliary company was the Caribonum Co., Ltd., manufacturers of carbon papers, etc. Their continental assets in Paragon and Caribonum undertakings covered France, Belgium, Switzerland, Holland, Denmark, Sweden, Norway, Finland and Austria. Auxiliary companies were also flourishing in South Africa and in South America. The chairman also mentioned that their German assets were promising. The company's factory at Hendon was still in Government occupation, but when possession was obtained it was intended to remove their paper-bag and wrapping department from Paragon works, which would give much needed room for development at Canning Town. The chairman moved the adoption of the report and the payment of a final dividend on the ordinary shares of 10 per cent. making, with the interim dividend, 12½ per cent. for the year, also that £10,000 be placed to general reserve. Mr. John Meath (managing director) seconded, and the resolution was unanimously adopted.

Immediately after the close of the general meeting an extraordinary general meeting was held, at which a resolution was passed to increase the capital to £1,000,000 by the creation of 250,000 new 10 per cent. cumulative preference shares of £1 each.

## Standardising Printing Papers.

### Ideal Proportions and Sizes.

Mr. Alfred Watkins, of the Watkins Meter Co., who is a Fellow and Progress Medalist of the Royal Photographic Society, takes a special interest in questions of weights and measures, and is well-known as an advocate of octaval notation as against decimalisation. His contentions are always worthy of consideration, and printers will doubtless be interested to know of some suggestions he put forward recently with a view to striking at the root of the present chaos in printers' sizes of paper.

If a sheet of Crown paper, he said, which has a proportion in breadth to length of 1 to  $1\frac{1}{2}$  (1 to 1.33), is folded in half, it produces a smaller rectangle which now has a different proportion, viz., 1 to  $1\frac{1}{2}$  (1 to 1.5), and if folded again the new rectangle returns to the first proportion of 1.33. The same principle applies to Post size which has a short proportion of 1.25 in full sheet, but a long proportion of 1.6 when folded.

This general fact of altered proportion when folded is so universal in commercial sizes for printing (even in writing papers there is only one exception—Super Royal), that printers generally regard folios, octavos, and 32 mos. as being long shapes; while quartos and 16 mos. are short. The only exceptions being a few "double" sizes, which being long to begin with, furnish short folios and octavos.

I was struck by the fact that the shorter the proportion of the rectangle in the whole sheet, the longer its proportion was when folded in half. I drew the inference that there must be one middle or nodal proportion for a rectangle, which would not alter when the rectangle was halved across its shorter side.

This mathematical proportion is one to the square root of two, in decimals 1 to 1.414; or expressed in geometry—as the side of a square is to its diagonal.

On setting a slide rule to it, I found that it is almost exactly represented by 6 to  $8\frac{1}{2}$ , and that a series of rectangles based on this (6 by  $8\frac{1}{2}$ ,  $8\frac{1}{2}$  by 12, 12 by 17, 17 by 24, etc.), are all 1 to 1.412, and 1 to 1.416 alternately, that is for all practical purposes the ideal proportion of 1 to 1.414, which is the nodal point.

No other proportion than 1 to 1.414 will give a rectangle which remains unchanged when evenly divided.

If therefore a sheet of paper 17 by 24, to which I give the name King, is halved into its folio, the folio will also have exactly the same proportion, and so will its quarto, octavo, and 16mo. If this sized sheet is adopted as a printer's standard, the printer will not be troubled with the usual change of proportions from quarto to octavo, but will have double the number of sizes of one proportion, which is neither long nor short, but a really handsome and craftsmanlike shape.

In practice one size of sheet is not enough,

as its quarto may be too large and its octavo too small for a particular want. I found it necessary to provide two intermediate sizes, as evenly spaced for area as possible, and as near the ideal proportion as practicable without troublesome fractions. I name these two sizes Queen and Prince.

I have not access to all reference books on the subject, and scarcely like to make a definite claim that I have re-discovered a technical point known well to fifteenth and early sixteenth century craftsmen printers, and lost to knowledge in the seventeenth century and later; but it looks very like it. This ideal proportion of a rectangle has been known to mathematicians, but I cannot find that in the later centuries printers have expounded, known or (except casually), used it. Out of 154 measurements of new books named in two weeks of the *Athenæum*, only seven come near the ideal size, and only one very near. Almost all are octavos over 1 to 1.46 in proportions. And yet I see evidence that its practical and artistic value was well known and used by the early printers.

I do not claim that this series and shape will supersede the shapes as provided by Crown or Post. But if introduced as an adjunct it will, I think, fill a want, both in shape and as tending to simplicity. Any large consuming firm making up its mind that it wants ideal sizes, will get them, however much papermakers may object to "add another size to our list."

## Japanese Paper for Export.

Overtures have been made recently by several foreign merchants for the purchase of large quantities of paper made in Japan, but the negotiations have not resulted in business owing to the difference of seven to eight sen per pound in the prices offered and asked. The Japanese Paper Manufacturers' Union has decided to allow a subsidy of five sen on every pound exported abroad in order to encourage export and dispose of the accumulated stock says *The Manchester Guardian Commercial*.

## Norwegian Box-Board Extensions.

The owners of Rena Kartonfabrik, Norway, are now progressing with the alterations and extensions to their machinery, which will mean that their production will be increased to about 9,000–10,000 tons per annum, and a greater variety of substances, qualities, etc., of folding box-boards. The qualities contemplated will be suitable for high-class boxes as well as for ordinary cartons. There has been unavoidable delay in the delivery of the additional machinery, but it is expected that the mill will be once more in commission by the end of April.

## Testing Gloss on Paper.

### The Improved Glarimeter.

An improvement has been made upon the instrument which he invented for testing the gloss or degree of finish on paper by Mr. L. R. Ingersoll, Associate Professor of Physics at the University of Wisconsin. A number of years ago he showed that the gloss or degree of finish of a paper surface may be conveniently and accurately measured by its polarising action on obliquely reflected light. The original instrument developed for this purpose—termed a “glarimeter,” since it measures glossiness by means of the glare or specularly reflected light—while it attained a measure of success, still left much to be desired, and had moreover the rather serious defect of requiring optical parts which were difficult to obtain. Accordingly, about a year ago an effort was made to improve the design so as to remedy this and some other defects.

After some experimentation it was found that the optical system of the “glariscopes” or polarimeter part of the original instrument could be profitably replaced by a modification of the so-called Pickering polarimeter, an instrument well known to meteorological observers for the measurement of sky polarization. This resulted in the double advantage of a considerable (two-fold or more) increase in sensibility and requirements for optical parts, viz., quartz Wollaston prism, nickel, lens, etc.—which would not be especially difficult of fulfilment.

The new glarimeter retains the main features of the old, save in the minor, but highly important matter of the improvement in optical system. The instrument is constructed in a more convenient and compact form, with several time-saving features. Gloss measurements are quickly and simply made, and do not require a darkened room. The sample of paper is placed under a clip in the camera-like box, this being done through an opening without change of position on the part of the operator—and illuminated. The gloss is then given (in arbitrary units) by the reading of the scale.

Among the uses specified for the instrument is that of enabling the manufacturer of paper to control the uniformity of his product, just as he now does its basis weight, strength and other qualities. Another field of usefulness lies in the assistance it will render the paper user in specifying exactly the degree of finish he desires.

Certain other uses are suggested as follows: It will prove useful in testing and grading photographic stock, it can be used to regulate the gloss in school book papers, it may help the printer in his choice of inks for certain purposes, and it will assist in the development of improved book or magazine papers.

The last point will bear explanation. There are really two distinct qualities concerned when we speak of the gloss or finish of paper

one being its mechanical smoothness or “feel,” the other its “optical smoothness” or glare-producing quality. In general the two are proportional, particularly in a given type of finish where the glarimeter which measures primarily only the latter quality serves with equal accuracy to determine the former. When widely different sorts of paper are concerned, however, this may not be exactly the case. An exaggerated example would be a sheet of super-calendered paper in which one had pricked many fine needle holes. Such a sheet would still give a high gloss reading, but would feel, on the burr side at least, decidedly rough.

Now the printer, having in mind his fine half-tones, desires a smooth paper, but because of the awakening public interest in the matter of eye discomfort from glare, must not use too highly finished stock. The development of a paper with smooth surface but low glare-producing quality is accordingly highly to be desired. Some decided progress has already been made along this line, but more is sure to follow.

While intended primarily for white or lightly tinted papers, the glarimeter can be used satisfactorily with coloured stock when a piece of glass of approximately the same colour is inserted in the eye-piece. Nor is its use even limited to papers, for the gloss of any non-metallic surface may be measured in this way.

## Purchase of Bridge Hall Mills.

### A Profit of £86,000 and Alleged Conspiracy.

After being adjourned from January 20th, the hearing was resumed in the Chancery Division last week of the action by Messrs. Relph, Darwen and Pearce, paper merchants, of Finsbury-pavement, London, against Messrs. G. T. Temperley, of St. Vincent's-terrace, Whitefield, Manchester; Fredk. Whowell, of Hawkshaw, Bury; Wm. Bridge, of Bury; and James Bridge, of Gorsey Lea, Whitegate-drive, Blackpool.

The plaintiffs sought to recover damages for alleged conspiracy, and, in the alternative, for alleged breach of contract, in connection with negotiations for the purchase by the plaintiffs of the paper mill and other property belonging to Messrs. James Wrigley and Sons, Ltd., of Bury. The case was adjourned for Mr. Temperley to have separate legal representation if he so desired. He was now represented separately.

Sir Malcolm Macnaghten, K.C., and Mr. St. John Field were for the plaintiffs; Mr. Maugham, K.C., and Mr. Dighton Pollock for Messrs. Bridge and Whowell; and Mr. Owen Thompson, K.C., and Mr. Archer for Mr. Temperley.

All the defendants denied conspiracy with misrepresentation, and they declared that the negotiations for the plaintiffs' purchase broke down, not only because of the excessive price asked, but because of the stipulations made by the plaintiffs. It was also submitted that negotiations never reached the stage when contractual obligations were imposed on the defendants such as to preclude them from negotiating for the property on their own behalf.

Sir Malcolm Macnaghten, re-stating the case for the plaintiffs, said Messrs. Wrigley's mill at Bury was established a hundred years ago, and remained to some extent a pride and glory of Bury. In 1919 they were disposed to sell out, and that came to the knowledge of the plaintiffs, who wished to buy. They knew nothing about paper mill management, but through one of their clerks got into communication with Mr. Temperley, who had had considerable experience in that direction. The idea of Messrs. Wrigley was to sell on their 1918 balance-sheet, included in which were £210,000 as the value of the mill, the Manchester warehouse and the London office, and £100,000 as the value of the stock. At a meeting in September, 1919, Mr. Temperley and his fellow defendants met Mr. Darwen, and it was arranged that Mr. Temperley should inspect the mill. This he did, and as a result he said that he could not advise the plaintiffs to have anything more to do with the matter, and that the assets were not worth more than £120,000. The plaintiffs believed him.

"Our case," said counsel, "is that all along the gentlemen knew that it was a very desir-

able purchase. But the defendants thought, apparently, 'a Lancashire mill for Lancashire people,' and considered that the London gentlemen should be squeezed out, and they would squeeze them out by telling them that it was no good. The defendants told us, and we believed them, and when they had squeezed us out, negotiations took place between the defendants and Messrs. Wrigley, which resulted in a contract for the purchase of the mill and for the resale of it, with the result that the defendants put £86,000 in their pockets without handling a single penny themselves. Our charge against them is that all along they knew that it was a good business, that all along they intended to buy it, and that all along they intended to put us out, and it is because of that that this action has been brought." Counsel said Mr. Whowell was a director of the Bleachers' Association, that Mr. William Bridge was a cigar merchant, and that Mr. James Bridge was a gentleman of independent means.

Mr. Maugham said there was no dispute about the profit that the defendants made. Their case was that when they were freed from any negotiations with the plaintiffs they made an offer to pay 14s. a share for Messrs. Wrigley's shares, that this was accepted, and that a Mr. Wilkinson came along and bought them at 20s. each, which gave the defendants a profit of, roughly, £86,000.

Mr. Julian Darwen, senior partner in the plaintiff firm, gave evidence bearing out counsel's statement. He said that Mr. Temperley told him that he put the value of the buildings, machinery and land at £120,000, adding that the mill was in a bad condition and not worth spending anything on, and the machinery was obsolete. From what Mr. Temperley said, plaintiff formed the conclusion that it was not desirable to go any further in the matter.

The hearing was adjourned.

## New French Companies.

HETIER FRERES.—Manufacture and sale of boards, etc. Capital 416,000 francs. Mesnay, Jura.

C. AND J. MARTEL.—Fancy paper. Capital 80,000 francs. Paris.

FABRIQUES DE TUBES DE BISCHWILLER.—Paper tubes and similar objects. Capital 300,000 francs. Bischwiller (Bas Rhine).

DEPOT CENTRAL DE PAPETERIES. IMPRIMERIE COMMERCIALE RADIOGOIS AND CIE.—Wholesale paper trade and manufacture of folding boxes and printing. Capital 650,000 francs. Rennes.

Mr. S. A. WOODROFFE has severed his 18 years' connection with Mr. W. Baldwin, Upper Thames-street, having taken over the position of buyer and sales manager of the wholesale paper department of Messrs. W. Turner and Co., Ltd., 159, Commercial-street, London, E.

## The Printing Exhibition.

(Continued from page 472.)

own contributions to the printer's service are seen to respond to all the treatment required. The various qualities of dry flong, including the photo-tone fine art flong and the "Everwear" oil and ink proof press rubbers are demonstrated under practical working conditions with success. As for the stereo plant, its substantial and efficient qualities are at once apparent. The demonstrations of the automatic stereo moulding press, the Winkler automatic casting apparatus, the automatic router and so on, give the uninitiated an insight into the operations of a newspaper foundry. As well as adding to efficiency, the plant controlled by Mr. Light aims at economy. Thus his firm exhibits an apparatus for regaining stereo metal in ingots, which is characterised by the fact that the metal is always taken from the part of the pot where no oxidation occurs. The working of the new type of flat bed printing machine, with an output of multi-colour work exceeding in speed that of ordinary black printing on the average two-revolution press, made an impression on the expert while it fascinated the lay visitor.

### **Timson, Bullock and Barber, Ltd.**

Among the exhibits at Stand No. 21, Gilbey Hall, the rotary paper lace making machine is seen to handle paper with great ingenuity. It is a special type of embossing machine for producing the multiplicity of laced papers used in decorating boxes, as well as laced paper decorations. A number of papers are taken at the same time together from webs, are automatically chalked, embossed and cut to shape, delivering the finished articles at a high speed. The patterns are produced from engraved rollers. The firm supply all kinds of engraved rollers and plates for embossing, etc., and have working during the exhibition one of their engravers, demonstrating how the engraving is done on steel rollers.

### **Averys.**

This London firm of photo-engravers are showing specimens of their block work in any number of colours in half-tone and line, as well as art work and retouching work, this latter covering all classes from catalogue to advertisement illustrations, and commercial photography. They lay special stress on the fact that they have a day and night staff so as to be always open to execute work in the shortest possible time.

### **Harrild and Sons, Ltd.**

"Everything for the printer, everything for the bookbinder, everything for the boxmaker," is the slogan at Stand No. 226, Gilbey Hall, and an inspection of the contents proves the truth of the claim. Here is a very comprehensive display, from printing presses to box-making apparatus. There are cylinder machines and platens, labour and space saving composing room furniture, stereo and electro plant, metal furnaces, and a host of other pro-

ducts for the printer. Equal service is performed for the binding and warehouse department. Included among the exhibits in this section are the Harrild self-clamp guillotine, perforating, paging, wire stitching and ruling machines. For the boxmaker there are the folding box and carton cylinder cutter and creaser, wire stitchers and bending machines. Every item is interesting, and the whole stand ranks high.

### **Federation of Master Printers.**

The Stand of the Federation of Master Printers and Allied Trades of Great Britain and Ireland is in the Gilbey Hall, where officials of the Federation are constantly in attendance to assist members in all matters relating to organisation, etc., and all the publications issued by the Cost and Charges Committee are on sale. Information and advice on costing questions can be readily obtained, and orders for installations or revisions may be booked at the stall.

### **Mr. Robert H. Ruddock.**

While there is no auctioneering to be undertaken at the Exhibition, Mr. Ruddock was ready at Stand No. 23a, Gilbey Hall, to discuss valuations for fire insurance, costing and "going concern" purposes. Furthermore, he provided a cosy rest-room and facilities for correspondence for clients and friends.

### **The T. W. and C. B. Sheridan Co., Ltd.**

A fine impression is produced by Stands No. 24 and 25, Gilbey Hall, where Messrs. Sheridan display effectively their various bookbinding appliances, which were fully described in our last issue. The various machines are to be seen in operation, and they present a very fascinating spectacle.

### **Vickers, Ltd.**

Of the twelve cardboard box-making and printers' stitching machines on Messrs. Vickers' Stand, No. 28, Row "B," Gilbey Hall, only one, namely, the Vertical Bending Machine, has previously been exhibited to the public. All the machines now shown have been put into standardised production in the course of the past year, and a very comprehensive range of power and treadle box-making machines of the highest quality is now offered. Of special interest to box-makers is the power-driven folding box plant shown, consisting of a rotary cutting and creasing machine, a folding box cutting machine and a folding box stitcher. To the last, an entirely new type of anvil is fitted, permitting of the work being fed straight through the machine to a receiving box at the rear. A Corner Stayer and Metal Edger, both for power drive, may be inspected, as also the Nailing Stitching Machine, for composite container and all-wood box work. The Nailing Stitcher presents many new features over previous designs. Printers were naturally interested by the three standard types of stitching machine for their use, hand, treadle and power with universal anvils. Photographs are shown on the Stand of the now well-tried and popular rigid box-making machines which have become familiar to the trade.

### GALLERY.

#### H. T. Knight, Ltd.

At Stand No. 6 Gallery, Messrs. H. T. Knight, Ltd., of Goswell-road, London, E.C.1, leather, and imitation, attaches and suit cases, portfolios, satchels, writing, commercial and blouse cases, brief and kit bags; and also show light fancy leather goods, such as card cases, wallets and pocket books, parachute and other purses, compendiums, etc.

#### Ashley Smith.

This firm of paper agents and merchants and wholesale manufacturing stationers show a selection of papers with the world-famous Original Turkey Mill Watermarks, now being put up in every suitable way for the high-class retail stationer. For printers who supply high-class business stationery, these papers are supplied and cut and trimmed ready for die-stamping in packets of 504 sheets. In addition to the wide range of Turkey Mill papers, they also show a big selection of writing pads, private and business stationery, type-writing papers, etc., made from St. Cuthbert's linen, and other high-grade papers of St. Cuthbert's Mill make.

#### William Crossland, Ltd.

The bookbinder will find at the stand of this firm several machines of special interest. Among these is the Boston No. 15 Stitching Machine which takes wire from the reel and makes it own staples. The head is interchangeable; can be used for either cross or parallel stitching, and has but one adjustment. The Boston No. 11 Small Box Power Stitcher for Folding Box Work, takes wire from the reel and makes its own staples; has but a single adjustment, the movement of one handle regulating for the thickness of work and length of wire.

#### Raphael Tuck and Sons, Ltd.

Visitors will find at the exhibit of this well-known firm a veritable Palace of Art. Among the attractive features is a fine collection of birthday, Easter and Christmas cards and post cards which will appeal to the stationer. There is an extensive range in design of picture post cards and Oilfacsim post cards, showing the actual brushmarks of original paintings, which indeed may be considered as perfect little gems in themselves. Christmas auto stationery is included in Messrs. Tuck's exhibit, and this is followed up in a really wonderful range of boxes of auto stationery cards, and children's picture books range from Father Tuck's A.B.C.'s to the Raphael House Library. Surrounding the stand are shown specimens of some of the beautiful works of art published by the firm.

#### Hartmann Bros., Ltd.

This Danish firm, whose agent in this country is Walter E. Kimber, Dobb's Weir, Hoddeston, Herts, are exhibiting a modern rapid running block bottom paper bag-making machine. This machine makes the best kinds of block bottom bags from all classes of paper in reels, and up to 110 bags per minute, makes bags in all sizes from 1 oz. to 4 lbs. and is

fitted with automatic counting delivery arrangement for making first-class lined (double) bags; is also made in large size, B.H.11., making bags in all sizes from 2 lbs. up to 20 lbs. The same firm also has the "Melior" Platen Printing Machine, an apparatus of very simple but modern construction.

#### Harrison and Sons, Ltd.

This well-known printing firm is endeavouring to place on the market goods that were formerly in the hands of the German, and the specimens they have showing include leatherette papers, surface papers, lining and book-end papers, brushed enamels, and several new series of fancy embossed papers, etc. Of interest, too, are the samples of stamps in sheets, books and rolls used in the collection of municipal rates, trade union contributions, and hospital funds.

#### Hazell, Watson and Viney, Ltd.

At Stand No. 35, Hazell, Watson and Viney, Ltd., the well-known general printers, display "Relief" nibs and other popular pens of Esterbrook's make. The special feature, however, is the attractive counter and showcases, a range for buyers to select most suitable lines for their trade or foreign market. Over a hundred styles and makes are displayed, including the "Relief" fountain pen, which is the only fountain pen fitted with a genuine gold relief nib. The whole range of Bradley penholders are shown, which are noted for their quality and variety.

#### The Nickeloid Electrotyle Co., Ltd.

This exhibit presents to the visitor a fine array of colour prints and specimens which the "Nickeloid" process is capable of executing. Other features are the latest development in electrotyping and its application to rotogravure printing. "Printex" plates, which are finding such favour everywhere, are shown, and are meeting with especial interest from the visitor.

#### Hill, Siffken and Co., Ltd.

This firm of specialists in pictorial posters, showcards, etc., display the practical character of Hill, Siffken and Co.'s treatment of the poster. Art and advertisement are successfully combined, the designs being not only strikingly original but real business producers. Hill, Siffken and Co. have been entrusted with the printing of the posters for the Printing and many other important exhibitions.

#### Langley and Sons, Ltd.

These well-known printers to the trade are showing a variety of specimens of good workmanship, prominent being letterpress posters for hoardings, van bills and window bills for general advertising purposes. Posters produced in "the Euston way" enable advertisers who do not wish to incur the cost of special pictorial designs and lithographing in many colours to obtain publicity on hoardings without sacrificing their artistic tastes. Langley and Sons have cut specially designed founts of poster type to meet the wishes of those customers who appreciate beautiful lettering and have been unable to obtain it

without incurring the cost of special designs and lithographing.

### B. Winstone and Sons, Ltd.

This well-known firm of printing ink manufacturers display many of their prominent productions. Among these may be mentioned specimens of the work executed with their rotary photogravure, copperplate, offset, and high class letterpress inks. Bronze powders and printers' blankets also figure among their other exhibits.

### ARCADE.

#### Edwin W. Evans.

At Stand No. 8 in the Arcade, Mr. Edwin W. Evans, the well-known printers' auctioneer and valuer, of 150, Fleet-street, London, E.C.4, is exhibiting various detailed inventories of letterpress and lithographic printing, book-binding, boxmaking, and engraving plants, which show how thoroughly the work is accomplished, being detailed and individually priced even to the smallest article—a unique exhibit of great interest to the trade. One of Mr. Evans' representatives will be available at all times to discuss the matter of valuation, and will gladly furnish any information required.

#### Johnstone and Cumbers.

At Stand No. 9, The Arcade, the impression created externally is nil! But internally this Stand should appeal to every practical printer, and everyone interested in the craft is advised to pass the Imperial Portals and explore the mystic depths, where will be found specimens of the firm's high class commodities ranging from intaglio inks to newspaper inks, dry colours, varnishes, etc. They are featuring offset litho., intaglio, and three-colour inks and Imperial fine art catalogue blacks, all of which should appeal to users of printing inks, showing ingredients from the raw to the finished product; the Stand conveys a perfect mine of information to those who will investigate it, and all are invited to do so.

#### New Pegamoid, Ltd.

At Stand No. 10 Arcade, the exhibit of New Pegamoid, Ltd., includes Pegamoid Brand Leather Cloth in bulk, showing the latest productions for bookbinding, etc., Pegamoid Brand Printers' Blanket and Cylinder Cloths, and Pegamoid Brand Map and Poster Cloths.

#### The Rembrandt Intaglio Printing Co., Ltd.

This firm exhibits some very fine specimens of monochrome, also two and three-colour machine printed photogravure. Their reputation for monochrome work of an extremely high quality is well known, but perhaps some of our readers are not equally familiar with their colour work, and those who are interested in reproductions of the very highest quality will find much to interest them at Stall No. 1 Arcade.

**AN Advertisement is always working.**

## Designs for Cover Papers.

### Artists Invited to Compete for Valuable Prizes.

Those of our readers with an artistic temperament will do well to study the invitation of the Lindenmeyr and Johnson Paper Co., to compete for cash prizes amounting to £100 for new catalogue cover designs to be executed on their well known "Sunburst" Cover Paper. The first prize is £50; second prize, £30; third prize, £20.

In addition to these three prizes the promoters are open to buy any designs submitted which they may select for future advertising purposes. Wide publicity is thus ensured to successful competitors and their work.

The competition is open to all without restriction as to choice of subject or treatment, and results are to be judged by experts appointed by the *Caxton Magazine*. Needless to say, the generous offer should make a special appeal to art students throughout the country.

Messrs. Spalding and Hodge, Ltd., of Drury House, Russell-street, Drury-lane, W.C.2, market the "Sunburst" Covers in Great Britain for the Lindenmeyr and Johnson Paper Co., and the paper also forms one of the attractions at the stall of the latter firm at the Printers' Exhibition. Literature dealing with the competition is there available to visitors, and intending competitors may also obtain full particulars of terms of entry (the closing date of which is May 30th), or from the Lindenmeyr and Johnson Paper Co., Ltd., 11b, Upper Thames-street, London, E.C.4.

## J. A. Weir, Ltd.

### Retirement of Mr. John Lister.

A change in the old-established firm of J. A. Weir, Ltd., is caused by the retirement of the chairman and managing director, Mr. John Lister. He has been closely associated with the mills from the early years of Mr. Weir's ownership, and has been mainly responsible for the extensive schemes of reconstruction and extension carried out from time to time. He retires now with the hearty good will of his many friends.

In the position of managing director, he is being succeeded by Mr. Herbert S. Hooper, and the two mills will be respectively under the management of Mr. John Law (from Auchmuty) at Forth Mills, and Mr. James Smith at Strathendry Mill, with Mr. John S. Hetherington as commercial manager.

The mills are laid out for a large production of high-grade papers, and with improving trade should continue to give a good account of themselves.

## Some Paper Notes.

By Mr. F. HECKFORD.

"Nickel will be used instead of paper for books. A sheet of nickel one twenty-thousandth of an inch thick is cheaper, tougher, and more flexible than an ordinary sheet of book paper. It also will absorb printers' ink. A nickel book two inches thick would contain forty thousand pages. It would weigh only a pound, and the cost of the nickel would be five shillings."

This prophecy is what Mr. Thomas A. Edison is said to have made.

How thin plates or sheets of metal as a substitute for our present collection of vegetables called paper does not sound interesting enough to the romantic mind. One is used to exceedingly thin sheets of metal and mineral compositions, though a book about an inch thick, with 20,000 leaves would be a great economy in space. A cigarette paper is something less than one-thousandth of an inch in thickness. Feel one, and then think of a paper twenty times thinner. My "paper-maker" would have to find something finer than "beeswing" to describe such a paper.

Once I made reference to a writer who stated that there was nothing in the normal routine of papermaking to attract the æsthetic individual. I agreed with this, but ventured to say that there are real æsthetics in our industry. Like many things that outwardly present nothing to the man in search of the beautiful, when the surface is scraped a small phantasmagoria appears.

I remember how pleased I was when first I realised that nature was imitated by the papermaker in such a simple operation as paper sizing and the analogies I was able to draw. For instance, rosin is the residual product of the distillation of tree sap, and sap protects the wood from rain; therefore a tree robbed of its sap is deprived of its water resisting property. Now, in preparing wood for papermaking the resins are eliminated, and the paper made from such wood pulp would be water leaf and non-ink-resisting, but the papermaker imitates nature by putting resin back again with the wood fibres in the beating engine. And, again, a buffalo hide and a rabbit skin keep the occupant dry during its life time, and when dead the skin may be used as a covering for paper, *vide* gelatine—animal sizing.

To contemplate the likeness of the ultimate fibres to their respective stems is æsthetic. The esparto fibre, one-thirtieth of an inch in length and one two-thousandth of an inch in thickness, is of cylindrical shape, with tapering ends, resembling the stem from which it is extracted.

In looking at a field of corn one sees the kinks or bends in the yellow stalk, and knows that it contains thousands of cells of fibres with similar kinks, which characteristic in the

fibre helps to give the paper made from it a slightly different physical form from that of esparto. Again, paper is water-borne. No other liquid will perform the same function. On a fast running machine in three or four hours twenty, thirty, fifty thousand gallons of water will have deposited a mere two hundred or three hundred gallons of fibre on a piece of wire. A continuous flood rushes on and is rushed off after a few feet of travel. Enough water to wash the small quantity of fibre into nothingness; but it is only a carrier and a gentle depositor. At one point the fibres and their attendant accessories are whirling units, and a few moments later they have become a homogeneous sheet, made so by the friendliness of the water. Jostling, clinging, intertwining, down lie fibre, resin, alum, clay, starch and colour in a common watery bed, emerging undrowned and unified, to become mankind's great messenger of thought.

A piece of paper itself is an interesting thing. Under certain conditions it is nearly alive. With cold and heat, dampness and dryness, it will squirm and curl and stretch and shrink like its maker, whose messenger of thought it is.

Somehow I think friend Edison's metal paper will not satisfy our present civilisation. The manufacture of fibrous paper is surely still imperfectly carried out, and it holds out many problems yet to be solved, so that we cannot be on with the new until we have perfected the old, otherwise the thought and experiment expended by the papermaking world to-day—and a good many yesterdays, too—may not bear full fruit.

### Paper—the Messenger of Thought.

I find an interesting lecture given by Professor Aimé Girard on "Paper, its Antecedents and Progress." Mons. Girard said "If, as in a dream, our mind, leaving the nineteenth century, could go back 10,000 years before our epoch, we should find man in the midst of forests defending his savage life. Then, having managed to nourish and to clothe himself and to find a place to dwell, he begins to think, and the desire of transmitting the work of his intelligence follows; the memory of important events of which he may have been the witness takes possession of him, and as he had not yet discovered that great messenger of human thought—paper—he was obliged to find a substitute for it. As far back as we can go into the history of mankind we learn that the first men knew how to draw, that by pre-arranged signs they represented facts on the bones of animals. Then long after inscriptions on marble succeeded bones as the manifestation in embryo of human thought. Then followed bricks and pottery as a means of communicating messages of the human mind to future generations, and at a later date the peoples of Asia accomplished a new transformation by making use of the leaves of the palm trees; later still, parchment, obtained from the skins of sheep, was used."

"That great messenger of human thought," modern paper, first made some 500 or 600 years

ago, is now made in the same way, i.e., interweaving vegetable fibres with one another.

This invention greatly facilitated intercommunication of ideas, but the length of life of paper is much shorter than that of its bone, marble and parchment antecedents; on the other hand, it can be produced in much greater quantity, and is of more portable character.

Paper lends itself easily to reprints of historical reference, so that information can be handed down in profusion.

### Civilisation's Double Engine.

One of the most interesting references to the history of paper I've read was contained in a presidential address to the Royal Photographic Society by Lord Redesdale. Like Professor Girard, Lord Redesdale pays high tribute to paper.

"With the invention of the fount came the final perfection of the great double engine of civilisation—paper and printing—but of these two paper must be held to have been the *more important power*, for without it printing would have been of comparatively little value. Only think how few copies of any given book could have been printed on such costly and cumbersome materials as parchment or vellum, and you will realise the disseminating value of the new invention and its influence in the furtherance of all human knowledge."

In this lecture it is stated that the Chinese did not use cotton for papermaking. I have no acquaintance with the ancient Chinese, and only an outside idea of how they made their paper, and must also take it for granted now that cotton was not used and was ill adapted.

As distinct from raw cotton in ancient time, the cotton fibre is one of the most cherished for modern papermaking. The difference between the ancient method and the modern is the difference between the use of the stem or the natural conglomeration of the plant used as against the ultimate fibre.

No doubt all ancient paper was made after the manner of the papyrus article—i.e., by crossing layers of the stem, so a hard material which required little sizing would be a natural selection.

I was looking at another interesting lecture on ancient papermaking by a modern authority, Mr. Lewis Evans, and he states "the Chinese in the Far East had for a long time been making paper direct from cotton and some other vegetable fibres," and "this coarse cotton paper was known as Greek parchment."

It might be comparatively easy for an expert microscopist to determine whether an ancient Chinese paper contained cotton. The more difficult part might be to convince oneself that one had got hold of a piece of paper made, say, about 2,000 years ago. I have a fragment of papyrus labelled 1,000 B.C. and I have imagined it being handled by an early Pharaoh, but there is a doubt whether there might not be a thousand years to play with as regards its alleged date.

Other sentences in the address are: "Is it not wonderful that this invention, which was

destined to revolutionise the culture of the world, should have remained for centuries the monopoly of the most unlearned and retrograde of the so-called civilised nations? What were the Romans about? Their arm was long enough, one would have thought, to have wrested this great engine from almost savage hands which held it in their grip."

Well, it is strange, perhaps, that this mighty people did not make paper, but then it seems that the Romans spent the greater part of their rise and fall in actual fighting, in conquering and in being conquered. Their peaceful times were not sufficiently long to develop many of the arts or to contemplate inventions. When the Roman Empire had passed away the land of Italy rose to the greatest heights in some of the arts.

In the world to-day there is no important civilising and culture-giving agent which is the monopoly of any one nation. All of the great nations are equal in their comprehension of the principles of the sciences and arts, and differ in degree of method only, and if some small and obscure people were found to "make bricks without straw"; in other words, to invent a new paper—entirely new in principle, I mean—then the powerful nations—unlike their Roman predecessors—would possess it by peaceful abstraction.

## Crisis in American Paper Trade.

A critical situation has arisen in the United States and Canadian paper industry as the result of a vote taken by the workers' union on a proposal made by the employers to introduce a 30 per cent. reduction of wages and substitute a nine hour for an eight-hour day. An overwhelming majority of the men rejected the proposal, and in view of the fact that the agreements between the companies and the union expire early in May, the opinion is widely held that there is likely to be a complete stoppage shortly, crippling newspapers and printing and publishing houses throughout the United States and Canada. It is estimated that 50 paper mills would be effected.

# New Inventions.

## Inking Apparatus.

An invention patented by Messrs. R. Hoe and Co. relates to inking apparatus for printing machines of the general type shown in Specifications 20195/14 and 126,815 in which ink from a reservoir is forced by pumps through corresponding conduits to the distributing surface one pump and conduit supplying a column or section of the forme, the whole ink supply being variable, and each pump independently adjustable to vary the quantity supplied to each column, and provides a construction whereby the quantity of ink supplied to a series of conduits, such as those supplying a page, may be varied without affecting the supply to other columns. Improved constructions for the adjustment and operation of the pumps are also shown. Ink is supplied to a series of columns, etc., by a set of pump plungers 7 reciprocating in ports 6 in a member 4 slidably mounted in

their upward strokes the ports 6 communicate with the reservoir, and on their downward strokes with the conduits 3. Stops 17, screwed into the top 16 of the reservoir 1, engage the flanges 20 and may be independently adjusted to limit the extent of the suction strokes and therefore the quantity of ink delivered to the corresponding conduits. Springs 19 fitted between the member 9 and the flanges 20 compensate for this adjustment and lift the plungers on the suction strokes.

## Feeding Sheets to Printing Machines.

Under an invention by Mr. H. Heenss sheets are fed to printing, folding, and like machines at a high speed by means of suction nozzles which are moved into contact with the rear edge of the top sheet, of a pile, and then are tilted and moved toward a sheet forwarding device on to which the separated sheet is de-

guides 5 within an ink reservoir 1 provided with conduits 3 communicating with the ports 6 which alternately act as suction and discharge ports as the member 4 is reciprocated. A controlling member 21 having ports 23, and by-pass channels 26, slides between the bottom 2 of the reservoir and the member 4, and is adjustable by a screw 31 rotating in a stuffing-box 30 and engaging a nut 32 so that a predetermined proportion of the ink supplied by the plungers 7 provided with collars 8 and end flanges 20 slidably engage holes in a member 9 grooved to receive an eccentric shaft having a head 13, Fig. 3, driven from any part of the machine by gear wheels 14, 15 so that an eccentric motion is given to the member 9 serving to reciprocate the plungers vertically and the member 4 horizontally, the operations being so timed that when the plungers are on

posited, the feeding of more than one sheet at a time being prevented by means of blasts of air delivered by nozzles arranged adjacent to the suction nozzles and tilted about the same axis as the nozzles. As shown, a pile table 6 is mounted above a feed table 2 attached to supporting rail 3 from which depend guide tubes 4 for racks 5 which keep the table 6 at a constant level by means of mechanism involving a finger 47 which acts on the pile and worm gearing 9, 10, and pinion 7 on shaft 8

which engages the racks 5. The rear sheet of the pile is separated by means of a series of nozzles 27, Figs. 1, 3, and 6, depending from a tube 26 which is connected to a suction pump and is carried by levers 15 pivoted to a slide 14 which is moved along pivoted guides 13 by crank and link mechanism comprising links 17, 19, a triangular lever 18, and a lever arm 20 on a shaft 21 which is oscillated to an adjustable extent by a connecting rod 23, adjustably connected to a reversing link 24 operated by a crank pin on a disk 25. In addition to its longitudinal movement along the guides 13, the slide is adapted to be raised and lowered by means also controlled from the crank disk 25. The disk 25 oscillates levers 32 with pins 31 which support the guides 13, the front ends of the levers 32 being connected by a rod 47 which limits the motion of the levers 32 towards the pile, the rod 47 also acting in conjunction with known means for controlling the feeds of the pile table. A projection on the slide 14 limits its motion to the left, and then the continued movement of link 19, and lever 18, causes the suction nozzle 27 to tilt about the tube 26 to the position shown in Fig. 6. The air tube 28 air blast nozzle 29, and deflector 30 move with the suction nozzle, and this effectively blows off any sheets adhering to the one raised by the nozzle 27. A pin 36 on link 19 in conjunction with a fixed cam surface, assists in raising the lever 18 to a vertical position to cause the tilting action described. The separator 27 carries the sheet in a rearward direction and when the suction is cut off, a dropping roller 42 feeds it into the bite of belts 38, 46, which carry it downwards,

then under the pile table, and forwards to the feed table 2. For dealing with sheets of varying widths the suction nozzles may be attached to tubes 48 which are adjustable laterally on an inner tube fitted with suction ports 49.

#### A Rotary Bronzing Machine.

A rotary bronzing machine, patented by Mr. G. Newsum, which dispenses with the use of grippers comprises a sheet-carrying cylinder on which the sheets are held frictionally by a number of driven rollers, some of which rotate at a higher speed than the cylinder, the whole being arranged in a chamber having openings to receive sheet feeding and delivery boards and the sheets being delivered by a brush rotating in the opposite direction to the cylinder. The chamber comprises a metal frame *a*<sup>1</sup> covered with wood *b*, a part *a*<sup>2</sup> of which is hinged to give access to the bronze trough *m*. Openings are provided in the chamber to receive sheet feeding and delivery boards *h*, *f* and an opening *c* is also provided for the passage of spent bronze to a drawer *e*. The sheet-carrying cylinder *q* has a polished and unbroken surface and is driven by gearing from a shaft *u* driven by a belt *s*<sup>1</sup>. A number of plush covered rollers 4...14 mounted in adjustable bearings 33 run in contact with the cylinder *q* and are driven by chains 36, 41. The chain 36 is driven from a sprocket on the shaft *u* and presses round sprockets on the shafts of the rollers 4...10 and round an adjustable tensioning sprocket 39. The chain 41 is driven by a sprocket 42 on the shaft of the roller 10 and passes round sprockets on

### PRINTERS! BE YOUR OWN TYPEFOUNDER.

The HOUR has struck, and you can no longer delay that investigation into present-day costs.

The large amount of capital which is now lying idle in your Caseroom can be converted into a liquid asset.

The "NODIS" System will show you the way to

increase your production in the caseroom by 33 1/3 per cent., and reduce your type bills by 75 per cent.

Call at STAND 14, ROW C, Gilbey Hall, Royal Agricultural Hall. Ask for particulars and see the "NODIS" Typecaster in operation.

the shafts of the rollers 11...14, round a sprocket on the shaft of a sheet-delivery brush 44 so as to drive this brush in the opposite direction to the cylinder *q*, and round tensioning sprockets 47, 50. The rollers 4, 5 are driven at the same speed as the cylinder *q*, but the rollers 6...14 are driven at progressively higher speeds. The bronze powder is

applied to the sheets by the rollers 4, 5 to which it is transferred from a trough roller 1 by intermediate rollers 2, 3. The roller 1 is driven by a chain from the shaft *u* and the roller 2 is carried by pivoted arms 28 which may be lifted by hand-operated levers when desired to stop the supply of bronze.

### Moving-Picture Books.

Mr. A. T. Mason has patented an invention in which a book has its leaves cut in two places *a*<sup>1</sup>, *a*<sup>2</sup> to provide a series of flaps *a*<sup>3</sup> which are bevelled on their edges in two directions as shown at *a*<sup>4</sup>, *a*<sup>7</sup> to facilitate the

obtaining of a kinematograph effect by allowing the flaps to slip past the finger in either direction. The leaves have text and illustration in addition to the illustration provided in the flaps.

## Teaching Printing at Leeds.

### Annual Meeting of Masters' Association.

The annual meeting of the Leeds M.P.A. was held at the Masonic Hall, Leeds, on Friday, April 15th, 1921, when there was a large attendance of members, the chair being taken by the president, Mr. Harry Cooke.

After a few remarks by the president, in which he referred to the different conditions of to-day (owing to the great shortage of work) from the state of the trade as revealed in the minutes of the last meeting, when at that time the great difficulty was to obtain sufficient paper, the officers for the ensuing year were elected as follow: president, Mr. Harry Cooke; vice president, Mr. G. F. Storey; treasurer, Mr. H. Wood; with a very strong and representative executive. The Leeds Association believes in a large Executive, and the wisdom of this is proved by the great interest taken in their weekly meetings and the good work done by the members of the Executive.

As an instance of this, the following report by Mr. Wigley, chairman of the Technical Education Sub-Committee, will be of interest: "The Technical School Department of Printing is under the control of the Leeds Education Committee, who, along with H.M. Treasury, find the money necessary to carry on the work, by giving grants in aid for approved successful teaching. Another Government department, the Ministry of Labour, is now also taking an interest in the school owing to the presence of ex-service men who are being taught various branches of the trade. It is gratifying to know that 70 per cent. of all apprentices in the Leeds area have attended the school at some period of their apprenticeship during the last five years. During the last two years twelve students who are the sons or relatives of master printers have attended, mainly, of course, young ex-service men. The evening courses this session have been a great success. There were admitted 251 students, and the number of class entries totalled 625. The attendance has been uniformly good, and in the bookbinding section it was a record. At the day classes 40 students attended in preference to going in the evening, and 16 older students were present at the special lithographic classes held on Monday afternoons. The examinations are all voluntary, and it is creditable to find that three-fourths of the boys who entered actually finished the session and sat for examination. There are between 40 and 50 ex-soldiers in training, mostly in day classes, and we all ought to feel proud that this school is doing such good work in helping men broken in the war to resume their places in our workshops, feeling themselves to be as competent as the others who have not been called upon to make great sacrifices. The plant of the school is being kept up to the highest standard, which means that it still is the best equipped print-

ing school in the kingdom. There are four linotype machines; a monotype keyboard; another litho off-set machine is on the way and soon to be delivered; and the four sewing machines and other new bookbinding plant have been a great help to the school. For the first time in the history of technical education girls and women are officially enrolled as students under the new regulations. The costing classes have been very successful, mainly owing to the boundless energy of the vice-chairman of the L.M.P.A. The teachers and officials at the school are a capable and conscientious group of men, full of enthusiasm in the making of better craftsmen to follow the noble art of printing."

## "Colour Grammar" for Paper.

Details of what is called the "Colour Grammar" for the paper trade were given at a recent meeting of the Strathmore Mill and Merchants' Association, Springfield, Mass. The "Colour Grammar" is described as being to the art of printing and papermaking what the grammar and the dictionary are to the English language; it expresses in colours what mere words cannot express. It has taken three years' effort to produce the "Colour Grammar" despite many discouragements. The men responsible for the success of the work were Mr. H. A. Moses, president of the Strathmore Co.; Mr. H. H. Munsell, who spent his life in perfecting the Munsell System of Colour; Mr. Arthur S. Allen, Messrs. Rudolph Ruzicka, E. P. Kendrick, T. M. Clelland and C. W. Deardon.

Mr. Allen, with the aid of coloured charts, demonstrated at the meeting the Munsell Colour System for the measurement of colour, and stated the exposition of it in the "Colour Grammar" was not intended to present a creed or dogma for the use of colour, nor to supplant the instinct and trained perception. It is intended as a training for colour perception and the quickening of the instinct for colour, thus avoiding to a large degree the outrages upon colour harmony which are constantly being committed in every-day practice. It is intended to further add to the quota of human knowledge and become of permanent benefit to all engaged in printing, advertising and paper manufacture.

An unusually large number of members attended the eighty-second annual general meeting of the News-vendors' Benevolent and Provident Institution, held on Tuesday the 26th in the Memorial Hall, Farringdon-street, under the chairmanship of Viscount Burnham, the president. A report was presented showing that the total contributed and funded income last year was £3,903 11s. 10d., and the amount expended in pensions and relief £2,331 1s. 4d., both figures being considerably above the pre-war standard.

## The Stationers' Company.

### Interesting Record of an old Livery.

The Worshipful Company of Stationers and their historic Hall are coming a little more into the open, with advantage, we believe, to the Company itself and with greater usefulness for their headquarters. Social gatherings of the paper, printing and allied trades are now almost a regular feature of Stationers' Hall, and those who attend these gatherings will, no doubt, read with interest a short account of the Company's history.

The Stationers' Company, founded in the early part of the fifteenth century for the protection of manufacturers and vendors of books, was incorporated in 1557, and has henceforth discharged the various duties of—  
 (1) A Livery Company of the City of London;  
 (2) a trading company of publishers for the benefit of the partners providing a common stock; and, until recently (3) the custodian of the registers of copyright works.

### The Hall.

The present Hall was erected in 1671 upon the site of Burgavenny House, the town residence of the Earl of Abergavenny. The Court Room on the north-west of the Hall is of the same date as the Hall, but was enlarged at the end of the eighteenth century by the addition of the Card Room, which was built on the site of the old City Wall. The garden on the south side of the Court Room and west of the Hall is the place where the heretical books, which were seized by order of the ecclesiastical authorities and ordered to be burnt, were destroyed.

In the Court Room the meetings of the governing body are held, and applicants are admitted to the Freedom and Livery and the apprentices bound. In the printing trade the ancient custom of binding apprentices is still largely followed; each apprentice bound at Stationers' Hall receives from the Company a Bible and prayer book, and many of these books have been produced as valuable treasures 50 and 60 years afterwards. Formerly all apprentices were bound to members of the Company as indoor apprentices for seven years, but upon the application of the Court of this Company, the Court of Common Council framed an act enabling outdoor apprentices to be bound for a shorter term, if required.

The Company has for many years past awarded valuable prizes to apprentices who sit for examinations in their respective branches of the trade, and a scheme is maturing, whereby it is expected that these examinations will for the future be held in Stationers' Hall, under the immediate supervision of the Company and members of the various trades concerned.

From the Liverymen of the Company are chosen the members of the Court of Assistants, which constitutes the governing body. The selection has usually fallen upon the senior

members of the Livery in strict rotation, and for many years past an interval of about forty years has elapsed between admission to the freedom and admission to the Court of Assistants.

### Ancient Trade Boom.

It is well known that the charter granted to the Stationers' Company by the Crown in 1557 was granted with the object of controlling the Press and creating a powerful engine for the repression of literature distasteful to the Court and ecclesiastical authorities; at the same time it is equally clear that the Stationers were desirous of obtaining it for the purpose of advancing their trade which was then increasing rapidly in extent and value. Books seized by order of the Archbishop of Canterbury or Bishop of London were brought to the Hall and damasked or burnt in the adjoining garden.

The number of presses was limited, and strict supervision kept over what issued from them; thus the printer to the Company of Parish Clerks was required to enter into a bond of £50 to print nothing on his press but the weekly bills of mortality. At this time numerous presses were battered and the letters melted by order of the Star Chamber.

Ordinances controlling printing were made by Parliament in 1643, but these were not effectual, and in the following year Mr. Warden Crooke was requested to speak with Sergeant Keeling concerning the bill drawn up for printing, and prevail on him to press the Attorney-General for dispatch, also to move the Bishop of London to be procurable in forwarding its passing into an act and to give such fees as he sees cause. The Warden's intervention and judicious distribution of fees was effectual, and in 1662 the bill was passed into law. The duties cast upon the Master and Wardens by the High Commissioners were very onerous, and much time was spent in searching for illegal presses. The present freedom accorded to the Press has, of course, long ago rendered these duties inoperative.

For many years before the incorporation the Stationers carried on a lucrative publishing business which has been continued now for unwards of four centuries. The publications, are, however, at present confined to Carey's *Gradus ad Parnassum*, the Stationers' Almanac and *Vox Stellarum* (Moore's Almanac).

The capital formerly employed in business is invested and is known under the name of "The English Stock." This is held by certain members of the Livery called "Partners," who become qualified by election to possess, at first, a small portion; this is gradually increased until the Liveryman is called on to the Court, when he is entitled to hold £320. From the revenue derived a sum of £400 is distributed to the poor, and interest is paid half-yearly to the Partners.

### Benevolence.

Many of the members have left considerable sums of money to the Company for disposal as gifts or pensions. These are distributed under the supervision of the Court.

The Company established a school in Bolt-court, Fleet-street, in 1858. It was afterwards

removed to Hornsey, where the present school building was erected by the Company, and is now governed under a scheme of the education department by a governing body, composed of members of the Stationers' Company, members of the Middlesex County Council and members of the Hornsey Borough Council.

One of the curious customs appertaining to the Company occurs on Ash Wednesday. In the afternoon the Court and Livery, arrayed in their Gown, Scarlet Hood, and Tudor Cap, march in procession through the West Door of St. Paul's Cathedral to the Church of St. Faith, situated in the Crypt beneath, there to hold a service and hear a sermon or address appropriate to the occasion. A sum of money was left to defray the expenses, to distribute to certain poor persons, and to supply "cakes and ale" to any of the Company who attended.

Quite recently a Committee of the Livery has been formed which is intended to be the medium between its members and the Court of Assistants, and through which any matter concerning the welfare of the Company may be brought forward and considered. Further, the Committee have arranged to hold a series of lunches in the Hall on the third Wednesday in each month when distinguished visitors are invited to attend and speak on matters of general interest. It is hoped by these and other means to revive the object for which the Company was originally founded, and also extend its usefulness as a centre for the Livery members of the allied trades.

## Coated Paper Combine Stopped.

Judge John C. Knox in the United States District Court, on the application of Mr. Francis G. Caffey, United States Attorney, granted a perpetual injunction against the American Coated Paper Co., Inc., National Coated Paper Corporation, Pawtucket Glazed Paper Co., and others, restraining them from engaging or carrying into effect an alleged combination in restraint of trade. The Department of Justice alleged in its petition for the restraining order, that the defendants named were in a combination to maintain uniform prices in the sale and distribution of their products contrary to the provisions of the Anti-Trust Law.

A "SMOKER" and presentation was given, on the 14th inst. by the paper trade representatives to Mr. John Nugent, buyer of the Heavy Paper Department of Messrs. Begg, Kennedy and Elder, wholesale stationers and paper merchants, Glasgow, who after 35 years has severed his connection with the firm, and sails this week with his wife and family for Canada. Mr. Nugent was very popular with all mill representatives, and the best wishes of his many friends accompany him in his new venture. Mr. Nugent was presented with a wallet containing Treasury notes, and his wife with a seal morocco hand bag. The employees have also made a presentation of a fitted dressing case.

## Papermaking Sixty Years Ago.

### Major Gray Relates His Early Experiences of Papermaking.

A lecture on "The Old Hand-made Paper Industry" was given by Major Gray, of Messrs C. Davidson and Sons, at a recent meeting of the Aberdeen Technical Section of the Papermakers' Association held in Robert Gordon's College. Col. T. Davidson, of Messrs. C. Davidson and Sons, occupied the chair.

#### Two-Vat Mill Model.

Major Gray, who is one of the oldest and most experienced papermakers in Great Britain, described the mill in which he commenced his career over 60 years ago. The lecture was illustrated by a series of neatly-made wooden models of the whole plant, constructed under Mr. Gray's supervision. It was a two-vat mill, making chart and hosiery papers from rags, and the production was 5½ reams per day. Step by step the lecturer described the various processes of preparing and pulping the rags, and the subsequent operations of making, couching, pressing, sizing and drying the sheets. By means of the models he demonstrated the operations of the various workmen, the vatman, the coucher, the lay-boy, the pressman, etc.

A number of interesting facts were brought out during the course of the lecture, not only with regard to the technical details of the process, but also concerning the conditions of working. Work was commenced at 4 a.m., and if the whole staff had not turned up by 5 a.m. there was no work done that day.

#### Highest Pay 20s. a Week.

The highest paid papermaker got 20s. per week, and the wages graduated from this down to 1s. per day. Every man was his own mechanic, and the fireman, who attended the boiler, also assisted in the mill at the presses. The first job that the apprentice tackled on entering the mill was washing the couch-felts, during which operation he had to stand all day over the knees in cold water. Mr. Gray said it was hard work, but very healthy.

After the lecture numerous questions were asked and answered concerning practical details.

The Chairman remarked that they were all very much indebted to Mr. Gray not only for the trouble he had taken in preparing the models but also for his clear exposition of the subject.

#### Models to be Exhibited in Edinburgh.

The secretary (Mr. J. Strachan) said that Major Gray was to be congratulated on the production of what was really a most valuable contribution to the history of the industry. The matter was of more than local interest, and he proposed that the models should be exhibited at the Edinburgh meeting this coming summer, so that their southern members would share the interest. This was approved of by the meeting.

## S. O. as a Purchaser of Paper.

An interesting paper by Mr. E. A. Dáwe was recently given before the Technical Section of the Papermakers' Association on the subject of the "Stationery Office and the Papermaker." The following brief extracts from the paper will no doubt be of interest to printers and others.

### Early S.O. Contracts.

Going back to 1814, it is seen that there was an annual contract for the supply of paper to the Stationery Office containing 29 separate items, totalling 155 tons. In 1831 the number of items increased to 50, and the prices ruling were: Writings at 1s. 2d. per lb., printings at 10d. per lb., and wrapping at 35s. per cwt. The names of the contractors may revive memories in the elders of the company. They were Magna and Co., Key, Morgan and Jones, Wiggins and Co., and Richard and Williams, who shared the 50 items between them.

In 1851 there was still an annual contract, then increased to 88 items, with such names as Hodgkinson and Co., Grosvenor, Chater and Co., Morgan and Co., and Watson and Phipps. Prices varied a little from the previous quotation—writings, 8½d.—1s. 2d.; printings, 8d.; and wrappings, 43s. per cwt.

As time went on the inquiries for Government requirements became more frequent, the number of contractors making supplies increased, and the prices of paper steadily declined. For many years purchases were made from wholesale stationers, and later paper agents were added as means of obtaining supplies.

The list of papers stocked by the S.O. has grown in the course of years, and there is now a schedule of 13 distinct classes of paper. Although the varieties are many and the quantities ordered are large, the majority of the mills of the United Kingdom do not appear to make paper for the British Government. There are reasons, doubtless, best known to the papermaker for this abstention.

### Method of Obtaining Supplies.

The quantities of paper purchased by the S.O. are much larger than those required by the ordinary consumer, and as far as possible, the deliveries are spread over a reasonable time. In some cases the sizes and quality of the paper are peculiar to the S.O., and unless the papermaker has had previous experience of making supplies for the Office there is some diffidence in quoting for these particular papers.

The method of obtaining supplies may be described very briefly. The responsible officials aim at maintaining stocks of papers of such magnitude (or the reverse) as shall suffice to meet the demands of Government departments for a brief period. The exact time may be influenced by many things which are settled by others than the S.O. staff. At certain intervals a list of requirements is prepared, printed, and circulated to a number of papermakers who have expressed

their desire to have the opportunity of quoting for the supply of paper.

The form of tender sets out a description of the paper gives a specification, which sometimes includes furnish, sizing agent, strength, and other factors necessary to guide the manufacturer in making his bid.

### Specifications and Modifications.

If there is one thing that the average man likes to avoid doing it is reading through a contract of any kind. In others we call it stupidity, but in ourselves—well, it is weakness. But because the S.O. is progressive, it is very important that every form of tender should be read through. As far as possible the attention of contractors is called to significant changes, but it does not affect the conditions of the contract if these have not been studied by one of the contracting parties.

### Examination of Supplies.

The necessity for subjecting all supplies to a series of tests, the scheme for which varies for different papers, cannot be understood by the layman. It is at once apparent that structures of all kinds must be properly inspected and tested, and must be able to bear stresses far beyond those to which they will be subjected in the ordinary course of employment. While it must be clearly understood that paper is not to be classed as a structural material, yet on the other hand it will be admitted that there must be a considerable margin of safety in certain of its characteristics, or the paper will often be very poor stuff.

### Mutual Understanding.

The aim of this paper is to attempt in a small way to reconcile points of view, which appear to some people as divergent, yet when they are presented together are found to lead to the same end. The manufacturer (the papermaker) and the consumer (the Government department of the country) desire efficiency. If the consumer demands the maximum of efficiency at a minimum of expenditure there is a factor which makes economy of manufacture desirable or even imperative, and, if successfully attained, there is progress in which many benefit. It is easy to see that although the Government is a large—perhaps the largest—individual purchaser of paper, the major portion of the output of the mills goes in other directions.

SING SING prison's newspaper, the *Sing Sing Bulletin*, started twenty two years ago, has suspended for lack of funds.

STATIONERS' SOCIAL SOCIETY GOLF.—The knock-out golf competition under the auspices of the Stationers' Social Society has been in progress during the past three weeks. So far the successful players are Messrs. P. W. Kennett, Harrison Savory, R. R. Thomson, E. Lewis Winn, G. Smart and J. H. Green. The competition for the Horsburgh Cup is due to be played off on May 26th at Porters Park, Radlett. We understand there will be a good turn out, so intending competitors should note that entries close on May 12th.

# The Fisher Bookbinding Co., Ltd.

**A Peep into the Well-known Bookbindery,  
St. Ann's Works, Herne Hill, London, S.E. 24.**

The Fisher Bookbinding Co. (1912), Ltd., dates its history from the establishment, over 80 years ago, of the bindery of Fisher and Sons in Bride-court, the firm in those days consisting of Mr. Thomas Fisher and his three sons. The works were subsequently moved to Carter-lane, and a factory acquired also at Church-entry. It was at this stage of the firm's evolution, in 1883, that Mr. Edgar P. Woodman joined the concern as representative, and his activities were so successful in extending the firm's turnover that the two factories mentioned were soon found insufficient for the growing requirements of the business, and accordingly a further move was made to premises that had just been erected behind the *Times* office in Queen Victoria-street. But though the building here was more commodious, and a good deal of new machinery was installed, there soon came trouble into the camp, it being found impracticable on the death of old Mr. Thomas Fisher, to carry on the business as then constituted. In the end a liquidator was appointed and the debenture holders and creditors were paid out, the brothers Fisher afterwards separating. Mr. Woodman thereupon started the business afresh himself. He floated the present company—this was in 1901—under the style of the Fisher Bookbinding Co., Ltd., purchasing the Herne Hill premises, at which the business has been carried on ever since. The date, 1912, was inserted in the name of the firm when the company was, in that year, reconstructed for the purpose of increasing the capital. Mr. Woodman still remains at the helm, being managing director and chairman, while the secretary of the company is Mr. J. Frankham.

## **The Premises and Machinery.**

Pleasantly situated facing Brockwell Park, St. Ann's Works are well adapted for the efficient handling of bindery work. The main building is a very long one of only two storeys, the general plan of procedure being that sheets, etc., are received—by crane—into the upper storey, are circulated through the requisite departments, and finally delivered into vans from the ground floor, which is just a little above the level of the street. Besides the main building, the premises include a large number of railway arches, many of them surprisingly light and airy, and these provide excellent warehousing accommodation and serve also to house some of the subsidiary departments, such as the engineering repair shop, the stereotyping department, and the works kitchen in which the women workers' meals are prepared by a cook employed for the purpose.

It would take too long, and would encroach on ground already covered, to follow in detail the course of the work from the printed sheet to the finished volume, but it may be said in brief that the visitor to St. Ann's Works finds side by side with the older hand processes a fine selection of up-to-date machinery at work. There are a large number of guillotines of different types, folding machines too, and a big battery of sewing machines. Among the latter are no less than 14 Smyth No. 3 sewers, while there are to be seen also the larger Smyth No. 4 sewer, together with a number of Brehmer machines. A little further on one finds several of the ingenious Smyth case-making machines, and for the lettering and decorating of the cases there are a number of blocking and inking

presses of various kinds, which are to be seen turning out attractive designs in gold, aluminium, three colour and other styles. Rounding and backing are done on Crawley and other machines, and the casing-in is also done largely by machinery. Prominent in connection with the casing-in process is the Smyth casing-in machine, that very interesting piece of mechanism by means of which the rather exacting, messy and troublesome process of pasting books into their covers is performed with admirable accuracy, cleanliness and speed. The machine having been provided with a pile of covers, it feeds these

manufacture of all the paste required in the works, while room is found, too, for some fine motor vans which deliver throughout the London area, the Fisher Co. attaching great importance to the possession of up-to-date delivery facilities.

While this bindery specialises in binding for printers, and is entrusted with the work of houses of the highest standing in the trade, one finds all kinds of binding in course of progress through the factory, including publishers' orders and the many minor classes of work which go to make up the total output of a general bindery. The volumes bound

**The Smyth Casing-In Machine.**

forward seriatim, pasting them and applying them to the books as the latter are placed by hand in position on moving arms of the machine. As this machine has not been illustrated in the preceding articles of this series, an up-to-date illustration is included herewith.

In making a tour of the arches to which reference has already been made, one comes across several further interesting auxiliary items. Provision is made, for instance, for the regrinding of guillotine knives, also for the

range from tiny booklets which slip easily into the pocket up to big atlases and volumes of the *Times*—for which journal, by the way, the Fisher firm are the official binders.

#### **Brighter Times Ahead.**

Like every other house in the trade, this firm has shared in the severe business depression of the last year or two—a state of affairs which they found to be in striking contrast to the rush period of the War, when Government Departments were clamouring for de-

liveries, and when, with a large proportion of employees on war service of one kind and another, every available worker and machine was kept going to fullest capacity. Before the coming of the present national strike crisis, the company found inquiries definitely on the increase and business seemed to be well on the mend. And though the crisis has brought a set-back for the time being, the Fisher Bookbinding Co. is wisely taking the optimistic view and getting ready to utilise their resources to the best advantage in coping with the increased volume of business which, when this latest industrial storm shall have been weathered, is sure to come.

### THE

## World's Printing Trades Congress.

### Important Conferences at the Exhibition.

Of all the gatherings and conferences that have been held in connection with the Printing and Allied Trades Exhibition at the Agricultural Hall, the most important is the World's Printing Trades Congress, which occupied the whole of two days—Tuesday and Thursday of this week. There was a good attendance at the opening session, when Mr. E. W. Humphries (President of the Federation of Master Printers) occupied the chair. He briefly opened the proceedings with a reference to the comprehensive character of the subjects down for discussion.

"The Standardisation of Paper" was the first problem considered, introduced by Mr. Howard Hazell, who has done so much to press this matter forward. We hope to give the addresses of Mr. Hazell and others in a later issue.

It came out in the course of the discussion that Holland and Denmark are also endeavouring to secure standardisation of paper, but the difficulties there, as in this country, come from the mills and the merchants.

In the end a resolution was passed, on the initiative of Mr. Pollock, giving support to further efforts towards standardisation of number, size and weights of paper, and Mr. Humphries undertook that the question should be put on the agenda for the Scarborough meeting.

The Congress heard with much regret that Mr. Vincent Brooks, who was to have given an address on "Recent Developments in Litho and Colour Work and Future Outlook," was unable to attend owing to the regrettable fact that he was in hospital. He had prepared an interesting and vigorous paper, however, and this was read by Mr. Frank Colebrook, who took the opportunity of paying tribute to the high place which Mr. Vincent Brooks occupies in the lithographic craft of this country.

There was a second innovation at the morning session. Mr. G. A. Isaacs (general secretary of the N.S.O.P.A.), otherwise engaged in the afternoon, offered his observations on "How

to Secure Healthy Printing Works," sketching the work of the Health Committee of the Joint Industrial Council. Dr. E. Halford Ross's contribution to the more scientific aspect of the question came along in the afternoon.

"Salesmanship in Printing" was the final topic for consideration before the interval. It was introduced by Mr. J. Crowle Smith (Hazell, Watson and Viney), who illustrated his telling points with many inimitable stories. Mr. Josh. Bailey (Manifoldia, Ltd.), who, as the president remarked, has built up one of the largest businesses in England, followed on the same subject, with many useful practical hints.

Delegates to the Congress were subsequently entertained to luncheon, when foreign and colonial visitors were toasted, responses being made by Mr. J. M. Holtz (Amsterdam), Mr. K. V. Koch (Denmark) and Mr. Green (Madras).

In the afternoon, when Dr. Jas. Maclehose presided, discussion ensued on the question of salesmanship, after which Dr. E. Halford Ross gave his address, some interesting views following.

Mr. A. E. Goodwin (secretary to the Federation of Master Printers) then dealt with the "Methods Adapted to Printing Works for Adjusting Wages and Working Conditions in Various Lands." Mr. A. E. Holmes was to have given the views of the unions on the question, but he was obliged to be in Brighton for a meeting of the Printing and Kindred Trades Federation.

The discussion on this subject produced a comprehensive review of the position in Holland, Denmark and South Africa, thus illustrating the wide scope of the Congress.

Not the least interesting contribution to the day's programme was Mr. J. K. Riddell's able discourse on "Technical Education in All Lands," illuminated by thoughtful observations from Mr. J. C. Smail.

Wednesday was a special day at the Exhibition set apart for the comfort and convenience of members of the allied trades at home and from overseas.

To-day (Thursday) the World's Congress is being resumed, the subjects being as diversified and interesting as on the first day.

## Holiday Pay and Short Time.

The Hours and Holidays Committee at a meeting held on May 9th, re-discussed the question of payment for holidays in those instances where short time is being worked. The following are the decisions reached:—

"That in the case of any employees who are working short time, payment for Whit Monday shall be one-sixth of the weekly wages earned, taking the average of the four weeks immediately prior to the holiday, i.e., four weeks up to and including the pay day in the week ending May 14th. Payment for the annual week's holiday is to be made at full rates without any deduction because a firm may have been working short time."

# The Joint Industrial Council.

First Annual Convention made the Occasion for a  
Presentation to the Rt. Hon. C. W. Bowerman, M.P.

While it was in some respects regrettable that the arrangements to hold the First Annual Convention of the Joint Industrial Council of the Printing and Allied Trades at Brighton on April 12th had to be postponed owing to the national industrial unsettlement, it was nevertheless a happy circumstance that linked this historic first convention with the Printing Exhibition. By invitation of the organisers of the Exhibition, the Convention was held at the Royal Agricultural Hall on Monday.

The many delegates were first entertained to luncheon, Mr. W. H. Lock and Mr. F. W. Bridges welcoming them very heartily in the name of the Advisory Council of the Exhibition.

Mr. E. W. Humphries, who was in the chair, referred to the postponement of the Convention and expressed cordial appreciation of Mr. Bridges' kindness in offering them accommodation at the Exhibition and incidentally inviting them to luncheon.

Mr. C. W. Bowerman corroborated, saying that no one had rendered greater service in respect of the initiation and advancement of the Joint Industrial Council than Mr. Bridges.

Mr. Bridges then briefly replied.

The Convention proper commenced at 2.30 and the session lasted until about 6 o'clock.

## The Chairman's Speech.

Mr. C. W. Bowerman, chairman of the J.I.C., presided and in an introductory speech said that the past year in the printing trades had seen moments of acute difficulty, but they had survived them. He looked forward to the future with considerable hope, because he was satisfied with the success that had attended the work of that conference so far. Referring to the need for forming more district committees, he spoke appreciatively of the strenuous work of the two joint secretaries of the J.I.C., and suggested that they should receive additional assistance in order to make possible their arranging meetings in various districts for the purpose of forming district committees. Speaking of unemployment insurance he emphasised the importance of the employers' suggestion that they should be allowed to share the burden of the industry in this respect. With regard to increased production, he asked them not always to blame the workman for unsatisfactory results. So far as workmanship was concerned he believed they would not find better workmen in any country in the world than in our own. But up-to-date and ample appliances were essential. He stressed the importance of the opportunities provided by the J.I.C. and expressed the conviction that only good would result from its activities. There might be troublous

times ahead of them, but if their discussions were conducted in the same spirit that had characterised previous meetings they would get over their troubles without friction, each side securing the confidence and goodwill of the other side.

## Presentation to Mr. Bowerman.

At the conclusion of Mr. Bowerman's speech Mr. E. W. Humphries asked leave to encroach upon the duties of chairman, and, Mrs. Bowerman having been invited to the platform, there followed the pleasing incident of the presentation to Mr. and Mrs. Bowerman of a suitably inscribed silver tea and coffee service, a spirit kettle, a silver salver and a cheque, on behalf of a very large circle of well-wishers in the trade, both employers and employed.

Mr. Humphries, in an eloquent speech, dwelt upon the way in which Mr. Bowerman had filled one position of trust after another with conspicuous success from the time when he worked as a compositor up to the present day when he was honoured not only by his fellow workmen, but honoured also by Parliament and by the King. Making courteous reference to Mrs. Bowerman as worthy to share in the honour done to her husband, Mr. Humphries made the presentation to them both, amid the very hearty applause of the meeting.

Mr. H. Skinner, general secretary of the Typographical Association, heartily associated himself with the presentation on behalf of the employees' side of the Council.

Mr. and Mrs. Bowerman then both made fitting acknowledgment of the gift.

## Reports of Committees.

The business of the meeting was then proceeded with, reports being presented by the representatives of the various committees, and some discussion ensuing. Mr. G. A. Isaacs presented the report of the Health Committee, Mr. J. S. Waterston that of the Unemployment Committee, Mr. J. C. Coppock that of the Apprenticeship Committee, Mr. E. W. Humphries that of the Conciliation Committee and Mr. H. Skinner that of the Organisation Committee.

A SUCCESSFUL whist drive was held on Saturday at the White Café, Cook-street, Liverpool, in connection with the Letterpress Machinemen's Guild. In the absence of Mr. George Hampson, Mr. Houston (secretary) acted as M.C. The prizes were contributed by Messrs. Turner and Dunnett, Rockliff Bros., C. Tinling and Co., Hughes and Treleven, E. Craig and Co., Lorilleux and Bolton, Fleming's, L. S. Dixon and Co., and Mr. and Mrs. Sheridan.

## THE P. M. & O. A. Day at the Exhibition.

**Some Specially Interesting Features  
Mark the Visit of the Printers'  
Managers and Overseers  
Association.**

Last Saturday was the day on which the Printers' Managers paid their official visit to the Printing Exhibition, and right royally did they utilise the opportunity provided not only for "broadening the basis of friendship"—to use the words of the programme—but also for discussing matters of the Association's organisation and of technical progress, the Exhibition providing an ideal rendezvous.

Though transport arrangements naturally restricted somewhat the number of provincial members attending, there was nevertheless an imposing representation of this large and growing Association. The official delegates from the Centres were the following:—London: Mr. S. M. Bateman (vice-president), Mr. E. H. Berryman, Mr. J. C. Pugh and Mr. E. W. Whittle (general secretary). Liverpool: Mr. H. R. Caldwell and Mr. J. N. Poole. Manchester: Mr. T. Rignall and Mr. F. J. Hughes. Yorkshire: Mr. L. C. Mennell and Mr. W. H. Wray. Birmingham: Mr. J. Birch and Mr. W. E. Martin. Edinburgh: Mr. R. N. Stuart and Mr. F. B. Sandie. Glasgow: Mr. W. Guild and Mr. J. H. Adamson. North Midlands: Mr. G. Low and Mr. J. T. Wells. Leicester: Mr. W. H. Bailey and Mr. W. H. Crane. West of England: Mr. J. M. Dodds and Mr. J. Bowen.

### **Czecho-Slovakian Delegation.**

A very interesting feature of the day's proceedings was the presence—by courteous invitation of the P. M. and O. A.—of a large deputation of members of the Association of Overseers in Printing Offices and Letter Foundries in the Czecho-Slovak Republic. This delegation consisted mainly of prominent printers' managers and technical experts from the Czech Republic, and the fraternal hospitality shown them by the British sister association will doubtless long be to them a very pleasant memory.

The Czech delegation made careful inspection of the many interesting features which the Exhibition presents, and the result should not be without its value to this country's export trade. While these visitors did not, we gather, find much that was startlingly new in the exhibits, they were keenly interested in many of the machines and other goods on view, and they must have gained much useful information as to what the British manufacturer can do in the way of displacing the German supplier who has hitherto had the Czecho-Slovakian trade almost entirely in his own hands.

These foreign delegates, while not, of course, attending the delegate meeting of the Association, which was private, took part in all

the day's social festivities with evident enjoyment. While the majority of them were not English-speakers, there were several interpreters present, by whose aid the language difficulty was minimised.

### **The Delegate Meeting.**

In the course of the day there were two important sessions of the delegate meeting, at which the business transacted had to do chiefly with the Association's rules—business which has previously been referred to in these pages, and which will doubtless be again referred to later.

Soon after one o'clock the large Barford Saloon was crowded with P.M. and O.A. members and their Czecho-Slovakian guests, who sat down together to an excellent luncheon, the vice-president Mr. S. M. Bateman being in the chair.

### **The President's Greeting.**

The luncheon had not proceeded far before the reception of a telegram from the Association's esteemed president Mr. A. E. Jarvis—absent an account of illness. This message read: "Best wishes for the success of our united gathering. Greetings to the Czecho-Slovak delegation, and my kindest regards to you all. Wish I were there in person." This was received with great cordiality, and the secretary was instructed to send a telegram in reply. Mr. Whittle then proposed the toast of "Mr. Jarvis," adding the wish of a very speedy recovery and happy convalescence.

When the toast list proper was reached, precedence was given, of course, to the toast of "The King," which was followed by the singing of the National Anthem.

### **The Czech Visitors.**

Mr. Bateman then gave the toast of the occasion—"The Czecho-Slovakian Delegation." In a humorous speech he pointed out the similarities—and differences—between the two associations, and after telling the delegates of the very enthusiastic manner in which P.M. and O.A. members had endorsed the proposal to invite the visitors to share their festivities, he wished the Czecho-Slovak delegation a prosperous voyage back, prosperity after their return, and proffered them the heartiest good wishes of the P.M. and O.A.

Reply was made by M. Maly, the president of the delegation, whose speech in the Czech language was interpreted passage by passage. Beginning with hearty greetings on behalf of his association, he congratulated British printers on "the advances of English printing and the achievements of the British spirit." He pointed out that this "splendid association," the P.M. and O.A., had aims similar to those of their own society, and he wished the British association every success in its work. "The great World War," he said, "has brought our liberation, and we are thankful to our invincible allies, amongst whom the English are the first, and we are proud that it is your nation which enables us to come here as representatives of an emancipated and illuminated nation." He asked the acceptance by

the P.M. and O.A.—as a souvenir of the occasion and a mark of gratitude—of an interesting and handsomely bound volume, a reprint of the oldest and most precious Bohemian book, of 1648, a reprint which members of his association had produced in 1918. Concluding with renewed expressions of goodwill, he expressed the wish that representatives of the P.M. and O.A. should visit Prague, so that his association might reciprocate the hospitality shown them here.

At the conclusion of this speech the Czech-Slovak delegation showed their hearty en-

tea, on which occasion there was only one toast to be honoured, that of "The Exhibition Organiser"—Mr. F. W. Bridges.

Mr. J. C. Pugh gave this toast, expressing appreciation of the interest Mr. Bridges had always taken in the P. M. and O. A. He spoke of the previous Exhibitions to which Mr. Bridges had invited the Association, and said the present occasion was especially welcome in that it had provided an opportunity of meeting their Czecho-Slovakian colleagues. He returned the Association's thanks to Mr. Bridges for the splendid manner

**Mr. E. W. WHITTLE, General Secretary, P.M. & O.A.**

dorsement of the sentiments expressed by joining in a thrice-repeated shout of the Czecho-Slovakian cry of approbation or homage—"Na Zdar!"

Secretary Whittle courteously accepted the gift volume on behalf of the P.M. and O.A. He thanked Mr. Bridges for giving the Association the opportunity of extending their hospitality to these overseas brethren in the craft, and he expressed the hope that the friendly relations so happily begun would be continued.

**Mr. Bridges Thanked.**

Some 700-800 members, their ladies and friends assembled in the Congress Hall for

in which he had entertained them that day

Mr. F. W. Bridges, in reply, recalled that on four previous occasions the P. M. and O. A. had thus foregathered from North, South, East and West at his invitation. To-day, however, was a record day. This was a great gathering. He stressed the big possibilities for the good of the trade, in the hands of printers' managers, and said he hoped they would go away feeling they had a trade they were proud of, a trade worth working for, a trade which it was worth their while to do all they could to uplift. He concluded with complimentary reference to the Czecho-Slovak delegation, expressing the hope that their visit would be a pleasant and profitable

one, and that they would go away with happy recollections of the way they had been received in this country, and of their meeting with the P. M. and O. A.

#### The Concert.

Even the big attendance at the tea tables was eclipsed at the bohemian concert in the evening, when the Congress Hall was filled to overflowing.

We fancy the members responsible for arranging the concert will not on this occasion—as has been known to happen in the past—be subjected to criticism in respect of the quality of the entertainment provided. All the items were of a high order, and—if one may judge by the applause elicited, and by the fact that several of the artists received even double encores—the programme was heartily enjoyed by all. The concert party was under the guidance of Miss Gertrude Mayo, who ably rendered several pianoforte solos, acted most acceptably as accompanist throughout, and also contributed a couple of songs at the piano. Miss Edith Price's comedy songs were extremely well done, and raised great laughter and applause. The more serious songs of Miss Nellie Walker were also entirely successful. Miss Daisy Hogwood in some songs making considerable demand upon vocal resources, showed herself the possessor of a remarkably flexible soprano voice. Clever banjo solos by Miss Dorrie Courtney were heartily applauded, as were also Mr. Leo Savage's tenor songs. Very marked approval was accorded to the miscellany of humour submitted by the comedy duettists, Messrs. Robert Pitt and Langton Marks, while the exceptionally clever living marionette show of Mr. Wilby Lunn and Miss Connie Hart received unstinted applause.

Brief speeches interpolated the concert programme. The vice-president, on behalf of the Council, expressed London's welcome to the provincial delegates; then at intervals during the evening replies were made by representatives of the provincial centres, including Liverpool, Manchester, Yorkshire, Birmingham, Edinburgh, Glasgow, Leicester (whose representative put in a word on behalf of the North Midlands delegates, who had to leave earlier), and the West of England. All these representatives expressed, one after the other, the hearty appreciation felt by the provincial delegates for the generous hospitality afforded by the London centre.

#### A Distinguished Visitor.

In the course of the proceedings, announcement was made of the arrival of Dr. Adalbert Masny, the Ambassador of Czecho-Slovakia, to whom was expressed the Association's welcome and members' appreciation of the honour done them by his visit.

Mr. G. H. T. Freeman, the Association's indefatigable pensions secretary, found an opportunity of putting in an earnest appeal on behalf of the pensions efforts of the Association. He announced that a collection towards this object, taken after the tea, had realised only about 18 guineas, a sum which was regarded as unworthy of the occasion.

In this appeal he was supported by the Leicester delegate, who suggested that a further pensions collection be taken at the door—which was accordingly done.

#### The Finish.

As the concert programme neared its end the general secretary, Mr. E. W. Whittle (who had himself had a most strenuous day, as the active centre of all the proceedings), proposed a very hearty vote of thanks to Mr. Dawson, Mr. Hart and the rest of the committee who had so successfully acted as stewards.

The vote of thanks having been carried very cordially, Mr. Dawson and Mr. Hart both made happy response.

Mr. W. H. Gill then gave further expression to the Association's satisfaction at the presence of the Czecho-Slovakian delegates, and at his call they were given very hearty cheers, followed by the singing of "For they are jolly good fellows."

After the National Anthem and "Auld Lang Syne," what will probably be remembered by the P. M. and O. A. as their "Czecho-Slovakian Day" came to a fitting close by a response from the Czech delegates, who, at the call of their president, rose to their feet and again shouted in hearty unison their thrice-repeated "Na Zdar!"

## Modern Reproductive Processes.

Many claims are made upon Mr. J. R. Riddell, the principal of the St. Bride Foundation Printing School, to give addresses throughout the country, but nothing more useful could have been arranged than the address which he gave to the members of the Fine Art Trade Guild at the Royal Society of Arts on Thursday, May 5th.

The lecturer's lucid and interesting explanations of the modern photo-mechanical processes by which an artist's work can be reproduced was illuminating and must prove helpful to art dealers who are handling the best examples of the printer's Art.

Mr. Riddell gave a brief outline of the various processes by which colour pictures are reproduced, making reference to wood-cut, line, half-tone and tri-chromatic printing, photogravure (dust grain), mechanical gravure (screen), pure lithography, photolithography and collotype. There were some excellent examples of colour printing representative of the various processes referred to.

The interest of those present was sustained throughout the address and at the finish there was a close examination of the prints on exhibition, all of which were produced by leading printers in this country.

Mr. C. Gerald Agnew, the chairman, in proposing a vote of thanks, complimented Mr. Riddell on the manner in which he handled his subject which by the elimination of technical terms, had given a great deal of helpful information which would no doubt be of great assistance to those who are responsible for the marketing of high class prints.

## FORTY-THIRD YEAR.

*Printed and Published EVERY THURSDAY  
by STONHILL & GILLIS,*

*at 58, Shoe Lane, London, E.C. 4.*

**Tel.: Stonhill, Fleet, London. Phone: 3407 City.**

**SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE EXTRA).**

**Charges for Trade Advertisements:**  
(Full page 8 by 6 1/2 ins.)

Whole Page ...	24 10 0	s. d.
Half Page ...	2 10 0	
Third Page ...	1 17 6	
Quarter Page...	1 10 0	
One-eighth Page	17 6	
One-third Column	22 6	
One inch in Column	9 0	

**An Extra Charge for Cover and Special Positions.**  
Discounts according to Number of Insertions.

**Representatives throughout the United Kingdom and also in Australia, India, South Africa, United States Canada, etc.**

**All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C.4**

**Copies may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., news-agents, 11, St. Bride-street, E.C.4.**

THURSDAY, MAY 12, 1921.

# Current Topics.

## The Last Days of the Great Show.

THE course of the Printing Exhibition is almost run, and with the closing of the doors on Saturday evening there will come a sense of regret that such a fine collection of up-to-date appliances could not be kept on view for a week or two longer. A single visit, or even two or three visits, to such a show do not sufficiently enable one to obtain a grasp of the many machines on view, or to take in the ingenious and interesting details that go to build up these modern examples of mechanical ingenuity. At some of the stands where the larger collections are shown a whole day would be little enough for a thorough grasping and appreciation of the mechanisms and their labour-saving qualities, while the smaller exhibits scattered about the Hall also demand the closest attention. The attendance of visitors has been good, though it might have been better; and if there are still any printers who have not seen the show they should lose no

time in doing so, for whether they want to buy or not, they will get a liberal education as to what has been done by the engineering section of the trade to give them up-to-date plant and to enable the printer and book-binder to bring their works into a state of modern efficiency.

## From the Gallery.

Looking down from the Gallery of the Agricultural Hall, one gets quite a kaleidoscopic effect of the great expanse of floor space below, and of the various exhibits that are seen from that elevation. The stands of Messrs. Geo. Mann and Co., Ltd., Linotype and Machinery, Ltd., Furnival and Co., the Monotype Corporation, Ltd., Fry's Metal Foundry, Dawson, Payne and Elliott, and others, are seen to advantage, and Jubb's metal display stands out like a silver castle in the sunlight, while the colouring of the various decorations, the swift movement of sheets passing through the machines at work, the animated crowds of visitors passing up and down the aisles between the exhibits, make an interesting picture, full of life and movement. For the non-technical visitor this is perhaps the best point to view the exhibition from, but the interested practical man will want to get down to the main floor, and see the whole of the exhibits at close quarters.

## Some Features.

THOSE who remember the earlier exhibitions will doubtless notice the almost entire absence of the flat-bed lithographic machine from the present show, and the manner in which the rotary offset press has ousted it from the field it once occupied. To-day all the principal printers' engineers are showing offsets. Mann and Co. have a splendid range of them at work, including rotary offsets for tin printing, a class of work that until quite recently was considered especially suitable for flat-bed printing, and other makers are not behind them in the construction of these now popular presses. As to the fall in value of the flat-bed litho press, it may be noted that at a recent sale in London a quad-demy machine by one of the leading makers, with all modern improvements, only brought £50, while other similar presses were knocked down at almost the same price. The "super-offset" press shown by R. W. Crabtree and Sons, Ltd., of Leeds, and fitted with automatic feeder, is a distinct advance in this class of machine. Another feature of the Exhibition is the number of automatic feeders for platen machines which have made their appearance

since the last time the show was held. There is the "Miller" automatic feeder shown at the stand of the Lanston Monotype Corporation, the "Humana" and the "Klymak" at the exhibit of Messrs Caslon and Co., and others. It is evident that the difficulties so long attached to the designing of automatic feeders for platens have now been overcome, and that that small, though useful, machine has now been brought up-to-date, and its output increased. The automatic platen press shown by Francis J. Connolly, Ltd., in the King Edward Hall, under the title of the "Princepts," is really the most interesting machine of the platen class in the show. The press has self-contained automatic feed and automatic delivery, and is a marvel of ingenious construction that will give an output of from 2,400 to 3,200 per hour, while it has the remarkable advantage of allowing the printer to work off several small jobs at once. Thus, say in the case of printing envelopes, four or five can be printed at one impression, and a cardboard and a tissue job may be worked at the same time, if required. This is certainly a press that is worth inspection.

#### **No Longer a Mystery.**

PHOTOGRAPHURE, which of recent years has come well to the front, and is now taking a front place among illustrative processes, was for long quite a mystery to the ordinary printer who looked upon it as a method to be left to artistic experts. This was certainly true in the old days when the printing was only done from flat plates, but with the advent of the rotary machine, the engraved cylinder, and the automatic wiper, the process was simplified and brought within reach of every enterprising printer. Here, at the Exhibition, one may see "how it is done" at several stands, and the mystery is a mystery no longer. That printers are interested in the process is evidenced by the small groups of visitors that crowd round Penrose's "Velo-graphure" Machine and other exhibits in the photogravure class.

#### **A Display Composing Machine.**

THE ordinary everyday practical printer will be much interested in the Ludlow Typograph which is on view in the Gallery. This appliance provides a means for setting display composition from twelve to sixty-point, on slugs, in bold and extended faces, and, in fact, may be termed a display composing machine. It covers but little floor space, and greatly increases the capacity of the jobbing office, while at the same time it does away with

dissing and there is no limit to the number of lines that may be set up and cast. Four compositors can be at work at once, and the saving in time and increase in output are remarkable. The Ludlow Typograph has been in use in the United States for some time, and this is the first time it has been shown in this country. The action of the typesetter is simplicity itself and presents no difficulties to the ordinary operator.

#### **For the Bookbinder.**

THE bookbinder who visits the Exhibition cannot complain that his section of the trade has been neglected by the manufacturers, for there is a larger collection of binding appliances than has been seen at any previous display of machinery for the printing and allied trades. At the Sheridan stand there is a selection of machinery of a high class, and from the Smyth-Horne collection a binding shop could be fully equipped with the latest labour-saving appliances. Valters, Jackson and Co., the Canadian-American Co., the J. L. Morrison Co., Oscar Friedheim, the Hobbs Mfg. Co., Hampson, Bettridge and Co., and other firms all cater for the binder and offer him a selection of tools to suit his every purpose. In the matter of materials, too, the binder has been well provided for, and leather, leather substitutes, cloth, papers, threads, wire, glue, and the many other articles that are used in the binding shop, are all offered by reputable makers.

#### **Improving the Plant.**

WHILE it cannot be said that there is anything quite new or revolutionary in the way of printing machinery to be seen at the Exhibition, it is very noticeable that the various makers have been improving in their designs and details of existing appliances, with a view to greater simplicity in working and increase of output. Some appliances, in fact, have been practically reconstructed, and there are very few that have not been improved in some way since the last Exhibition. In this connection may be noticed the remarkable smoothness of working and absence of noise, especially in the larger and heavier class of machinery, a feature that was remarked on by the majority of the practical men who visited the Hall. This points to finer and more accurate workmanship by the printers' engineers, and the reduction of noise is all to the good in the sometimes rather nervous atmosphere of the busy printing office.

## DIVIDENDS AND REPORTS.

**THE "GENTLEWOMAN" ILLUSTRATED**.—On the 6 per cent. preference shares, 6 per cent. per annum; and on the ordinary shares, 4 per cent. per annum.

## NEW COMPANIES.

**WOOD'S DIE PRESS IMPROVEMENTS CO., LTD.**—Capital £100, in £1 shares; printers, stationers, lithographers, typesetters, die sinkers, die pressers and die press makers, etc., and to adopt an agreement with **F. W. Wood**, **W. H. Cook**, **H. T. Johnson** and **T. Cook** Private company. Subscribers: **W. C. Gascoine** and **W. Barrier**. Subscribers appoint directors. Registered office: 10, Serjeant's Inn, Fleet street, E.C.

**LEWIS ANTHONY CO., LTD.**—Capital £2,000, in £1 shares; music publishers and retailers, dealers in musical instruments, etc. Private company. Subscribers: **J. W. Smith**, **H. G. Phillips** and **Anthony Lowry** (managing director). Registered office: 30, Westbourne-grove, W.

**H. S. CROKER AND CO., LTD.**—Capital £15,000, in £1 shares (5,000 8 per cent. pref.); engravers, wholesale and manufacturing stationers, die sinkers, relief stampers, printers, etc. Private company. First directors: **H. S.**

**Croker and H. B. Croker**. Registered office: 10, Rathbone-place, Oxford-street, W.

**ECCLESIASTICAL PRESS, LTD.**—Capital £500, in £1 shares; to adopt an agreement with **Hoxton and Walsh (1915), Ltd.**, and to carry on the business of printers, engravers, publishers, etc. Private company. First directors: **J. Wheatley** and **P. Wheatley**. Registered office: **Philos Chambers**, 195, Oxford-road, Manchester.

**LEWIS, COATES AND LUCAS, LTD.**—Capital, £100, in 1s. shares; law and general stationers, printers, lithographers, stereotypers, photographic printers, engravers, die sinkers, envelope manufacturers, papermakers, paper bag and account book makers, boxmakers, cardboard manufacturers, etc. Private company. First directors: **Major P. R. Thornton**, **A. C. Lewis** and **A. B. Coates**. Registered office: 115, High Holborn, W.C.1.

**CINEMA ADVERTISING CO., LTD.**—Capital, £4,000, in £1 shares; to take over the business of advertising agents and contractors, carried on by **S. B. Anderson** and **W. J. Coupe**, at 30, Hall Gate, Doncaster, as the "Cinema Advertising Co." Private company. First directors: **S. B. Anderson** and **W. J. Cooper**. Registered office, 30, Hall Gate, Doncaster.

**WILLIAM S. TAYLOR, LTD.**—Capital, £15,000 in £1 shares; waste merchants, papermakers and merchants, spinners and manufacturers of tow, jute, flax, hemp, yarns, sailcloth, etc. Private company. First directors: **W. S. Taylor**, **J. R. Taylor** and **J. S. Taylor**. Registered office: 3, Raglan-street, Dundee.

**HARRIS PUBLICATIONS, LTD.**—Capital, £2,000, in £1 shares, to take over the business of a publisher, journal and publication proprietor, philatelic bookseller, stationer and philatelic exchange club proprietor, carried on by **A. H. Harris**, at 87, Emmanuel-road, Balham, S.W. Private company. Directors: **Mrs. T. A. Harris** and **A. H. Harris** (chairman). Registered office: 87, Emmanuel-road, Balham, S.W.

**CAMDEN CARDBOARD BOX WORKS, LTD.**—Capital, £3,500, in £1 shares (3,000 preference and 500 ordinary); manufacturers of and dealers in plain and fancy boxes, cases, packages, jars, discs, tubes, rings and washers made of cardboard, paper, papier mache, pulp, felt, fibre and other materials, printers, lithographers, etc. Private company. First directors: **F. G. Hackney**, **W. M. Coombes** and **C. M. Thomson**.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**ALFRED JUBB AND SON, LTD.** (Printers, etc. Huddersfield).—Satisfaction in full (a) on April 30th, 1911, of debentures dated May 1st, and October 17th, 1901, securing £11,000; and (b) on April 27th, 1921, of debentures dated May 1st, 1911, securing £11,000.

**KENT, MILNE, AND PARTNERS, LTD.**—Issue on April 8th, of £2,400, and on April 22nd, 1921, of £1,100 debentures, part of a series already registered.

**WESTERN MAIL, LTD.**—Satisfaction in full on December 31st, 1920, of mortgage dated November 8th, 1894, and debentures dated May 4th, 1896, securing £55,000.

**WALLASEY PRINTERS, LTD.**—Particulars of £2,000 debentures authorised February 25th, 1921, present issue £700; charged on the company's undertaking and property, present and future, including uncalled capital, subject as to freehold properties in Belle Vue-road, Sea-combe, to a mortgage for £700.

**MANCHESTER PRINTING BINDING AND BOX-MAKING CO., LTD.**—Particulars of £4,000 debentures, authorised April 24th, 1921; present issue £1,100, charged on company's property, present and future, including uncalled capital, subject to mortgages for £1,700.

**WYMAN AND SONS, LTD.**—Land Registry Charge and as collateral security thereto, a mortgage, both dated March 31st, 1921, to secure £5,000 charged on 29 and 31, Breams-buildings, E.C. Holders: Phoenix Assurance Co., Ltd.

**CANNON AND CLAPPERTON, LTD.** (Paper manufacturers, Sandford-on-Thames, Oxford).—Particulars of £40,000 debentures, authorised March 24th, 1921; whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital.

**THOMAS DE LA RUE AND CO., LTD.**—Charge on the company's undertaking and property, present and future, including uncalled capital (subject to prior charges), dated April 22nd, 1921, to secure all moneys due or to become due from company to mortgagees. Holders: Hertford Investment Co., Ltd.

**MCCORQUODALE AND CO., LTD.**—Particulars of £200,000 debentures, authorised by resolutions of March 10th and April 13th, 1921, and covered by trust deed dated April 18th 1921; whole amount issued; charged on the company's undertaking and property, present and future, including uncalled capital. Trustees: A. C. McCorquodale and H. McCorquodale.

**HUDSON AND KEARNS, LTD.** (Printers and stationers, London).—Mortgage and Land Registry charge on Hatfield-street Works, S.E., and two sinking fund policies, both dated April 26th, 1921, to secure £50,000. Holders: Legal and General Assurance Society.

## Printers' Managers and Overseers ASSOCIATION.

### May Monthly Meeting.

The usual monthly meeting of the Printers' Managers and Overseers (Parent) Association was held on Tuesday of last week at the "Old Bell," and was mainly of a social character. Mr. S. M. Bateman, vice-president, was in the chair.

After the approval of the minutes of last meeting, the general secretary made the welcome announcement that Mr. A. E. Jarvis, the Association's president, was making very satisfactory recovery from his illness, though it would probably be some time before he would be well enough to attend meetings again.

As is customary with this go-ahead Association, several new names were put forward as nominations for membership. On this occasion the following were elected:—Messrs. A. Brooks (Nathaniel Lloyd, Ltd., Burrell-street, Blackfriars, S.E.1, overseer—litho); H. Jay (Waterlow and Sons, Ltd., Dunstable, overseer—letterpress); A. E. Leggatt (E. C. Barlow and Sons, Ltd., Urswich-road, Hackney, E., manager—litho); W. W. Shaw (Suttley and Silverlock, Ltd., 92, Blackfriars-road, S.E., works manager); and C. Sumner (The Press Printers, Ltd., 69-76, Long-acre, W.C., overseer—composing).

The general secretary then made an announcement as to the latest arrangements with regard to the P. M. and O. A. day at the Printing Exhibition, and intimated that there was every promise that the occasion would be a very successful one.

On the meeting being thrown open for "any other business," Mr. G. H. T. Freeman put forward a query about the recent election for the Printers' Pension Corporation pensions; he wished to know whether provincial members were being properly informed as to the Association's pensions efforts and their outcome.

The general secretary was able to assure him that the matter of the provinces in respect of the pensions appeal was being very carefully attended to, and that provincial members would be kept fully informed on the subject.

The remainder of the evening was occupied by a members' concert, the talent for which was provided by members and their friends. Miss Alice Palmer and Miss Minnie Davies, friends who have previously helped at the Association's concerts, contributed several songs apiece, and were appreciatively received, while several of the members present also contributed to the programme. Mr. J. J. Smith was heartily applauded on showing himself sufficiently recovered from his illness to be able to entertain the room again with some of his rollicking stories. Mr. T. Little contributed a pianoforte solo and also acted as accompanist. Mr. G. H. T. Freeman proved himself able to recite effectively, and a hearty reception was given to songs by Messrs. Condliff, Northam and H. Barnes.

Notes and News for

# The Bookbinder.

## Bookbinders and Their Costs.

Several comments have reached us to the effect that the contribution dealing with cost-finding in the bookbinding trade which appeared in the last issue of this journal dealing with that section was very much apropos. There is a desire in every part of the country to conduct the trade on sounder principles than hitherto, and even in trade union circles there is a more sympathetic interest in works organisation. The stumbling block is the timing principle, and at this obstacle the whole system of works control and determination of job costs breaks down. The whole development of the industry turns on the time docket, for time is the basis of production, cost and charge. Upholders of the antique method of guessing at probable and possible times and ignoring the relative cost and value of machine against handwork are finding it difficult to justify their support. The sole argument in their armoury of defence is that which every opponent of progress clings to, the claim that old methods have sufficed in their time, so why change? Even the times are changing, and we must change with them. To stand still is to go backward when all else is moving. The bookbinder of to-day is facing competition, high costs of production and the probability of a dwindling demand for his commodity by reason of its cost. Organisation and efficiency will do more to increase demand and lower the cost of production than would result even from longer hours or lower wages. The right use and economic application of the material and equipment at his command is the key to increased efficiency. The larger the workshop the greater the need for honest facts and figures, and the less the value of personal overlooking on the part of the management. From the time docket alone come the data which will prove the cost of the job and the relative weakness or strength of the organisation as a whole. The name on the docket is of no account except as a check on accuracy and a safeguard against repetition. But the analysis of and investigation into the aggregate hours and the classification thereof are the means by which the business may be built or extended.

## Trade Unions and the Docket.

Most of the officials of the Binders' Union have no personal objection to time dockets, and, in fact, the executive endorse their use so long as they conform to requirements. It is

understood that where the installation of dockets is desired, the Binders' executive will co-operate with the Federation in helping to secure the installation. In practice, some of the local branches refuse to recognise time dockets, and in certain areas the rule books have a clause imposing a fine on any member infringing the law against filling dockets. Even in these areas the officials, or many of them, quite uphold the cost-finding system and admit the necessity and efficiency of the time docket. There is a wavering fear on the part of some of them, and on the part of some of their members, that too much in the way of time analysis or dissection might be asked of them. Possibly there is also some lingering doubt as to the purpose and intent behind the docket, but the experience in every other department of the printing trade for 10 years goes to discount this entirely. If, then, the opposition to time dockets boils down to a question of the arrangement of the form and the data desired by the management, it may safely be taken for granted that dockets will be in general use within a very short period. No purpose of a cost-finding system is served by imposing a burden of clerical work on the operator, and commonsense dictates that close analysis of bookbinding time on miscellaneous work is an utter impossibility. An hour or so round a table occupied by half a dozen practical men from both sides of the craft and a chairman selected from the Federation by the Union officials themselves would see the end of the trouble over the time docket.

## The State of Trade.

The bookbinding trade is quiet all over the country, but hardly so dead as the printing trade. We hear of some stationery binding establishments who are busy enough to keep the full staff employed. Government work has fallen off considerably, and in the large manufacturing stationery establishments very little of the accustomed stock trade is moving. There is too much uncertainty in the outlook to sanction the making up of stock lines. Paper prices continue to decline, though very gently, and bookbinding materials have not yet touched bottom. Under these circumstances the general policy is to work hand to mouth and avoid accumulation of stocks whether of material or made-up goods. The coal stoppage put "paid" to a promising movement which set in as a result of good inquiries from abroad. But for this, much stationery would

have been in request by now. As it is, no improvement is looked for until Whit week and the coal trouble are things of the past.

#### **Bookbinding at the Exhibition.**

The Printing Trades' Exhibition reveals the extent to which machinery is being introduced into the bookbinding section of the industry. Despite the exclusion of late enemy countries there is a wonderfully good showing of the later types of equipment which owe much of their evolution to the painstaking efforts of German engineers. It serves no good purpose to blink the fact that the bulk of the ingenious and delicate machinery for both boxmaking and bookbinding formerly came from Germany and in only lesser degree from America. The British engineers, who thoroughly understand book-sewing machines for example, could almost be counted on the fingers of one hand. In the more substantial machines, the old foundations of the trade—as guillotines, blocking presses, paging machines and perforators—we always had the lead and still retain it. Apart from the auto-knockup machine and new English makes of stitching and perforating machinery, etc., there is really no marked development since before the war. What we look for at the next Exhibition is a striker ruling machine with *reliable* self-feed and self-inking attachments, also less complicated booksewing machinery of English origin. We may also anticipate improved methods in mechanical indexing, marbling and the making of spring tubes.

#### **Trade Solidarity.**

Events crowd thick and fast in the allied trades. The Exhibition, World's Trade Congress, the Annual Conference at Scarborough, all within a week or two! Ample opportunity is afforded for the mingling of North and South, England and the Colonies, not to mention America and the Continent. This is all to the good and marks the new era in fraternisation. Not many years ago the

printer didn't know his neighbour and side-slipped his competitor. The bookbinder jealously safeguarded his secrets and fancied they would die with him. To day the trade is friendly, one man has found he is much like another; the knowledge of one helps the lot and comes home to his own advantage. We are only at the commencement of the new phase and goodwill is but in its infancy. The trade is one, and in its whole it is dependent on the parts. The parts are not yet welded as they must be, but the time is coming when masters will look on masters as their friends and men as their friends in equal degree. Two-sidedness will give way to single unanimity in the development and pursuance of mutual interests.

## **Bookbinding Trade in 1920.**

The 39th annual report—for the year 1920—of the London Chamber of Commerce, just issued to the members, contains several points of interest, that dealing with the Bookbinding Section being especially interesting.

The report states that the main features of the year 1920 in the bookbinding industry, in common with many others, were a period of good trade accompanied by further rises in wages, commensurate with the increasing cost of living, and subsequent scarcity of orders so general as to necessitate the consideration of a scheme for short-time throughout the shops.

The number of meetings of the Section was not great, but the Master Bookbinders' Association met every Tuesday, all the members of the Association being identified with the Section. Negotiations with the National Union of Bookbinders (London Branch) were continuous, to such an extent that, owing to great pressure on both the employers' and employees' organisations many matters requiring settlement were still left outstanding.

## **BINDERS TO THE PRINTING TRADE.**

**P**RINTERS who have the facilities for folding, sewing and casing up, can be supplied with cases made in Leather, Rexine, Pluviusin, Imitation Leather, Cloth, or any other material, blocked or embossed in Gold, Imitation Gold, White or Coloured Foil Leaf, ink in any colours.

Our staff consists of more than 300 capable workers, provided with the most up-to-date machinery.

*We shall be pleased to submit samples for Trade Catalogues, etc.*

## The Victoria Platen Machines.

### An Improved Series of Presses.

There is at present on view at No. 353, Upper-street, Islington, N., a fine series of the well-known "Victoria" Platen Presses that have been so much appreciated by all printers who have installed them. The machines shown, however, are an improvement on the presses that were formerly supplied by the manufacturers, and embody many improvements in details that bring them thoroughly up-to-date and add to their efficiency and the accuracy of the work they turn out. The exigencies of modern printing makes exacting demands on the machines used, and what was good enough in the way of impression and register a few years ago will not do now that half-tone and three-colour has become so popular, but the designers and builders of the newer class of platens have devised and embodied improvements that fulfil the necessary conditions of modern printing.

The No. V. Victoria platen has been a favourite with all printers who have installed it, and the "Special Model" on view at Upper street combines all the advantages of the old machine in addition to a number of improvements that place it in the first rank of this class of appliance. Much attention has been given to the inking powers, and the rollers, in passing over the forme, give a thorough distribution of ink on its surface, while by simply pulling a small lever all the rollers, including the ductor, may be thrown out of gear. The chase is held on the bed by a special catch that can be instantly released when desired to change a job, and a special feature is an improved safety guard that makes it quite impossible for the operator's fingers to be caught while feeding-in sheets. It is well known that the feeder of a platen press has a strong objection to guards, and very often surreptitiously removes them, and to prevent this the guard in question has been so devised that the machine refuses to work if it is taken off. This in itself is an improvement that should be appreciated as eliminating accidents to the worker. Another feature is that should anything drop from the forme while the press is running the rollers immediately fly back to position at the top of the machine, thus avoiding the possibility of a breakage, a thing that often occurs from this cause. There is a special three-point clutch that can be immediately thrown in or out and the machine started or stopped instantly. The working of the press, as in all the Victoria models, is very smooth and there is little or no vibration. For working-off half-tone or three-colour illustrations No. V. Victoria is specially adapted, while at the same time it may be used on any class of commercial work that comes within the limit of its size. The No. V. Normal is a similar press to

the one described, and is fitted for the best class of commercial and other work.

No. IV. Victoria is also made in the Special and the Normal grades and what has been said in the description of No. V. as to the accuracy of workmanship, fine inking powers, and the attachment of the safety guard equally applies to these presses. They are ideal machines for commercial work, and are effective, speedy and economical in working, very little power being required to drive them, while the solidity of their construction enables them to withstand the impression of the most solid form.

A cheaper form of platen press, suited for the general work of a busy printing office is the "Victoria-Merkur." It is a good commercial machine, with excellent ink distribution, and embodying all modern improvements. It can be worked either by treadle or power, and the size, inside chase, is  $12\frac{1}{2}$  by  $16\frac{1}{2}$  inches. This machine, like the others, is fitted with a hand guard of an effective character; its construction is solid, and for ordinary jobbing work it is effective and reliable.

Another press on view at the Upper-street show-rooms is the "Kobold." This machine is the cheapest in the range offered and is a thoroughly well-built and strong press, well suited for general jobbing work. It has two inking rollers, with disc distribution, is fitted with a guard, and can be worked either by treadle or power. A special feature of the "Kobold" is that the platen is not hinged, as is usual on this class of press, but moves forward with a parallel motion that issues perfect contact at all points of the impression. Printers who have a knowledge of platen working will know that this arrangement greatly facilitates the work of making ready and getting good results. Another advantage is that the frisket fingers can be laid back flat on the platen and easily set without danger of damaging the type.

Another very powerful machine on view is the "Herkules" press, which is intended for embossing, cameo, and showcard work. It is massively built and possesses great strength, as is necessary in an appliance of this kind, giving such a powerful impression. The platen is  $15\frac{1}{2}$  by  $20\frac{1}{2}$  inches, and the bed of the press can be easily raised or lowered, by a hand lever, to suit the job that is being worked, so that either thick or thin plates can be used. Very high embossing can be done on the "Herkules" on account of its great strength. This press is also provided with a hand guard that prevents injury to the worker, and it also possesses the great advantage that the platen can be stopped at any moment of the impression, a feature that may prevent "spoils" by errors in feeding on the part of the operator. Naturally a powerful press of this character requires to be well lubricated, and this has been well attended to by the designers who have given it an effective lubricating attachment.

Another platen press, the No. II., is intended for either printing, embossing, cutting, creasing, and cameo work of a smaller class than the "Herkules" is suited for. It, also, is a very

solidly built machine, designed and constructed to take heavy pressures, and is a most useful appliance for general work of the class it has been intended for. For the cutting and creasing of folding boxes and the embossing or printing of them it is just the thing, and its installation in a printing office would enable many jobs to be done on the premises that now have to be sent out to those who cater for trade work.

The Victoria presses which we have described are made by the Victoria Press Manufacturing Co., Ltd., of 209, Balham High-road, London, S.W.17.

## HELPING THE LETTERPRESS PRINTER

\*\*\*

"Why, you are helping us all the time," said a printer to us at the Printing Exhibition.

"Because I have been unable for a long time to come to London—but the Exhibition brought me—I have been unaware how greatly your products are helping the letterpress printer to lower his machinery costs, make his product better, and, incidentally, help him favourably to compete with his brother printer—the lithographer."

*Service is rendered in  
Every kind of Colour Process Blocks  
and Line Blocks*

NEW STREET HILL, LONDON, E.C. 4

*(Where is operating a complete  
plate-making service for  
originals & duplicates)*

## Trade Notes.

Owing to pressure on our space several important items have had to be held over.

MR. WALTER LONG, M.P., was plaintiff in actions for libels which had appeared in the *London Evening News* and the *Weekly Dispatch*, and the *Hampshire Telegraph*. Unreserved apologies were tendered by the proprietors of the newspapers, and damages were agreed at £500 in the first case, and £100 in the last, with indemnities for cost.

CHRIS. FOWLER MEMORIAL PENSION.—A bohemian concert was held on Friday evening at the Talbot Restaurant, in aid of the A. Chris. Fowler Memorial Pension. The concert was of a high-class order and the amount of the plate—£50—gave every satisfaction. Mr. Walter Bond presided and the Rt. Hon. C. W. Bowerman, M.P. (president), and Mr. Wilson Howes were also present.

A DINNER was given at the Hotel Cecil on Tuesday evening to the chiefs of staff and heads of departments connected with the enterprises controlled by Messrs. Wm. E. and J. Gomer Berry. Mr. Wm. E. Berry said that the combination employed 5,000 people, less 20, and had a pay bill of £21,000 per week. Mr. George Eaton Hart (managing director, St. Clement's Press) was among the speakers.

L.M.P.A. ANNUAL GENERAL MEETING.—The annual general meeting of the London Master Printers' Association is to be held at Stationers' Hall, Stationers'-court, Ludgate-hill, to-day (Thursday), commencing at 11.30 a.m. The agenda comprises the approval of the Financial Statement and Report; the approval of a subscription of one-half-penny in the £ of wages paid, subject to deductions; the election of auditors; and the consideration of certain alterations and additions to the rules.

NORTH-WESTERN "T.A." CONFERENCE.—On Saturday last (May 7th), the North-Western Group of the Typographical Association held their Annual Conference at Blackpool. A civic reception was given to the sixty delegates by the Mayor of Blackpool (Councillor C. W. Callis), supported by Mr. E. Machin, president of the Trades and Labour Council, and Mr. Fredk. Ayre, president of the Blackpool branch. The proceedings were held in the fine Council Chamber of the Town Hall of the Borough. Among those present were Mr. J. D. French (general president of the T.A.) Mr. H. Skinner (general secretary), and Mr. T. Roberts (organiser), and several members of the E. C. During the proceedings a presentation was made to the retiring president, Mr. A. Guest, who severs his connection with the Group, owing to his acceptance of the position of Labour Agent to Mr. T. O. Roberts, M.P. The dinner was held at Jenkinson Café. The menu card was one of exceptional merit and was printed and presented gratis by J. Robertson and Co., Ltd., St. Annes-on-Sea. The proceedings were of unusual importance covering questions of hours, wages, and labour conditions.

## The Printing Exhibition.

### Further Notices of Exhibits.

To the numerous notices already given of the exhibits at the Royal Agricultural Hall we add the following:—

#### THE ARCADE.

##### W. G. Monnery and Co., Ltd.

This firm shows printers' sundries of all kinds, prominent being a fine showing of printers' blankets.

##### H. G. Oakley and Co.

Materials for the bookbinder are exposed on Stand 5, such as gold bronze and aluminium powders, blocking foils, etc. Printing inks for offset, litho and letterpress also shown.

##### Albion Sewing Cotton Co., Ltd.

Cords, twines and threads for the stationery, printing and bookbinding trades are stocked in great variety by this firm. For the bookbinder two qualities of thread are stocked in various sizes and lengths, on tubes or cones, for special machines.

##### S. Fry and Co., Ltd.

This firm are showing a comprehensive range of all shades and grades of bronze and aluminium powders, especially to suit the requirements of the printing and allied trades. Among their specialities are: "Esefco" label and ticket bronze, "Urapet" embossing bronze, "Urapet" stamping bronze, "Silbrite" aluminium powder, etc. The firm suggest that printers would be well advised to consult them on any thorny problems regarding the application of bronze powder.

#### MAIN HALL.

##### T. G. and J. Jubb.

Those interested in printers' metals have been paying many visits to the excellent exhibit of this well-known Leeds firm of manufacturers. The ingeniously constructed stand, which is partly composed of an interesting miscellany of stereo plates, contains evidence of the use of Jubb's metals by important newspapers all over the country, while there can also be seen other items that appeal strongly to printers, including notably a demonstration of Mackay's Patent System of Poster Composition.

##### M. C. Ritchie.

Boxmakers will be much interested in the demonstrations by this firm of machines for box glueing, corner staying, piecing on, and the other operations incidental to the box-maker's craft.

##### W. R. Nicholson and Co., Ltd.

At this stand are to be seen zinc and aluminium plates in various grains for chromo, commercial and poster work, offset rubber blankets, "Nixo" brand in red or grey colour, embodying the latest improvements, accuracy of gauge to within .001-in. and uniformity of thickness being the chief features, also lithographic materials and sundries.

### The Aerograph Co., Ltd.

Much interest is attracted by the working exhibit of the Aerograph Co., Ltd. (the inventors and pioneers of spraying), which consists of a complete work bench designed for one operator.

### Simplex Machines, Ltd.

Some unique features are to be seen in this exhibit, which includes the "Bowns" Patent Rotary Strip and Edge Gumming Machines (both single and double roller principles); strip gumming attachments; surface Gumming machines for labels, etc.; "Bowns" Patent Rotary Perforators, run through and stop models; also combined rotary stop perforating and interleaving machine; guillotine knives; circular cutters; drying racks with or without heating apparatus, etc.

### Usher-Walker, Ltd.

Much interesting running machinery is to be seen at this exhibit, which is a most comprehensive one, and comprises a display of inks, rollers, and other products of Messrs. Usher and Co.'s factories. The "Potter" Rotary Offset Press, with Dexter Automatic Feeder and Pile Delivery—the latest in offset presses, and many other presses and other machines which are not to be seen on any other stand in the exhibition.

### Peter Carmichael and Co., Ltd.

Envelope making machines at work attract much attention to this stand. The chief machine the firm make is the "Carmic" Adjustable Envelope Folding Machine, in five standard sizes: No. 1 will fold envelopes any size from  $5\frac{1}{2}$  by  $3\frac{1}{2}$  to 10 by 7; No. 2 produces both envelope or wallet shape in any size from  $4\frac{3}{4}$  by  $3\frac{1}{4}$  up to  $7\frac{1}{2}$  by 5; No. 3 will make official bag shape in any size from 4 by 3 up to  $7\frac{1}{2}$  by 5; No. 4 gives official bags of any size from  $5\frac{1}{2}$  by  $3\frac{1}{2}$  up to 13 by 7, and is considered the most useful machine for general commercial purposes. The "Carm" Power Envelope Gumming Machine is also seen producing gummed envelope blanks; it will gum blanks from 4 by  $2\frac{3}{8}$  up to 12 by 10.

### GILBEY HALL

#### Cross Paper Feeder Co.

The latest model of the Cross patent continuous automatic feeder is seen on a No. 1 Miehle printing press supplied by Linotype and Machinery, Ltd. There is also attached to the press the Chapman electric neutraliser, in connection with which is an electrically-controlled drying apparatus for drying the sheets as they are delivered.

### Richard Burley and Co.

This firm of consulting lithographic experts and printers' engineers are at Stand No. 12.

### London Lithographic Co.

Art lithographers and folding box manufacturers, this company have decorated No. 12A with samples of lithographic work and specimens of folding boxes suitable for various trades. The variety of work is only equalled by its artistic qualities.

### P. Lawrence Printing Machinery, Co., Ltd.

At Stand No. 13 is to be seen the Lee Press substantiating its claim to be the simplest

two-revolution press on the market—smooth, quiet and easy running, and giving perfect register of all classes of work at all speeds; constructed to give the maximum efficiency of output. The bed movement has double bearings that ensure accurate register, while the ink distribution is simple and decidedly effective, with ample rolling power. The action of every working part has been carefully thought out. Only two styles are built, which run at from 1,600 to 2,000 per hour.

### Hall Trading Co., Ltd.

The features of this firm are a series of important lines of adhesive for the boxmaker, bookbinder and printer, including their "Wonder" gum and barnacle liquid glues for box-making, labelling. Samples of work on which these adhesives have been used are on view, together with special dry and liquid gums for envelope making and gummed papers, and other varieties of vegetable gums, dextrines and animal glues.

### Spencer and Cook.

Several interesting machines are exposed at Stand No. 20 in the Gilbey Hall. There is the Mark Smith patent safety vacuum flat bronzing machine with gripper delivery and jogger, double-crown size, excellently constructed for its particular work. The British job and magazine semi-automatic drop-roll, high-speed folder has second, third, and fourth fold delivery and sheet-perforating attachment. The firm's power baling press for paper stock has new features, such as an automatic end pressure release and sliding lid, while the baler for scrap tin and metal possesses a mechanical safety overload device and automatic platen return.

### James Taylor and Sons (Cleckheaton), Ltd.

This firm specialise in the production of wire for bookbinders, printers and cardboard box-makers. Every class of wire is manufactured, and the new mill which is on the point of completion will enable a higher production at lower cost, combined with quality, to be attained.

### Hesco, Ltd.

The transporter truck exhibited at Stand No. 25A demonstrates the ease with which half-ton loads can be lifted with the left hand. A feature of construction is that the wheels are inside the frame, giving a wide surface to carry the platforms.

### Metal Powders, Ltd.

Gold, bronze and aluminium powders in various shades and degrees of fineness, together with exhibits illustrating their application in the printing and allied trades are shown at Stand No. 27.

### Odham's Press, Ltd.

A veritable picture gallery may be found at Stand No. 29. Odham's Press, Ltd., are showing some very good specimens of reproduction by their photo engraving department. On the walls of the stand are proofs of line, half-tone and colour reproductions, including some very excellent fine art pictures.

### GALLERY. Shannon, Ltd.

This firm show a fine collection of office furniture suitable for the stationery and allied trades. Especial interest centres round the Efficiency Desk, which is fitted with steel frictionless suspension slides. Up-to-date binding cases, and the new and improved Shannon File and Cabinets go to make an interesting exhibit.

### Dennis and Webb, Ltd.

Among the many features shown by this firm are embossing presses and rubber stamps in a most comprehensive variety, "Royal" Self-Inking Stamp Pads in an improved form, and stencil plates, brass door plates, office supplies and all kinds of engraving combine to make an interesting exhibit.

### Percy F. Talbot and Wilson and Sons.

The former firm are showing the "Postette" series of miniature stationery and the "Fumsup" series of illustrated children's stationery; the latter firm are stationery manufacturers and have a comprehensive variety of writing pads, compendiums, and printing and embossed calendars.

### The Ludlow Company.

The Ludlow system of display composition from 8-point to 60-point is creating much interest by its unique capabilities. There is also shown Ebrod lead and rule caster for casting leads, slugs, rules and borders.

### Geo. Gibbons and Co.

At the Stand of this firm are shown a comprehensive range of fine colour reproductions by their "Similart" process, including colour prints for framing and subjects for calendars, book illustrations, show cards, etc., and folding boxes and general commercial stationery are also shown.

### Wynne and Selby, Ltd.

Offset inks for single and two-colour machines are shown by this firm, as well as a striking display of three-colour letterpress inks. They are also showing "Chromoist," their latest production, being a liquid drier suitable for all grades and classes of printing.

### W. Rickatson and Sons.

Pigskins and various kinds of bookbinding leathers are shown by this firm in a wide variety of colours. Loose-leaf ledgers, bag and fancy work are also included in a well-arranged exhibit.

### National Loose-Leaf Co., Ltd.

To the bookbinder the exhibit of this firm will especially appeal, showing as it does such useful lines as ledgers, transfer binders, loose-leaf books, etc.

### The City Litho Roller Co.

This firm has on view a quantity of litho machine roller skins of various sizes, Hand-Press Rollers and Skins, Roller Skins in the unfinished stage, which show the manner of the seaming and also number of hides, to enable visitors to thoroughly examine the quality and the workmanship of the lithographic

rollers and skins they manufacture, from the dressed hide to the finished article.

### Vincent Brooks, Day and Son, Ltd.

Quite an interesting show is put up by this firm who show some of their current work in chromo-lithography by offset and otherwise. There are also examples of auto-lithographs by artists of eminence.

### The Lloyd Memorial (Caxton) Seaside Home, Deal, Kent.

Here are to be seen the outlines of this popular Seaside Convalescent Home for the workers in the Printing and Allied Trades, which since its opening has benefited no fewer than 9,262 persons.

### Brunton and Williams.

At this stand are shown many important requirements of the bookbinder and stationer in the form of gummed labels, stationers' sundries, rubber bands, etc.

### Henry Booth (Hull), Ltd.

The firm is showing in roll form samples of the "Nautch" easy-tearing roll tickets, bottle deposit labels and seals, imprint tickets, Millers' labels in cloth, manilla and paper, auctioneers' numbers, drapers' pinning tickets, packers' tickets, etc.

### Caxton Convalescent Home.

All information regarding the work of this excellent institution are displayed on a well-arranged stall. Friends of the Home and other workers are in attendance giving information to those interested. A framed picture of the printing and allied trades' Roll of Honour, to contain the names of the 2,500 names of men from London and district who fell in the war is on view.

### Printers' Pension Corporation.

The objects and aims of this well-known organisation are set forth clearly in picture and printed form. Among the information to be obtained by the visitor is the fact that the Corporation at the present time is supporting 800 pensioners, 1,400 war orphans, 45 inmates at the Printers' Almshouses, and that £25,000 a year is distributed in benefits.

### The National Society of Operative Printers and Assistants.

Photographs and descriptive plans of the "Natsopa" Memorial Home, with explanatory leaflets.

### Cassell and Co., Ltd.

This famous house show a wide range of their publications—books, magazines and weekly periodicals. Selections from a number of their well-known publications and other general literature are on exhibition, and represent not only the very latest word in the world of letters, but also specimens in the art of good printing and binding.

### N. Zang, Ltd.

Line blocks of extreme depth and cleanness and absence of "shoulder" are being exhibited at this Stand; also high-quality brass and steel engraving and photo process blocks; brass blocks, embossing dies and steel dies, as

well as brass type made of very hard metal in 250 faces from  $\frac{1}{16}$  in. to a largescript 3 in. high. Bookbinders' tools and handle letters, rolls, etc., are included in the list of goods put up for inspection.

### A. Wilmo Collier, Ltd.

The bookbinder will find many things of interest at the stand of this firm, who are showing specimens of "Gloy" paste, "Dex" photo mountant and "Gluak" vegetable glue. With regard to "Dex" mountant, a paste specially prepared for photographic purposes, and for use in the library, is sold upon highly advantageous terms. "Gluak" vegetable glue is a stiff adhesive for book-binding, cardboard modelling, etc., and is meeting with much demand.

### D. Harper and Co.

Diaries, pocket books, loose-leaf note books, gold and silver blocked calendars for desk and wall, pocket calendars, art calendars, wallets, season ticket cases, match box covers, vesta cases, ash trays, puzzles and numerous other advertising novelties are among the attractive goods displayed by Messrs. D. Harper and Co. In addition there are gold and silver blocked showcards. The following articles for stationers to re-sell are also being shown:—Fitted pencil cases, fitted mirror and comb cases, blotters, telephone call recorders, telephone indexes, loose-leaf note books, "Toyzenet" constructional jig saw puzzles, "Jungle Jinks School," "Jonathan" patent walking toy, "Hook-a-Fit" patent puzzle and ordinary jig saw puzzles.

### Lowe and Brydone, Ltd.

This firm shows examples of music engraving, music printing, three-colour block printing, litho colour printing and general letterpress printing.

### Wallsall Lithographic Co.

Cameo and lithographed seals and embossed showcards, produced by the latest and most up-to-date methods, are the main features of the interesting exhibit put up by this firm.

### Avery and Martin.

Here is to be seen a rapid "Simplex" Index Cutting Machine and Index Printing Rolls for indexing account books, etc.

### Ashley Trading Co., Ltd.

"Rex," one of the principal productions of this firm, is being exhibited for the first time. This paste is made instantly with cold water and is ready for immediate use, remaining fresh for at least 10 days. The makers claim for it that it is free from acids and absolutely pure. Several specimens are being shown of books in which "Rex" has been used and in which there are no traces of staining, or anything approaching an evil smell. The paste has been in successful use for many years by many enterprising British houses and the visitor has an opportunity of inspecting its suitability for the bookbinding and box-making industry.

### W. and H. Rollings, Ltd.

The general printer will find at this stand of this firm type cases, dust-proof cabinet frames (single and double), wood letter bulk,

lead and galley racks, planers, mallets, reglet cases, etc., stencil boxes, letter trays, stationery boxes and filing cabinets.

### R. W. Higgs and Co.

At the stand of this firm is shown how platen machines can be re-built and made equal to new. Specimens are displayed of the company's work as platen machinery specialists and examples are given of the all-steel tubular roller-stocks suitable for use on platens and similar machines. Accessories are also on view.

### Hudson and Stracey, Ltd.

The Watford system of drying by electricity for the printing and allied trades. By the use of this system interleaving can be avoided with all classes of commercial work, and the work is handled with safety in half the time usually allowed.

### The Printers' Medical Aid and Sanatoria Association

have a very interesting exhibit, comprising a fully-equipped First Aid Station, with trained attendants upon duty at all times when the Exhibition is open. There is also a Revolving Chalet, as used at the principal sanatoria for the treatment of tuberculosis, in charge of trained attendants, and giving visitors the opportunity of seeing the present method for the treatment of consumption. All interested in welfare work should see these P.M.A. exhibits.

### Ministry of Labour.

The printing section of the Ministry of Labour have a fine showing of excellent examples of the work produced by disabled men undergoing a course of training as printers at different centres throughout the United Kingdom. Examples of work done in Bristol, Manchester and other parts of the country clearly show the excellent work carried on in this direction by this Government Department.

### St. Bride Foundation Printing School.

"The Printer's College" have a fine show of specially arranged examples of work done by disabled men and apprentices attending St. Bride School for a course of technical training. The examples represent all classes of work, including bookwork, design and advertisement, letterpress and lithographic printing, and colour work.

### Electromotors, Ltd.

Electrical driving for printing machinery is shown by this company, whose exhibit forms an equipment specially designed for Linotype and Machinery Limited, and also made suitable for driving Miehle and similar machines. In addition, electromotors have some 40 to 50 equipments of various patterns and with different forms of control gear on printing machine makers' stands in the exhibition.

### W. F. Pickford.

Bookbinders' glue and paste brushes; also glues (cake, powdered and undried). Agent for W. W. Hill, Son and Wallace, Ltd., Manchester, manufacturers of "Gumara" cold glues (brown and white); also George Kent, Ltd., "Whisk" paste and glue mixing machines.

## The Printing Exhibition.

### Paper and Stationery Exhibits.

Paper and manufactured stationery occupy no inconspicuous position at the Sixth International Printing, Paper, Stationery, Book-binding, Box-making and Allied Trades Exhibition.

#### Backhouse and Coppock, Ltd.

Printers and users of paper generally will have an opportunity of inspecting various productions in the way of paper at the exhibit of Backhouse and Coppock, Ltd., of 16, Farringdon-street, London, E.C.4, who are the manufacturers of a very wide range of papers, and are quite able to meet the requirements of all kinds of work. Their specialties include chromos, enamels, photographic papers, leather papers, calf papers and boards, etc. Most of their leading lines are well stocked enabling orders to be expeditiously transacted.

#### The British Crepe Paper Manufacturers, Limited.

Visitors will find at Stand No. 64, Gallery, many interesting novelties in the way of creped paper, etc. Quite a unique feature has been introduced by the company in its method of marking goods in order to prevent petty pilfering. Among the various specialties may be mentioned coloured crepe paper, coloured and plain white serviettes, toilet rolls, dental bibs, barbers' rolls, dental rolls, crepe paper tablecloths, dish papers, D'Oyleys, etc.

#### John Dickinson and Co., Ltd.

From the Croxley and Home Park Mills, Messrs. John Dickinson and Co. are showing a range of their well-known art and coated papers suitable for high class illustration, letterpress printing, as well as photogravure papers. The exhibit also contains examples of other lines of papers and manufactured stationery, for which this well-known firm are famous. Visitors can see for themselves how the photogravure papers behave under practical conditions, since the Sun Engraving Co. have a photogravure machine in operation. Messrs. Dickinson supply the art paper for "Illustration," which is produced by the Sun Co., and which demonstrates the fine quality of the Croxley product. No better tribute could be paid to a printing paper than to be chosen to reveal the fine characteristics of process work, and the Dickinson products do this to perfection.

#### Dux Chemical Solutions Co.

"Duxeen," the new bookbinding and box covering material, is much in evidence at Stands Nos. 39 and 40 in the Gallery, and the Exhibition authorities have adopted it for the catalogue. Novelties were introduced to illustrate its waterproof and durable character. A glass tank filled with water and containing goldfish and "Duxeen" waterproof books

and book cases arrests attention; while other features, which have been described in these columns before, are the white ant-proof book; a complete book that has been boiled; and a book that has been seven years in water. The material is described as being of a fibrous nature, tough, hard-wearing, flexible; does not rub up or stain when wetted, and has other special properties which make it particularly suitable in climates where heat, damp and insects are prevalent, as it is damp proof, mildew-proof and insect-proof. It takes gold and all colours. "Duxeen" is made 38-in. and 33-in. wide, in rolls of 72 yards long, and in several qualities. Double-texture is very tough, for use where special strength is required; Single-texture is used for medium-sized books: a half-texture "Duxeen" is now ready for small and cheap books, and when required "Duxeen" is supplied backed in cloth. The range of colours is wide and is continually being added to. The material is in large demand for box-covering and fancy goods and for purposes where leather and bookcloths are used.

#### Gummed Paper Manufacturing Co., Ltd.

At Stand No. 14, Gallery, is arranged an extensive collection of "Tiger-Tiger" brand gummed tapes, and three models of sealing machines, including the semi-automatic Sealer de Luxe. Parcels sealed by this method are not only very attractive in appearance, but are regarded as pilfer-proof. It is claimed that the tape is considerably more economical than string and much more satisfactory. The Sealer de Luxe is a smart-looking machine and is designed to cut predetermined lengths of tape from 2-in. to 9-in. long.

#### Samuel Jones and Co., Ltd.

This company's exhibit is divided roughly into four sections, namely, the Camberwell Mill productions, Devonvale Mill productions, fancy and box papers and general lines. In regard to the latter the firm are well known as wholesale stationers generally and buyers need no introduction from them on that score. Gummed paper of every sort and description is the firm's chief manufacture, and there are displayed as well a selection of white and coloured wood and esparto papers, etc. The productions of the Devonvale Mill are represented by some fine specimens of white and tinted two-sided arts, chromos, enamels and surfaces. In regard to marbling papers these are shown in "Parian" and Carrara, and there are specimens of M.F. and S.C. printings, imitation arts, coated papers, etc.

#### Limehouse Paperboard Mills, Ltd.

Stand No. 65, Gallery, is occupied by this firm, who are showing many of their leading lines. Paperboard for use in the manufacture of cartons, folding, rigid and collapsible boxes, tickets and show-cards are placed well within the reach of the visitor for his close inspection. As regards thickness, the boards vary from .014 to .050-in.

#### Lindenmeyr and Johnson Paper Co., Ltd.

At Stand No. 56 the Lindenmeyr and Johnson Paper Co., Ltd., are showing their ex-

clusive series of papers of especial interest to printers, advertisers and in fact all consumers of paper. They include Warren's standardised lines of printing papers (coated and uncoated) recognised universally as "Better Paper—Better Printing"; Hampshire Paper Co.'s Old Hampshire Bond; also catalogue cover papers, writings, bonds, ledgers, blottings, photographic coverings and mount papers, box-makers papers, index Bristols, etc. The well-known Hammermill paper products are shown in the various stages of manufacture. These items are augmented by a fine display of products of The American Writing Paper Co. (makers of Eagle A mill brands), who have 26 mills, covering all classes of papers and boards. The sole selling distributing agents for these papers are the Lindenmeyr and Johnson Paper Co., Ltd., who have been recently appointed in Great Britain. A further interesting feature are the products of The Union des Papeteries, Belgium—thin printing, white and coloured banks, pastings, etc. Interesting to stationers are the high-class boxed papeteries, writing pads, envelopes and stationery novelties, which are well worth inspection.

### Loeber, Ltd.

Some fine samples of papers and boards are on show at Stand No. 51, Gallery. Loeber, Ltd., have all their usual stock lines on view, the range being very wide and the quality in keeping with the variety. This firm specialises in high-grade papers suitable for brochure work and advertising, and are the sole selling agents in the United Kingdom for the District of Columbia Paper Mill Co.'s specialties, of which a very attractive display is made, which publicity experts especially should not fail to see.

### Martin and Clarke.

This firm of wholesale paper merchants display at Stand No. 79 in the Gallery a good range of papers. The series of thin papers include Japanese and other copyings, white tissues, manifolds, banks, bonds, and "Purley Linen" for typewriting. Then there are drawings, azure laids, arts, printings, writings, white and coloured duplicators, tinted manillas, artistic covers, rolls for electrical trades, pencil carbon papers, serviettes. No. 285 Mill varieties, etc.

### Charles Morgan and Co., Ltd.

Manufactured stationery of the artistic order can be set out in the most effective manner, as can be seen at Stand No. 20, where Charles Morgan and Co., Ltd., have arranged the great variety of their products. Papers of every description are arranged with great effect. The range embraces printings, writings, bonds, banks, coated art papers, enamel and surface papers, browns, krafts and other wrapping papers, label manillas, cards and boards, blottings, tissues, marble papers, account books, billheads, note papers, envelopes, pads and compendiums, etc. Account books made up in every form to suit the manifold requirements of to-day are exhibited in their serviceable bindings. Not the least effective feature of the Stand is the boxed

stationery and compendiums, which are conceived with artistic taste and executed with skill. The appeal which the decorative boxes make is not the only one, however; the quality and the design of the writing paper and the envelopes are equally high. One of the most recent achievements of Messrs. Chas. Morgan is "Jutland Bond," a high grade paper in cream and tints, and it is worthy of taking its place alongside the other productions which have given the firm so great a reputation wherever papers of merit are appreciated.

### National Paper and Pulp Co. (1920), Ltd

In the Gilbey Hall, the Stand No. 8A of the National Paper and Pulp Co. (1920), Ltd., is a conspicuous object by reason of the rolls of paper of every size and colour. This is the first time the company has been seen at an exhibition, and although Mr. G. H. Wilkinson modestly remarks that they have "much to learn" in matters of display, the Stand represents a varied and extensive range of papers. Printings, writings, wrappings and waxed papers cover every grade. With the command of something like a dozen mills, there was wide scope for selection. The Bridge Hall Paper Mills, whose reputation for the last 120 years has extended over all parts of the earth, alone provide a great choice. An interesting picture on the stall shows the mills as they stood in 1800, while other photographs illustrate one of the large machines and the handling of the finished paper. But it is the paper on view which bespeaks attention. In this connection a book of Wrigley's art papers demonstrates with what effect colour printing can be produced. For any description of printing, the company can provide the paper, whether for letterpress, advertisement, pictorial or cheque. Carbon tissues and duplicating papers are to be seen in great variety. The writings are made from rags, esparto and wood. Cartridges, hosiery papers, brown wrappings, strips, together with envelope papers, manillas, M.G. sulphites and caps are among other specialties of the National Paper and Pulp display, supplied in either sheets or reels. A feature of the Stand is the collection of waxed tissues and waxed wood pulp boards which serve such useful commercial purposes. Not without reason, therefore is the collection of papers described as "one of the most varied and extensive exhibits of all kinds of paper ever shown."

### Smith and Young.

At Stand 1, Gallery, Messrs. Smith and Young, of 4, Maiden-lane, London, E.C.4, show a good range of envelopes, including tough manilla, cartridge, cloth lined and gusseted envelopes, together with writing pads and boxed notepapers and envelopes; also examples of high-class engraving on copper and steel, including business headings stamped from steel dies. The actual process of stamping can be seen on the joint Stand of Waite and Saville and W. H. Lockett and Co. (Main Hall, Row B. No. 20), where Smith and Young are supplying the engraved steel dies and also operating the Waite die press

during the exhibition. Smith and Young also have a complete show of their various presses for embossing and perforating, which range from their cheap "City" press up to large screw presses suitable for embossing the official seal of corporations, etc.

### James Spicer and Sons, Ltd.

It is appropriate that this firm of wholesale stationers and paper merchants should have their stand in juxtaposition to the great printing machines and appliances which fill the Main Hall. Their papers cover every branch of printing, newspaper, commercial and domestic, and the striking display at Stand No. 22 illustrates how fully Messrs. James Spicer can cover the needs of printers, large and small. They exhibit a full range of writing, printing, coloured, coated, surface, flint, enamelled and art papers, browns, wrappings, waxed papers and bags. An excellent display is also made of boxed stationery, note papers, writing pads, compendiums, envelopes, account books, office files and filing devices. Very attractive lines there are also of ivory boards and cards, fancy cards, index cards and a varied selection of many other qualities of boards and cards set in tastefully dressed cases. When it is added that the wares are explained with courtesy by a capable staff, it may be understood that a visit to the exhibit of Messrs. James Spicer and Sons is to combine pleasure and profit.

### Vickerys (1920), Ltd.

The exhibits at Stand No. 6 have an interest alike for the papermaker, the paper merchant, and the printer. The "Vickery" patent self-adjusting, non-scoring doctor for paper machine calender and intermediate rolls, drying cylinders and M.G. cylinders, is coming into favour in paper mills. It overcomes the defects alleged against some existing doctors in that it automatically adjusts itself to irregularities and does not score the roll. The examples on view substantiate the claims made and they are in themselves finely finished specimens of work. Equally interesting to papermakers is the "Vickery" non-stop felt cleaner for cleaning paper machine felts. While the machine is running the work of cleansing proceeds, with the aid of this new device, which has the effect of lengthening the life of the felt, increasing output and gives a more consistent quality of paper. All who handle paper will be attracted by the "Vickery" automatic loading transporter, although it is adaptable for use in moving all classes of material. There is something alluring in the arrangement for loading a wooden platform with reams of paper, passing underneath when required the "Vickery" transporter, lifting the load automatically and wheeling it away with a 6 lb. pull for half a ton.

An old papermaker has passed away in the person of Mr. James Bryant Holiday, who died at Laverstock Green, Hemel Hempstead, Herts. last month, in his 91st year. He was formerly with Messrs. James Baldwin and Sons, King's Norton, Worcestershire.

A RESOLUTION of the Interim Industrial Reconstruction Committee for the Paper-making Industry regarding the purchase by H.M. Stationery Office of stationery of British manufacture has been received by the Conference of Joint Industrial Councils. Copies of the resolution have been sent to all Joint Industrial Councils and Interim Committees for information, it being decided that the convening Committee should take any action considered necessary and approach the Government departments concerned.

# From "Case" to Privy Council.

The Career of the Rt. Hon. C. W. Bowerman, M.P.

The mark of esteem bestowed upon Mr. Bowerman at last week's Convention of the Joint Industrial Council of the Printing and Allied Trades (reported in our last issue), draws attention to what is a romantic life-story of achievement such as would have delighted the heart of old Samuel Smiles, and such as must bring satisfaction to every printer who is proud of the printer's craft.

It was in Devonshire that Charles William Bowerman was born on January 22nd, 1851. Brought at an early age to London, he eventually settled in Islington, in which famous old borough he has lived continuously since 1873.

## Compositor and Trade Union Leader.

Mr. Bowerman's association with the printing trade began when in August, 1866, he was apprenticed on the staff of the *Watchman*, a weekly newspaper, which with the *Methodist Recorder* was produced in Fleet-street. He early took up a card in the London Society of Compositors, of which Society he has been a member continuously since May, 1873, still holding his card to-day. His first position as journeyman was in the printing office of the *Hour*, a daily newspaper, Conservative, which ran for about four years before it collapsed—after two or three fortunes had been sunk in it. Having spent about a year in that office, he left to join the staff of the *Daily Telegraph*, his connection with which is well known as it lasted about 19 years. There he occupied the position of Father of the Chapel, later that of Clerk of the Chapel, and from there he was elected secretary of the News Department of the London Society of Compositors. That was in 1889, and it marked the beginning of his activities as a trade union official. Then in 1892, on the retirement of Mr. Drummond, Mr. Bowerman was elected general secretary

of the L.S.C., a position which he occupied with great success until he was in 1906 elected to Parliament as member for Deptford, when the Society made him their Parliamentary Secretary, an office which he holds still. Mr. Bowerman's term at the head of the L.S.C. covered some very difficult periods of transition in the industry, including the momentous changes caused by the introduction of mechanical composition, and his able hand at the helm was largely responsible for the success achieved in peacefully negotiating this dangerous corner with due advantage to the workpeople concerned.

With the Printing and Kindred Trades Federation Mr. Bowerman has also had much to do. He dates his connection with it from its establishment about twenty years ago, and he is still its president, as he has been since 1902.

Mr. Bowerman's influence in trade union circles extends far beyond the limits of the L.S.C. Elected in 1897 as a member of the Parliamentary Committee of the Trades Union Congress, he continued to serve in that capacity, and was in 1910 appointed secretary of that committee. In 1901 he was appointed president of the Trades Union Congress held at Swansea, thus attaining the most influential position to which any labour leader can aspire.

## Parliamentary Honours.

It was in 1906, as already stated, that Mr. Bowerman was elected to Parliament, being returned as member for Deptford. This success was regarded at the time as most remarkable, the contest being a three-cornered one, and the seat being wrested from a Tory member who had held it for about 30 years. Mr. Bowerman was re-elected for

Deptford in the two elections of 1910 and again in 1918. His Parliamentary ability has led to his being chosen for special services. Thus he is a member of the Publications Committee of the House; he was one of the commissioners in the recent Royal Commission on Income Tax; and he is a member of the Divorce Committee. Then in 1916 he received the very high honour of being made a member of the Privy Council, an honour which was hailed with rejoicing by the trade union with which he is especially associated, and, indeed, by the industry as a whole.

#### **Relations of Capital and Labour.**

In all labour questions Mr. Bowerman stands very definitely on the side of that wise policy which is responsible for making the printing industry to so great an extent a pattern to other industries in the matter of the avoiding of destructive conflicts between employers and employed, the better method being chosen of open negotiations, in which it is sought to subordinate sectional interests to the interests of the trade as a whole. A good example of his influence in industrial disputes was seen in the crisis of last year, when the Manchester-Liverpool trouble threatened to have disastrous consequences for the whole industry. It was largely owing to Mr. Bowerman's good offices that it was then found possible, through the agency of the J.I.C., to bring about a settlement without detriment to the general good relations of employers and employed in the industry. Mr. Bowerman is a firm believer in the principles underlying the report of the Whitley Committee, and he has put his ideas into practice by rendering most valuable service on the Joint Industrial Council of the Printing and Allied Trades, of which he was elected the first vice-chairman, and was last year made chairman. He regards this council as having more than justified its existence in the benefits which have come to the workers through its means—which benefits have included reduction of working hours, the granting of a week's holiday in the year to every man, woman, boy and girl employed in the trade, also the agreement that the six statutory holidays should be paid for.

#### **The Industry's Philanthropy.**

There is no figure better known in connection with the many charitable activities on behalf of printers and their dependents than Mr. Bowerman. He has been one of the moving spirits of many of these most necessary charities right from their commencement. He is treasurer of the Caxton Convalescent Home, president of the Printer's Medical Aid Association, and is one of the trade auditors of the Printers' Pension Corporation, to which he has been a subscriber for about 50 years. An indication of the appreciation felt for his efforts on behalf of printing trade charities is to be found in the fact that Brixton, Streatham, and Clapham auxiliary of the Printers' Pension Corporation have recently established a "C. W. Bowerman Pension" in connection with which the first pensioner was elected last month. Moreover, Mr. Bowerman

has been connected with Ruskin College from its inception, and has for many years been the chairman of the executive committee of that college.

Of his services as Alderman of the L.C.C., and of his visits to America—including one in 1917, when he went with Mr. J. H. Thomas, at the request of the British Government, to inform labour in America of the part which labour on this side of the Atlantic had played in the Great War, also one in 1919 as delegate to the International Labour Convention—we have space for no more than a mention.

Still hale and hearty, kindly, approachable, with sympathies and ideals which the years have failed to dim, Mr. Bowerman looks forward to much further active usefulness, and we think the whole industry will join us in congratulating him on last week's little recognition of his worth to the printing craft, and in wishing that there may be in store for him a time that will be even happier than the years he spent at "case"—years which, as he has often said, he regards as having been the happiest period of his life.

## **Remarkable Engraving Feat.**

One of the most interesting things to be seen at the Printing Exhibition was a small copper plate bearing on its surface a name composed of twenty letters which name is repeated and engraved entirely by means of the photographic camera, in all 300 times and yet the entire 6,000 letters occupy only a space of about two by three inches. The astonishing thing to realise is that this name thus repeated has each separate time, notwithstanding its minuteness, been the subject of a separate photographic exposure. A stepped-up negative had been made in the celebrated Step-and-repeat Camera, made and exhibited by Pictorial Machinery Limited, and this negative so made had been used to print this multi-name plate. To everyone interested in photography—and who is not these days?—this plate and its method is of great attraction. Camera users to-day are as the sands of the seashore almost in number, but all take photographs of a single subject unless users be of the stereoscopic type, but the Step-and-repeat Camera of the above-named company is designed especially to take multi-negatives, that is, duplicate negatives of the same subject. So exactly does this appliance do its work, that a photograph can be taken of any design required, which can be repeated over practically any size and spaced out as required, or a design can be photographed and joined up and thus a continuous design covering any area be made. When it is realised what this means to the printer who can thus make his own printing plates either for lithographic printing or for typographic work, it will be seen that once again the photographic camera has come into an immense field of use, a field that perhaps may even rival the immense field of cinematography.

## THE World's Printing Trades Congress.

As mentioned in our last issue, Thursday of last week brought the second day's session of the World's Printing Trades Congress. Though the attendance was not worthy of the occasion, much interest was aroused and some discussion elicited by the delivery of several further addresses upon subjects of special importance to printers. As these addresses contained matter of some permanent trade interest, we hope to report them either complete, or in abridged form as our space permits.

Notable in the morning's session was Mr. W. Gamble's contribution under the title of "Process, Zincograph and Plate Work," while the important subject of "Printing Types" was dealt with by Mr. G. W. Jones, and Mr. J. C. Coppock told of the "Methods of Selecting and Training Apprentices in Different Countries."

Mr. A. H. Lockington's paper on "Rotary Photogravure" had to be held over until the afternoon session, at which Mr. R. A. Austen-Leigh presided, when it was heard with much interest. Mr. Douglas Cockerell delivered an address on "Bookbinding as a Craft and Industry," covering a wide field and touching many points of practical importance. Mr. Robert R. Hyde, director of the Industrial Welfare Society, dealt with "The Welfare Movement in Printersdom," and his enthusiastic and comprehensive treatment was productive of a good deal of discussion; two foreign visitors, Mr. Holtsch (Holland) and Mr. Gasson (Switzerland), told a little of the progress of the welfare movement in their respective countries; Mr. J. W. Carley also took part, emphasising the relation of welfare to scientific management, and Sir William Waterlow cordially supported the plea of Mr. Hyde, also referring to some of the practical difficulties and possibilities of the welfare movement. Then, at the chairman's request, Mrs. Cameron-Swan, who is the organiser of the Women's and Girls' Department of the Industrial Welfare Society, ably supplemented the remarks of previous speakers, laying special stress on the requirements of women and girls.

The afternoon session having proved rather protracted, it was decided to close the Congress without hearing Mr. A. Williamson, who was down to speak on "Costing in Various Lands." We hope, however, to be able later to publish an outline of what Mr. Williamson had intended to say, as this will doubtless be of general interest.

By the generosity of Mr. Oscar Berry, a representative of Billingsgate on the City Corporation, the Guildhall Library, the Coal Exchange, Fishmongers Hall, the Church of St. Magnus the Martyr, and other public buildings, have become the possessors of some valuable old prints which the donor has spent forty years in collecting.

## Casual Employment Insurance.

### Special Unemployment Book.

Workers claiming Unemployment Benefit have hitherto been required to lodge their Unemployment Books at a Local Office of the Ministry of Labour. This requirement has given rise to difficulty affecting both the workers concerned and their prospective employers in the case of workers in casual employment or otherwise employed intermittently on short jobs, in whose case it is frequently not practicable to deliver the Unemployment Book to the employer for stamping before the employment ends.

It has therefore been decided, as an experiment, to issue a special Unemployment Book, to be known as a "Casual Employment Book" for the use of workers following such employment as that described above. The Ministry of Labour is accordingly asking for the co-operation of employers in making this experiment a success.

The Casual Employment Book will be issued to the worker when the ordinary Unemployment Book is lodged at the Local Office. It is available for four calendar weeks and contains seven spaces for each week (one for each day in the week). The Unemployment Insurance Stamp for any week is to be affixed to the stamp space provided for that week. Once the book has been duly stamped for the week no further stamp is required for that week, but what the employer is asked to do, whether or not he is required to affix a stamp, is to mark a cross (X) in the space for each day on which he employs the holder of the book. The object of this is to assist in preventing claims to Unemployment Benefit from being made for days on which the holder of the book is at work.

The Casual Employment Book may be kept in the possession of the worker if his employer so agrees.

**WAGE REDUCTIONS.**—Among the industries where wage reductions have been agreed to, as announced by Dr. Macnamara, are the following:—Gypsum mining (Nottingham, etc.), papermaking (youths and girls) (Lancashire), wallpaper manufacture, waste paper trade (London). Negotiations are in progress in connection with other industries.

**IMPORT OF CATALOGUES INTO SWITZERLAND**—A special correspondent at Geneva, writing in the *Times* (Trade Supplement), states that on account of the prohibition now in operation on the import of printed matter into Switzerland, it is desirable that British firms should send their catalogues by book post only—otherwise delay will occur while the necessary import licence is being obtained, and the licence may even be refused if the catalogues are printed in German, French, or Italian. The prohibition has been imposed to prevent Swiss firms from ordering their printed matter abroad.

## The L.M.P.A. Annual Meeting.

### Important Matters Mentioned.

Several points of special interest—notably an official mention of the expected conference between the Federation of Master Printers and the Printing and Kindred Trades Federation of the United Kingdom on the subject of wages, also the announcement of the election of the new secretary of the Association—were dealt with at the annual general meeting of the London Master Printers' Association held at Stationers' Hall on Thursday of last week.

The president, Mr. R. A. Austen-Leigh, was in the chair, and referred apologetically to the meeting having been called for the morning, as was necessitated by the unavailability of the Hall for the afternoon, and by the proximity of Whitsun week and the Federation annual meeting.

The secretary having read the notice convening the meeting, the annual report (previously circulated to members) was taken as read.

Mr. J. H. Williams, hon. treasurer, then presented the financial statement and report for the period March 26th, 1920, to March 25th, 1921. This showed a very satisfactory state of finances, there being a large credit balance.

The president remarked that this was the first time in the career of the Association that there was an adequate balance to the good.

### The Question of Wages.

Mr. R. A. Austen-Leigh, in his speech from the chair, drew attention to the annual report, and amplified some points of importance. Speaking of the two wage increases that had occurred during the year, he remarked that, now that the index figure for the cost of living was rapidly falling, there were just as good arguments for a reduction of wages as there had been for the increases. The Association had sent a resolution on the subject to the Federation, and the Federation Council had now invited the Printing and Kindred Trades Federation to a conference which it was proposed to hold shortly after Whitsun week.

He referred with satisfaction to the formation during the year of the London District Committee under the scheme of Whitley Councils. Mentioning the exemplary work such a district committee had done in the Cardiff district, in promoting social intercourse between masters and men, he thought London presented special difficulties in this respect, but suggested that the parent body of the J.I.C. might later have work they could delegate to the London District Committee.

Referring to the Manchester-Liverpool strike, he pointed out that a new precedent had been created by the assistance given through the Federation to the master printers in the affected districts. London, he said, had contributed a total of nearly £14,000 out of the total of £44,000 raised.

He reported that relations with the trade

unions were, on the whole, satisfactory. In regard to the compositors' piece scale, provisional agreements had, after about 15 months' negotiations, been reached in respect of hand case and linotype work, but the Council would have seriously to consider whether the consolidating of the bonus was worth the concessions given. In regard to a piece scale for the monotype, even a provisional agreement had not been come to, but an agreement respecting monotype caster attendants had been effected with the Typefounders' Society.

### Future Work of the Association.

In referring to the need for further organisation, Mr. Austen-Leigh remarked upon the large number of master printers in London still non-members, but said he thought there were now no firms of really important size outside the Association. He wished the system of extra discounts to members, as arranged with the process engravers, could be extended to include the papermakers and ink makers. It was desirable also that the Association should get more adequate and worthy premises.

### The New Secretary.

Mentioning the resignation of Major Fordyce Birch, the president remarked that although that gentleman had been handicapped by being unacquainted with the printing art when he came into the position of secretary, he did extremely good work in putting the subscription register on a proper basis, and improving the correspondence and filing system. A Selection Committee having been appointed to fill the vacancy, they advertised and interviewed various candidates. They had only that morning finished their labours, and had appointed to the position a gentleman well known to all members, the late assistant secretary, Mr. W. Whyte. (Applause.) Mr. Austen-Leigh added that he was glad to observe the favourable manner in which this announcement was received. He thought they were all satisfied that Mr. Whyte had the printing business at heart and never spared himself in anything by which he could promote its interests.

The president concluded by thanking for their respective services during the year the Council, the officers of the various district associations, the chairmen of the various district committees—especially Mr. Cecil Clay whom they were extremely sorry to lose from the Labour Committee, also Mr. E. C. Austen-Leigh and Mr. Langley. He thanked also the staff of the Association, mentioning particularly Mr. Whyte, on whom the burden of the work had been thrown on account of the late secretary not being well up in the technicalities of printing. He mentioned also Mr. Willsher, Mr. Johnson, who, as organiser, had added very considerably to their membership, and Mr. Low for the trouble taken with the cash receipts; also the good work accomplished by the latest "recruit," Capt. E. G. Baker.

On the motion of the president, the financial statement and report were approved and adopted.

Mr. Wrights, referring to the election of the new secretary, remarked he was glad that a practical man had been appointed.

In reply to Mr. H. N. Prentice, Mr. Whyte stated that it was in order to elect trade rulers and account book makers as members, a special section of the Association being provided for them.

#### Subscription to the Federation.

Mr. J. H. Williams moved as a resolution "that the subscription for the year 1921 to 1922 be on the basis of one halfpenny in the £ of wages paid, subject to deductions for amounts exceeding £50,000, £100,000, and £150,000 respectively, with a minimum of £1 is. and a maximum of £500, the subscription to include the Alliance contribution to the Master Printers' Federation."

Mr. Northam seconded.

Mr. W. H. Burchell drew attention to the large amount of money contributed by London to the Federation. He thought that far too much was paid, especially in view of the keen country competition which London printers had to face, of which he cited a hard case. He suggested the L.M.P.A. should pay to the Federation an affiliation fee only.

The hon. treasurer remarked that London was only one Alliance of the Federation, and had to do exactly the same as the others. If any member thought the amount of subscription to the Federation too great, he had better attend the Federation annual meeting at the end of the month and try to get the subscription reduced.

Mr. Langley pointed out that whilst the London Alliance could regulate their own subscription of 1d. to the London Association, as to the Federation 1d. they had merely to collect it, the amount of the subscription being fixed by the Federation Council, on which London had representatives.

The Chairman said the Federation 1d. was levied on the individual printer; it would be invidious if any distinction were made in favour of London.

The resolution was then put to the meeting, and carried.

On the hon. treasurer's motion, it was agreed to re-elect as auditors Messrs. A. C. Roberts, Wright and Co.

Some proposed minor alterations to rules were then discussed, the alterations proposed being eventually approved as circulated.

The proceedings ended with a vote of thanks to the chairman, proposed by Mr. T. J. Hunt.

Job printers in America employed on numerous plants throughout New York are striking owing to the refusal of the proprietors to grant a 44 hour week, and it is estimated that nearly 5,000 have struck in Chicago. Several newspapers have been compelled to cease publication or else to issue joint editions or publish curtailed editions.

A SILVER clock and salver were presented on Tuesday to Sir David Duncan, of the *South Wales News*, by the members of the Southern Federation of Newspaper Owners.

## Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

There was a large attendance at the monthly meeting of the Association held on Tuesday the 3rd inst. at the headquarters, St. Bride Institute, Bride-lane, E.C.4. Mr. A. W. Hunt (president) occupied the chair and Mr. H. Milton (vice) supported. At the conclusion of formal business Mr. F. Arnott delivered an interesting lecture on "Leather."

The minutes of the last monthly meeting were read and confirmed.

On the proposition of Mr. J. Cox, seconded by Mr. S. J. Wills, the following new members were unanimously elected *en bloc*:—Messrs. E. J. Warren, ruling, Waterlow and Sons; E. F. Chibnall, litho, C. and E. Layton; F. E. Felix, binding, Chas. Letts; A. S. Long (hon.), Winterbottom Book Cloth Co.; W. R. Wellman, ruling, Blades, East and Blades; C. Salter, paper department, Blades, East and Blades.

The president in the name of the Association expressed in felicitous terms his pleasure in welcoming the new members and reminded them that they would find in the ranks of the Association a strong spirit of comradeship.

#### New Technical School.

A letter was read from Lord Riddell stating that the London County Council was now prepared to proceed with the arrangements for the new technical school in Stamford-street.

It was stated that the cost would be between £10,000 and £12,000 and that a sum estimated at £1,500 would be required annually from various representative bodies in the trade if they wished to have a voice in its management.

It was also stated that St. Bride Printing School would be incorporated with the proposed new school. Suggested amounts which the committee had allocated to the different bodies in the trade were also announced.

Mr. Geo. A. Eden, the representative of the Association on the council of the proposed new school, moved that in the event of their being asked to provide a sum of £25 annually for a period of three or five years they should be prepared to do so.

Mr. A. W. Hunt seconded and said the principal thing was, were they as a body willing to give expression of approval to such a scheme by contributing the amount towards the maintenance of the proposed new institute?

Mr. E. W. Tuff asked what fund it would come from.

The secretary explained that the whole thing was in a suggestive stage. All they wanted to know now was what support they were likely to get for it.

Mr. J. Lee spoke in support of contributing the £25 as suggested, and said it would prevent them accumulating a large banking account, which was itself a good thing.

Mr. A. J. Daines moved an amendment that the amount be restricted to £10. He thought charity should begin at home, with an increased subscription he thought a better policy would be to increase their various benefits and so make their Association of more service to the members.

Mr. E. W. Tuff seconded.

Mr. Tom Hunt suggested that the matter be left for another month to enable fuller information to be obtained on the subject.

A member thought the amount suggested as the Association's contribution was too high in comparison with the amounts asked for from other organisations.

Mr. A. E. Walters proposed, and Mr. A. G. Aves seconded, that the Association support the scheme but that the question of the amount of contribution be left for some future time.

The previous amendment having been withdrawn, this proposition was carried with one dissentient.

In regard to the concert cancelled at the Exhibition, the secretary expressed thanks to those members who had arranged to contribute to the programme.

### The Lecture.

Mr. F. Arnott at the outset said that the subject of leather was a very old one and full of interest. The skin of an animal, he said, was a complex anatomical structure, and its constituents belong to the class of uncrystallisable substances known as colloids. He thought it was very necessary that the printer and binder should know something about the various materials of which leather was composed. Good leather was a great national asset, and the most important materials for leather manufacture are furnished by domestic animals, especially by the ox and sheep. After dealing in an interesting manner with the formation of cells and different layers of the skins, Mr. Arnott next referred to the washing and softening of the hides. After speaking of the operations employed in tanning, the lecturer explained the processes of dyeing and colouring. The old method of dyeing was to handle or turn two or three dozen skins in a bath or tray until coloured to shade, the dye being added in two or three successive portions. The skins, after dyeing, were struck out and dried and very frequently nailed on boards to strain and flatten them. The graining of morocco covers and skins was an interesting process, and was done by laying the skins, which are damped, on a flat graining board or table, a portion being folded over and the crease drawn across the skin with moderate pressure to get the nice morocco grain.

### How to Find the Cost.

Mr. Arnott said the best way to get at the actual cost of leather was to find the average value of square inches. When the skin is received the square feet are marked on the skin, that being the value measurement of the tanner, which of course takes in all useless flanks, etc. Now to strike a fair average covering cost, it is best to measure out a dozen

skins with a crown 8vo. size cover. Find how many covers you can cut out of a dozen skins. Presume the dozen skins cost 20s. and that one is able to cut 10 out of a skin, which will bring the cost of the cover to 1s. each. Then measure the crown 8vo. cover to get the superficial measurement, which is 144 inches, then divide these inches by 12 which will bring it to 9½ inches per penny. The lecturer concluded by stating that the binder should have by him, for reference when asked to quote, for bound books, a simple price list such as he had indicated.

A short discussion followed, after which a vote of thanks to Mr. Arnott for his interesting paper brought the meeting to a close.

### Mr. Charles Ernest Marsden.

We regret to have to announce that Mr. Charles Ernest Marsden, co-managing director with Mr. H. C. Bolton, passed away after a brief illness, on Monday, the 9th inst., in his 52nd year.

Mr. Marsden was born at Halifax (Yorks) and at an early age spent several years in Vienna, where he acquired a knowledge of Continental languages, which proved valuable on entering the service in 1887, of Messrs. Lorilleux and Co., printing ink-makers, of Paris. Mr. Marsden came to London in 1911, to take charge of the London depot of Messrs. Lorilleux and Co., which he managed with conspicuous ability, until the amalgamation of Lorilleux and Co. with Messrs Morris and Bolton, Ltd., in 1919.

He was loved by all his friends, and respected and esteemed by all with whom he came in contact. A man of sterling character, he will be sadly missed, both in France and England.

The fourth Annual Conference of the North Wales and Border Counties group of the Typographical Association will be held at the Wynnstay Hotel, Wrexham, on Saturday, May 21st.

AN EXHIBITION SOUVENIR.—The souvenir produced by Messrs. Lorilleux and Bolton shows in an excellent manner the wide range of their various inks and their capability of executing work of almost every class.

BELGIAN TARIFF CHANGES.—Under modified Belgian Customs regulations the "co-efficient of increase" has been increased from 2 to 4 on the following typographic productions: Typographic prints, lithographs, chromolithographs, photolithographs, chromotypographs, phototypographs, phototypes, zincographs, or other reproductions of drawings or engravings on wood, metal or stone, not specially mentioned, albums and picture or drawing books.

## Trade Notes.

UNDER the Joint Industrial Council of the Printing and Allied Trades a District Committee has this month been formed at Lincoln.

AMONG the week's dissolutions of partnership is that between James Arthur Gregory, Albert Edward Rostron, and James Brookes, printers, 231, Oldfield-road, Salford.

A MOVEMENT is on foot to raise a fund for Mr. George Howard, Tabley-road, Holloway, who is the last of Dickens' compositors, as he set up a portion of "Edwin Drood," at Messrs. Clowes' works in Stamford-street.

THE Typographical Association is proceeding with the arrangements for its triennial delegate meeting to be held at Hastings in the second week of June, when a very important agenda will be placed before the delegates.

AT the eighty-first annual dinner of the Newspaper Society, held at the Waldorf Hotel last week, there was a large gathering of the representatives of the newspaper world and distinguished guests, Mr. Valentine Knapp (the president of the society) in the chair.

THE Printing and Kindred Trades Federation of the United Kingdom held its annual administrative council conference at the Royal Pavilion, Brighton, on the 11th, 12th and 13th. Some account of the proceedings will, we hope, be available for publication in next week's issue.

NEWSPAPER ORGANISATIONS. — Under a scheme adopted finally this week, the four bodies representing the interests of the proprietors of the daily and weekly provincial press of the United Kingdom (except Scotland) have become consolidated. The four bodies are the Newspaper Society, the Linotype Users' Association, the Newspaper Federation, and the Southern Federation of Newspaper Owners. They will be embraced in future in the organisation of the Newspaper Society, which has reached the eighty-fifth year of its existence.

FUNERAL OF MR. L. R. TANNER.—Several hundred people attended the funeral on Thursday, May 5th, at Frome, of Mr. Lanfear Robson Tanner, managing partner of the firm of Butler and Tanner, printers, of Frome and London. The firm which has one of the largest printing works in the kingdom was established by his father, the late Mr. Joseph Tanner, in conjunction with the late Mr. W. T. Butler. Subsequently the business was carried on by the deceased and his brother, Mr. Russell R. Tanner, who, however, retired from active participation in the business some years ago. Mr. Lanfear Tanner was contemplating a similar step when his death occurred at Boscombe, Bournemouth, whither he went for the benefit of his health. Latterly, Mr. Beardsley, of London, and Mr. Humphrey Tanner, of the third generation of the family, have been the more active members of the firm.

MESSRS. WILLIAM RITCHIE AND SONS, LTD., Elder-street, Edinburgh, inform us that Mr. George Jamieson, the secretary of the company, has been appointed a director in place of the late Mr. Thomas Scott.

"THE LIBRARIAN AND BOOK WORLD."—This monthly, now in its tenth year, is to take a new lease of life, and is to be published by Messrs. Sampson Low, Marston and Co., Ltd., who also control the advertising side.

LICENCES are still required for the export of the following goods from Norway:—Cellulose and wood pulp, paper and cardboard and manufactures thereof, rags (old cloths) and printed materials, etc., from Russia.

MESSRS. JOHN DICKINSON AND CO., LTD., send out a fine selection of their Croxley printing, writing and cover papers, with the advice that "buoyant optimism and large-hearted cheerfulness are the two outstanding factors with which to fight the present-day trade depression."

MR. JOHN LAW, who has been for the last 30 years with Messrs. Tullis, Russell and Co., Ltd., Markinch, Fife, has resigned his position to join Messrs. J. A. Weir, Ltd., as general manager at their mills at Kilbagie and Leslie. Mr. Law is the patentee of a revolving strainer and also an instantaneous felt washer, both of which are manufactured by Messrs. Chas. Walmsley and Co., Ltd., Bury.

MR. W. V. MARCHANT (trading as E. Mayer and Co., Stuart-house, Tudor-street, E.C.4.) informs us that Messrs. Ignaz Spiro and Sohne, of Krummau, Czecho Slovakia, for whom they are the sole representatives in the United Kingdom, have revised their prices for the British market. The papers include all pure sulphite papers bleached and unbleached, M.G. or glazed, also greaseproof white or coloured, glazed and unglazed, label manilla, printed tissue and embossed papers.

SUMMONSES have been served on the National Labour Press, Ltd., of Johnson's-court, Fleet street, and Albert George Norton Rose, their manager, of Westcliff-on-Sea, in connection with the alleged printing and publishing of a document called "The Theses of the Communist International," in regard to which proceedings are being taken against Albert Inkpin. Both summonses are returnable at the Mansion House Police Court to-day (Thursday).

MR. A. B. SWAIN, envelope maker, whose premises at 69-73, Mansell street, Aldgate, London, E.1, were damaged by fire, which occurred on Saturday, May 7th, states that the effects of the fire on output have already been overcome, and that all orders can be executed, while inquiries and correspondence will receive immediate attention. The offices have recently been removed from 20-21, Queenhithe, E.C.4, to the Mansell-street address, in order to secure greater co-ordination, while simultaneously the factory and warehouse have been considerably enlarged to give increased production. We are informed that all through the slump the factory has been very busy indeed.

## FORTY-THIRD YEAR.

Printed and Published **EVERY THURSDAY**  
by **STONHILL & GILLIS**,  
at 58, Shoe Lane, London, E.C. 4.  
**Tel.: Stonhill, Fleet, London. Phone: 8407 City.**

**SUBSCRIPTION: Per Annum, 8s. 8d. (POSTAGE EXTRA).**

**Charges for Trade Advertisements:**  
(Full page 8 by 5 1/2 ins.)

Whole Page ...	£4 10 0	s. d.
Half Page ...	2 10 0	
Third Page ...	1 17 6	
Quarter Page...	1 10 0	
One-eighth Page	17 6	
One-third Column	22 6	
One inch in Column	9 0	

An Extra Charge for Cover and Special Positions.  
Discounts according to Number of Insertions.  
Representatives throughout the United Kingdom and  
also in Australia, India, South Africa, United States  
Canada, etc.

All communications for the "BRITISH AND COLONIAL  
PRINTER AND STATIONER" should be addressed and  
Cheques and Post Office Orders made payable to—  
**STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C. 4**

Copies may be purchased at the Offices, as above  
or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.

THURSDAY, MAY 19, 1921.

# Current Topics.

## Wages in the Printing Trade.

WE understand that it is likely that a conference will take place next week between the representatives of the Federation of Master Printers (together with representatives of the newspaper interests), and the Printing and Kindred Trades Federation of the United Kingdom to consider the general conditions in the industry and possible revision of the wages paid.

## L.M.P.A. Milestone.

ANOTHER milestone in the record of the London Master Printers' Association is marked by the appointment of a successor in the secretariat to Major Fordyce Birch. In promoting Mr. Wm. Whyte to the office, the Council and the members of the Association have only given honour where honour is due. During the difficult period which has intervened since Mr. Lake gave up the reins of office, the burden of the technical negotiations from the administrative side has fallen upon

Mr. Whyte, who handled the negotiations with both tact and knowledge. He is, as a matter of fact, a practical printer who is *au fait* with the conditions of an intricate and many-sided craft. Moreover, there have been arrayed against the master printers a number of very alert and talented trade union officials, who, but that they were matched with men of equal ability, might have had things all their own way. Thus the negotiations which have marked the progress of printing in London during recent years have represented a battle of wits in which nothing has been given away on either side. The fact that in spite of the keenness always displayed in the innumerable conferences, good temper and a friendly exterior have been preserved only testifies to the merits of the partizans. And in all these negotiations Mr. Whyte has played a valuable if an unostentatious part. He and London master printers alike are to be congratulated upon the high office to which he is called. It is a popular appointment also, and Mr. Whyte has been the recipient of congratulations from every quarter.

## Postal Rates.

THE proposals to increase postal rates are causing some concern in the minds of printers, and the Federation of Master Printers is taking action with a view to convincing the authorities that any further increase in the postal rates on post cards and printed matter would probably lead to a diminution in the revenue rather than any increase. Experience on the Continent with regard to increased post card rates has proved conclusively that if a certain critical point be passed in increasing the costs, the public ceases to use post cards.

## Paper Imports.

IMPORTS of paper, etc., into the United Kingdom during April show a substantial decline, due to depression in trade and its accentuation on account of the coal strike. The total receipts amount to only 331,596 cwts. of the value of £672,523, as compared with 876,626 cwt. and £2,105,120 for the corresponding month of last year. The quantity imported last month, therefore, shows a decline of 62 per cent. and the value a drop of 68 per cent. Of the reduction in imports of 545,030 cwts., the drop was chiefly in packings and wrappings, amounting to 369,686 cwts., the shipments from Norway and Sweden being greatly curtailed. Packings and wrappings received from Germany amounted to 11,844 cwts. valued at £26,170, the quantity being 2,050 cwts. in excess of that received from

Norway. Finland supplied 7,075 cwts. of packings and wrappings, valued at £17,900. The falling off in the imports of printings, etc., last month was 80,969 cwts. as compared with April of last year, Norwegian supplies being particularly small. There were no arrivals from Newfoundland. From Germany 5,496 cwts. were received of the value of £8,539. Among other declines may be mentioned 8,577 cwts. in coated papers, and 127,406 cwts. in mill, leather, card and pasteboard. Owing to the extremely small arrivals of strawboards during April of last year, the receipts last month show a comparative increase of 48,506 cwts. Taking the average value per cwt. of the imports during April of this and the previous year a depreciation is shown of from 16 per cent. to 17 per cent.

### \* \* \* Paper Exports.

THE decline in the exports of British papers is not so great as in the imports of paper into the United Kingdom. Last month's total shipments amounted to 111,828 cwts. and the value of £662,563, a decrease of 52,612 cwts. and £51,567 as compared with the returns for the corresponding month of last year. The quantity shows a depreciation of 31.9 per cent. and value only 7.2 per cent. It is noteworthy that whereas the average value per cwt. of imported paper amounts to £20s. 6.7d. that relating to exports is as high as £5 18s. 5d. Instead of any depreciation being shown as a year ago, there is an average increase of £1 11s. 7d. per cwt. It is satisfactory to find that the exports of British printings were better than a year ago—60,660 cwts. as against 55,653 cwts. A greatly improved trade has been done with Australia, in fact the demand on the part of British Possessions accounted for 50,355 cwts. as compared with 30,175 cwts. in April of last year; Foreign Countries, on the other hand, have proved poor markets, the supplies last month amounting to only 10,305 cwts. as compared with the shipments of 25,478 cwts. during April of last year. British writings show a poor export demand, the supplies last month to British Possessions amounting to only 8,590 cwts. and to Foreign Countries 1,723 cwts., as compared with 10,056 cwts. and 5,518 cwts. respectively during April of last year.

ARRANGEMENTS are proceeding for the holding of the cost congress and annual meeting of the Federation of Master Printers at Scarborough at the end of this month, there being ample reason to suppose that the coal crisis will be over and railway facilities improved before these important gatherings are due to take place.

## Personal.

AT the offices of the Southern Federation of Newspaper Owners in London, last week, a presentation of a silver clock and salver was made to Sir David Duncan, of the *South Wales News*, by the members of the Federation.

ALDERMAN SIR GEO. ROWLAND BLADES, J.P., has headed the list, with 1,107 votes, for the council of the London Chamber of Commerce. The period of office is for three years.

THE Court of the Stationer's Company have paid a well-merited compliment to the public spirited work done on behalf of the printing industry by one of their Livery, Mr. J. R. Riddell, principal of St. Bride Institute, who has recently been appointed one of the Company's representatives on the Governing Body of the Stationer's Company's School at Hornsey.

COLONEL JOSEPH REED, of the *Newcastle Chronicle* has been elected by the Committee of Management of the Press Association to be chairman of the Association for the ensuing year.

A STAFF gathering of the employees of Messrs. Charles Birchall, Ltd. (*The Journal of Commerce*), was held on Saturday the 7th at the Britannia Rooms, Liverpool, to celebrate the silver wedding of Mr. C. H. Birchall, editor of the *Journal* and proprietor of the associated businesses, and Mrs. Birchall. Mr. Birchall was presented with a "grandmother's" clock and Mrs. Birchall with a diamond and sapphire ring and pendant set in platinum.

MR. JOHN CRABB, the secretary of the *Christian Herald Co., Ltd.*, recently celebrated the fortieth anniversary of his entering the service of the company, the firm honouring the occasion by inviting all the staff and employees—nearly eighty—to a social tea at the Institute of Journalists, when Mr. Crabb was presented with a gold watch and chain as a mark of esteem and affection from his colleagues.

WE understand that Mr. A. Willis Stevens is leaving Messrs. Millington and Sons, Ltd., with which firm he has been associated for many years as paper buyer, to take up an appointment with Messrs. John A. Kidd and Son, of Queenhithe. His many friends will wish him all success in his new sphere.

MR. GEO. M. WILLIAMS, chairman of the Ulverston Paper Co., Ltd., and who is well known in paper trade circles, has recently been made a grandfather by the birth of a son to his only daughter, Mrs. C. Wilson, on the 28th ult.

## DIVIDENDS AND REPORTS.

THE first annual general meeting of Odhams Press, Ltd., was held on Tuesday at the Holborn Restaurant, Lieut.-Colonel W. Grant Morden, M.P., chairman of the company, presiding. In mentioning that the net profit of the first year of the company's trading amounts to £150,265 13s., the chairman said the profits earned during the year would have justified a larger dividend than 8 per cent. being distributed to the shareholders, but in view of the present industrial uncertainty the board think it wise to conserve its resources. It was agreed that a dividend of 8 per cent. be declared on the ordinary shares of the company.

## NEW COMPANIES.

**WALTER BALLANTYNE, LTD.**—Capital, £3,000, in £1 shares; to take over the business carried on at Newcastle-on-Tyne, as "Ballantyne and Co.," and to carry on the business of office supply specialists, printers, publishers, bookbinders, etc. Private company. First directors: W. Ballantyne and W. D. Macallister. Registered office: 41, The Side, Newcastle-on-Tyne.

**JOHN BURT AND SON, LTD.**—Capital, £10,000, in £1 shares; to adopt an agree-

ment with J. Burt and to carry on the business of general engineers, manufacturers for printing and allied trades, machinery and appliances, motor engineers, founders, dealers in new and secondhand machinery and motors, manufacturers of and dealers in lithographic stones, etc. Private company. First directors: J. Burt, Mrs. A. Burt and J. T. Burt. Registered office: 3, Rosebery-avenue, E.C.

**DELTA STATIONERY AND OFFICE REQUISITES, LTD.**—Capital, £2,000, in £1 shares; to take over the business of printers, lithographers, stationers and office furnishers, carried on by W. Neal and F. Furzey, at 6, Bank-street, Sheffield, as the "Delta Stationery and Office Requisites Co." Private company. Directors: W. Neal and F. Furzey.

**P. AND J. ARNOLDS, LTD.**—Capital, £18,000, in 1,500 8 per cent. cum. pref. shares of £10 each and 3,000 ordinary shares of £1 each; to take over the business of manufacturers and importers of and exporters and dealers in inks, typewriter ribbons, carbon papers, office requisites, etc., carried on by A. A. Ogden at Aldersgate Works, Benwell-road, Holloway, as "P. and J. Arnold." Private company. First directors: A. A. Ogden, W. J. Ogden, R. J. Beeson and E. W. Brown. Registered office: Aldersgate Works, Benwell-road, Holloway.

**H. COLLINS, LTD.**—Capital, £3,500, in £1 shares; to acquire the business of a book-binder, paper ruler, account book manufacture and wholesale stationer, carried on by H. Collins, formerly at 10, Newmarket-lane, Manchester, and at present at 23, Blackfriars-street, Salford. Private company. Directors: H. Collins, F. Smift and F. H. Dodman. Registered office, 23, Blackfriars-street, Salford.

**REX BROTHERS, LTD.**—Capital, £1,000, in £1 shares; manufacturers and dealers in raw materials and textile fabrics, stationery and fancy goods and other articles, etc. Private company. Directors: B. Jenkinson, B. P. Jenkinson and J. Jenkinson.

**POLYGON HOME SALES, LTD.**—Capital, £100, in 6d. shares; manufacturers and distributors of all kinds of inks, carbon papers, stationery, typewriting and office requisites, etc., and to exploit in the United Kingdom the sale of all or any articles, manufactured or factored by the Polygon Ink Co. Private company. Subscribers: J. S. St. B. Baker and O. G. Hutchinson. Registered office: 30, Regent-street, S.W.1.

## COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

**MANCHESTER PRINTING, BINDING AND BOX-MAKING CO., LTD.** (Office, London, W.C.).—Issue on May 3rd, 1921, of £85 debentures, part of a series already registered.

**TRYAD CO., LTD.** (Printers, etc., London).—First mortgage debenture, dated May 5th, 1921, to secure £500 charged on the company's undertaking and property, present and future, including uncalled capital (if any). Holder: L. B. Felton, 31, Newton-road, Bayswater, W.2.

**ALFRED JUBB AND SON, LTD.** (Printers, Huddersfield).—Particulars of £11,000 debentures, authorised April 27th, 1921; whole amount issued; charged on the company's property, present and future, including uncalled capital.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### AUSTRALIA.

A Melbourne firm, who have branch offices in Sydney, desire to undertake the representation, throughout Australia, of a British manufacturer of stationers' sundries (except pencils). The enquiring firm proposes to conduct agencies on a commission basis, calling only on the wholesale houses throughout the Commonwealth. They would also be prepared to carry small stocks, if thought desirable. (Reference No. 518.)

### CANADA.

A manufacturers' agent and importer in Toronto desires to obtain the representation of United Kingdom manufacturers of stationery specialties, etc., on a commission basis, for the whole of Canada. (Reference No. 519.)

Through the Canadian Trade Commissioner, a Canadian tannery inquires for importers of bookbinders' leather made from cowhide, in every grain and colour.

### BRITISH WEST INDIES.

A manufacturers' agent at Kingston, Jamaica, desires to secure the representation, in Jamaica, of United Kingdom suppliers of stationery. (Reference No. 528.)

### BELGIUM.

A Belgian residing in Brussels desires to secure, for the whole of Belgium, the agency, on commission, of United Kingdom firms manufacturing paper and all stationers' supplies. He would eventually be prepared to purchase his own stocks. Correspondence in English and French. (Reference No. 529.)

## Tenders for Cardboard Portfolios.

The Central Stores Department of the Egyptian Ministry of Finance is inviting tenders to be submitted up to noon on May 25th, for the supply of the following material:—

900 Portfolios, Cardboard, 70 by 70 by 7 cms.  
 600 Portfolios, Cardboard, 85 by 75 by 7 cms.  
 500 Portfolios, Cardboard, 60 by 60 by 7 cms.  
 1,500 Portfolios, Cardboard, with flap 28 by 37 by 7 cms.

Sealed samples in duplicate of the goods must be submitted with tenders. Delivery of the goods is to take place within 90 days of the acceptance of the tender. Only those firms with a representative resident in Egypt can tender for Egyptian Government contracts.

The Egyptian War Department are also calling for tenders for glass paper.

An Advertisement is always working.

## The Printing Exhibition.

### Some Other Stands Noticed.

Below we give notices of more of the stands at the Printing Exhibition. The notices were unavoidably held over from our last issue.

#### THE ARCADE.

##### Gilby and Hermann, Ltd.

Printing inks for all processes are shown by this firm.

##### Parsons, Fletcher and Co., Ltd.

Specimens of printing as well as bulk samples of ink at Stand No. 13 reveal the quality of goods turned out by this firm.

##### Torbet (Northern), Ltd.

An attractive variety of paper specialties are exposed at Stand No. 14, Arcade. Among them are pure esparto writings and printings, and a wide selection of Torbet papers. The latter include parchment, cover, art, and chromo papers of high quality. Particular attention should be paid to the Torbet unstretchable litho paper, which is manufactured by the firm's own process and used for high-class litho work without being hung. E.S. writings and printings; T.S. writings and T.S. bank papers (white and tinted) make effective display, while ledger papers, cartridges, M.G. poster paper, greaseproofs up to 120 lbs. D.C. are among other lines in Messrs. Torbet's wide range.

##### KING EDWARD'S HALL.

##### Francis J. Connolly.

The whole of this annexe is devoted to an elaborate installation by Francis J. Connolly, Ltd., and there may be seen and admired a big array of the varied lines of printing machinery for which the firm are agents. The exhibit comprises rotary offset lithographic machinery, tin printing and platen machines, all in operation. In addition there is illustrated a new system of embossing without dies, by reversed type, to be worked on an ordinary platen. Bookbinding and boxmaking machinery is also included, making altogether a comprehensive display.

#### MAIN HALL.

##### W. J. Connoll and Co.

Specialising in the purchase, sale and exchange of second-hand and re-built machinery, Messrs. Connoll do their own printing on a re-built machine to show how they make them "equal to new." Other apparatus for which they are agents is also shown.

##### Monometer Manufacturing Co.

How the highest efficiency can be attained in a printer's foundry and how the cost of output can be reduced and production increased is demonstrated at Stand No. 8 Main Hall. The tilting furnaces and the casting machines are objects of interest.

##### J. T. George and Co.

The chief features of the exhibits being shown by this firm include the following:—

"Eclipse" safety guards for platen machines in operation, fitted to two kinds of platen machines; the "Diamond" press; Lever Guillotine Cutting machine; "Universal" and other punching and eyeletting machines; "Eclipse" and "Little Giant" lead and rule Cutters, as well as labour-saving founts of brass rule and printer's sundries.

##### Deritend Engraving Co., Ltd.

Bending and cutting machines and a thumb-holing machine are among the exhibits at Stand No. 12, ingenuity and skill being shown in their manufacture.

##### F. W. Woodroff and Co.

Boxmakers find much to instruct them at Stand No. 13, Main Hall, rotary and platen cutting and creasing machinery, together with allied appliances, being demonstrated under working conditions.

##### Cundall Folding Machine Co.

The Cundall folding machine holds a high reputation and the exhibit at Stand No. 14 illustrates its attributes fully.

##### Stoer Bros. and Coles, Ltd.

Specimens of printing by the firm's own inks are a practical guide to their quality. In addition to printing inks, there are colours and printing varnishes, litho and letterpress aids, blanketings, etc.

##### Northern Press Engineering.

Some of the latest devices introduced by this South Shields firm are to be seen at Stand No. 17. They include a casting box, boring box, a stereo cylinder and late news device.

##### John Meerloo and Sons.

Printing materials of all kinds, including samples of wood type for flat and rotary presses, have been brought from the firm's own factories at Walthamstow, and set out with effect at Stand No. 19.

##### Universal Typesetting Co., Ltd.

A lesson in economy may be learned by witnessing the re-casting of old type into new "Type that is type" ready for case is the description given to this exhibit.

##### A W. Penrose and Co., Ltd.

As indicated in our survey last week, there is some magnificent apparatus to be found at the Penrose stand. Much interest is attracted by the working demonstrations of the printing machinery, by the engraving and process apparatus, by the novel "Bawtree" Type Composing machine, and by numerous other features.

##### Ault and Wiborg London Co.

Letterpress and lithographic inks cover a wide range, including "news" and roto-gravure steel die and poster, and there are full strength colours of all shades for offset printing, together with dry colours and varnishes.

##### A. T. Kremer's Manufacturing Co., Ltd.

The exhibits at Stand No. 34 comprise gold, bronze and aluminium powders; metal leaf, foils, reels, etc.; "Altior" renovating metal; and linotype, monotype and stereo metals.

### T. C. Thompson and Son.

These printers' engineers, furnisners and valuers have a range of useful machines on show. The exhibit includes platen machines, guillotines, perforators, and several other machines useful to the printer, while the book-binder will be interested in the nipping presses shown.

### Hunters, Ltd.

A complete installation of apparatus for photo engraving in line, tone and colour and photo-lithography is arranged by Hunters, Ltd. A full range of machinery manufactured by Messrs. H. O. Strong and Sons, of Bristol, for whom Messrs. Hunters, Ltd., act as sole agents for London and districts, comprises blocking presses, punching machines, cornering machine, etc. There are also demonstrated a range of the well-known "Golding Jobber" platens, in a wide range of sizes, each complete with electrical equipment of the self-contained model, with necessary speed controller; a double crown flat bronzing machine ("Mark Smith" model); guillotines, casting boxes, type-high surfacing machines, shoot boards and planes, and various accessory machinery for printers, stereotypers and electrotypers, manufactured by Messrs. Hunters, Ltd., at their new Wel-lingborough Works.

### Dalziel Foundry, Ltd.

An impressive display is made at this stand of many things having to do with the engravers' art. A magnificent showing of illustration reproductions in colour, monochrome and line is supplemented with examples of Dalziel's stereos and auxiliaries, the latter including demonstrations of the Dalziel Patent Register Finder for mounting in register on Parker Boards any number of colour plates, both originals and stereos taken from them.

### R. P. Bannerman and Son.

Among the various exhibits of this firm of typefounders and printers' engineers, prominence is given to the "All British" Type-casting Machines which are seen in operation.

### Furnival and Co., Ltd.

Among the prominent specialities which this firm are showing are the following:—Quad Demy Rotary Offset Press, fitted with automatic damping apparatus, special inking arrangement, automatic lay, sheet delivery, and counter. Double Demy Two-Revolution Press with printed side up sheet delivery. Double Demy Drum Cylinder Press fitted with flyer. Quad Crown Direct Rotary Litho fitted with flyer. Double Demy Mark Smith Patent Safety Cylinder Vacuum Bronzing Machine fitted with flyer. 42-in. Patent "Express" Self-Clamp Guillotine, fitted with self-contained hydraulic clamping motion, quick return motion to knife, and patent balanced knifeholder.

### Dyer, Ltd.

At Stand No. 61, Main Hall, are located the productions of this firm. Very fine examples of embossed and stamped printed matter,

such as catalogue covers, show cards, box labels, etc., are on view. Special advice is also given by the firm on the subject of embossing, including cameo and cutter crush embossing.

### Ewart and Collis, Ltd.

Messrs. Ewart and Collis, Ltd., manufacturers of paper laying machines, paper bag making machines, electrotyping and stereotyping machinery, box nailing and boxboard printing machines, and the Cowan Transvevor. A paper bag making machine is exhibited in operation, embodying many labour saving and space saving improvements of a striking character.

### Shuck, Maclean and Co., Ltd.

The speciality of this stand is printing inks—litho, letterpress, tinplate, photogravure. Offset inks are a speciality. Messrs. Shuck, Maclean and Co., Ltd., are sole manufacturers of "S.M." paste.

### Lorilleux and Bolton, Ltd.

At this stand are to be seen printing ink and varnishes of every description, and the materials from which they are manufactured; also specimens of various kinds of printing. An interesting feature is "Transparink," for printing any transparency, particularly window envelopes.

### Hampson, Betteridge and Co.

This firm of printing, bookbinding, and boxmaking, and machine ruling engineers have a large and varied showing of small machinery for the printing and allied trades, including machines for bookbinders and box-makers.

### GALLERY.

#### The A.G.P. Agence Generale.

This Parisian firm have at Stand No. 41, Gallery, a smart and effective arrangement of high class French cabinet and box stationery. The envelopes displayed are lined with distinctive patterns and are characteristic of their country of origin.

#### Department of Overseas Trade.

The exhibit of the Department of Overseas Trade Development and Intelligence in the Gallery is designed to bring to the notice of the commercial world the activities and functions of the Department in the furtherance of British trade in overseas markets. An interesting feature of this stand is an exhibit of various raw materials from different parts of the Empire which have been investigated at the Imperial Institute with reference to their possibilities for papermaking. Specimens of paper prepared from these materials in the Imperial Institute Laboratories are also shown. Reports on some of these investigations have been published.

#### George Bramston.

Located at Stand No. 18, Gallery, are the exhibits of this firm, who manufacture twines, ropes and packing cords in every description in jute, hemp, manilla and cotton, etc. Among their specialities are dryspun cords for use in the paper trades and jute and hemp twines for the stationery trades.

**A CO-OPERATIVE DAILY.**—A co-operative college and a co-operative daily newspaper were advocated on Monday by Mr. George Major in his presidential address at the 53rd annual Co-operative Congress at Scarborough.

**NEWSPAPER** advertising throughout the United States increased in value during 1920 to more than \$200,000,000, an advance of \$50,000,000 over the previous year. According to the report of the Bureau of Advertising of

the American Publishers' Association, newspaper advertising space gained in favour as a medium of determinable results and of sure economy.

AMONG the visits to be paid during the summer by the Publicity Club of London is one to the paper mills of Messrs. John Dickinson and Co., Watford; to Fry's Metal Foundry, Blackfriars; also to Hill Siffken's works, Dalston, to witness the various processes of poster printing from start to finish.

## Patent Action Over Display Cards. Master Printers at the Exhibition.

In Chancery Division recently the patent action was heard of Simplex Lithographic Co. v. Sir Joseph Causton and Sons, Ltd. Reviewing the case, the "Illustrated Official Journal" (Patents) says:—The plaintiffs were the owners of a patent for "Improvements in Sample Cards." Claim 1 of the complete specification was as follows:—"A sample card for displaying textile fabrics, comprising a body portion and an embossed panel struck up from the said body portion having a surface forming a replica of a sample of textile material." Claim 2 was as follows:—"A sample card for displaying textile fabrics, comprising a body portion, and an embossed panel struck up from the said body portion having a surface forming a replica of a sample of textile material and sharply defined edges raised above the body portion a distance substantially equalling the thickness of a sample of textile material." Claim 3 was substantially Claim 1 with the addition of the words "and a sample of textile material attached to said sample card." At the trial of an action for infringement of the patent, the defendants admitted infringement. It was admitted by the plaintiffs that the striking up of panels and the embossing of the surface representation of the texture of the material were both old, but the plaintiffs contended that the combination was novel and produced a particular result which was commercially successful. Held, that, in view of the existing common knowledge at the date of the patent, there was no subject-matter, and that the action must be dismissed with costs.

## Paper Competition in Australia.

The extent to which British papermakers are meeting with competition from United States manufacturers is revealed by the statistics relating to the trade of the Australian Commonwealth for the year ended June 30th, 1920. Paper received into Australia from the United Kingdom represented a value of £435,652, or 15·2 per cent. From the United States, however, the value was £951,128, or 33·3 per cent. Japan's share of the paper trade was £57,844, or 2 per cent. In stationery, the United Kingdom easily holds the lead, the value of this commodity from the Mother Country being £864,093, or 66·1 per cent. The United States sent stationery to the value of £336,810, or 25·7 per cent., and Japan was represented by £27,595, or 2·1 per cent.

**WILLS.**—Mr. Arthur Francis Bentley, of Southampton, book cloth manufacturer, bleacher and dyer, £80,878. Mr. Robert Wilson, for 27 years associated with management of *Edinburgh Evening News*, £87,398. Mr. Arthur Lucas, of Brondesbury, N.W., art publisher, £15,026.

The latest effort of the North and West and North-West London Master Printers' Associations to strengthen still further the spirit of friendly comradeship and co-operation which has been growing amongst them was, if numbers are any criterion, a marked success, and must have given great satisfaction to those who organised the meetings. Tickets of admission to the Printing and Allied Trades Exhibition were issued to every known printer having works in the two districts, as well as to tea (as the guests of the Organising Committee of the Exhibition) and a Bohemian Concert after. About 250 employers and their ladies sat down to tea and by request Mr. R. A. Austen-Leigh, president of the London Association, voiced their congratulations to Mr. Bridges and his council on the success of the Exhibition, and thanks for hospitality given, and Mr. Bridges with his well-known cordiality responded. Later at the concert Mr. Wilson James and his famous concert party kept a large audience enraptured till near the closing hour. Professor Besoni, late of Maskelynes, added immensely to the enjoyment by a clever display of conjuring, and Mr. H. C. Hill in a few fitting words told the advantages of Association to those present who were not members. A great accession of strength should result to the London Associations responsible, from this happily conceived undertaking.

**PENSIONERS AT THE EXHIBITION.**—Some 800 old pensioners of the Printers Pension, Alms-house and Orphan Asylum Corporation were present at a tea and concert given on Friday at the Printing Exhibition at the Royal Agricultural Hall, Islington. It was an occasion that was thoroughly enjoyed by the old people, most of whom were able to make the round of the hall and take note of the marvellous developments in printing that had been brought about within the last 30 or 40 years. Sir William Waterlow welcomed the guests, and was supported in the proceedings by Mr. J. Thompson, chairman of the Corporation, and many members of the council.

## COLOUR PRINTING to the TRADE

**BETTER, QUICKER and CHEAPER**  
 — than can usually be obtained. —

**Litho'd Posters**, 64 by 44 in one Sheet.  
 Design made, drawn and proved, and printed complete or any part of it.

**Transparencies and Transfers**,  
 either for advertising or decoration.

**Showcards, Labels, Wrappers, &c.**

**Publishers of Chromo Almanacs and Art Card Calendars, Date Blocks, and Monthly Leaflets—Large Variety, Choice Designs.**

**Catalogues on application.**

ESTIMATES OR INFORMATION FREELY SUPPLIED.

**TAYLOR BROS.,** The Trade **Leeds.**  
 Colour Printers.

Replies to Box Nos. to be addressed to the Offices,  
"BRITISH AND COLONIAL PRINTER AND STA-  
TIONER," 58, SHOE LANE, LONDON, E.C.4.

## SPECIAL PREPAID ADVERTISEMENTS

**SITUATIONS VACANT, REPRESENTATIVES or MANA-  
GERS** REQUIRING POSITIONS, AGENCIES, BUSI-  
NESSES WANTED or FOR DISPOSAL, MACHINERY  
and MISCELLANEOUS.—Charges for Advertisements of  
the above class are Three Shillings for 21 Words or  
under; One Shilling extra for every line or portion  
after. Seven words to be reckoned for each line.

**SITUATIONS WANTED.**—Special Rate for Operatives  
only; One Shilling and Sixpence for Twenty-One  
Words and One Penny per Word after. Minimum charge  
One Shilling and Sixpence. Cash to be sent with order.

Telegrams: STONHILL, FLEET, LONDON.  
Telephone: No. 8407 CITY.

## Agencies.

## British Printing Machine Engineers.

**Amalgamation of Famous Wharfedale Firms.**

**Enterprise Opens Up a New Era for the Industry.**

When Mr. Wesley Petty, of Leeds, who was then president of the Yorkshire Master Printers' Association, visited Wharfedale in 1906, he suggested to the Otley printers' engineers, who entertained the party, that the best interests of the local trade would be served by a pooling of the businesses. At that time, however, divergent views were too strong to permit of such a course, but the past few years have seen a marked change in the situation. During the war the firms have worked together so closely that they have been led to the belief that the words of Mr. Petty were capable of being brought to fruition, and though the whole of the engineers have not seen their way to fall in, there has lately been an amalgamation of three of the leading firms in the town—Messrs. Dawson and Sons, Ltd., Messrs. Payne and Sons, Ltd., and Messrs. Elliott and Co., Ltd. They are now known as Messrs. Dawson, Payne and Elliott, Ltd.

This amalgamation is interesting from many points of view, but mainly because all the three firms originally worked together, were afterwards disunited, and have now come together again. It is now over half a century since the late William Dawson and the late David Payne, the two pioneers of the Wharfedale Printing Machine industry, dissolved partnership, and this is not the first attempt at a re-union. Negotiations in that direction

were begun some years ago, but it was found impossible to get unanimity, and the effort failed. Success on this occasion is an interesting addition to the history of the industry that has made Otley world famous.

### **The Beginning of the Industry.**

The foundations of the industry were laid nearly 100 years ago by the late Mr. William Dawson, whose business of supplying printers' materials was commenced in 1830. He first turned his attention to plough cutting machines, and later to the guillotine and label cutting machines. About 1850 he was joined by a clever and inventive foreman, Mr. David Payne, who was constantly searching his brain to effect improvements on existing machinery and to invent new. Their fame reached the ears of Mr. Stephen Soulby, an inventive printer of Ulverston, who in 1852 had taken out a patent for a machine, but who had not the luck to get it made sufficiently well to meet his wishes. He therefore sought out Messrs. Dawson and Payne at Otley, and on August 5th, 1854, there is an entry in Mr. Dawson's handwriting to the effect that himself and "David" went to Ulverston to see Mr. Soulby, the expenses being £2 10s.

The two Otley men secured the order, and in the following year—1855—the first printing machine ever built in Otley was delivered to the purchaser. It was known as the "Ulver-

stonian," and had a fixed bed and travelling cylinder, very much on the lines of the galley press of to-day. Some of these machines—for others were made subsequently—are still in existence, and up till quite recently there was one in Leeds. In comparison with what had gone before they did good work, and the firm was kept busy.

Many improvements on the original were made by Mr. Payne, and in recognition of these Mr. Soulby presented him in 1856 with a handsomely-bound volume of the "History of Furness Abbey."

Mr. Payne's inventive abilities led him to the belief that a fixed bed and travelling cylinder were not the best methods of securing a sharp impression with rapidity, and he decided on a change. Curiously enough, he only went by stages, and first effected a compromise by making the cylinder and bed each travel half-way.

### The "Wharfedale."

Having gone so far, Mr. Payne eventually decided to "go the whole hog," and with the fixed cylinder and the travelling bed came the "Wharfedale" machine that was to revolutionise the printing machine industry. The name of "Wharfedale" was not used at first, but the machine was known as "Our Own Kind." Like most new inventions it was not received kindly at the outset, and the first machine was on stock nearly a year before a purchaser could be found. It ultimately went to Halifax. Later, the name of "Wharfedale" was applied, but, unfortunately for the originators, the patenting of the machine was not effected—patenting being a much more difficult process then than now—with the result that the "Wharfedale" type of machine became public property. It has since been freely copied, and is now made in varying styles all over the world.

In 1863, Mr. Payne was taken into partnership, along with Mr. Dawson's elder son—Mr. Thomas G. Dawson. For three years they traded as Dawson, Payne and Co., and a flourishing business was built up. The firm had no foundry, but had to rely on outside firms for a supply of castings. These were chiefly supplied by Messrs. John and Peter Elliott, of Otley, the descendants of whom are now, singularly enough, joining the successors of William Dawson and David Payne.

The arrangements in 1863, when David Payne was taken into partnership, were of a somewhat unique character. It was agreed that Mr. Payne should pay his share by instalments extending over a period, and that all inventions of his should be patented in his name, but become the property of the firm so long as he was a member.

Through this arrangement friction arose that led to dissolution in 1866. At this time about 80 men were employed. With the sum of £2,500 paid out of the business, Mr. Payne built himself a workshop, 30 yards by 15 yards, on the site of the present works. He continued in business until 1879, when he retired in favour of his three sons, all of whom are now dead, and the business has since been in the hands of his grandsons.

Now, after a dissolution of half-a-century, the descendants of the two pioneers of Otley's printing machine trade have re-united, and the first machine bearing the name of the new firm was on view at the Printing Exhibition in London, where, by the way, £15,000 worth of Otley machines were shown.

Messrs. Elliott claim the honour of producing the first two revolution machine built at Otley for commercial work.

### The Two Firms.

The firm of William Dawson and Sons was incorporated as a private limited liability company in 1906. Its directors are Mrs. Bey, Mr. E. Stott, Mr. H. Bey, Sir Arthur Roberts, and Mr. W. V. Dawson. It has a staff of about 500, and in addition to the manufacture of Wharfedale printing machines, it specialises in various appliances for the production of high-class half-tone and three-colour work, and for high-class magazines.

The firm of Payne and Sons, Ltd., was incorporated as a private limited company in 1909. Its directors are Messrs. Cyril Payne, Sydney Payne, Herbert Payne, Walter Ashley Payne, and Roland Payne. It employs a staff of over 500, and specialises in the varied machinery used by high-class printers.

---

**"LINOGRAPH" DEMONSTRATION.**—Following up their demonstration at the Printing Exhibition, when much interest was shown in the "Linograph" composing machine in operation, Messrs. C. W. Shortt and Co., Ltd., have been giving similar demonstrations at their offices and show-rooms, 8, Fulwood-place, High Holborn, and many printers who failed to have the machine explained to them in detail at the exhibition, have thus been able to make good the omission. At the hands of a very able operator and demonstrator the "Linograph" machine—of which we have previously published a description—has had its capabilities and advantages made plain, special stress being laid upon the fact that with this machine there is only one transfer from elevator to distributor, and this transfer is made without using the matrix combinations, materially lengthening the life of matrices and reducing the chances for distributor stops; also upon the characteristics of lightness and quick change possessed by the magazine, in respect of which no locking or unlocking or other adjustments are necessary, either before or after the change.

## Organisation of the Process Trade.

Mr. G. E. Holloway.

A well-known and outstanding personality in the printing trade, Mr. G. E. Holloway was apprenticed to printing and went through the working departments, remaining in the trade for some years. Twenty-nine years ago he was engaged as general manager of B. Dellagana and Co., Ltd., of London, Manchester and Liverpool, the well-known and oldest block-making house in the kingdom, and was appointed managing director and secretary of the company during last year.

At the time Mr. Holloway came into the block trade the custom of printers of publications establishing their own stereotyping plants was becoming general. This action soon presented a most formidable problem, as the trade not only lost their largest and most regular customers but found them competitors as well. This left the trade houses mainly dependent on jobbing printers and advertising agents, the price for whose work was totally inadequate without the publications to support them. The members of the trade at that period were disposed to look with suspicion at any form of co-operation with their competitors, but the circumstances under which an action for infringements of copyright was brought by a German firm of block dealers against Dellagana's so obviously threatened the interests of the whole trade that it brought the discordant elements together and Mr. Holloway succeeded as an outcome of the position in forming the Association of Electrotypers, Stereotypers, Process and General Engravers, the first organisation for the protection of the interests of these trades. Mr. Holloway was himself the first secretary.

The Association eventually fell into two sections, which developed into the existing Electrotyping and Stereotyping Employers Federation and the Federation of Master Process Engravers; but they are both offshoots from the pioneer organisation already mentioned.

Many attempts to improve the status of the trade, then in a deplorable condition throughout the country, were made with varying success, but the benefits were only temporary, owing to lack of control over two or three small firms and new ones springing up, "cutting" prices, becoming insolvent, and disappearing, leaving the harm done to be grappled with by those struggling to honestly pay their way.

It was long pondering over these apparently hopeless conditions which led Mr. Holloway and his friend, the late Mr. E. R. Cook, of Messrs. Badoureau and Jones, Ltd., at that time chairman of the trade association, to endeavour to come to terms with the men's society for mutual benefit protection. To bring this about required dogged effort, renewed over several years, for the supposed natural hostility and divergence of the in-

terests of Capital and Labour were then strongly held, as, unfortunately, they still are, in many quarters, with the disastrous results with which all are familiar.

However, in 1911 an agreement between employers and men was arrived at and a joint committee set up somewhat on the lines of a "Whitley Council," but, as will be seen, some years in advance of its time, and this organisation has admittedly proved of great value to both parties and prevented any strike or serious conflict either before 1914, during the war, or in the trying times since the armistice.

The present position of the block-making industries will be admitted to be the work of trade organisation. It cannot be denied that this success is largely due to the efforts

Mr. G. E. Holloway.

originated by Mr. Holloway 25 years ago and persistently maintained by him despite hostility, opposition and discouragement in every form.

Mr. Holloway has been a member of the executive committee of the electrotyping employers' organisations throughout their history and of recent years has been and still is chairman of the Federation above mentioned.

**PRINTING AND ALLIED TRADES' CHARITY SPORTS ASSOCIATION.**—The 26th annual meeting of this popular trade event is to take place at Stamford-bridge Athletic Grounds on June 18th, commencing at 2 o'clock. The programme includes open and trade events and covers a wide range of attractions. Mr. Chas. H. Roud (president) has consented to present the prizes.

# The Standardisation of Paper.

W. HOWARD HAZELL.

The present methods of dealing with paper are the slow growth of many generations, and if any one examines them, they will find that he are absolutely chaotic and quite unsuitable for the present day. When paper was made by hand, and sold in Foolscap and similar small sizes, different methods might have been suitable, but when we now deal in a multitude of sizes and qualities of paper, it is essential that better and more modern methods should be adopted.

Paper is bought by the ream, which contains 472, 480, 500, 504, 508 or 516 sheets, and occasionally some other quantity. A "ream" is, therefore, only a term for a packet containing an uncertain number of sheets, and as practically all the sales of paper by printers consist of "thousands," it is easy to see the great number of calculations that are necessary, and the possibility of error.

Papers are sold by size, such as Foolscap, Medium and Demy, and the sizes of these sheets varies considerably, and there is also no uniform standard of thickness for papers in different sizes.

Any change in the custom of the trade is likely to cause some disturbance in the business affected, and may arouse some opposition. It is, therefore, desirable to find what are the lines of least resistance in making any improvement, and when the question under consideration is to find some standard that could be adopted in the different countries, the problem is still more complex.

The main points on which international standards could be fixed, are:

- (a) Standard unit for sale.
- (b) Standard thicknesses of paper.
- (c) Uniform methods of packing.
- (d) Uniform customs of the trade.
- (e) Standard sizes.

There is no doubt that the unit for sale should be a thousand sheets, sold by weight. The "thousand" could be called a "mille," and the paper packed in reams of 500, or, if more convenient, in smaller packages containing 250, 200 or 100 sheets. There are many advantages in using the "thousand" or "mille" as a basis. Printers print and sell per thousand sheets or per thousand books, and stationers sell their envelopes by the thousand or the hundred, although there is an anomaly of selling notepaper by the ream of 480 sheets. In all these cases the standard of the "thousand" would be an advantage.

As the "mille" is the basis of sale, the quire of 24 sheets should be abandoned, and for smaller quantities, 100, 20 or 10 sheets should be the unit.

### Simplifying Price Calculation.

One great advantage of the "mille" as a unit for sale, is that the price of smaller

Paper read at World's Printing Trade Congress, May 10th.

quantities could be found without the calculations or reference to the ready reckoners that is necessary when the quire is the unit. It is only necessary to convert the cost of the "mille" into pence, and then shift the decimal point to find the cost of smaller parts, thus:—

If a "mille" costs 21/-	...	252 pence,
One sheet costs	...	.252 "
Ten sheets costs	...	2.52 "
One hundred sheets cost	...	25.2 "

In countries with a decimal coinage it would not even be necessary to convert into pence, but the decimal point could be shifted, and the cost of small quantities found immediately.

If the "mille" were adopted as an international standard, an enormous amount of time would be saved in making calculations, checking invoices, keeping records, etc., and many errors would be avoided.

In the United States a ream of 500 sheets is already the standard, and some other countries are thinking of, or already have adopted, a ream of 500, and, therefore, the "mille" would lead to little change.

It has been suggested that instead of the "thousand," it would be desirable to have 1,008 or some other number of sheets, to allow for overs, but no number of overs will satisfy all consumers. Under the present conditions, some require 516, others are satisfied with 504. A short run of high-class work requires many more overs than a long run of inferior work, and a "thousand" is the only number which would simplify calculations, and meet with the least opposition.

I would also suggest that pulp, paste and ivory boards should be sold by the "mille" instead of by the grosses or packets. The weight per "mille" would also be the basis, and if this system was universally adopted, all purchasers and all countries would know that in any quotations the price quoted was by the "thousand" sheets and the weight thereof.

### Standard Thickness.

The second standard that would have many advantages would be a standard thickness by which papers would be sold under a substance number. If substance numbers, representing the number of grammes per square metre in a sheet of paper, were adopted, a complete range of weights would be available, and as the metric system is used by so many nations, it would be a better basis than the inch. In the United States an attempt is being made to standardise the weights of paper, and they are suggesting as a basis the weight of a thousand sheets, each containing a thousand square inches. It would be a great disadvantage if there were a series of substance numbers. If the grammes per square metre were taken as a basis, it would not be necessary for paper users to work with either grammes or metres, as equivalent tables giving equivalent weights in various sizes could be worked out, and they would buy, sell and deal in pounds weight per thousand sheets in the different sizes. For example:—Substance number 80 (i.e. a square metre of paper would

weigh 80 grammes) would give the following weights per thousand sheets:—

Large Post	...	40 lbs.
Demy	...	45 "
Double Foolscape	...	51 "
Double Crown	...	68 "

The thickness of each substance would be known, and many calculations would be saved in converting paper from one size to another. A printer could order paper in any size, and would only have to quote the substance number of 50 or 80, and he would know the thickness that he would obtain. If these substance numbers were adopted, a printer would know that he could order any standard substance from any stationer in any size, and paper-makers would have the great advantage of being able to run a large bulk of paper in a standard substance number, and cut to any size if required. When supplying paper to other countries, similar advantages would ensue, and many errors would be eliminated.

The methods of packing paper could easily be standardised on a national or an international basis, and thus secure uniformity of marking and description. There are various customs of the trade in different countries, and these could, with advantage, be standardised. For instance, when a special making order for paper is given to a paper-maker, he requires the purchaser to accept the quantity made, whether it be above or below the amount required, within a certain percentage. In the same way a percentage of variation in weight must be allowed to the papermaker, and this percentage of variation could be fixed internationally.

### The Difficult Question of Sizes.

The final question, and the most difficult of all, is how to standardise sizes. Every country has its own sizes, and in most countries there is no standard, even of the sizes in that country. An attempt has been made in this country to obtain uniform sizes, and these have been agreed upon by the master printers, though they have not yet been accepted by the papermakers and the wholesale stationers. The difficulty, however, of any scheme for international sizes, is the conflict between the metric system and the British system, and the upheaval that would be caused by any international standard being adopted. In every country printing machines, standing forms, library shelves, letter files and many other things, are made to suit the sizes in existence in the various countries. Any change in the sizes would render much of this plant or fittings useless, and it is probably impossible under the present conditions to make any international standard.

Mr. Werner, of America, has advocated for a long time the use of paper which he calls the "hypotenuse oblong," which when folded and re-folded, always produces a sheet with the same proportionate length and breadth. If we were to have a colossal fire, or were starting at the year "one," this scheme would probably be universally adopted, but as such events are not happening, we shall probably have to be content with each country stan-

dardising its own sizes on some sane and simple basis, and contenting ourselves with abandoning many other anomalies that exist in the paper trade. Anything that can be done to save clerical or other labour, eliminate waste, avoid errors and reduce the amount of stock that it is necessary to carry, are steps in the right direction, and will add to the efficiency of the trades concerned, and reduce the cost of production.

Our world is crying out for goods at a cheaper price, and traders are suffering because of the high cost of production. This scheme for the standardisation of the methods of dealing in paper, either on a national or an international basis, has the above advantages. Therefore, I earnestly hope that some steps may be immediately taken in the direction of standardising the principal material with which printers have to deal.

## "St. Bride Students' Cake."

This publication emanating from St. Bride Printing School reflects the highest credit on all who have taken part in its production. It follows on the lines of "Printers' Pie," having the same object, viz., raising money to assist the work of the Printers' Pension Corporation. In this case, the students of St. Bride are endeavouring to raise £600 to found a pension in commemoration of those of their number who fell in the Great War. Up to the present some £230 have been raised and it now lies with those in the printing and allied trades who are interested in the work carried on at St. Bride, to help the students in their laudable effort to raise the amount required.

The paper for the book has been given gratuitously and has been printed in the school, therefore contributions in their entirety will go to the Pension Fund. It is a book which every printer should have, and is well worth the 10s. which must be subscribed to the Fund to obtain a copy.

There are reproductions in colour of the presentation portraits of the Right Hon. Viscount Burnham, C.H.; The Right Hon. Lord Riddell and Mr. Reginald J. Lake; and two caricatures applicable to St. Bride, by Arthur Moreland. There are also two colour portraits of Sir Robert Blair, M.A., LL.D., and the various Chairmen of St. Bride Foundation Printing School Committee. The examples of reproductive processes, including photolithography are produced by modern methods, and if some of the students' sketches are lacking in artistic merit, they make up for it in sense of humour. The literary matter also, which comprises poetry and prose, is well worth perusal.

Contributions to help the students to found their pension should be sent to the Principal, St. Bride Foundation Printing School, Bride-lane, Fleet-street, E.C.4, when a copy of "St. Bride Students' Cake" will be sent by return.

An Advertisement is always working.

# Trade Notes.

BY 7,525 votes against 1,945—majority, 5,580—the London Society of Compositors has decided to make a grant of £1,000 for the assistance of the miners.

A CONFERENCE is arranged between the Typographical Association and the National Society of Operative Printers and Assistants to consider amalgamation.

THE death took place on Friday at Birmingham of Mr. Francis Jonathan Crowther in his 81st year. For 45 years he was a compositor on the *Birmingham Post*.

THE northern staffs of the *Daily Mail* were entertained to luncheon by the directors at the Free Trade Hall, Manchester, on Friday, the guests numbering about 800. Lord Northcliffe was in the chair.

AT Oswestry, where the gas supply has been insufficient for mechanical purposes, a local newspaper introduced a farm tractor to drive the machinery, and the venture is stated to have been completely successful.

SOME information as to the controversies that have arisen between the Bolshevik Government of Russia and the big trade unions, among which the printers are prominent, appeared in the April *Contemporary Review*.

THE Press Association is informed that arrangements are being completed for the publication in the autumn of a new morning paper, the *Daily Theatre*, a daily record of the movement of the drama, music, art and literature all over the world.

THE *Jewish Guardian* offices at 149, Fleet-street, were broken into during the week-end. The rooms were ransacked for all portable property, the burglars taking away a number of typewriters and other easily removed items of office equipment, also letters and MSS.

MR. R. S. JOHN, Newport, has been elected president; Messrs. W. C. Short, Cardiff, and Walter Spurrell, Carmarthen, vice-presidents; Mr. G. T. Wright, Newport, hon. treasurer; and Mr. C. N. Nicholls, Cardiff, hon. auditor, of the South Wales and Monmouthshire Printers' Alliance.

LABOUR PRESS PROSECUTION.—Hearing was resumed at the Mansion House Police Court, on Thursday last, of the charges against the National Labour Press, together with the secretary of the Communist Party of Great Britain, for printing and publishing "The Theses of the Communist International." On behalf of the National Labour Press it was stated that they were not propagandists but simply printers, and their attention having been called to the nature of the publications they decided not to print any more for the Communist Party, and had ceased to print a weekly paper called *The Communist*. They were prepared to promise not to print any more of this kind of work. The hearing was adjourned to June 1st.

ONE case of lead poisoning was reported in the printing trade in April.

OWING to ill-health, Mr. A. C. Fifield has disposed of his publishing business to Mr. Jonathan Cape.

A MEMORIAL to 20 members of the staff has been placed in the office of the *Birmingham Daily Post*, and was unveiled on Friday by the proprietor, Mr. Charles Hyde.

THE Mayor of Birkenhead (Mr. Luke Lees) entertained to dinner at the Town Hall, on Saturday, a representative gathering of journalists resident in the town, and an enjoyable evening was spent.

THE London staff of the *Manchester Guardian* held a dinner on Saturday at the Hotel Victoria, in celebration of the centenary of the *Manchester Guardian* and the jubilee of Mr. C. P. Scott as editor. There were a great number of distinguished guests.

SOME remarkably beautiful pictures, cut out of paper by a clever Danish girl artist, are reproduced in the *May Pearson's Magazine*. Gudrun Jastrau is the artist's name, and she is giving an exhibition of her work at one of the London art galleries this month.

SIR RODERICK JONES, chairman and managing director of Reuter's Agency, delivered an interesting address on Monday afternoon on "International Telegraphic News" to the students attending the Journalism Diploma Courses at the University of London, South Kensington.

"COMMON SENSE," the weekly journal which a few months ago amalgamated with *Ways and Means*, is now compelled—owing, it says, to the inadequacy of income to balance the high cost of paper and printing—to appear only twice this month instead of four times.

A WELL-PRODUCED brochure, containing numerous half-tone illustrations of interest to motorists, was presented by the *Autocar* as a souvenir menu on the occasion of the 21st anniversary commemoration banquet of the 1,000 Miles Trial of 1900, held at the Royal Automobile Club on the 12th inst.

HYDRAULIC MACHINERY.—We have received two illustrated lists, showing new designs of hydraulic machinery by Messrs. Hollings and Guest, Ltd., of Birmingham. Particulars are given of hydraulic and hand screw presses for numerous purposes, also of hydraulic pumps and other machinery of interest to all who use hydraulic power.

U.S. 44-HOUR WEEK.—Strikes by printers in almost every city in the United States and Canada where the book and job printing shops employ union compositors marked the first week in May, set by the International Typographical Union for the institution of the 44-hour working week. About 10,000 men are estimated to be out of work. New York City is the outstanding exception to the rule, the short schedule having been agreed to by all but three large metropolitan shops. Contracts providing for the 44-hour week in book and jobbing printing offices, have been signed by employing printers in 230 cities throughout the country.

### FORTY-THIRD YEAR.

*Printed and Published EVERY THURSDAY  
by STONHILL & GILLIS,*

or from Messrs. W. H. Everett and Son, Ltd., news-  
agents, 11, St. Bride-street, E.C. 4.**

THURSDAY, MAY 26, 1921.

## Current Topics.

### To Scarborough!

PREPARATIONS are being rapidly completed for the cost congress and annual meeting of the Federation of Master Printers to be held at Scarborough from Saturday next, May 28th, to Wednesday, June 1st. Excellent arrangements having been made for the comfort of visitors and for the success of the meetings, and train services to Scarborough being still efficient, it is expected that there will be a big influx of master printers into the popular Yorkshire holiday resort, and that the occasion will be a memorable one. The printer visitor can be sure of an interesting and profitable time, as there has been a large demand for tickets from all parts of the country, and there will be provided opportunities of gaining by the experience and advice of prominent experts in the trade. The cost congress programme contains a most imposing list of speakers, who will deal with the important subject of costing from many different points

of view, while in the course of the annual general meeting vital matters discussed will include, for instance, the labour situation, assessment of machinery, Government and municipal printing, anti-dumping legislation and railway rates for printed matter.

### P.K.T. Federation Conference.

NO LESS than 65 delegates attended the recent annual administrative council conference (to which we referred last week) of the Printing and Kindred Trades Federation of the United Kingdom. In view of the continued growth of the Federation, it was decided to alter the rules so as to allow a larger representation than hitherto at the annual conference. In the absence of the Mayor of Brighton, who was out of town, the Deputy-Mayor welcomed the delegates in the name of the citizens of Brighton. A noteworthy feature of the three days' proceedings was the presentation to Mr. C. W. Bowerman of a very handsome silver cigar box in recognition of his very great services to the Federation as president since its formation just over 20 years ago.

### The Postage Increases.

THE increased postal charges announced by the Postmaster-General on Tuesday will come with some measure of surprise as well as of perturbation to printers, who were hoping that wiser counsels would prevail. The changes that will in special fashion hit the printing industry are, of course, the increase of the post card rate to 1½d. from 1d., and the raising of the printed paper minimum from ½d. to 1d. There is much evidence to indicate that these increases, while dealing a further blow at the printer, will fail to effect the intended object of improving the revenue. Sir Adolph Tuck's comment to a Pressman was the following: "It is a very grave blunder. To ask people to pay three times the original rate for sending post cards is obviously an unjust demand. It will affect seriously the sale of picture post cards; the British printer will have less to print; and the papermaker will deliver less paper. France has found that higher postal rates for picture post cards resulted in such a big decrease of revenue that she has had to revert to the original charge. Germany has had a similar lesson." We understand that the Federation of Master Printers is sending a deputation to the Postmaster-General to protest against these increased rates.

### Standardisation of Paper.

THE subject of Paper Standardisation was introduced to the World's Printing Trades

Congress, at the recent Printing Exhibition, by Mr. Howard Hazell, whose scheme has been before the trade for some years. It was evident that Mr. Hazell was disappointed with the lack of support forthcoming from the papermakers and the wholesale stationers. Indeed, he stated that the scheme had been referred back to various sub-committees and finally shelved. Accordingly the meeting was anxious that some definite step should be taken to bring the matter to a practical issue. Mr. Pollock led this movement, suggesting that it took a charge of dynamite to move papermakers and merchants from an established custom. Evidence was forthcoming from Denmark and Holland that in spite of difficulties, some progress is being made in regard to standardising paper, at least in the former country, where the ream of 500 has been established. It was pointed out by Mr. A. Williamson, the Costing Secretary of the Master Printers, that the problem could be tested by master printers ordering paper in 500 sheet reams. There were some suppliers who were advertising their papers in that form. Mr. Hazell took up one objection raised to his scheme, which was that a printer could not get any peculiar size he needed. That was a misunderstanding of his scheme. All he urged was that there should be a definite standard of sizes, weights, thicknesses and methods of packing. Any person who wanted paper made or packed in any absurd fashion could have it, but the thousands of transactions for stock lines should be allowed to go through on some uniform basis built up on common sense. Of course, there is not entire unanimity in the methods proposed in different countries. For instance, Mr. Hazell disagrees with the American proposal to base their standard weights and thicknesses on lbs. and inches per thousand sheets. This, he says, would be a retrograde step, because in the United States they would have the lb. and the inch, and in Europe the gramme and the metre; and as the decimal system is more largely used, he hopes representations will go from this country to induce the United States to adopt the decimal method of standard thickness and weight. The final result of the consideration of the question was to support Mr. Pollock's view, and accordingly the meeting adopted a resolution "warmly supporting the suggestion that efforts should be continued to standardise the number, size and weights of paper, and that the Federation of Master Printers should be asked to co-operate with other printers' organisations in other countries to further the movement." Mr. Pollock was anxious that a sub-committee should be appointed on the

spot to handle the matter, but it was left to the forthcoming annual meeting of the Federation in Scarborough to take such further action as they consider advisable.

## Personal.

MR. A. E. HOLMES, being at Brighton for the annual convention of the Printing and Kindred Trades Federation, took the opportunity, last week, to extend his visit a little, in the hope of overcoming the attack of sciatica with which he has lately been suffering. He has, however, returned to town without having obtained much relief from this troublesome complaint, which has doubtless been accentuated by his having often been found of late in the discharge of official business at times when his health was making demands for prior consideration.

MR. GEORGE EATON HART, in visiting the United States, is accompanied by Mr. C. H. Lea, of Messrs. Williams, Lea and Co., and by Mr. Carter, of Messrs. W. Speaight and Sons, Ltd. The little party is not expected back until the end of next month at any rate, the precise duration of their stay depending, no doubt, upon the extent and interest of the investigations they are able to make.

MR. EDOURAD CHAPUISAT, secretary of the *Journal de Genève*, has been appointed vice-president of the World's Press Congress.

MR. ROBERT DONALD, chairman of the Empire Press Union, is the author of the important volume "The Imperial Press Conference in Canada," just published by Hodder and Stoughton. The book is a record both of the conference and of the subsequent tour through Canada, and carries a foreword by Viscount Burnham.

MR. C. R. SEDDON, who was chairman on the Interim Committee, has been elected the first chairman of the newly-constituted Joint Industrial Council of the Papermaking Industry, with Mr. James Pearson as vice-chairman. These gentlemen represent the employers and the employees respectively.

MR. A. E. HOLMES (general secretary of the Printing and Kindred Trades Federation) and Mr. A. W. Foster (secretary of the Papermakers' Association) are the joint secretaries.

THE Federation of Master Printers is taking steps to protest against paper being brought within the scope of the proposed anti-dumping legislation.

THE late Mr. Robert Syme Mackie, of Blackburn, for nearly 30 years editor of the *Northern Daily Telegraph*, left £5,264.

## DIVIDENDS AND REPORTS.

**AMALGAMATED TRADE PUBLICATIONS.**—First report of Amalgamated Trade Publications, Ltd., from December 3rd, 1919, the date of incorporation, to December 31st, 1920, states that profit available for distribution amounts to £17,140. An interim dividend at the rate of 3 per cent., less tax, was paid on September 6th, 1920, amounting to £3,360. Directors recommend that preliminary expenses (amounting to £2,089) be entirely written off, and that a further dividend of 7 per cent., less tax, be paid, making 10 per cent., less tax, for the year, and that the balance of £5,939 be carried forward. Meeting, 24, Coleman-street, E.C., May 27th, 3 p.m.

## NEW COMPANIES.

**JOHN HOMAN, LTD.**—Capital £20,000, in £1 shares; manufacturers of and dealers in jewellery, books, stationery, etc., and to adopt an agreement with J. Homan. Private company. Subscribers: John Homan, Miss S. A. Homan, Miss L. Homan, John Homan, W. M. Letts, C. H. Elliott and W. Goudling. Registered office: Royal Arcade, 82, Mostyn-street, Llandudno.

**JOHN ROBERTS PRESS, LTD.**—Capital £5,000, in £1 shares; to acquire the business of a printer carried on by J. R. Roberts. Private company. First directors: J. R. Roberts and E. F. Leak. Registered office: 14, Clerkenwell-green, London, E.C.

**"GROCERS' JOURNAL," LTD.**—Capital £15,000, in £1 shares; to take over the business of the *Grocers' Journal* carried on by H. C. Lea at 22 and 23, Great Tower-street, E.C., together with the copyright thereof. Private company. Subscribers: H. C. Lea and J. Hiscox. First directors: H. C. Lea, J. Hiscox, H. B. Hatcher, H. E. Harry and A. E. Woodward.

**UWANTA BOOK STORES, LTD. (Belfast).**—Capital £2,000, in £1 shares; booksellers, stationers, music dealers, etc. Private company. First directors: L. Marcus and R. Green.

**HALLAWS, LTD.**—Capital £5,000, in 4,500 preference shares of £1 each 5,000 ordinary shares of 2s. each; to adopt an agreement with W. H. Hall and A. C. Law at 149, Fleet-street, E.C., as "Hallaws," and to carry on the business of printers, stationers, etc. Private company. First directors: A. C. Law, W. H. Hall and J. Maxwell. Registered office: 45, Glasshouse-street, W.1.

**PERFITT'S ADDISON PRESS, LTD.**—Capital £1,000, in £1 shares; printers, lithographers and manufacturing stationers, manufacturers of and dealers in paper, type and printing inks, etc., and to adopt an agreement with J. J. Perfitt. Private company. First directors: J. J. Perfitt and H. S. Perfitt. Registered office: 88, Holland-park-avenue, Notting-hill, W.

**CHARLES BAKER AND SONS (PAPER MAKERS), LTD.**—Capital 50,000 in £1 shares; to take over the business of Charles Baker and Co., of London, Glasgow, Birmingham, Manchester and elsewhere, and to carry on the business of makers of pulp, paper, wax, waterproof and leatherette, papers, boxes, bags, covers for the protection of goods, stationery, envelopes, card, straw and millboard, show, playing, fancy and other cards, etc. Private company. First directors: C. Baker, C. G. Baker, R. Jacob, E. R. Rayner and B. T. S. Bagnall. Registered office: 77A, Queen Victoria-street, E.C.

**CONNOLLY, DAVIS AND WARRALL, LTD.**—Capital £500 in 495 preference shares of £1 each and 100 ordinary shares of 1s. each; advertising artists, advertisement writers, designers of pictorial and display advertisements, etc. Private company. First directors: H. L. Connolly, H. G. Davis, C. W. A. Worrall, A. E. Perry and W. Perry. Registered office: 110, Strand, W.C.

**RADLEYS, LTD.**—Capital £500 in £1 shares; wholesale and retail stationers, booksellers,

etc. Private company. First directors: H. R. Radley, G. H. W. Jones, A. G. Sully and F. J. Price. Registered office: 29, Farnival-street, E.C.4.

**ROEBUCK AND SONS, LTD.**—Capital £3,000 in £1 shares; manufacturers and distributors of cardboard boxes, printing, account books, gold block embossing, etc., and to acquire the undertaking of Roebuck and Sons, carried on at Alderville-road, New King's-road, S.W.6. Private company. First directors: A. Roebuck and Dr. J. H. K. Griffiths. Registered office: Alderville Works, Alderville-road, Fulham, S.W.6.

**PHILATELISTS, LTD.**—Capital £1,000 in £1 shares; stamp importers and dealers, philatelic publishers, proprietors and publishers of newspapers, journals, magazines, books and other literary works, etc. Private company. Subscribers: H. F. Perry and G. C. Baldock. Registered office: 53, Westminster Palace-gardens, S.W.1.

**HAWTHORN'S PATENTS, LTD.**—Capital £4,000 in £1 shares; to acquire inventions and improvements in or relating to ticket punches, automatic registered, mechanisms for punching, counting, checking, numbering, recording or registering tickets, discs or other vouchers etc. Private company. Directors: J. H. Hawthorn, A. H. Chamberlain, L. Pierpoint-A. B. Talbot, W. Walters and F. E. Wheeler. Registered office: 39, Belvoir-street, Leicester.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

**SUNDAY PUBLICATIONS, LTD.**—Issue on April 29th, 1921, of £15,300 debentures, part of a series already registered.

**SANDERSON AND CLAYTON, LTD.** (Printers, etc., Wakefield).—Satisfaction to the extent of £1,000 on May 1st, 1921, of debentures dated July 23rd, 1918, securing £2,000.

**HUDSON AND KEARNS, LTD.** (Newspaper Proprietors, etc., London).—Satisfaction in full on April 27th, 1921, of charge dated November 17th, 1915, securing £18,000.

**JAMES WAKEHAM AND CO., LTD.** (Paper-makers, etc., London).—Debentures dated May 4th, 1921, to secure £50, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: W. J. Hill, 22, Chelverton-road, Putney, S.W.

**STAMWYN, LTD.** (London).—Issue on April 22nd, 1921, of £500 debentures, part of a series already registered.

### COMPANY NOTICES, etc.

**MANCHESTER PRINTING, BINDING, AND BOX-MAKING CO.**—A circular issued by the secretary states that the board have decided to

reconstruct the company, which will provide working capital, and place the company on a sound commercial basis. An extraordinary general meeting of shareholders will be held on June 1st for the purpose of considering the proposals which will then be submitted. The directors recommend the following procedure: The assets of the Printing Works Co. to be transferred to Samuel Temple and Co., Ltd., upon the footing that Samuel Temple and Co. shall pay all the debts and liabilities of the Manchester Printing, etc., Co., and, further, shall give every member of the last-named company for each share held by him, the right to an allotment of four 5s. shares in Samuel Temple and Co., with the sum of 4s. 6d. credited as paid up on each share.

### BANKRUPTCIES, etc.

*Re* **EDWARD JOSEPH MILIFFE**, 172, Clerkenwell-road, E.C., stationer. This bankrupt, who failed in July, 1913, applied to Mr. Registrar Francke at the London Bankruptcy Court on May 13th, for an order of discharge. Mr. F. T. Garton, official receiver, reported that the liabilities amounted to £1,395, the assets valued by the bankrupt at £355 had realised £290, and Mr. A. A. Hall, the trustee, had paid a dividend of 9½d. in the £ on proofs aggregating £1,325. The applicant originally commenced business in 1896 as a designer and engraver in partnership with a Mr. Hutchinson, under the style of E. J. Miliffe and Co., but he retired from that firm in 1905. Two years later he commenced another business as newsagent and stationer, and in 1908 he was joined in partnership by a Mr. Howse, a branch being opened at 2, Gresham-buildings, E.C. That partnership was dissolved in August, 1910, on terms that Mr. Howse took over the Gresham-buildings business and the bankrupt continued at Clerkenwell-road. From January, 1912, to June, 1913, he printed and published "Ireland in London," over which he made a loss of £216. The failure was attributed to such loss, to bad debts, lack of capital, and excess of drawings over profits. As offences the official receiver reported (1) insufficiency of assets to equal 10s. in the £ on the amount of the unsecured liabilities; (2) omission to keep proper books of account; and (3) trading with knowledge of insolvency. The discharge was granted subject to a judgment for £5 to be satisfied by an immediate cash payment.

A SPECIAL number of the French commercial newspaper, *Les Echos*, measuring 19 feet by 15 feet, is one of the exhibits at the Paris Fair.

THE Houston Advertising Agency has completed negotiations with the Ministry of Health for the purchase of the back of the census forms as advertising space. The space is foolscap size and 11,000,000 census papers will be circulated. The sum of £11,000 has been agreed upon.

## Next Season's Greeting Cards.

### Magnificent Selection at Raphael House.

When the pessimists were saying before the last Christmas season that the palmy days of the greeting card were over, and that the Christmas of 1920 would bring a big falling off in the trade in Christmas and New Year cards, Sir Adolph Tuck was one who came out prominently with the expression of the

some 3,000 designs in Christmas and New Year cards alone, and the quality of these and of the many other examples of artistic printing which the firm produces, leaves nothing to be desired.

In this really impressive selection of greeting cards one finds British art printing at its very best. Starting rightly by choosing originals of the highest standard—Messrs. Tuck, by the way, were the purchasers of the very first picture sold from this year's Royal Academy exhibition—the House of Tuck has ransacked all the multitudinous resources of the printer; his best capabilities in the realms of letter-

An Artistic Tuck Design.

opposite opinion. And the event fully justified his optimism by the immense volume of trade which last season brought. Messrs. Raphael Tuck and Sons, Ltd., are facing the coming season in equally optimistic fashion, and, if one may judge by the magnificent collection of new designs which they are able to show at Raphael House, they should find this year that their best past records have been outdone.

Taking as their motto for the season "The World's Art Service"—a motto justified by the world-wide popularity of their admirable art productions—Messrs. Raphael Tuck and Sons, Ltd., are this year putting on the market

press, monochrome, and colour work in all their phases have been requisitioned to the production of an almost bewilderingly large variety of cards, which must surely suffice to suit every taste. They range in subject from the stately historical Royal cards down to children's cards and comics, and in price from 10s. 6d. to 1d. Notable in respect of the Royal cards, which once again Messrs. Raphael Tuck and Sons, Ltd., have had the honour to prepare, is the fact that this year the name of Princess Mary is added to the list of members of the Royal family having special Tuck cards.

With such a wide range of cards in view,

one can but mention a few types of outstanding interest. We note that the "Pot Pourri" series of delicately perfumed hand-painted cards has proved very successful, especially with ladies, and that the series is this year represented by many beautiful new designs. Likely also to meet with a big demand is the new "Silhouette Mascot" series, with its novel and striking black-and-white effects. The "Good Luck Art Pottery" and the "When East Meets West" series will also be favoured by many buyers. As one expected, this year brings new designs in the "Broderie d'Art, the "Oil Facsim," and the many other

A Tuck Calendar.

delightful series which are associated with the name of Tuck. In the case of all these cards the words of greeting, verses, etc., receive very careful attention in order to ensure their fitness to the general design.

In addition to the very extensive range of Christmas and New Year cards, there are, of course, numerous attractive new features among the picture post cards, the calendars, the toy books, and the many other lines which together go to make up the many-sided whole of Messrs. Tuck's admirable "World's Art Service."

## The State of Employment.

The state of employment in the printing, bookbinding and paper trades during April showed a further decline as compared with the previous month, being generally slack or bad in all sections. It was considerably worse than during April of last year, and with few

exceptions short time was worked in all districts.

The number of workpeople in the paper, printing, publishing and bookbinding trades whose unemployment books or out-of-work donation policies were lodged at Employment Exchanges at April 29th was 30,004. In addition, there were 21,677 claimants for benefit in respect of systematic short-time working.

With letterpress printers employment was not so good as in March, and short time was reported from the majority of provincial centres. In London some overtime was worked by compositors and readers, but to a less extent than in the previous month, while a number of other workers in London were on short time. In the lithographic printing trade employment was in most cases bad and short time prevalent. According to returns received by the Department relating to nearly 8,000 workpeople in the letterpress and lithographic printing trades, 39 per cent. of these workpeople were working an average of 11½ hours per week short of full time.

Employment in the bookbinding trade was generally bad, and showed a further slight decline as compared with the previous month. Of about 4,500 bookbinders covered by returns received, 57 per cent. were working short time to the average extent of 14 hours per week.

In the printing, publishing and bookbinding trades, the number of unemployment books and out-of-work donation policies remaining lodged on April 29th, 1921, totalled 18,237, of which 10,596 represented males, and 7,641 females—increases of 1,977 males and 1,339 females since March 24th. The number of short-time workers in these trades claiming unemployment insurance benefit and donation on April 29th totalled 7,031, of which 3,067 were males, and 3,964 females—increases of 1,675 males and 2,214 females since March 24th.

According to the returns received by the *Labour Gazette*, out of 78,850 members of trade unions in the printing industry the percentage of unemployed at the end of April was 7·5 as against 5·7 at the end of March and 0·7 at the end of April a year ago, the increases being 1·8 and 6·8 per cent. respectively. In the bookbinding section, out of a trade union membership of 14,629 the percentage of unemployed is given as 10·3 at the end of April as against 9·4 at the end of March and 0·6 at the end of April last year, the increases being 0·9 and 9·7 per cent. respectively.

Returns made by employers for the week ended April 23rd show the number of workpeople in the printing offices concerned to be 9,460, a decrease of 1·6 per cent. on the previous month and of 8·0 on a year before. The wages paid amounted to £34,500, a decrease of 5·3 per cent. on the previous month and of 2·4 on a year before. In the bookbinding trade employers' returns showed 5,200 workpeople, a decrease of 1·8 per cent. on the previous month and of 3·8 on a year before. The total of £11,094 paid to workpeople represented a decrease of 4·9 per cent. on a year before.

## TENDERS WANTED.

### LONDON COUNTY COUNCIL.

**TENDERS** are invited for the printing of official documents, comprising agenda papers, minutes of proceedings, reports, etc., for the education service, for a period from 1st October, 1921, to 30th September, 1928, the whole of the work to be executed in London.

Full particulars may be obtained on application to the Chief Officer of Stores, L.C.C. Stores, 31, Clerkenwell Close, E.C.1, where specimens may be seen from Thursday, 19th May, 1921, to Friday, 10th June, 1921, between the hours of ten a.m. and four p.m. on any week-day, except Saturday. No tender received at the County Hall after 1 p.m. on Tuesday, 14th June, 1921, will be considered.

JAMES BIRD,

Clerk of the London County Council.

## New Shaw Ruling Machines.

An interesting ruling machine of disc type with novel features is the "Super-Imperial" made by the well-known firm of Messrs. John Shaw and Sons, of Honley. One model of this machine is designed for feint lining and striking four colours on both sides of sheets at one operation, with ruling cylinders  $4\frac{1}{4}$  in. (110 c/m) circumference, with patent pile feeder attached, which holds on feed-board from 15 to 20 reams of paper. It has a duplicate table, which is piled up with paper out of feeder, and has also a Bailey patent perforator attachment, and patent adjustable sheet cutter. Four colours can thus be ruled on machine on both sides, perforated and cut. Fifteen to seventeen reams per hour can be feint lined, and eight to nine reams can be struck on machine. Another model is a single-sider disc machine for feint lining and striking three colours on one side of sheets, with ruling cylinders  $3\frac{1}{4}$  in. (80 c/m) circumference, for hand-feeding.

Both of the above-mentioned machines were shown at the recent Printing Exhibition, as was also Messrs. Shaw's world-renowned double striker pen machine, for ruling and striking two patterns at one operation, with the Bailey patent rotary perforator attached, for straight-through perforating and striking. Messrs. Shaw were also showing the "New Imperial" rotary perforating machine, which is the latest perforating machine made. This machine had attached six sets of perforator cutters, five sets of which perforate beautiful slot holes, one set being for very fine perforating, used for triplicate headings, etc. Creasing cutters were also on the machine, for creasing loose-leaf sheets, and a scoring cutter was also attached.

**Replies to Box Nos. to be addressed to the Offices,  
"BRITISH AND COLONIAL PRINTER AND STATIONER," 58, SHOE LANE, LONDON, E.C.4.**

## SPECIAL PREPAID ADVERTISEMENTS

Telegram: STONHILL, FLEET, LONDON.  
 Telephone: No. 8407 CITY.

### Situations Vacant.

**PRINTING COSTS ACCOUNTANT.**—Applicant must possess a full working knowledge of Master Printers' Cost-Finding System with experience of its installation and a general knowledge of the practical side of the trade.—State experience, salary required, credentials, age (30-40), etc., in strictest confidence, to Secretary, C. and C. Committee, Federation Master Printers, 24, Holborn, London, E.C.1. 13834

**PRINTING.**—Young man required who has good experience in Estimating, also Costs; some experience in Progress and Planning work would be advantageous.—Give fullest details of experience, age and salary required, to "Printer," c/o Abbott's, Ltd., Eastcheap, E.C. 13833

**Raphael House,**  
 CITY, LONDON,  
 MAY, 1921.

**T**he fifty-fifth year since the founding of the House of "Tuck" still finds the unique position in the Art World which the firm has now occupied for so many decades, unchallenged. Its devoted labours during that period, culminating in the practical creation of an Art League of Nations, are fully recognised. Raphael House has become a hive of British Art Industry successfully and happily carrying on the **World's Art Service**.

A glance at our latest collection of **CHRISTMAS and NEW YEAR CARDS, POSTCARDS, CALENDARS, GIFT BOOKS, TOY BOOKS, PAINTING BOOKS, PICTURES, ART NOVELTIES**, etc., issued for the coming season, will fully substantiate our claim, for the **World's Art Service** will be found to be completely maintained by the wide-world dissemination of this year's marvellous array of Art productions. None better has ever left the studios of Raphael House.

Let us take a rapid survey of this comprehensive **World's Art Service**.

**Christmas and  
New Year Cards.**

The claim of our Christmas and New Year Card Service is upheld by a superb collection of no less than 3,000 designs, embracing a wonderful range of subjects in every phase of Art reproduction.

The famed "**POT POURRI**" series, with its beautiful hand-painted designs in entirely new arrangements, will increase, if that were possible, the popularity of this choice perfumed series, which have so definitely established themselves as the Ladies' favourite cards.

**The GREETINGS, QUOTATIONS and VERSES**

throughout the entire collection have had the most careful thought and attention bestowed upon them.

**Gift Books.**

High in the **World's Art Service** rank our beautiful Gift Books for young people. The unapproachable "**RAPHAEL HOUSE LIBRARY**" now includes 28 beautiful volumes.

**Toy Books,  
Unwearable and  
Modelling Books.  
Painting Books.**

Brilliantly entertaining, instructive and educational are 150 Toy Books of Fairy Tales, Nursery Rhymes, Alphabets, Animals, Birds and a host of other delightful subjects.

There are Painting Books for all ages. One and all are artistic and attractive.

**Caleendars.**

Novelty and beauty of design is the key-note of our **ART SERVICE** of upwards of 400 Caleendars.

We trust we have shown that our latest efforts in the Realms of Art have been productive of the highest results, and, as in the past, are deserving of your continued valued recognition. Feeling this, and feeling it strongly, we lay claim to your good will and venture to rely on your regular and frequent use of the **World's Art Service**.

Very faithfully yours,

*Raphael Tuck & Sons*  
 Ltd.

## British Imports of Millboards.

During April the following consignments of millboards were received at British ports:—

Port of Importation.	Country whence Consigned.	Quantity. Cwts.	Value £
London	Finland	925	1,276

Belfast	"	80	66
Dublin	"	280	290
		93,146	70,685

## Leatherboards.

The imports of leatherboards into the United Kingdom during April were as under:—

Port of Importation.	Country whence Consigned.	Quantity. Cwts.	Value. £
London	Sweden	1,818	2,025
Manchester	Germany	280	300
"	Sweden	199	320
Total	...	1,797	2,645

## Leeds and the "Team Spirit."

At a well attended and enthusiastic meeting of representatives from the various firms in the Printing and Allied Trades in Leeds and district held on Friday last, it was decided to hold a "Printers' Day" in Leeds on July 9th. The event to take the form of sports and gala to be held on the Headingley Grounds if possible. The idea received the warm support of both the Leeds Master Printers' Association and the Leeds Printing Trades' Federation, as it was felt it would offer a common ground on which all could meet in friendly sport and comradeship, and it would help to develop the team spirit in the trade.

Another point which commended itself to the originators and supporters of the idea was the fact that the proceeds will be devoted to the printing trade charities. A strong working committee was elected with Mr. Henry Jenkinson as chairman and Mr. A. Senior as secretary.

# New Inventions.

## Printing Surface Mounts.

A mount for printing surfaces of the kind comprising a wooden filling cast in a metal cover, as patented by Mr. W. W. Basham, is constructed so that the metal cover A is cast with feet F which give a rigid support while the cover A is planed after being cast. To

mould the cover A, the wooden filling B is supported in the casting box on pins D carried directly by a steel core C or through an intermediate member E of the thickness of the bottom part A' of the cover A. If desired the underside of the filling B may be left uncovered, the member E not being used in this case.

## Scoring and Cutting Out Paper.

In apparatus for scoring, cutting out, and severing paper, cardboard, etc., as patented by Mr. W. Rose and Rose Brothers, Ltd., blanks for packeting or box making the dies and cutter are so mounted that they may be easily removed when worn, reground and accurately replaced. An intermittent movement is imparted to the operating and roller feed devices by Geneva stop mechanism. *Work feeding arrangements.* The feed rolls 1, 2 are carried by shafts 3, 4 connected by gearing, the shaft 4 being adjustably mounted in eccentric bearings 6 rocked by screws 13. Secured at one end of the shaft 3 is a Geneva wheel 19 intermittently rotated when slots 20 therein are engaged by a roller 26 carried by an arm 24 on the main shaft 22, a locking-disk 30 serving to engage the parts 21 of the wheel 19 when the roller 26 is not in driving engagement therewith. Ridges 31 are provided in the roller 2, in co-operation with grooves 32

in the roller 3, to crease the blanks along the lines 84, Fig. 20. *Cutters and dies.* Sliding in guides in the sides of the framing is a cutter-carrying frame 33 reciprocated by eccentrics 38, Fig. 4, carried on a main shaft 22 and connected by lugs 39 to a spindle 40 passing through the frame 33. Carried by the frame are cutters 37, Figs. 5 and 7, formed with lower concave faces 37<sup>a</sup> and adapted to cut out parts 86, Fig. 20 from the blanks. Co-operating with the cutters are die pieces 44, 44<sup>a</sup>, Figs. 4 and 10, which are supported on the inclined faces of a removable block 45 by

means of tongues 47 engaging grooves in the block, screws 46 passing through slots therein serving to hold the die pieces in position. This arrangement allows the die pieces to be removed when worn, secured in similarly grooved and inclined jigs so that the operative faces may be reground, and accurately readjusted in position. Transverse creases 85 in the blanks are formed by ridges 82 on the block 45, similarly shaped grooves 79 being provided in a block 80, Figs. 5 and 7, carried by the frame 33. *Guillotine apparatus.* The completed blanks are severed from the strip by a vertically moving spring-pressed blade 48 co-operating with a shearing plate 60 which is secured to an inclined face of the block 45 in a manner similar to the die pieces

and adapted to be removed and secured to a jig for regrinding. Movement is imparted to the knife by a lever 50 through which the spindle 40 passes, the lever being carried by a pivoted arm 52.

### Sales Book Printing.

An invention by the Paragon Kassenblock Co., Ges., of Vienna, relates to a rotary printing machine for printing sales books having original and duplicate sheets and consists of a grouped arrangement of number printing couples with a number of sheet collecting devices, the couples being arranged so that they can be divided into sections, each with

a sheet collecting device, so that one or more webs may be printed to produce sales books of different kinds, all the couples of the machine being utilised. Fig. 1 shows one form of the machine in use for printing on one web, and Fig. 2, the same machine printing on three webs simultaneously, sheet collecting devices being arranged at the points c, d, and e. Two or four webs may also be printed by the machine, in the first case, each web using eight couples, and in the second case four couples.

### Sheet Delivery Apparatus.

In delivery apparatus for printing and like machines of the kind in which an auxiliary receiver is placed above the main receiving tray to receive the sheets while the tray is being replaced by an empty tray, means operated during the withdrawal of the auxiliary receiver are provided to transfer the sheets therefrom to the tray. The auxiliary receiver shown comprises a board 5 around which pass tapes 29 passing over rollers 21. When the main receiving tray 2, which is provided with the usual sheet guides 14, is full, the board 5 is slid into guides 6 in supports 4 on the machine table, and when an empty

tray 2 is again in position, the board 5 is withdrawn, the tapes 29 being simultaneously driven to run the collected sheets into the tray 2, by the engagement of spur gears 23 on one of the shafts 21 with racks 22 on the supports 4. The supports 4 or upper parts 10 thereof are adjustable longitudinally to vary the position of the board 5 in relation to the back

stop fingers 9 of the delivery apparatus 3. The board 5 is provided with adjustable front and side gauges 16 and with pivoted back gauge fingers 24 normally held in vertical position by light springs 25 which yield under the pressure of the sheets when they are being run off the tapes 29. The invention is patented by Mr. L. King.

THE OLDEST TRADE PROTECTION OFFICE IN THE UNITED KINGDOM.

ESTABLISHED 1776.

## Rotary Photogravure.

A. H. LOCKINGTON.

Illustrations that are called copper plate and steel plate engravings, meaning printed impressions taken from copper and steel plates, used to be produced by inking the plate all over, wiping the surface of the plate clean, so that the ink remained only in the cut-out lines and dots, and then taking the intaglio impression. These plates were engraved by hand, and are now almost obsolete, the labour being too great and the production too slow for modern requirements. Intaglio engraving was the aim of those who first endeavoured to use photographic methods for the production of printing plates.

### Early Experiments.

Nicephore Niepce, in 1824, coated a plate with asphaltum, exposed it under an engraving, developed, etched and proved it. By this result he discovered the general principles of the application of photography to intaglio engraving.

William Henry Fox-Talbot received his patent in 1852, "for engraving pictures obtained by photographic processes on steel plates; the engraved plate to be printed from." Later, in the same patent, he proposed to impress the image of gauze on the gelatine prior to the image of the subject it was wished to produce. This was the basis of photogravure, and in the use of gauze he demonstrated the necessity of a grain in the plate to help retain the ink. Had he used the reverse or negative of gauze he would have produced the rectangular cell which gives the best printing cylinders of rotary photogravure to-day. In 1858 he etched copper plates with perchloride of iron, another step forward.

Karl Klic, a Bohemian, also worked upon the process, and it was Fox-Talbot and he

who between them practically perfected the process of hand photogravure by about 1875.

The carbon process upon which so much depends in photogravure had meanwhile been brought to a fair state of perfection and greatly assisted them. From this time photogravure made rapid progress, and as it rendered results of the greatest possible richness and gradation, became very popular.

It is rather curious how long it took to arrive at rotary photogravure. The fact is, that though several experienced photogravure workers produced plates with durable mechanical grains, they were, unfortunately for themselves, quite unaware of the printing methods and possibilities of calico printing. Hand photogravure plate-makers used stiff ink and were dealing with a delicate plate which required to be steel faced and treated with great care to preserve its printing life, and it was difficult for them to realise the possibility of actually scraping the ink off bare copper with a steel blade at high speed without leaving any scum and yet for the plate to last many perfect impressions. However, when this was realised, the spread of rotary photogravure began.

About 1895, Klic and an Austrian named Klisch partially perfected the process and came into touch with Messrs. Storeys, who were accustomed to the calico method of printing. This was, I believe, the birth of the Rembrandt Co., and it was this knowledge of calico printing methods which gave them their monopoly for so long. Their work has had very deserved success. About 1910, several workers were getting a grip of the process and progress became more rapid.

### The Main Principles.

The principles of the process were quite unpatentable, as they were really an adapta-

Paper read at the World's Printing Trade Congress, May 12th.

tion of several well-known methods. It is safe to say, that all the main operations for the preparation of the plates for hand photogravure are used in the preparation of cylinders for rotary photogravure. The chief detail which varies is in the means employed to provide a structure throughout the plate which will retain the ink and yet offer a good bearing for the apparatus used to clean off the ink from the plate. It was found that though beautifully rich results could be obtained where the ink-holding capacity was provided by dots, as in hand photogravure or by reversed half-tones, the dots were soon flattened down, and the plate lost in vigour, wearing out very soon.

The method now used is to print on to the carbon tissue in addition to the impression of the subject to be reproduced an impression from a screen the reverse of that used for the half-tone process, and with a modified proportion of transparent line to black. This, after application to the cylinder and development, yields a gelatine mould which incorporates all the gradation of the subject crossed by a network of lines of uniform thickness at right angles to one another, and of much thicker gelatine than any part of the picture. The usual photogravure method of etching is then followed, and as the thickness of the gelatine in the mesh lines is so much greater than that of the picture, the etching of the picture is accomplished and the process stopped before the acid is weak enough to penetrate the lines of the mesh. This results in an etched cylinder full of gradation but intersected with a network of lines, unaffected by the acid and on the same level as the margins, thus allowing no dip into the work by the doctor or blade used to clean off the ink, and ensures long life to the cylinder.

#### **The Etched Cylinders.**

The production of the etched cylinders is by far the most difficult and uncertain part of the process, particularly when freedom from all defects is aimed at. I should certainly advise a printer to think carefully before undertaking the work of cylinder making. Where printers are in close touch with the cylinder etchers, say close by in the same town, they can safely take to printing their own cylinders, but I do not advise others not so placed to do so. Cylinders are easily damaged, and, even when the defect can be remedied, require expert handling.

#### **The Machines Used.**

The calico printer's single colour machine which could hardly be simpler in its construction and working than it is, remains the nucleus of printing operations. In fact without any modification whatever, it can produce of the best. The main parts of the machine—as most printers are, no doubt, aware—consist of the etched copper cylinder or sleeve on a mandrel resting on open bearings, the underside of the cylinder being immersed in a trough of fluid ink in which it is made to revolve by the pressure, from above, of a larger pressure cylinder which is the one to which the power is transmitted. The paper

to take the impression passes between these two cylinders, and, just before the copper cylinder arrives at the point of pressure, the surface ink is wiped or scraped off by a steel blade or doctor. Had one been asked in 1914, one would have expressed the opinion that much greater progress would have been made by now in the perfecting of machinery. But engineers interested in the process had little or no time to devote to thoughts of rotary photogravure until comparatively recently.

Machines of two broad classes are produced, *i.e.*, those which print from the reel and those which are sheet-fed. Where high speed, such as 10,000 impressions per hour is required, reel feed is a necessity, but for a great deal of the other work the sheet feed machine has decided points in its favour. The most marked advantage lies in the possibility of printing upon a much greater range of papers and thus being able to choose such as the customer may fancy. It is only necessary to order as required, and in the size required from the paper merchants. When using reel-fed machines it becomes financially impossible to keep a large range of different qualities and substances of paper, and in addition, of varying widths. Messrs. Penrose, Pickup and Knowles, John Wood, Hoe and others in England are producing excellent machines for the purpose of rotary photogravure.

#### **Uses and Possibilities.**

General work and the printing of magazine supplements and even magazines off the reel are now an everyday occurrence, but too little time has elapsed to judge whether all the machines will justify themselves. The process is a beautiful one, and can be made to yield beautiful results on nearly any kind of paper. This is a great gain over other processes, but too much advantage is being taken of this fact. Much of the work is printed at such speed as to produce results of very inferior quality. Where illustrations *must* be printed at speed on poor paper, such as "news," there is no doubt that the results are markedly superior to those obtained with coarse half-tone under the same conditions. When produced with care, and when quality results are asked for, the process will hold its own, and more, with any other photo-mechanical monochrome method.

In the realms of colour, much has to be done, and great rivals are in the field. Colour rotary offset and four-colour half-tone take a lot of beating. Some good results have been produced, but work on these lines is in its infancy. Greater difficulty in judging the etching for the various colours and the greatly less facility for modifying the flat etching afterwards, as can be done in the half-tone process, are marked drawbacks.

Some charming results have been obtained by using photogravure as the strength giving principle, and litho or offset for some of the colours. It is not fair, however, to call this "colour rotary photogravure." Photogravure in colour is becoming a crying need to many in the photogravure business. My own feel-

ing is, that no very great gain is to be obtained over existing colour methods so long as each colour has to be run off separately. When, however, good rotary photogravure can be produced in several colours at one printing, delivering the finished print at say 1,500 per hour, then I believe, other colour processes will have seriously to look to their laurels.

## The New Postage Rates.

### Big Volume of Protest.

The menace to British trade and to British influence overseas contained in the proposed increases of postage rates—particularly the provisions respecting printed matter and post cards—has called forth a most impressive volume of protest in all sections of the Press, it being made plain that, not only by printers, but also by the industrial community in general, the new increases are regarded as most untimely and ill-advised, and likely to defeat the very end they have in view.

The Joint Trades Council of the Printing and Allied Trades, representing 25,000 workers and 5,000 employers, has sent an urgent request to the Postmaster General asking that he should receive a deputation. The increased postal charges, if carried out, would, the Council contended, have a very serious effect on the printing trade, in which at present unemployment is at a high level.

A resolution has been passed by the Weekly Newspaper and Periodical Proprietors' Association, emphatically protesting against the imposition of the increased postage rates announced by the Postmaster-General, stating that these will be a serious additional expense to publishing and distributing houses, will result in a considerable reduction of orders for commercial printing and consequently cause increased unemployment in the printing trade.

The British Association of Trade and Technical Journals and the Technical Section of the Weekly Newspaper and Periodical Proprietors' Association, representing over 300 journals, have passed a resolution stating that the proposed increase in foreign postage rates for printed matter would seriously restrict the circulation of British trade and technical journals in the overseas market, these papers being of vital necessity to the export trade of the country.

A striking instance of how this over-taxing is more likely to reduce revenue than augment it is explained by Messrs. William Dawsons and Sons, Ltd., wholesale news-agents and exporters, of London, E.C., who do a very large part of the export newspaper trade. They state that the only effect of the increases will be to transfer that trade from the British to the French Post Office. Including cost of handling, French postal and other charges, the cost of posting the newspaper parcels in Paris instead of from England will

be no more than 4½d. per lb., as against 8d. per lb. if posted in this country at the new rate—a saving of 3½d. per lb.

Sir Adolph Tuck, as Chairman of the Committee appointed by the post card trade to safeguard its interests, has addressed a letter to every member of the House of Commons, recalling arguments he has previously placed before the Postmaster-General, including quite recent reports of the utter failure of this same policy to increase the postal revenue on the inland circulation of picture post cards both in France and Germany (France is already withdrawing it). Sir Adolph Tuck states that letters have reached him from all parts of the country "condemning in most unmeasured terms the fatuity of a policy which must wreck what has become an important British industry, cause unemployment to many thousands of workers, and most assuredly decrease the present revenue derived from the postage of picture post cards."

"A veritable bombshell has been hurled into the printers' camp," writes Mr. W. H. Burchell, hon. sec. of the Central Districts Branch of the London Master Printers' Association. "Has the Postmaster-General consulted the printing industry," he asks, "as to the effect this proposal will have on the trade and on unemployment before arriving at such a decision?" He urges that the sanction of the House of Commons should be obtained before a change "bringing with it such disastrous effects" is brought about.

"If this increase goes through," says the *Advertisers' Weekly*, "it means less advertising, less use of catalogues, booklets and circulating matter, less sales effort, and less enterprise. It means that fewer stamps will be bought for circularising purposes: that means that in turn there will be less 2d. letters, too, and there will be less business done through the post as a whole. It means less paper consumed, less printing, less blocks, less labour. And this at a time of unemployment among paper mills, printers, and workers of all classes. Printers, block-makers, paper suppliers will be among the first to feel the effects of this increase in price. It will increase unemployment."

With regard to the suggested postponement of the introduction of the increase in the post card rate till October, so that traders might be able to get rid of the summer stock just laid in, an official statement was made in the House of Commons on Monday, to the effect that post card traders had already had long notice of the change, and in view of the necessity for increasing Post Office revenue, the Postmaster-General regrets not being justified in any further postponement.

We hear that the Printing and Kindred Trades Federation of the United Kingdom is feeling unsettled with regard to its present premises at General-buildings, and that the executive intend if they can to purchase a suitable building so as to establish a permanent address. Perhaps this intimation may be worthy the attention of property owners.

# Master Printers' Convention at Scarborough.

## The Federation Cost Congress Discusses Matters of Vital Importance to the Craft.

The twenty-first annual conference of the Federation of Master Printers and Allied Trades of the United Kingdom opened at Scarborough at the week end. The conference promises to be one of the most successful in the history of the Federation. Despite difficulties of railway transport there were 450 visitors to the town.

### Civic Reception.

The conference was pleasantly inaugurated by a civic reception on Saturday evening at the Town Hall by the Mayor and Mayoress (Alderman and Mrs. M. T. Whittaker). Alderman Whittaker is himself a veteran newspaper proprietor. He said the earliest example of printing in Scarborough was a programme of races run upon the South Sand in 1733. A local printing establishment was also set up a little later from the plant of a company of strolling players who printed their own bills.

### Progress of Costing.

On Monday morning the ninth Cost Congress opened at the headquarters—the Grand Hotel.

The president, Mr. E. W. Humphries, of Bradford, in opening the proceedings after the Mayor had given another formal welcome, said the Government and other employers had found that the Federation's methods of costing were right. They as printers had found that their methods were right, with the result that the Federation at that twenty-first annual meeting found itself in a probably better financial position, a more ordered position, a more respected position as a craft in England than they had ever been in before. Very largely that was due to the efforts made by the Federation's costing experts throughout the country. He personally felt a great debt of gratitude to the Federation's committees, their chairmen and secretaries, particularly to Mr. Howard Hazell, the chairman, and Mr. Williamson, the secretary of the costing experts. He trusted that as a result of this conference the number of experts going about the country would be materially increased.

### The Cost of Costing.

Mr. Edgar T. Northend, Sheffield, followed with an address on "What it costs to keep costs."

Mr. Northend's informative and amusing paper stressed the point that the cost of keeping costs would be nil, because such would be the saving in the recovery of all kinds of odds and ends of expenses that had previously been either overlooked or ignored, that the cost of installing and running the system

would be saved many times over. He proceeded to detail item by item the outlay necessary for the installation and running of the Federation System in an office with a turnover of £25,000, dealing with about 500 orders per month and employing about 50 hands. He reckoned that with a turnover of £25,000 there would be a cost of £26 for installation, £26 for forms and dockets, and £65 for half share of clerk's wages, thus producing a weekly cost of 45s. for running the system for the first year, and after deducting cost of installation and initial outlay on binders, but allowing for a revision by 24, Holborn, of the annual statement, subsequent years would be run at 35s. per week.

Therefore, averaging cost at £100 per annum, and comparing it with turnover of £25,000, there was found an expenditure of 8s per £100 in keeping costs. This, he said, was a very small item compared with the cheerful way in which they gave their customers 2½ per cent. or even 5 per cent. discount for a prompt settlement. And for this they were getting information that was absolutely vital to the success of their business, besides knowing that they were giving their customers, their workers and themselves a square deal.

Mr. Keene, Leicester, was afraid small shops could not afford 8s. per £100 in addition to general costs.

Mr. A. E. Goodwin, secretary of the Federation said if there were shops which could not afford that amount, or customers who could not pay it, there was very little hope for the industry.

Mr. G. F. Storey, Leeds, said the promotion of discipline under the costing system repaid them for the cost.

### Newspaper and Jobbing Costing.

Mr. A. E. Harrison, of Cardiff, described by the chairman as a director of a number of firms of newspapers and jobbing offices, under the control of Lady Rhondda, spoke on "Costing in a Newspaper and Jobbing Office." He remarked how easy it was to introduce a costing system into any establishment, large or small. On gaining a thorough knowledge of the costing system one was impressed with the fact how easy it became and how adaptable it was to every condition of affairs. He went on to speak of an office combining the business of a newspaper and general printing business. The system which he had found satisfactory was to allocate to each a certain percentage of all capital charges. Many businesses were run in ignorance as to which was a losing proposition and which was a paying one in the two branches. Some people thought a newspaper

was a gold mine whilst the other branch was just scraping along. If they introduced a costing system they would probably find disillusionment of their dreams.

#### **Creating Demand for Printing.**

Lieut.-Col. Fletcher, Norwich, gave an address on "Creating a Demand for Printing." He commenced by analysing the causes for

and the cause was the treatment of the trade by officialdom. They must feel sometimes that that treatment is detrimental to their interests as a trade. As to the remedies, one which they could all apply, was to try and improve their methods and to adopt up-to-date labour-saving devices. They should also try to create a demand by giving their customers ideas which the customers did not

**Mr. W. A. TOWNSEND,**

Yorkshire Alliance President, 1921.

the present depression. The principal cause he said was the general condition of business throughout the country which had naturally led to a diminution in the amount of printing required by their customers. The second cause was the present high wages operating in the printing trade causing a feeling amongst customers that the product given them was much too dear. That was a matter with which the committee known as the "Hard Labour" Committee was dealing,

possess themselves. A second remedy was undoubtedly improved salesmanship. They should still further try and gain the confidence of their customers. Many customers felt that they benefited by the fact that the printers worked a costing system and that they were dealt with fairly because of that fact. Others did not appreciate the system, but these were customers they would be better without. Some branches of officialdom were rather up against them and it was only by co-

operation that they could satisfactorily cope with them. The Post Office was not treating them fairly. (Hear, hear.) The Postmaster said they could not send out catalogues at a loss to the P.O., but they allowed newspapers to send out papers at a loss and send their telegrams at a considerable loss. The printing trade was not allowed any of these privileges. He suggested they should have a fair deal. The Federation had been instrumental in doing good certainly; some of the rates contemplated to be brought up were not brought up. He hoped some modification of the suggested increases would be obtained. It could not be done by individual action, but only by co-operation.

Mr. G. F. Storey, chairman of the Yorkshire Alliance, who opened the discussion, said the printer ought to be able to stand as adviser, and be able to recommend the right means for the publicity which the customer wished to achieve, and must have sympathy with what the customer was trying to express. Here was his opportunity. He would himself largely determine the demand there was for printing, and this would be limited wholly by his ability to give practical effect to his customer's desires. The buyer very rarely wanted printing as such, but to realise some object, to carry out some plan. Many printers had yet to learn the rudiments and importance of balance, light and shade, and general effects, and these were fundamentals which ran through their work. He advocated an effort, for which they had the organisation, and knew the way if they had the will to advertise, advertising as the Press had advertised, by editorial advertising.

Mr. Shandlow, Leicester, raised the problem of coloured cinema printing. He said this was being done abroad because if they got a set of originals in England at a cost, say, of £50, they had only a very limited edition. Abroad they were probably able to produce an edition of 50,000.

Mr. Storey said in relation to cinema printing they had not realised the opportunity which was presented to them, and outsiders had got some idea what the cinema was going to be in the future. They secured the pitch, and kept the Englishman outside.

### Litho Costing.

Mr. Harry Cooke, Leeds, gave an address on Litho costing. He said the Lithographic trade had all the difficulties of the jobbing trade with a hefty number of difficulties of its own. Whether the printer was a fool or a knave he did not know; but judging by the figures which came before one from time to time one was bound to come to the conclusion he was either one or the other. That was the impression many of their customers had. When from the absence of a costing system they did not know what the various branches were costing them and there were differences in quotations, the customer did not remain with one firm but went "shopping." They tried to do too many things in their offices, and he emphasised the example of American firms. The firm having posters only could wipe the

floor with other firms that tried to do posters mixed up with other work.

Mr. Hill, London, suggested that more attention should be given to the litho section, and the chairman said the matter would receive consideration.

### Costing in America.

Before the luncheon interval, Mr. R. A. Austen-Leigh, London and Colchester, vice-president of the Federation, gave an address on "What is Being Done in America." He indicated that the industry in America was far less organised than here. They did not negotiate with labour as a whole, whilst here labour negotiations took up a great deal of time. In educational policy they easily out-distanced this country. There were 7,000 students in the instructional classes, and a comprehensive price-list had been in existence five years.

### The Luncheon.

Delegates and friends to the number of over 400 were entertained at luncheon, the hosts being the Yorkshire Master Printers' Alliance, and Mr. W. A. Townsend, president of the Yorkshire Alliance, being in the chair. Mr. Townsend proposed the toast of "The Visitors," to which Mr. E. W. Humphries, president of the Federation, responded. Mr. J. MacLehose, M.A., LL.D., Federation President-Elect, proposed the toast of "Our Hosts," to which Mr. E. H. Dennis, J.P., chairman of the Scarborough Hospitality Committee, responded.

### Paper Standardisation: Important Proposal.

The standardisation of paper occupied attention immediately after luncheon. Mr. Pollock (London) said the time had come when they should do something in the way of securing a standardisation of paper. It was the paper merchant who stood in the way, but he would move if they made him. Only one name should be given to any size of paper, and when ordering demy they should not have to wonder whether it would be writing demy or printing demy. Doubles and quads should be exact multiples of the standard size. There should be 500 sheets to the ream, standard name, weight and metric weight per square inch. He moved that they should give notice to the paper merchants that after January 1st members of the Federation would order on a standard to be outlined.

The Chairman suggested the scheme should be submitted to the various alliances, and then submitted to the council. This was agreed to.

### Selling Print.

Mr. J. Crowle-Smith, Director of Messrs. Hazell, Watson and Viney, Ltd., gave an address on "Selling Essential to Profit." He condemned the price cutting, which, he said, threatened the very existence of the printing trade structure. He appealed to all printers to maintain the dignity of their craft. To sell print successfully needed special qualifications. They should not be afraid of letting

the men who represented them know everything they could possibly instill into them about the cost of production of the article they were asking them to sell. Men should not be sent out who could not suit the customers. The trade was in a slump at present, but that slump was passing. There was every indication to those who studied the industrial position of this country that as soon as they got this coal business settled trade would begin to jump, and he was intensely anxious that printers should sell their product at a definite rate of profit which justified their being in business.

Mr. A. Wigley (Leeds) said price cutting was becoming a very regrettable feature in their industry, and was fraught with great danger to the craft.

Other addresses were "Costing and Accountancy" (Mr. A. E. Goodwin), "Binding Costing" (Mr. Vick), and "Some Problems Relating to the Handling of Mechanically Set Matter" (Mr. A. Williamson). Owing to the late hour to which Congress sat, discussion was withheld on these latter papers at the request of the chairman.

## Coxton Convalescent Home, LIMPSFIELD.

### Opening of the War Memorial Wing.

Arrangements are well advanced for the opening of the Printing Trades' War Memorial Wing to the Coxton Home, Limpsfield, on Saturday afternoon, June 18th. The Secretary of State for War (Sir Laming Worthington-Evans, Bart., M.P.), will declare the wing open at 4 p.m.; and the unveiling of the Roll of Honour, containing 2,550 names, has been kindly undertaken by Lady Worthington-Evans. Indications point to a record gathering of representative ladies and gentlemen from all branches of the printing trade. It is hoped that the ordinary train service from London Bridge and Victoria to Oxted will be in working order by the opening date.

## L.C.C. Central School of Arts & Crafts.

The annual exhibition of work of students of the L.C.C. Central School of Arts and Crafts, Southampton-row, W.C., opened on Monday and will continue until June 18th. Visitors are admitted from 10 a.m. to 8 p.m. daily (Saturdays 10 to 12 noon), and admission is free on signing the visitors' book.

The lover of arts and crafts will find here many delightful examples of work well done. A section is devoted to writing and illumination, printing, bookbinding, wood engraving, etching, lithography, etc., and some fine productions in these subjects are on view, though the showing is more limited than in former years.

## Printing and Allied Trades Sports ASSOCIATION.

### Another Success for the Trade Charities

On Tuesday evening, May 24th, the annual bohemian concert and distribution of football trophies and medals took place at the Cannon-street Hotel, Mr. Edgar Waterlow presiding over a large gathering. Amongst those supporting him were Chas. Roud, John Fry, W. R. Masters, Russell Palmer, Major Wilson, Rev. Everard Digby, F. Hart, S. H. Hart, H. H. Fleming, G. L. Mothersill, A. H. Munday, accompanied by their ladies. The occasion was a huge success, and the Association were fortunate to have such a chairman as Mr. Edgar Waterlow, to whom the thanks of the whole trade is due. Mr. Waterlow announced that the financial result amounted to roughly £500. Of this amount, by the way, Mr. Waterlow was instrumental in raising over £400.

During the evening Mrs. Masters presented the handsome cups and medals to the winning teams. Four sets of the medals were generously given by Mr. Harvey Dalziel and Mr. W. R. Masters. The Association were also fortunate in having presented to them three new trophies for football, swimming and rifle shooting—the gift of Mr. John Fry (late president).

### Valuable Services Recognised.

As a mark of esteem, Mr. John Fry was presented with a gold medal by the whole of the Printing Trade Sports Association, the hon. treasurer (Mr. A. Oddy) also being given a gold medal for his good work.

One cannot but congratulate this Association upon its splendid labour on behalf of the trade charities through healthy sport.

All inquiries relating to the Printing and Allied Trades Football Charity and League should be addressed to the hon. secs., Mr. Geo. V. Maddams (Fry's Metal Foundry) and Mr. Herbert J. Parker (Fleetway Press).

The athletic meeting takes place this year at the Stamford Bridge Grounds, on Saturday, June 18th.

In the King's Bench Division, on Thursday, an application was made on behalf of James Brennan for a rule calling on the editor of the *News of the World* to show cause why he should not be attached for contempt of Court. Brennan is at present remanded in custody on a charge of conspiring with two other men to obtain £2,300 by false pretences. He complained that an article in the *News of the World* gave the impression that he was involved in another case involving an alleged £20,000 conspiracy. The Court refused the rule, Mr. Justice Lush observing that, whilst a careless person might mistake the true meaning of the paragraph, no person of ordinary intelligence could do so.

## The Federation's New President.

**James MacLehose, M.A., LL.D.**

The new President of the Federation of Master Printers will bring distinction and

Lehose, M.A., LL.D., is gifted with a scholarly mind, a refined personality and a fine presence, to which are added a thorough knowledge of the printing business in its various aspects.

The son of James MacLehose, publisher to the University of Glasgow, the new President was born in 1857, and educated at the University of Glasgow, where he received the degree of M.A. In 1915 his University honoured him

**JAMES MACLEHOSE, M.A., LL.D.**

learning, together with experience in the higher branches of the craft, to bear upon the leadership of the Federation. James Mac-

by conferring on him the honorary degree of LL.D.

Mr. James MacLehose was a partner in

James MacLehose and Sons, publishers and booksellers to the University of Glasgow from 1881 till 1919, when he retired from this firm in order to devote himself exclusively to the work of his printing business.

He is chairman, and since the foundation of the company has been a managing director, of Robert MacLehose and Co., Ltd., University Press, Glasgow. The University Press of Glasgow has had a long and distinguished career. During the eighteenth century it had a world-wide reputation, when it was owned by the celebrated firm of Robert and Andrew Foulis, who printed their well-known editions of the classics. Unlike the Oxford and Cambridge University Presses, which are owned by the Universities, the Glasgow University Press has always been the property of printing firms, and it is owned by Robert MacLehose and Co., Ltd.

The University Press in Glasgow was moved about twenty years ago to large buildings specially built for the purpose in Glasgow, a few miles from the centre of the city, where all work is carried on on one floor. The principal departments are printing, stereotyping, electrotyping and bookbinding. During the last forty years the output of the firm has increased enormously. At the present time it is one of the important book houses, and makes a speciality of mathematical printing and scientific work, such as may be required by engineers or chemists.

Mr. James MacLehose has been intimately associated with employers' organisations since 1891, when he assisted in founding the employers' association in the bookbinding trade for the Glasgow district. He was for several years president of the Scottish Alliance of Employers in the Printing and Kindred Trades, and more recently has been an honorary president of that Alliance. During the past year he has proved an able senior vice-president of the Federation of Master Printers and Allied Trades of Great Britain and Ireland, so that it is a natural step that he should be chosen President of the Federation for the ensuing year. He has taken an active interest in the work of the Joint Industrial Council for the Printing and Allied Trades.

In 1903 Mr. MacLehose founded the *Scottish Historical Review*, and has edited it since its first number. After its twelfth year of issue a number of well-known men interested in history, including Lord Rosebery, Mr. A. J. Balfour, Sir Herbert Maxwell, Mr. Reginald L. Poole, Mr. C. H. Firth and Mr. W. P. Ker, of Oxford, initiated a movement for an index volume to the Review. They stated that their primary motive was that it should be an expression of the esteem in which the editor, Mr. James MacLehose was regarded by students of Scottish history, and they also wished that the valuable and varied material contained in its volumes should be readily accessible to scholars. Besides editing this Review, Mr. MacLehose has edited several volumes on Scottish history and archaeology. He is a Fellow of the Society of Antiquaries of London, senior vice-president of the Scottish Text Society, and has shared, as a mem-

ber of the executive, in the work of the Scottish Society of Antiquaries, the Scottish History Society, the Scottish Modern Arts Association, and the Glasgow Archaeological Society. He is a magistrate of the county of Lanark.

## Electrotypers and Stereotypers MANAGERS & OVERSEERS' ASSOCIATION

### Monthly Meeting.

The monthly meeting of the Association was held on Tuesday evening, the 24th ult., at St. Bride Institute, Bride-lane, E.C.4, the president, Mr. A. Chadwell, in the chair.

The minutes of the last monthly meeting having been confirmed, the president reported on the results of the deputation to the Electrotypers' Society.

A new member, Mr. Harold Crosland, late of the *Manchester Daily News* and now of London, received from the president, on behalf of the Association, a very warm welcome to membership.

### The Summer Vacation.

Mr. Chadwell said on account of the interferences due to the holiday season and in accordance with their usual custom, it would be advisable for them to drop their monthly meetings till September.

This was agreed to.

Before separating it was decided to ask last year's stewards of the annual dinner to make the arrangements for the event in November or December next.

Several members drew attention to the influence exerted in some foundries by fathers of chapels over the overseer, and strong opinions were expressed that members of the Association should maintain their position by asserting their authority in regard to methods of management. Several speakers said it was the overseer's own fault if he allowed the father of the chapel to go beyond his powers. Other questions adversely affecting the overseer in the control and efficient production of work were dealt with.

In view of this state of affairs it was proposed and seconded that as many members of the Association as possible should attend the next general meeting of the Society in order to see that their interests should not in any way be prejudiced.

It was also agreed that in the event of any encroachment on the executive control of the overseer the secretary should call an emergency meeting of the Association to discuss the matter.

A vote of thanks to the chairman closed the proceedings.

THE late Mr. George Herbert Perris, well-known journalist and author, of South Kensington, left £1,019.

**FORTY-THIRD YEAR.**

**THURSDAY, JUNE 2, 1921.**

## Current Topics.

### The Scarborough Convention.

THOUGH the important conferences of the Federation of Master Printers at Scarborough are not yet finished as we go to press, it seems clear that this year's convention has proved a most memorable and profitable one, despite the special difficulties with which the organisers have been faced owing to the unsettled industrial conditions of the country. We are able to give this week an outline of the proceedings at the Cost Congress, which formed a salient feature of the convention, and it will be evident from our report that vital matters of trade welfare have received thorough and illuminating investigation. On Tuesday Mr. James MacLehose, M.A., LL.D., of Glasgow, was elected president of the Federation for next year. Mr. R. A. Austen-Leigh was re-elected senior vice-president, and Mr. J. C. Coppock, of Warrington, ex president of the Lancashire and Cheshire Alliance, was chosen junior vice-president. Mr. Edward Unwin

(London) was re-elected treasurer, with Lieut.-Colonel H. Rivers Fletcher, of Norwich, as assistant treasurer. Another feature of Tuesday's proceedings was the passing of a strong resolution protesting against the proposal that paper should be subject to Customs duty under the Safeguarding of Industries Bill, as it would increase the cost of raw materials for the printing and newspaper industries, increase unemployment, injure the recovery of those trades, and raise the cost of living. A motion was also agreed to, viewing with serious alarm the increase of postal rates of printed matter and post cards. Further news of the proceedings at Scarborough will appear in next week's issue.

• • •

### Postage and Print.

ON another page we indicate briefly some of the multitudinous expressions of protest called forth by the Postmaster-General's new proposals of increases of postage. It is especially unfortunate that the printing industry, already faced with a very serious slump in trade, should find itself threatened with a further severe curtailment of orders, to say nothing of a further increase of working expenses. This must mean that the general printer, the newspaper printer and the printer of picture post cards will find their employing capacities still further curtailed, and the already sadly large amount of unemployment in our industry will be increased. When it is considered that this certain harm to trade is to be done with a view to a very uncertain hope of increased postal revenue, a hope negated by many weighty pieces of evidence, it will surely be agreed that at least the sanction of Parliament should be obtained, after a full discussion in the House, before these grievous imposts are allowed to be enforced.

• • •

### The Art of Book Production.

AN exhibition worthy of a visit from all interested in the art and craft of the making of books is now in progress at the Victoria and Albert Museum. With the aid of the book production staff of the L.C.C. Central School of Arts and Crafts there has been brought together a very interesting series of exhibits illustrating the processes involved from the designing of type to the actual finished book in the form in which it reaches the purchaser. Models, photographs, actual tools, materials and finished products combine to give even the uninstructed visitor a good idea of what, apart from the use of present-day machinery, the various operations are which go to the

turning out of a well printed book. Suitable attention is given to the work of famous English printeries, including those of William Morris, Doves, the Vale Press and the Ashendene Press of Mr. Hornby, while American and Continental printing is also represented, it being shown that the work of this country has influenced the printing of the world. Miss S. T. Prideaux—to whom the exhibition is indebted for an exhibit of bookbinder's finishing tools designed by Miss Prideaux, from details of Syrian and Turkish tiles in the museum—has written a very useful brochure "Notes on Printing and Bookbinding," which serves as a guide to the exhibition and at the same time provides a concise statement of the nature and history of these crafts. The booklet also contains a number of interesting illustrations in line and half-tone.

### Printers' Customers and Paper.

THERE is reason to believe that the practice of selling paper behind the back of the stationer and printer is spreading. Several instances have come to our notice in which mills of repute are not merely making paper, but converting it into stationery for direct sale to the printer's customer. Many merchants do the thing quite regularly. Meantime there is complaint in these very quarters if the printer buys his paper direct from the mill. Many screws are loose in the organisation of the paper and print trades and much water will flow before the system is linked up and all its parts made firm and smooth working.

### Loose-Leaf Sizes.

THE growth of the demand for systems methods and the development of loose leaf ledger goods has reached a stage which has created a need for helpful participation by the paper trade. It is common knowledge that the constitution of the apparatus used in the loose-leaf trade renders necessary a special series of paper sizes. Almost every printer and manufacturing stationer is now called upon to supply his customers with ruled or printed paper for use with ledger or mechanical fittings and the difficulty often is to secure the necessary class and size of paper. A few of the leading houses produce a special range of loose-leaf papers in suitable sizes, but the demand is becoming such that business will be lost to those houses or mills which do not cater for the particular requirements of the trade.

## Personal.

SIR WILLIAM A. WATERLOW, K.B.E., contributes to the *Journal of Industrial Welfare* an article entitled "The Employer's Opportunity," in which he urges that, even in the present difficult situation, it is well worth while, both to the individual firm and to organised industry, to go forward with welfare schemes requisite to the workers' health and happiness.

MR. ROBT. JOHN LYNN, M.P., who has been elected for Belfast West in the Unionist interest at the election for the Parliament of Northern Ireland, has been for the past eight years managing editor of the *Northern Whig*.

MR. W. R. SKINNER, founder of the *Mining Manual*, on Friday attained his 70th anniversary and is still "going strong."

MR. OWEN CONNELLAN, of the Typographical Association, has been adopted as Labour candidate for North Bucks, in succession to Mr. John Scurr.

At the annual meeting of the Society of Women Journalists, last week, Miss E. Almaz Stout was elected president in succession to Viscountess Northcliffe, who has filled that office since November, 1919.

SIXTY years in the composing department of Messrs. Thomas Forman and Sons, printers (and formerly proprietors of the *Nottingham Guardian*), Sherwood-street, is the record established by Mr. Robert Blasdale. Mr. Blasdale is the only employee with that firm to-day who assisted to launch the first issue of the *Daily Guardian* on July 1st, 1861. In recognition of his long association with the firm, Mr. Blasdale has been presented with an appropriately inscribed silver tea service.

MR. FRANK MURRELL, of the firm of Messrs. William Lewis, Ltd., printers and booksellers, Cardiff, gave an interesting discourse on the art of printing to members of Cardiff Rotary Club last week.

THE WALBROOK WEDDING.—In regard to the wedding which took place at St. Stephen's, Walbrook, recently, of Miss Barbara Oakeley Walbrook, and Mr. Archibald Mains, it is interesting to remark that the bride, who is a daughter of Mr. Harold Walbrook, managing director of the Fleet Printing Works, claims to be a descendant from an Alderman of the Ward of Walbrook of the 13th century. The name of this worthy was John de Tolesan Walbrook, who held the office of Mayor in 1252, and he is mentioned in the meagre chronicles of the time as a man of more than ordinary substance and importance in the affairs of the parish and of the City.

## DIVIDENDS AND REPORTS.

**A. B. FLEMING.**—Net profit of A. B. Fleming and Co. for year ended April 30th, 1921, including £9,404 brought in, was £28,933. Directors recommend placing to reserve (making same £47,000) £2,000, to depreciation of investments £1,000, dividend of 15 per cent., less tax, for year, carrying forward, subject to excess profits duty (if any), £7,933. 23,500 additional shares of £1 each were offered at par to members in proportion of one share in five. These were all applied for.

**BANGALORE PRINTING AND PUBLISHING CO., LTD.**—At the fifth ordinary general meeting on April 20th it was stated that the year's profit was about Rs.26,540 as against Rs.22,000 for the preceding year. Reserve stands at Rs.25,000. Dividend is recommended at the rate of 10 per cent. per annum (free of income tax) for the year ending December 31st, 1920. The directors also propose a bonus of one month's pay to all on the company's establishment who have done service for one full year and are still in its service. This will absorb about Rs.1,100.

**C. ARTHUR PEARSON.**—Net profit for ten months ended March £29,141 and £39,793 was brought forward. Dividend at rate of 10 per

cent. on ordinary; to reserve £5,000; to pension fund £300; forward £37,392.

**STAR PAPER MILL CO., LTD.**—An interim dividend has been declared of 9d. per share.

**ANGLO-NEWFOUNDLAND DEVELOPMENT CO., LTD.**—Accounts to August 31st, 1920, show a profit, less depreciation, interest on loans, etc., £165,559. After providing for debenture stock interest and sinking fund there remains a credit balance of £195,661, inclusive of £64,610 brought in.

**BECKER AND CO., LTD.**—The accounts presented to the 13th ordinary meeting of shareholders on Tuesday show a gross profit of £117,979. After allowing for discount on bills, bank charges, debenture interest, and trustees' fees (£50,359) and interim dividend of 5 per cent. (£5,000), there remains £62,620, to which is added balance (£13,917) brought forward, making £76,537 13s. 11d. As the conditions prevailing throughout the world are difficult, the directors propose to especially reserve £50,000 against stocks and shipments overlying to pay a final dividend of 10 per cent. free of income-tax, making 15 per cent. for the year, and carry the balance, £16,537 13s. 11d. forward.

## NEW COMPANIES.

**JIGGER, LTD.**—Capital, £5,000, in 4,915 participating cumulative preference shares of £1 each and 1,700 ordinary shares of 1s. each; to adopt an agreement with S. Merkin and B. Scher, trading as Watson, Son and Co., and to carry on the business of storekeepers, mechanical and electrical engineers, dealers in leather and fancy goods and novelties, printers, engravers, advertising agents, etc. Private company. First directors: E. N. Kennedy, B. Scher, S. Merkin, and J. F. Kennedy. Registered office: Bassishaw House, 70A, Basinghall-street, E.C.

**UNIVERSAL NOVELTIES, LTD.**—Capital, £500, in £1 shares; to adopt an agreement with Gwendoline A. Kennedy, and to carry on the business of storekeepers, mechanical and electrical engineers, dealers in fancy and leather goods and novelties, printers, engravers, advertising agents, etc. Private company. First directors: J. F. Kennedy and E. N. Kennedy. Registered office: Bassishaw House, 70A, Basinghall-street, E.C.

**SAMUEL GRANT, LTD.**—Capital, £10,000, in £1 shares; to take over the business of a paper

merchant and stationer carried on by S. Grant, at 35, Aire-street, Leeds, as "Samuel Grant," and to carry on the same and the business of manufacturers of articles for use and ornament from paper, wood and paper pulp and papier-mache, manufacturers of paper, paper bags, paper or cardboard or other boxes, etc. Private company. Directors: S. Grant, F. W. B. Gascoigne and D. A. Ripley. Registered office: 35, Aire-street, Leeds.

W. NOTTING, LTD. (London).—Capital, £25,000, in £1 shares; printers' and general engineers, founders, smiths, etc. Private company. Subscribers: P. Simpson and H. Bonsor.

CLARE'S PRINTING WORKS, LTD.—Capital, £7,500, in £1 shares (4,500 10 per cent. cumulative preference); to take over the business of a stationer, printer and newspaper publisher, carried on by A. J. Clare, at 5 and 9, High-street, Wells, Somerset, as "Woodhams' Successors." Private company. First directors: A. J. Clare, R. Bath, W. P. R. Clare and C. H. Barnes. Registered office: 5, High-street, Wells, Somerset.

ANGLO-CONTINENTAL ADVERTISING AND SERVICE AGENCY, LTD. (London).—Capital, £5,000, in £1 shares. Private company. Subscribers: E. L. Burton and D. Welch. First directors by subscribers.

T. BURTON, LTD.—Capital, £300, in 5s. shares; printers, publishers, papermakers, machinery agents and makers, manufacturers and agents for hard and soft goods, etc., in Great Britain, or elsewhere. Private company. First directors: A. Edmondson and Mrs. E. Self. Registered office: 93, Chancery-lane, W.C.

### COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfaction registered pursuant to Section 97 of the same Act. (The registration of Satisfaction is not compulsory).

MENDIP PRESS, LTD. (Weston-super-Mare).—Mortgage on certain properties in Weston-super-Mare dated April 30th, 1921, to secure all moneys due or to become due from company to Fox, Fowler and Co., not exceeding £1,500.

W. H. DORMAN AND CO., LTD. (manufacturers of internal combustion engines, printing machines, etc.).—Deposit on May 2nd, 1921, of deeds of certain lands and premises in Stafford, to secure all moneys due or to become due from company to Lloyd's Bank, not exceeding £10,000 (in addition to £40,000 secured by prior charge).

E. BENINGTON AND SON, LTD. (printers, etc.).—Mortgage dated May 17th, 1921, to secure £1,800, charged on 35, South Castle-street, Liverpool. Holders: Planet Perpetual Benefit Building Society.

W. H. BOWYER, LTD. (newspaper proprietors, London).—Two debentures dated April

29th, 1921, to secure £375 each, charged on the company's undertaking and property, present and future, including uncalled capital, if any. Holders: A. Grout, Georgian House, Oaklands-road, Bromley, and F. G. Watson, "Woodstock," 60, Arden-road, Finchley, N.

HOGG AND KNIGHT, LTD. (printers, etc., London).—Issue on May 23rd, 1921, of £150 debentures, part of a series already registered.

"TECHNICAL REVIEW," LTD.—Particulars of £1,982 debentures, authorised April 8th, 1921; whole amount issued. Charged on company's undertaking and property, present and future, including uncalled capital.

GLOBE ROTARY PRESS, LTD. (London).—Particulars of £10,000 debentures, authorised May 18th, 1921; whole amount issued. Charged on the company's undertaking and property, present and future, including uncalled capital.

EMPIRE PAPER MILLS, LTD.—Debenture dated May 11th, 1921, to secure £200,000, charged on the company's undertaking and property, present and future, including uncalled capital, subject as to Greenhithe Mills, Swanscombe, etc., to a mortgage securing £136,955 9s. 7d. Holders: D. J. H. Cun- nick, Sir Frederick Eley, Bart., and A. G. Hopewell, 15, Bishopsgate, E.C.

GEORGE PULMAN AND SONS, LTD. (stationers, etc.).—Mortgage dated, May 13th, 1921 (supplemental to trust deed dated June 25th, 1913, securing £12,500 first mortgage debentures), charged on 24-27, Thayer-street, Manchester-square, W. Trustees: Lloyd's Bank.

### BANKRUPTCIES, etc.

THE RUSSIAN NEWSPAPER, LTD., 10, Moor-gate-street, E.C.—The creditors and shareholders of this company met on May 24th at the Carey-street offices of the Board of Trade before Mr. E. T. A. Phillips, Official Receiver. The company was formed in October, 1918, with a nominal capital of £2,000 to acquire a paper entitled *The Russian*, and to carry on business as printers and publishers. The chairman reported that the venture was not well supported, and the paper was carried on at a loss. The winding-up order was made on the petition of the Putney Press, Ltd., creditors for £861. The liabilities included £260 owing under a debenture bond and £1,806 due to unsecured creditors, whilst the assets were only valued at £40, apart from anything that might be recovered from certain of the directors in respect of their qualification shares. In any event there was no prospect of any dividend being paid to the unsecured creditors, and the loss to the contributories was estimated at £3,159. In the absence of a quorum no resolution was passed, and it was intimated that the liquidation would be left in the hands of the official receiver.

AN Advertisement is always working.

# Trade Notes.

**THE Dorset Daily Echo and Weymouth Dispatch**, the first evening paper for the county of Dorset, began publication on Saturday.

OWING to the failure of the gas supply at Boston, the *Lincolnshire Standard* was printed on Friday night by power from a farm tractor.

**PAPER-COVERED NOVELS.**—A new issue is being made by Messrs. Newnes of novels by well-known writers, the volumes being sold at 7d. and carrying illustrated paper wrappers.

THE third annual conference of the National Federation of Newsagents, Booksellers and Stationers opened this week at Scarborough, and is being continued until to-day.

**PAPER** in all forms, except printed paper and goods manufactured of paper, is included in the list of goods the exportation of which from Roumania is prohibited. A special authorisation is required for the export of tarred paper.

**NEGOTIATIONS** are proceeding in the paper trade for a readjustment of working conditions, in consideration of the reduced cost of living. Conferences have been held, but no agreement has yet been found possible.

**"T.A." CONFERENCE.**—It is expected that about 300 delegates will attend the triennial delegate meeting of the Typographical Association, which takes place on June 6th, at Hastings, the rendezvous being a novel one, namely, the Palace Pier Pavilion. There is a long and interesting agenda to be dealt with.

**THE PAPER BOX TRADE BOARD (IRELAND).**—At the recent meeting of the Paper Box Trade Board (Ireland) in Belfast the Board decided to postpone for three months the questions of varying minimum rates for female workers as proposed in their notice dated October 4th, 1920, and of proposing to vary the minimum rates for male workers at present in operation.

**REPARATION ACT ABSURDITIES.**—Messrs. B. H. Blackwell, of Oxford, who do a considerable trade in the importing of German books, write to *The Times* pointing out that the practical working of the German Reparation (Recovery) Act involves not only that the English importer pays 100 per cent. of the value of his imports to the English Customs for the benefit of Germany, but also that delay and red tape on the part of the Customs officials make trade almost impracticable.

**KING AND THE PRESS CONFERENCE.**—In acknowledging the acceptance by his Majesty of a copy of Mr. Robert Donald's book on "The Imperial Press Conference in Canada," Lord Stamfordham writes: "The King is glad to have this interesting account of a great achievement, which must always be a notable landmark in the history of the Press, and notes with pleasure the feeling of happy comradeship that characterised the proceedings of the Conference."

ONE penny is the price of the new illustrated monthly review, the *Popular View*.

MR. F. R. SANDERSON, the editor of the *Sunday Pictorial*, died suddenly on Friday at his residence at Clapham.

**PAPER** mills as far as required for newspaper and newspaper printing works are on the priority list of consumers who will receive coal imported by the Government.

THE latest issue of "Oyez Notes" (house journal of the Solicitors' Law Stationery Society), comes to us in a handsome brown and gold cover. For size and quality this publication takes a high place among the house organs of this country.

**VICTORIA AND ALBERT MUSEUM.**—The Library and the Students' Room of the Department of Engraving Illustration and Design (Room 71), now closes on Mondays, Thursdays and Saturdays at 9 p.m., instead of 10 p.m. On Saturdays the Museum is open until 6 p.m. instead of 5.30 p.m. The hour of closing on week days will remain as at present, 5 p.m.

THE paper on "An Interferometer for Testing Camera Lenses," read by Mr. F. Twyman, F.Inst.P., at a recent meeting of the Optical Society, will form part of the "Transactions of the Optical Society," Vol. XXII., No. 4. The paper describes a new interferometer for testing camera lenses, the instrument being the first of its kind capable of testing lenses for oblique pencils.

THE need for national trade marks on printed matter receives additional emphasis from the recent decision of the Canadian Government that all goods imported into Canada must be marked so as to indicate the country of origin. The British Producers' Organisation last week passed a resolution urging upon the Government that steps should be taken to compel the marking of goods imported into this country.

THE good services of the Joint Industrial Council have again been manifested through the District Committee at Cardiff, where arrangements regarding curtailment of hours had given rise to a strained situation which threatened trouble both for the employers and the unions. By the aid of the J.I.C. it was found possible to persuade both sides to modify the attitude adopted, with the result that they have come to a satisfactory working arrangement.

**"PRINT-COLLECTOR'S QUARTERLY."**—Vol. VIII., No. 1 of that excellently produced periodical, the *Print-Collector's Quarterly*, is the first English issue of this magazine, which has hitherto been published with success in America. It is claimed that it is unique for an art magazine to be transferred entirely from an American to an English management, as has been done in this case. This first English number, of 120 pages, smallish octavo, is profusely illustrated and deals with the work of J. L. Forain, G. B. Tipeolo, Alex. Cozens and E. S. Lumsden, R.E. The publishers are J. M. Dent and Sons, Ltd.

Hangings ...	596,242	829,091

## German Paper Companies' Profits.

The Dresden Photographic Paper and Albuminised Paper Works are paying, respectively, a dividend of 8 per cent.

The Dresden Straw Pulp Works, capital 8,000,000 marks, realised, during their thirty-fifth year, a net profit of 3,247,680 marks, allowing a dividend of 20 per cent. and a premium of 100 marks per share.

DURING the past year 34,000 books, of which 6,277 were new editions, were published in Germany, compared with 35,000 in 1914, which was a record year in the German publishing trade.

THE late Mr. Alderman John Potter, of Maidstone, the first working man in England to be appointed a magistrate, a papermaker by trade, left £2,248.

## Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

### FRANCE.

H.M. Consul-General, Paris, reports that an agent in that city desires to represent British firms exporting writing and printing papers, office sundries and typewriter supplies. Correspondence in English and French. (Reference No. 608.)

### BELGIUM.

A large British organisation in Antwerp desires to secure, for the whole of Belgium, the agency of United Kingdom manufacturers of papers of all kinds, particularly high-grade. (Reference No. 571.)

### SOUTH AFRICA.

A well-known Cape Town manufacturers representative, at present in this country, who already holds agencies for United Kingdom firms engaged in the paper and book trades, desires to obtain agencies for United Kingdom manufacturers of similar lines, which will not clash with those already held. (Reference No. 603.)

### CANADA.

A manufacturers' agent in Toronto desires to obtain the representation, on a commission basis, for the Province of Ontario, of United Kingdom manufacturers of paper articles such as cups and mats, used on fountain and ice cream counters. (Reference No. 598.)

## Indian Paper and Pulp Imports.

In the schedule of the revised Customs duties contained in the Bill introduced in the Indian Legislative Assembly the following appear among the articles which are free of duty: Pulp of wood, rags and other paper-making materials; trade catalogues and advertising circulars imported by packet, book or parcel post; books, printed, including covers for printed books, maps, charts and plans, proofs, music and manuscripts.

Articles liable to duty at 11 per cent. *ad val.* include, under the heading of paper, pasteboard and stationery, paper and articles made of paper and papier mache, pasteboard, mill-board, and cardboard, all sorts, stationery, including ruled or printed forms and account and manuscript books, drawing and copy books, labels, advertising circulars, sheet or card almanacs and calendars, Christmas, Easter and other cards, including cards in booklet form, including also wastepaper and old newspapers for packing, but excluding trade cata-

logues and advertising circulars imported by packet, book or parcel post.

Prints, engravings, and pictures, including photographs and picture postcards and playing cards, it is proposed should be liable to duty of 20 per cent. *ad val.*

## Continental Paper Market.

### Germany.

Generally speaking, the pulp and paper industry has not improved during the past month. It has, on the contrary, grown worse. Not only have there been no new orders, but those given have been cancelled. Reports of agents and travellers are deplorable. The book industry has almost ceased and publication of prospectus and advertising pamphlets has fallen away. Quotations are quite fictitious and meaningless.

### Austria.

Since March there has been an adjustment of prices, which were increased 20 to 25 per cent. for delivery at Vienna. The complete list is very long. We may mention the following: Cigarette paper (20 grammes per metre, 80 per cent. cellulose), 269 crowns plus 18.50 crowns for extra work and watermark; fine tissue paper (18 grammes per metre, 100 per cent. cellulose) 187 crowns; demi-fine, 166; ordinary (50 per cent.), 139; parchment paper, 80.5 crowns. Paper without wood pulp 85 crowns per kilogramme at the mill. Ordinary printing paper, 43 crowns; ordinary packing, 36.

### Czecho-Slovakia.

Since the commencement of the year there has been an accumulation of stocks in the market owing to a fall in prices and the reserve of consumers or manufacturers. Actually there is not a great fall in prices. Brown packing has dropped 5 per cent., attaining 475 Czecho crowns per quintal at the Works railway station. The price of wood rose greatly last year. Export duties have been reduced 1½ per cent. for paper and cellulose, and the import duties raised 2 per cent. except illustrated post cards.

### Hungary.

The situation of the Hungarian market has been profoundly modified under the influence of financial reforms. Speculation is discontinued and stocks are accumulating to some extent. The rates of foreign exchanges have fallen, especially the Czecho crown, which has dropped about 15 per cent. and as Hungarian paper mills depend upon Czecho-Slovakia, there has been a fall in prices. German competition is not perceptible to any extent, as the mark is at a premium in all specifications in Central Europe. The printers' strike for an increase of 35 per cent. in wages does not improve prospects.—*Le Papier.*

AN Advertisement is always working.

## POSTAL RATES PROTEST.

Mr. W. H. BURCHELL, hon. sec. Central Districts Branch, London Master Printers Association, is organising a big meeting of protest against the proposed increase of postage upon printed matter, the meeting to be held in the Large Hall at Stationers' Hall, Stationers' Hall Court, Ludgate-hill, E.C.4, on Monday next, June 6th, 1921, at 6 o'clock. Amongst the many prominent printers who will address the meeting are Mr. A. Mortlock, managing director, Messrs. Smith, Dalby-Welch, Ltd., and Mr. Arthur Chadwick, managing director, Amalgamated Publicity Services.

At Manchester on Tuesday the National Labour Press, Ltd., Blackfriars-street, Manchester, were fined £50, while a £100 fine and a month's imprisonment respectively were inflicted upon two representatives of the National Labour Workers' Committee Movement. The summonses related to the printing and circulating of leaflets entitled "A Call to Action" and "Clear for Action," the Labour Press being charged with printing them, and the other defendants with providing the MSS.

In the House of Commons on Tuesday Mr. Neil Maclean, Labour member for Govan, asked the consent of the Speaker to move:—"That the editor and publisher of the *Plain English* newspaper do attend at the Bar of this House, at four on June 2nd, to answer in that he or they has or have written and published articles imputing corruption and breach of trust to Members of this House, the articles complained of constituting a gross breach of the privileges of this House." The Speaker refused his consent.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STATIONER," 58, SHOE LANE, LONDON, E.C.4.

## Future Railway Rates.

In a precis of the main clauses of the Railways Bill it is pointed out that the basis on which rates are to be fixed will be one designed to secure for each company a standard revenue based upon that obtained in 1913, together with 5 per cent. upon capital expenditure made under Government control, and a further allowance in respect of large capital expenditure not fully remunerative in 1913. As existing conditions cannot be regarded as stable, the rates will be modified as conditions change. To this end they will be reviewed annually for three years, and thereafter at stated periods in the Minister's discretion. It is felt that a standard revenue that should be invariable would go far to destroy that initiative in railway companies upon which both the general prosperity of the company and the country must depend. Where the rates yield a return in excess of the standard 80 per cent. of such excess will go in rate reduction and 20 per cent. to the revenue of the company earning it. It is said that both the railway companies and the Federation of British Industries and other bodies that look with a jealous eye upon their respective interests and privileges are satisfied with the principles that the Bill proposes to put into operation. With reference to light railways, it is stated that the Act in many ways encourages light railway enterprise, notably by giving such railways higher charging powers than main lines and securing to them a proportion out of the rates which will reflect these higher powers.

## Spanish Paper Exports Free.

The *Gaceta de Madrid* for April 16th contains a Royal Order, dated April 14th, which permits the export from Spain, without restriction, of all kinds of paper, cardboard and pasteboard.

**POSTAL RATES PROTEST MEETING.**—A meeting of representatives from all branches of the National Federation of Retail Newsagents, Booksellers and Stationers, held on Tuesday at 21A, Southampton-buildings, to protest against the increased postage charges, decided to call a mass meeting of all trades affected at Australia House, at seven o'clock on Tuesday evening next. Those who desire to attend the mass meeting next week are asked to communicate with the district secretary, 21A, Southampton-buildings, Chancery-lane, W.C.2.
